Additionally, the administrative costs of the NYC In-school program are much higher than the Work-Study Programs. In fiscal 1966, per enrollee administrative costs for the NYC program were $184 compared with $8 for the Work-Study Program. These figures may prove to be somewhat misleading. For example, $145 of the costs of the Neighborhood Youth Corps program is for providing supervisors for the enrollees while there is no similar cost in the Work-Study program. This is because the NYC program is designed to provide job training for its enrollees while the Work-Study programs are not.

The Vocational Education Work-Study Program, operated by the Office of Education in HEW, has an authorization of $35 million for fiscal 1970. Incidently, this authorization was enacted in October of last year (P.L. 90-576) which I think is strong evidence of the continuing regard the Congress has for this excellent program.

In order to adequately fund Work-Study without increasing the budget, I respectfully recommend that this Committee follow the same procedure it used to fund it in fiscal 1968. That is to earmark at least $10 million of the funds appropriated for the Neighborhood Youth Corps to be transferred to the Office of Education to operate the Work-Study Program. As I am sure you are aware, although the operating responsibility for the Neighborhood Youth Corps has been transferred to the Department of Labor, the funds for NYC are still appropriated to the Office of Economic Opportunity.

I have followed the progress of the Work-Study Program quite closely and have been very impressed by its accomplishments. Prior to fiscal 1968, the Work-Study program produced the solid results that should be the envy of any Federally assisted program. Today, it has been effectively dismantled and no longer exists for all practical purposes. I urge this committee to restore this valuable program so that all vocational education students can continue to receive the training necessary to become productive participants in today's economy.

NEIGHBORHOOD YOUTH CORPS

* * * * *

(b) New projects which provide meaningful work-experience and training designed to develop enrollees' maximum occupational potential and to contribute to their upward mobility.

B. ELIGIBLE PERSONS

(1) A youth may be selected for an in-school project if at the time of selection he is:

(a) Attending the ninth through twelfth grades of school, or its equivalent, or attending an elementary school but is of the same age as that of students in the ninth through twelfth grades and in need of paid work experience in order to continue in school, or

(b) Not attending school and is of the same age as that of students in the ninth through twelfth grades of school and in need of paid work-experience in order to resume and maintain school attendance.

(c) A member of a low-income family.

(2) A youth may be selected for an out-of-school project if, at the time of selection, he is 16 through 21 years of age, a member of a family with annual income below the poverty line, unemployed, out of school, and not planning to return to school, and in need of useful work-experience in public agencies or private organizations, combined where needed, with educational and training assistance, including basic literacy, counseling, and occupational training designed to assist him to develop his maximum occupational potential.

(Permission to enroll a small proportion of youth who are not members of families with incomes below the poverty line may be granted by the BWP regional director if special conditions appear to warrant such exceptions. In all cases, however, priority must be given to enrollees who meet all of the eligibility criteria.)

The purpose of the Title I-B program is primarily to assist youth who are not high school graduates.

WORK-STUDY PROGRAMS

§ 104.24 Supplement to State plan.

All work-study programs for vocational education students supported by a State's allotment of Federal funds under section 13(a) of the 1963 act shall be included in the State plan pursuant to § 104.2 of these regulations and shall be governed by all provisions contained in such plan applicable to work-study programs. As a condition for the allotment of Federal funds under section 13(a) of the 1963 act, the State board is required to include in its plan or submit to the Commissioner an amendment to the State plan containing the provisions required in § 104.25 and § 104.26. Such amendment shall be submitted and approved pursuant to § 104.2(b). (See § 104.45 for allowable expenditures of work-study programs.)

§ 104.25. Requirements of work-study program.

The State plan shall provide that a work-study program meet the following requirements:

(a) *Administration.* The work-study program will be administered by the local educational agency and made reasonably available (to the extent of available funds) to all qualified youths, in the area served by such agency, who are able to meet the requirements in paragraph (b) of this section.

(b) *Eligible students.* Employment under the work-study program will be furnished only to a student who (1) has been accepted for enrollment or, if he is already enrolled, is in good standing and in full-time attendance as a full-time student in a program which meets the standards prescribed by the State board and the local educational agency for vocational education programs under the 1963 act; (2) is in need of the earnings from such employment to commence or continue his vocational education program; and (3) is at least fifteen years of age and less than twenty-one years of age at the date of the commencement of employment and is capable in the opinion of the appropriate school authorities of maintaining good standing in his school program while employed under the work-study program.

(c) *Limitation on hours and compensation.* No student will be employed more than fifteen hours in any week during which classes in which he is enrolled are in session, or for compensation which exceeds $45 per month or $350 per academic year or its equivalent, unless the student is attending a school which is not within reasonable commuting distance from his house, in which case his compensation may not exceed $60 per month or $500 per academic year or its equivalent.

(d) *Place of employment.* Employment under work-study programs will be for the local educational agency or for some other public agency or institution (Federal, State, or local) pursuant to a written arrangement between the local educational agency and such other agency or institution, and

work so performed will be adequately supervised and coordinated and will not supplant present employees of such agency or institution who ordinarily perform such work. In those instances where employment under work-study programs is for a Federal agency or institution, the written arrangement between the local educational agency and the Federal agency or institution will state that students so employed are not Federal employees for any purpose.

TRUE MILEAGE—FOR SALE OF USED CARS

(Mr. HANSEN of Idaho asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANSEN of Idaho. Mr. Speaker, today I am introducing H.R. 11683 to require that anyone who sells or offers for sale a motor vehicle in commerce shall make a certification with respect to the accuracy of the mileage shown on the odometer.

The consuming public is the victim of the growing fraudulent practice of turning back the odometer on automobiles which are offered for sale to conceal from the prospective purchaser the true mileage. The purpose of the bill I am today introducing is to eliminate this deceptive and dishonest practice by requiring that anyone who sells or offers for sale a motor vehicle in commerce must provide to the purchaser or prospective purchaser a certificate under oath relative to the accuracy of the mileage shown on the odometer. If the odometer does not accurately reflect the mileage the vehicle has traveled, the bill requires that the certification show the reason for the inaccuracy and an estimate of the true mileage.

The enactment of this law will provide the consumer with adequate notice of the distance the automobile he is purchasing has been driven. A buyer will be in a better position to determine the value of the vehicle and to know exactly what he is getting for the price he pays.

This bill will also enhance our efforts to promote safety on the Nation's highways. If a purchaser of a used automobile has knowledge of the exact mileage, he will be much more likely to operate and maintain the vehicle accordingly. If, on the other hand, the purchaser buys an automobile which has traveled a considerable number of miles but which shows low mileage on the odometer, he will be more likely to operate the vehicle with a false sense of security and in a manner that is inconsistent with the actual or potential danger.

Mr. Speaker, a number of States have already enacted laws in various forms designed to deal with this growing problem. Because of the interstate nature of many motor vehicle sales, however, it is increasingly clear that action at the Federal level will be essential if this fraudulent practice is to be brought to a halt. The enactment of this proposed Federal odometer certification law will supplement the various State laws and thereby benefit both the buyers and sellers of motor vehicles.

In addition to the consuming public, among the chief beneficiaries will be the honest automobile dealers who refuse to deceive their customers to the mileage of the automobile being offered for sale. These honest dealers suffer an unfair disadvantage in competing with dealers who make it a practice to turn back the mileage on the odometer of automobiles being offered for sale.

Mr. Speaker, I include as a part of my remarks the text of H.R. 11683, together with two articles from Consumer Reports and a recent article from the Washington Post relating to the practice of turning back the odometers on automobiles offered for sale:

H.R. 11683

A bill to require certain certifications with respect to odometers on motor vehicles used in commerce

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That as used in this Act—

(1) The term "motor vehicle" means any mechanically propelled vehicle used on the highways principally in the transportation of passengers or property, but shall not include vehicles designed for running on tracks or rails;

(2) The term "State" includes the several States of the United States, the Commonwealth of Puerto Rico, the District of Columbia, the Virgin Islands, Guam, and American Samoa; and

(3) The term "commerce" means commerce between any State and any point outside thereof, between points within the same State through any point outside thereof, and commerce within the District of Columbia.

SEC. 2. Whoever sells or offers for sale, or imports into the United States, or introduces, delivers for introduction, transports or causes to be transported for the purpose of sale or delivery after sale, any motor vehicle usable in commerce, shall submit to each prospective purchaser and to the purchaser a certification under oath (A) that the odometer accurately states the mileage traveled by such vehicle or (B) that such odometer does not accurately state the mileage traveled by such vehicle, all of the reasons known to him why it fails to do so, and his most accurate estimate of the actual mileage traveled by such vehicle.

SEC. 3. In the case of any motor vehicle subject to this Act, whoever—

(1) fails to submit a certification as required by section 2, or

(2) certifies that the odometer accurately states the mileage traveled by such motor vehicle knowing that such odometer does not accurately state such mileage, or

(3) knowingly fails to state all of the reasons known to him why such odometer fails to accurately state the mileage traveled by such motor vehicle, or

(4) knowingly and willfully gives an inaccurate estimate of the actual mileage traveled by such motor vehicle,

shall be fined not more than $10,000 or imprisoned not more than one year, or both.

SEC. 4. Nothing in this Act shall be construed as invalidating any provision of State law which would be valid in the absence of this Act unless there is a direct and positive conflict between this Act and such provision of State law.

SEC. 5. This Act shall take effect on the 180th day after the date of its enactment.

[From the Consumer Reports, June 1968]

HOW LONG IS A USED-CAR MILE?

The prudent buyer must presume used-car dealers guilty of tampering with the mileage readings on their cars until proved innocent. A "fully reconditioned low-mileage" cream puff must be suspected of being nothing better than a car with its odometer rolled back. For there is no nationally established measurement for the mile on car lots. A used-car mile is hardly a statute mile—it's often a lot longer.

What if odometers did not lie? The prudent shopper would, of course, still have a tedious checklist of inspections and tests to perform before buying a used car (see page 412 of the 1968 Buying Guide Issue). But he *could* learn from the odometer, other things being equal, roughly how much transportation to expect from a vehicle under consideration. Whether a car has gone 25,000 or 50,000 or 75,000 miles can, after all, make a considerable difference. One might predict, for instance, that under the effects of true mileage information, prices would go up for low-mileage cars and down for high-mileage cars.

Such a prediction is proving accurate in California, one of the few states where law has come to the used-car lot. Anyone tampering with an odometer in California commits a crime. The law is being enforced, and, according to *Automotive News,* car leasing and renting companies, which sell thousands of cars on the resale market, are feeling the effects of a sharp drop in prices. The only exceptions are low-mileage models.

Prices start falling steeply, the report states, after a two-year-old car has gone 30,000 miles. Beyond that distance, it loses about $10 of value every 1000 miles.

California is now a bargain paradise for out-of-state car wholesalers. They can buy high-mileage, low-cost California cars and sell them at a good profit in other states, where retail dealers can roll back the odometers. What's good for Californians thus is not so good for their neighbors.

Across the border in Arizona, the used-car credibility gap has grown so wide that one group of car dealers recently agreed, with the official blessing of the State Attorney General's office, to reset the odometers of all used cars at zero. Dealers put stickers on the car and on the sales contract in which they disavowed any knowledge of the true mileage. But shoppers would have none of it, and as a result the practice is being dropped.

Nevertheless, California car dealers want the odometer law repealed in favor of the Arizona approach. "If [rollbacks to zero] were to become a uniform practice," wrote one industry member, "the emphasis on mileage would soon disappear. Used-car buyers would learn to look at the actual mechanical condition of a car without worrying too much about how much mileage showed on the [odometer]."

In other words, a little knowledge is dangerous. Don't give 'em any.

Motor vehicle regulations are different in each state—but a mile is a mile. What's needed is full, honest and uniform disclosure. The logical solution is a Federal odometer law at least as strong as California's.

[From the Consumer Reports, May 1969]

THE GREAT ODOMETER RAID

Last summer, 12 investigators from the Massachusetts Attorney General's Division of Consumer Protection made consumer protection history. They staged an odometer raid.

The plan of attack was simple. Working in pairs, the investigators fanned out through the Commonwealth, selected 24 new-car showrooms at random, sauntered in, flashed their badges, and said they were conducting a "routine check" of cars on display in the dealers' used-car lots. For the next several hours they inspected hundreds of used cars and pored over dealers' records

for possible evidence that odometers might have been rolled back from original trade-in mileages to lower, more salesworthy figures. Mainly on the basis of educated guesswork after comparing the odometer readings with the appearance of the cars, the investigators listed about 250 vehicles open to suspicion of odometer tampering.

The next step was to try locating the former owners of the suspect cars. About 70 per cent of the owners could not be traced at all because the dealers had purchased the cars from wholesalers, or because former owners couldn't be located. A few former owners, when located, refused to cooperate. But 70 persons did reply to the inquiry, and 20 of them said the reading on their odometers when they traded in their cars was much higher than the readings found by the inspectors. On average, between 20,000 and 30,000 miles had been subtracted. One man said his odometer reading had been pared from 90,000 to 45,000 miles.

PENANCE OF A SORT

Assistant Attorney General Robert L. Meade at length decided he had strong cases against six of the biggest newcar dealerships in his state. Massachusetts is one of four states with "little FTC laws" patterned on the antideceptive practices provisions of the Federal Trade Commission Act (the others are Washington, Vermont, and Hawaii). Acting under his state's laws, Mr. Meade succeeded, after several months of polite armtwisting, in convincing three of the dealers to sign an assurance of discontinuance. That meant, simply, that they filed in Superior Court an agreement saying they would not offer "for sale any vehicle upon which the odometer has been adjusted in any manner . . . so that it does not disclose the . . . true mileage . . ." As in consent orders filed with the FTC, assurances of discontinuance in Massachusetts are carefully worded so that the signer does not admit to having used certain specific deceptive sales practices in the past, but, nevertheless, agrees *not* to use the same deceptive practices in the future.

Those who signed were Charles Chevrolet, Inc., and The Harr Motor Co., both of Worcester, and State Plymouth, Inc., of Springfield. At this writing, the state was still negotiating with two of the other dealers. Mr. Meade took sterner action against the sixth dealer on his list, North Ford, Inc., of West Medford. Saying it had flatly refused to cooperate, he filed suit for permanent injunction against North Ford.

All things considered, the Great Odometer Raid might have been a very bitter pill, indeed, for any auto dealer to swallow had it not been for a high-level decision to sugarcoat the pill with secrecy. As far as CU has been able to learn, little news of the raid ever reached the people of Massachusetts. The Attorney General's office could have given the names of the dealers to the newspapers, but it decided not to—this time. The only excuse offered by a state official was that it would have been "unfair to ruin these guys when everyone else is doing it, too." Of course, the names of the dealers thus far cited went into public court records (where CU eventually looked them up). But by not alerting the press, the state deprived itself and the public of a most effective enforcement tool in consumer protection cases —the glare of publicity.

Nevertheless, the Massachusetts Division of Consumer Protection deserves some credit for the first organized attempt to stamp out the ancient, odious and widespread practice of odometer tampering. And, Mr. Meade assures us, it won't be the last assault on what is, regrettably, a standard operating procedure of many used-car dealers, who know perfectly well that a high-mileage car is nothing but a drag on the market.

PICKERS AND SPINNERS

Technically speaking, odometer tampering is all too easy to do. The favorite technique in the trade is called "picking" because most operators use a homemade assortment of specially shaped ice picks. With a certain degree of skill and a modest capital investment, an odometer picker earns anywhere from $3.50 to $25 a car. The procedure takes only a few minutes. The picker simply reaches into the odometer drum—after first removing the instrument panel lens or boring through a partition behind the speedometer—and manipulates the digits mechanically, usually only the ten-thousandth place. If the picker is skilled, his handiwork is rarely detectable by a used-car shopper.

With less skill but much more patience, an odometer tamperer can spin the speedometer cable with a high-speed electric motor to the desired low reading. But since it can take hours to spin off just a few thousand miles, spinning is most commonly used by the amateur.

The simplest way to falsify an odometer is by disconnecting the speedometer cable. Dealers will sometimes do that on a new car to be used as a demonstrator or to be driven cross-country to the point of sale. In California last year a fairly strict state law against odometer rollbacks was weakened by an amendment expressly permitting dealers to reset new-car odometers at zero, provided they give the buyer a statement of the true mileage. But law or no law, you can't always be certain that the mileage on the odometer of a "factory-fresh" car recounts its true history.

Wisconsin *requires* that the odometers on all used cars be reset at zero. Arizona tried that, too, then changed its mind (CONSUMER REPORTS, June 1968). And in Florida dealers are permitted, but not required, to roll odometers back to zero. The idea is fine, of course—for the dealer. He can then disavow any knowledge of a car's true mileage and still be on the side of the angels. But the car buyer is deprived of the only base he has on which to add mentally the 20,000-or-so miles the dealer has subtracted mechanically. In states where antitampering legislation is pending, the back-to-zero idea is apt to be pushed hard by the dealer lobby.

Besides California, only Delaware, Kentucky, Massachusetts and New Jersey have laws making it illegal to tamper with an odometer. Several other states, including Hawaii, Maryland and Georgia, have similar laws under consideration. Unfortunately, state laws specifically aimed at odometer rollbacks are generally regarded as difficult to enforce and are therefore rarely invoked. "In order to convict under these statutes," says Paul J. Krebs, director of New Jersey's Office of Consumer Protection, "you practically have to catch these guys in the act."

Bearing him out, Massachusetts chose not to use its criminal statute against odometer tampering to prosecute suspects in the Great Odometer Raid. Although enforcement under the state's little FTC law proved possible, the act provides for no fines to penalize violators and no redress for victimized consumers unless they can sue privately and win an award for damages. The legislature is considering an amendment with stiffer penalties, but meanwhile the most the Attorney General can do is get an injunction ordering the unrepentant violator to stop his fraudulent practices. That has more muscle than an assurance of discontinuance, since anyone in violation of a court injunction is also in contempt of court.

WHO GYPS WHOM?

Massachusetts Assistant Attorney General, Mr. Meade, while pleased at the results of his raid, asks, "Why hasn't the Federal Trade Commission itself declared odometer tampering an unfair trade practice?" He argues that the problem is, after all, interstate in scope, since so many used cars are sold to wholesalers, particularly in the South, and then auctioned off to dealers from all over the country. Therefore, the solution must be national in scope. The FTC, on the other hand, told CU the agency views odometer tampering in used cars as primarily a local rather than an interstate problem.

"We have no evidence to support the idea that it is being done by the wholesaler," said an FTC attorney. "If we did, we'd certainly investigate, but in my opinion, it's done at the retail level, the level at which the automobile is sold to an unsophisticated buyer. The wholesaler would have nothing to gain by resetting an odometer. He's certainly not going to fool the dealer, who doesn't buy on the basis of the odometer reading, anyway."

Still, he was willing to make at least a hypothetical concession: "I could visualize a dealer *requesting* the wholesaler to turn back an odometer for him, especially if it's illegal in his state, and I'm sure the wholesaler would do it. But, as I said before, we have no information on this."

Perhaps FTC doesn't, but evidence of a sort is apparently plentiful right across the Potomac River from Washington. The office of Virginia's Senator Harry F. Byrd, Jr. told CU: "The Automobile Trade Association of Virginia tells us that 90 per cent of all odometer rollbacks are done by wholesalers. They say it's a routine part of the 'reconditioning' process. Naturally, the dealer doesn't pay any attention to the odometer reading; he only buys a car on the basis of what he thinks he can sell it for. And when he buys from a wholesaler, he knows he is getting a product he can palm off with little or no risk because the former owner will be very difficult to trace."

The dealer can blame the wholesaler, and the wholesaler can blame the dealer, but it's obvious that neither could tamper with odometers on any large scale basis without the direct knowledge or the implied consent of the other. Few swindlers, after all, fall for their own swindle.

Senator Byrd has therefore taken up the cause of a Federal law against odometer tampering. The Byrd bill (S. 1185) would make odometer tampering subject to a stiff fine. It would also require used-car dealers to give their customers a statement signed by the last *private* owner of the vehicle certifying the mileage that was on the car when he sold it. Meanwhile, on the other side of the Hill, New Jersey Congressman Henry Helstoski has resubmitted his bill of last year (H.R. 4163), also prohibiting odometer tampering in interstate commerce. The chances for passage of either measure during the current session of Congress may be hard to assess, but it's not very encouraging to note that, even in the proconsumer atmosphere of the previous Congress, a bill sponsored by Senator William Proxmire to require auto manufacturers to install tamperproof odometers in all new cars died in the Senate Commerce Committee.

The need for effective legislation is obvious. Norman Polovoy, chief of the Maryland Consumer Protection Division, put it this way: "I know of no rational or reasonable justification for an automobile dealer setting the odometer back other than to try to convince the purchaser that the automobile has substantially less mileage on it than is in fact true."

According to one report, in 1967 alone Americans bought nearly 20 million used cars and paid an estimated $20 billion for them. The trade journal *Automotive News* reports that prices start falling off sharply after a car has traveled 30,000 miles; and beyond that distance, a two-year-old car loses about $10 of value for every 1000 miles on the

odometer. Assuming that only half the used cars sold in 1967 were two years old or older, and that only half of them had 20,000 miles picked or spun off their odometers, it doesn't seem unreasonable to estimate that consumers are being misled on used-car lots to the tune of $1 billion a year.

But the cost must be assessed in terms of safety as well. Even with the best of care, a car with 75,000 miles on the odometer is not the car it was at 25,000 miles. The prudent owner knows this and is less likely to take his steering or wheel bearings or exhaust system for granted. But the owner of a "low-mileage" used car may be lulled by the odometer. Until the critical moment, he may have been completely unaware that his car was dangerouly in need of repair—a menace to himself and to others.

The National Highway Safety Bureau agrees, and in 1967 it proposed a safety standard requiring tamperproof odometers on all passenger vehicles, including buses, trucks and motorcycles. The idea was assigned to an administrative pigeonhole, however.

"Other proposed safety standards had a higher priority," a bureau spokesman told CU, "but this is not to say we won't have such a standard later on."

WHAT'S TAMPERPROOF?

But at the same time, the bureau questions whether it is possible to design a really tamperproof odometer, and except for General Motors, the auto industry has yet to market anything resembling one. GM's 1969 models have odometers that cannot be spun backward. But there is no way for the used-car buyer to detect whether the mileage reading has been spun forward beyond 99,999.9 to zero and then to some youthfully low second-time-around setting. Also, in GM cars made after January 1, the odometer will exhibit telltale color separation between the numbers if it has been picked. But, a GM spokesman admits, the buyer would have to be "a knowledgeable individual" to recognize the evidence. Despite those refinements, the new GM odometer cannot therefore be described as truly tamperproof. And whatever its positive virtues, the GM odometer will be of little use to the buyer of a used *Ford, Plymouth, Ambassador, Volkswagen*, etc., or, for that matter, to the buyer of a pre-1969 GM model.

CU's automotive engineers give a qualified Yes to the question of whether a tamperproof odometer is feasible. While anything Yankee know-how can put together, Yankee know-how can probably take apart, our engineers say a much less accessible odometer unit, one sealed in plastic perhaps, is certainly possible. But for the unit to be completely tamperproof, the speedometer cable would have to be sealed in two places—where it connects with the speedometer head and at either the transmission or the front wheel connection, depending on the car. (Some car rental companies seal odometers, for obvious reasons, and a spokesman for one of the biggest says sealing is highly effective.)

What about repairs? Would it be possible to fix a broken but tamperproof odometer or install a new one without breaking the seal? Probably not, but mechanics could be required to reseal the unit and verify the original mileage. Enforcement might be difficult—but no more impossible than any other weights-and-measures regulation. If it is important to protect the consumer from the butcher who cheats a few cents on the hamburger, it's at least as important to protect him from the odometer "artist" who chisels a few hundred dollars on a used car.

TITLE LAWS

Title registration laws could help, too, and 41 states already have them. Not only are they an effective weapon against auto theft, they also assure the car owner a clear title to his automobile by requiring that the chain of ownership be established to the satisfaction of motor vehicle authorities. (And possibly the mileage to the satisfaction of the consumer; see box above.) Such a title law is pending in Massachusetts, but the Massachusetts Consumers Council further proposes that the identity of the former owner become a part of the certificate of title the state gives the new owner. But even if the measure sailed through the Massachusetts legislature, it would be truly effective only if most other states passed similar laws.

It will be difficult but not impossible to make the used-car mile more nearly approximate the statute mile. For example, auto makers could develop better odometers; the National Highway Safety Bureau could require them! the FTC could compare notes with Sen. Byrd; states could pass uniform title laws; and, above all, Congress could pass meaningful antitampering legislation.

Meanwhile, there is something to be learned from Assistant Attorney General Meade's historic venture: Even weak laws *can* be enforced. His Great Odometer Raid certainly hasn't stamped out odometer tampering, but it has made the practice a good deal riskier in Massachusetts.

[From the Washington Post, May 13, 1969]

MARYLAND AFFAIRS: ASSEMBLY LAGS ON TRUTH-IN-CAR-MILEAGE BILLS

(By Peter A. Jay)

The Maryland General Assembly elected in 1966 has never been shy about citing its own accomplishments, but its self-admiration has glowed with a particular warmth in contemplation of its consumer protection record.

One nationwide consumer complaint, the turning-back of used-car odometers by dealers, has been dropped by the legislators like a red hot sparkplug. New attacks on the practice appear unlikely.

In its first session, its ire kindled by tales of buyers defrauded, the 1966–70 Asssembly created a special Office of Consumer Protection under the Maryland Attorney General.

Yet when the division's new head, Norman Polovoy, sought legislation in 1968 that would have outlawed odometer tampering, the Assembly turned chilly.

Consumers Union, the nonprofit research organization that publishes Consumer Reports, estimates that used-car prices are artificially raised by as much as $1 billion a year nationally by altered odometers.

The bill that would have outlawed odometer tampering and a measure that would have required that the actual mileage at the time of sale be recorded on every vehicle's title, were introduced in the 1968 session by Del. Arthur Dorman (D-Prince George's).

Although the bills were backed by Polovoy, they came under massive attack from the powerful automobile dealers' lobby and were never enacted. No one could be found to reintroduce them this year, Polovoy's office says, and prospects for 1970—an election year—look dim indeed.

Dorman says the reason he gave up on his bill this year was a 1968 Baltimore County court decision that held that if the buyer of a used car could prove that the odometer reading was altered, he had grounds for a civil suit.

"We figured that took care of the problem," Dorman said. "We haven't been getting more complaints about it." If legislation is still needed, he said, "Polovoy and his people have been lax" if pressing harder for it.

John S. Ruth, Polovoy's chief investigator, says the complaints keep coming in. Many of them, he says, come from people who buy "new" cars and discover the vehicles have been used as demonstrators, then had their odometers set back.

Although he is less than sanguine about his chances, Ruth hopes he can find a legislator who will reintroduce Dorman's two bills and get them through the General Assembly next year.

According to a Consumers Union survey, only seven states have any sort of odometer legislation on the books. One of them, Wisconsin, has the odd requirement that all used cars have their odometers reset to zero before they can be sold.

In states where anti-tampering bills are considered, Consumers Union says, dealers' groups invariably offer a Wisconsin-type measure as a more palatable alternative.

It happened that way in Maryland in 1968. When, for a time, Dorman's bill appeared to be moving along in the House, Del. Robert Banning (D-Prince George's) dumped in a "zero miles" measure. Banning is a Hyattsville automobile dealer.

Odometers could be left untouched on certain cars, under Banning's unsuccessful bill, if the last private owner of the vehicle certified in writing the mileage reading was correct.

"It was a joke," says Ruth, "If the dealer had a creampuff, he could leave the mileage alone. If he had a real dog, he could legally set it back to zero."

Because Maryland Attorney General Francis B. Burch, Ruth's and Polovoy's boss, favors the Wisconsin-type of measure, it's a good bet that if any bill is pushed hard at the 1970 General Assembly it will be that one.

In the Washington area, neither the District of Columbia nor Virginia has a law against tampering with odometers. Sen. Harry F. Byrd Jr. (D-Va.) is backing a bill to attack the practice at the Federal level.

Dealers' groups contend the practice of setting back odometers is justified both morally and economically. By reconditioning used cars before selling them, dealers contend they "put more miles into" the vehicles and are entitled to spin a few miles off the odometer.

The practice is easy enough. According to a flier circulated by the Speedy Instrument Service of Waterville, Conn., with the proper tools and instruction odometers can be reset "in 10 seconds to 2 minutes."

It's a well-established art, most garage owners agree, and one not likely to be ended legislatively in the next few years, either in Maryland or the Nation.

ANTICIPATED LEGISLATION CALLING FOR EXTENSION OF INCOME TAX SURCHARGE

(Mr. HENDERSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HENDERSON. Mr. Speaker, in the weeks ahead, the House will be asked to vote on major tax legislation which it is anticipated will call for an extension of the income tax surcharge in some form, and also repeal of the 7-percent investment credit.

Both of these proposals would have a major impact on the economy. Repeal of the investment credit is strongly opposed by businessmen throughout the country, including my own State of North Carolina. On the other hand, repeal is strongly advocated by the administration and many in the Congress. Much of the opposition to repeal comes

from manufacturing industry. An excellent case for retention of the 7-percent investment credit was made in the statement filed with the Committee on Ways and Means by the National Association of Manufacturers on May 23, 1969. I include this statement in my remarks at this point, so that it may be available to all Members of the House:

STATEMENT OF THE NATIONAL ASSOCIATION OF MANUFACTURERS ON THE EXTENSION OF THE INCOME TAX SURCHARGE AND REPEAL OF THE INVESTMENT CREDIT SUBMITTED TO THE COMMITTEE ON WAYS AND MEANS U.S. HOUSE OF REPRESENTATIVES, MAY 23, 1969

The National Association of Manufacturers has been for some time deeply concerned with the drift and deterioration in fiscal affairs. In July of 1967 the Association endorsed imposition of a tax surcharge, provided it was clearly labeled as "temporary," and provided that it was accompanied by a definitive program to limit the future course and direction of government spending. Furthermore, the NAM believed that, while the emergency lasted no fundamental changes in the tax structure should be made.

The NAM was thus among the first of business organizations to back this unpopular course and it was the first of the public witnesses to testify in this regard before the Committee on Ways and Means.

As recently as March of this year, the NAM was prepared to endorse a continuation of the surcharge for an additional year, provided it was accompanied by effective spending limitations as in the 1968 legislation. It believed, however, that this should be its only extension. The government would then have had more than two years to put its fiscal house in order, and the growth in absolute revenues together with tight expenditure controls should have sufficed to permit the surcharge to expire.

The Association has been forced to reappraise its position in the light of more recent developments. The proposal for repeal of the investment credit injects a new and unexepected element into this already complicated fiscal situation.

We are opposed to such repeal. In what follows we will set forth, first our general views on current fiscal action and, then, our detailed reasons for opposing repeal of the credit.

THE FISCAL 1970 BUDGET SITUATION

The occasion for these hearings is concern over the prospective budgetary situation in the fiscal year 1970, which will begin only a few weeks from now. The Administration's spending plans for that year would total $192.9 billion. If the Congress takes no tax action receipts would total an estimated $188.9 billion.

The Administration contends that the resulting $4.0 billion deficit would be entirely inappropriate during this period of inflation. The NAM agrees with that conclusion.

The Association does not believe, however, that the nation is ready or willing to accept a permanently higher level of taxation as a means of supporting a permanently higher level of government expenditures. The widespread unpopularity of the present 10% surcharge is convincing evidence of this.

Therefore, the ultimate solution must be sought, not in tax action, but in the control of spending. Whatever tax action Congress takes to meet the immediate problems of fiscal 1970 should be transitional in nature as we work toward that ultimate solution.

The more immediate concern is with the short run—the fiscal year 1970. But even here the only really satisfactory solution lies in further curtailment of spending. The NAM believes that, given sufficient determination, total outlays for the coming fiscal year can be reduced well below the proposed total of $192.9 billion. Such efforts may be painful but the American people will find the alternative of additional taxes even more painful.

The problem of reducing outlays in fiscal 1970 must be left to the wisdom of Congress and the Administration. Should the Congress, when the best possible effort has been made, still find that a deficit is in prospect in fiscal 1970, the NAM will support emergency and temporary tax action to close the gap.

It should, however, be strictly emergency and temporary tax action, and involve no permanent increases in anyone's tax burden. This is one of our reasons for opposing the repeal of the investment tax credit.

The simplest and best form of tax action to meet this kind of emergency is an across-the-board tax surcharge such as was enacted a year ago. The Association will support a one-year extension of the surcharge, if it proves necessary after a maximum effort at government economy has been made, provided it is not coupled with repeal of the investment credit.

The investment tax credit should be continued in its present form. Aside from the credit's usefulness as an economic device, which may be more apparent in the near future than in the immediate present, its repeal would involve an unjustifiable transfer of additional burdens to business taxpayers. Repeal of the credit, in its overall effect on tax burdens, is roughly equivalent to an additional 7% surcharge on corporate income taxes. If someone proposed an increase in corporate taxes in just that form, we doubt that the Congress would give it serious consideration.

This would be a *permanent* addition to the tax liability of business enterprises. It is too high a price to pay for a reduction, for six months, in the rate of the existing surcharge from 10% to 5%.

Repeal of the investment credit contributes only $1.5 billion toward the solution of the transitional budgetary problem in fiscal 1970. It would impose an additional annual burden of twice that amount on business taxpayers for the indefinite future. The bargain does not look like a good one, either for business or for the nation.

The NAM cannot support an extension of the surcharge which is coupled with a repeal of the investment credit. The combination would be an indefensible tax penalty on the enterprises which provide the bulk of the jobs and the output of our economy.

LEGISLATIVE HISTORY OF THE INVESTMENT CREDIT

Throughout its brief history, there has been a tendency in some quarters to consider the 7% investment credit as a "subsidy" to business—in the sense that business was receiving a special privilege not available to others. Anticipation of this attitude was one of the reasons that business did not wholeheartedly endorse the credit in the first place. Many organizations, including the NAM, would have preferred a lower corporate income tax rate to stimulate capital formation and long-term growth. However, industry was assured that the credit was to be a permanent feature of depreciation reform to help counter inflation of equipment costs and to help equate our system with liberal depreciation practices overseas.

Former Secretary of the Treasury Douglas Dillon said in early 1962:

"I consider our program of depreciation reform—including the investment credit—a central part of our economic policy . . . The achievement of this objective . . . requires both the investment tax credit and the faster write-offs that would be permitted under depreciation policies, which, in broader recognition of the increasing importance of obsolescence in the postwar world, would permit American firms to assume shorter tax lives for depreciable property."

The Revenue Act of 1964—one of the most important single domestic economic measures of the last twenty years—reduced individual income tax rates by an average approximating 20%, about two-thirds of the reduction becoming effective in 1964 with the remainder in 1965. Corporation rates, however, were not reduced 20%—they were reduced less than 8%, specifically from 52% to 50% for the year 1964 and to 48% for 1965 and subsequent years.

The Committee Reports accompanying the Revenue Act of 1964 explained the disproportionate rate reductions as between individuals and corporations, pointing out that in 1962, corporations had been the principal "beneficiaries" of the investment tax credit enacted as part of the Revenue Act of 1962 and that depreciation reform, initiated in that year as an administrative measure, had also largely benefited corporations.

The House Committee Report No. 749, September 13, 1963, p. 27, stated:

"This tax cut for corporations, when fully effective, will amount to $2.2 billion a year. It should, of course, be viewed in connection with the reduction provided by Congress last year in the form of an investment credit and the reform provided last year in the depreciation guidelines. These taken, together, provide corporations with a tax reduction of approximately $4½ billion."

And the Senate Committee Report No. 830, January 18, 1964, p. 8, stated:

"This bill provides a balanced reduction between individuals and business firms. In this respect, the bill is much the same as the bill that came from the House. When fully effective, the bill will reduce individual income taxes by $9.2 billion and will reduce corporate taxes by about $2.4 billion. These figures must be evaluated along with the effective tax reduction of 1962 through the investment credit and depreciation reform, the largest share of which went to corporations. Taking the 1962 and 1964 programs together, the share of the reduction going to individuals is about two-thirds and to corporations about one-third, which is approximately the present relative shares of individuals and corporations in income tax liabilities."

If a rate reduction proportionate to that in individual rates has been applied to the then existing corporate rate of 52%, reducing it to 42%, industry undoubtedly would have preferred this over the 7% investment credit.

Such was not the case. Instead, the package of depreciation reform and a much lesser tax reduction for corporations was adopted. Thus the investment credit could hardly be considered an extra bonus to industry when it was clearly a part of a package designed to arrive at a fair distribution of tax reduction between individuals and corporations. In its attempt to link reduction of the surcharge to repeal of the investment credit, the Administration, has neglected to bring out these facts—facts which seriously challenge the grounds for offering general tax relief by eliminating the investment credit.

In point of fact, even the old 52% corporate rate was supposed to be "temporary." It had been increased from 47% to 52% in the Revenue Act of 1951 as part of the fiscal measures adopted at that time in connection with financing the Korean War effort. It was scheduled to revert to 47% in 1954 but, although individual rates were reduced at that time, a series of Tax Rate Extension Acts annually continued the corporate rate at 52% through 1963.

The depreciation reform instituted in 1962 by administrative action was long overdue.

For almost twenty years prior thereto, industry had been obliged to assign unrealistically long lives to depreciable property. However, depreciation allowances for tax purposes are not the equivalent of rate reductions. The taxpayer is entitled to deduct his depreciation basis only once and, therefore, more liberal allowances in the earlier years must be considered a factor affecting the timing of cash-flow rather than a true tax reduction.

Moreover, the immediate cash-flow improvement that resulted from the 1962 changes in depreciation policy was significantly offset by the provisions in the 1964 and 1966 Acts that accelerated corporate payments for estimated tax. In fact, the nominal reduction in corporate tax rates between 1964 and 1968 was effectively wiped out by the acceleration in payments.

It is now proposed to repeal the 7% investment tax credit permanently (as distinguished from its suspension and subsequent reinstatement in 1966–1967) and this is offered as a form of offset to a proposal to reduce the surcharge rate from 10% to 5% effective next January 1st. The two are quite dissimilar.

The entire history of the investment tax credit supports the concept that it was intended as and should be a permanent part of the tax system. The surcharge, of course, was always proposed and intended as a temporary measure to tide the nation through a period of fiscal stress, and taxpayers were led to expect its termination after a relatively short time period. Thus, if the two items are viewed as partial offsets, the values are greatly one-sided. A reduction of a temporary tax, scheduled to expire shortly in any event, cannot be equated with the removal of a permanent incentive in the tax system.

ECONOMICS OF THE INVESTMENT CREDIT

Repeal of the 7% investment credit has been proposed on the grounds that: one, such action is necessary to combat inflation; and two, national priorities require the freeing of federal funds involved for other and presumably more pressing needs. We find both of these arguments unconvincing. But because they figure prominently in both the public discussion of, and legislative consideration of, the fate of the credit, we will treat them in detail.

BUSINESS INVESTMENT AND INFLATION

The Administration, apparently, does have some doubts on this point. In fact, members of the Council of Economic Advisers publicly have stated that the package of surcharge reduction and investment credit repeal would *not* have a significant impact on aggregate demand or inflationary trends in the economy. Nevertheless, much of the consideration in Congress, as evidenced by the majority report of the Joint Economic Committee, has centered on the alleged inflationary impact of the investment credit. According to that report, "First priority in tax reform should be given to repeal of the 7% investment tax credit as a significant step toward reducing inflation."

The NAM will concede to no one a greater concern over the problems of inflation today. We consistently have supported sound public policies to moderate inflationary trends in the economy, including the 10% surcharge on corporate and individual income taxes enacted last year. A significant part of our program activities have been designed specifically to alert the public to the dangers of inflation and inflationary psychology.

We fully recognize that, in the circumstances of 1969, with the labor supply stretched to its tightest point in eighteen years and the economy still reeling from the effects of past excesses of monetary and fiscal policies, any increase in spending, whether from the business, consumer, or government sectors, is to some extent "inflationary." We simply do not have the slack in our resources to take up additional demand pressures without some overheating.

Does this justify removing a part of the basic tax structure designed to make the economy more productive and competitive? We think not. Strictly from the point of view of controlling inflation, repeal of the credit could be self-defeating in the short run and have very dangerous consequences for the long run.

There is substantial agreement that changing the basic tax structure makes for poor stabilization policy. As recently as last March, Secretary of the Treasury Kennedy publicly stated: "We have no plans for tinkering with the investment tax credit. Congress intended the credit to be part of the regular tax system and not a device for stimulating or slowing the economy." The experience with the 1966–1967 suspension of the credit clearly demonstrated the wisdom of this approach.

Now the call is for *repeal* not suspension. In the minds of at least some of the advocates of repeal, the objective is countering the present inflation. To the extent that this is the objective, we would be repealing the credit in response to the same sort of economic signals that were given off at the time of the suspension in 1966—signals which later proved to have been misleading.

It is true that the Administration, in proposing repeal, maintains that it is guided by long-term considerations of national priorities, rather than the need for current anti-inflationary action. It is unlikely, however, that the Administration would have proposed repeal at this time if surveys of capital spending intentions had indicated a decline, rather than a 14% rise, in plant and equipment spending during this year. Thus realistically the case for repeal of the credit is based on the projection of a continuing rise in capital spending.

It may well be that the 14% "estimated" increase in capital spending could not be realized this year whether or not the investment credit is retained. The condition of the credit markets has deteriorated to the extent that many investment projects may have to be postponed or cancelled. As Economist William Peterson of U.S. Steel put it, "Statistical estimates of short-term economic activity are grossly insufficient grounds for major long-term changes in tax policy."

It is reasonable to assume that projects on which there are firm commitments, at this time, would go forward regardless of the availability or non-availability of the credit. But there is also the problem of lags between investment decisions and the full impact of those decisions on production and employment. As Senator Proxmire (D-Wis.) Vice Chairman of the Joint Economic Committee, pointed out recently:

". . . there is a technical lag of at least 12 months on the average between the time the investment decision is made and the plant or equipment is in the full flood of being produced. This lag was well documented by the Treasury in 1966 when suspension of the investment credit was being considered. Because of this lag, repeal of the investment credit this spring would not seriously affect investment until the spring of 1970."

Who is to say that a disincentive to investment would be appropriate a year from now even if it is conceded that the pace of capital spending should diminish at this particular time? Already there are reports that the Administration may feel it necessary in six months' time to offer some substitute incentive, perhaps in the form of a liberalized depreciation allowance. This clearly suggests that what is being labeled as repeal could in effect be another suspension, entailing all the dislocations with which we are so familiar.

Looking at the longer term, it cannot be over-emphasized that new investment in capital equipment is necessary not only to expand capacity, but to modernize it, and, therefore, to *ease* pressures on costs and prices. In fact, of course, the ultimate anti-inflationary weapon of the U.S. economy is its productivity, which must be maintained and enhanced to counter the now deeply embedded elements of inflation in our economic structure. More efficient plant and equipment and a more productive economy are particularly crucial in view of the full or near-full employment conditions that we have had since the mid-1960's with all their implications for labor costs.

The airline industry affords a clear illustration of the counter-inflationary effects of capital outlays, as stimulated by the investment credit. According to Internal Revenue Service figures, that industry has experienced the greatest reduction in its tax burden due to the investment credit. It is interesting to note that since the inception of the investment credit in 1962, capital expenditures of major U.S. airlines have more than quadrupled while the average fare per passenger mile has actually declined.

For manufacturing as a whole, prices of both durable and non-durable goods, particularly the latter, have lagged well behind the rise in over-all consumer prices over this same period, and, in fact, the prices of manufactured goods have risen only about a third as much as hourly wage rates over the same period. This could not have been the case without the substantial investments in new equipment since 1962.

Over an even relatively short span of years, capital spending for more efficient productive facilities is a *deflationary* rather than an inflationary force.

THE MATTER OF PRIORITIES

Repeal of the credit has been urged on the grounds that attention must be given to other "priorities." Yet all economic objectives depend on the *real* growth, productivity and competitive strength of the economy. The rate of business fixed investment has been relatively high since 1962 and, concurrently, the performance of the economy in terms of real growth has been relatively good. Most observers assign to the investment credit a significant, although not entirely measurable, role in this expansion. In short, the credit has worked toward fulfilling one of its important objectives—to raise productivity.

An allied objective was to make the economy more competitive internationally and we have seen progress towards this in some areas. However, because of a number of factors, including the acceleration of inflation over the last two years, our over-all balance-of-trade position has deteriorated drastically. *If ever there was a clear and present need for measures which improve our competitive stance abroad, it is right now.* This must be a prime priority for economic policy. While the Administration proposes to remove the 7% investment credit, foreign competitors will continue to utilize considerably more liberal investment incentives and, of course, enjoy considerably lower hourly employment costs.

It is very difficult to view the investment credit as a substitute for other priorities. If such a priority is the war on poverty, consider that, in the view of the President's own advisor on domestic affairs, Dr. Arthur Burns, the real growth of the economy has done more for employing and raising the living standards of the American poor than all the government poverty programs put together. If such a priority is conservation

of our environment, consider the huge investment being made in pollution control facilities spurred in part by the investment credit. New industrial plants have such facilities designed into them at the drawing board stage and as older capacity industrial plant is retired and replaced by modern manufacturing facilities, significant progress is being made by industry towards pollution control.

As the investment credit has performed valuable functions in promoting stable economic growth, employment, our international trade, and other objectives, the rationale for its repeal remains a mystery. Certainly, it should not be disposed of ligthly.

The 7% investment credit is essentially a reduction of the adverse effect of the corporate income tax on capital formation. With the credit remaining there would still be great need to assure more adequate capital supply in the 1970's. Without it this need would be magnified.

Anyone who has even casual knowledge of interest rate trends today can appreciate the fact of the worsening capital shortage in this country and, indeed, world-wide. If the private sector is to continue to provide the means for economic advancement, not to mention the additional roles it has assumed in attacking various social problems, *it must have the capital resources to do the job and a more favorable public policy towards these resources.* Repeal of the investment credit would be a step backwards.

SHUT OFF FEDERAL TAXPAYERS' FUNDS TO ANY INSTITUTION OF HIGHER LEARNING WHICH FAILS TO TAKE IMMEDIATE ACTION AGAINST STUDENT RIOTERS AND ANARCHISTS

(Mr. CHAPPELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CHAPPELL. Mr. Speaker, I yesterday introduced a bill which I must confess gave me a great deal of pain to introduce.

This bill seeks to shut off Federal taxpayers' funds to any institution of higher learning which fails to take immediate action against student rioters and anarchists.

I say this bill pains me. It does for this reason. The time has come, I am sad to say, when some college administrators seem almost totally unwilling to take the kind of effective action which would bring an end to this kind of activity on the college campus.

Therefore, much as it concerns me, it seems apparent the only alternative for this body to take is to cease the flow of Federal taxpayers' money to those institutions where, either by inaction, or, in some cases, by actual participation, the college officials in a sense condone the type of terrorist activity which in the current academic year has hit more than 200 of our college campuses in almost every State in the Union and certainly in my own State of Florida. In 1967–68, there was a total of 38,911 participants in demonstrations on college campuses. A total of 417 arrests resulted.

Property damage has run to $2.2 million and in this academic year the loss in academic pursuits caused by this activity may never be measured accurately.

In this recent statement concerning campus disorders, President Nixon said, and I quote:

When we reach the point where students, in the name of dissent and in the name of change terrorize other students and faculty members, when they rifle files, when they engage in violence, when they carry guns and knives in the classrooms, then I say it is time for faculties, boards of trustees and school administrators to have the backbone to stand up against this kind of situation.

With this, I agree. And there is something which this body can do to bolster the backbone of a few administrators! Shut off Federal taxpayers' money to them.

It is inconceivable to me that while these students roam a few campuses irrespective of law and regulation, while they advocate the overthrow of this Nation and its institutions, that the taxpayers of the country help pay the bill.

It is time for an end to anarchy by acquiescence. It is time this House of the Congress took stock of the status of this Nation's colleges. Lip service is not the answer. Federal control of education is not the answer.

The answer is strict enforcement of laws and regulations by those college administrators who are on the scene. If they choose not to enforce the laws, then they must face their own consciences and the legislative bodies of their respective States in addition to the alumni leaders of their institutions.

But at the same time, I do not believe this Congress can allow the further expenditure of public monies to foster the overthrow of the system which built the college.

I therefore ask support of this bill or a similar bill as an expression on the part of this Congress that anarchy in the name of freedom, and destruction in the guise of construction, will not be financed or tolerated by the taxpayers of this Nation.

WATER BANK ACT

(Mr. KLEPPE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KLEPPE. Mr. Speaker, today, Senators MILTON R. YOUNG and QUENTIN N. BURDICK of North Dakota and my colleague from North Dakota, Congressman MARK ANDREWS, and myself have joined in the sponsorship and introduction of legislation to provide a Water Bank Act. This bill is the product of the joint efforts of the North Dakota Farmers Union, North Dakota Farm Bureau, North Dakota Stockmen's Association, North Dakota Wildlife Federation, North Dakota Water Users, The Garrison Diversion Conservancy District, North Dakota Durum Growers Association, and the North Dakota Association of Soil Conservation Districts.

They realize steps must be taken now to resolve differences between farm and wildlife interests over the constant and increasing drainage of wetlands. On the one hand we see farmers experiencing a constant or decreasing return for his efforts while his taxes and cost of production and living increase. He must, out of necessity, attempt to produce more with his resources and this often means he must make better use of his land. Thus, we see a constant and increasing effort to drain the wetlands of this Nation. In North Dakota alone, almost 45,000 acres of wetlands are drained each year, and its effectiveness is seen each year in the form of increased agricultural production.

On the other hand, North Dakota is producing annually another very important resource, wildlife. Wetlands across North Dakota and many other States serve as nesting areas for many species of migratory waterfowl. The future of these species is now in jeopardy because the economic necessities of man dictate the drainage of these nesting areas. The farmer and rancher, more than anyone else, realizes this tragedy since he sees it happen first hand and has taken the financial burden of preserving this resource by not draining his wetlands. But, as the economic squeeze continues, he must relent.

Thus, we propose this water bank legislation to place the responsibility nationally for the preservation of our wetlands by providing the farmer with an economic alternative to drainage. Under the legislation, landowners could enter into contracts with the Federal Government to limit the use of wetlands and to leave them in their present condition.

Under a 10-year contract, the landowner would designate wetland areas on his farm which would not be drained or otherwise altered so as to affect their value as wetlands. In return, the landowner would receive payments based on the productive value of the land.

The farmer would have use and nonuse options. Under the former, he would continue to utilize the land for farm operations, although he would agree to refrain from any drainage or filling operations on the acreage.

Under the nonuse option, no farm operations would be undertaken on the land.

The program and payments under it would be administered by the Department of Agriculture's Agriculture Stabilization and Conservation Service.

When looking at this legislation, I think it is important to note the unanimity of opinion of the organizations involved. Whenever that takes place I am convinced of the merit of the proposed legislation.

GREATER MILITARY RESTRAINT MUST BE SHOWN IN VIETNAM

(Mr. TIERNAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. TIERNAN. Mr. Speaker, many of us in the Congress have become increasingly concerned with the continuing level of violence in South Vietnam. The death toll within the last few weeks has risen appreciably.

Much has been said by the administration concerning the fact that we can-

not reduce our combat deaths in Vietnam by showing greater military restraint. I feel that we can.

This week Americans will celebrate Memorial Day. For 35,000 American families Memorial Day has special meaning, for their sons have died in a conflict whose aims are questionable, whose toll is senseless. In 1 week alone—May 11 to the 18th—430 Americans lost their lives. They died while people talked in Paris, while people talked in the Pentagon, and while people talked in the Congress. They died less than 2 weeks after President Nixon announced that we are not fighting in Vietnam for a military victory, for military bases, for any military ties with Vietnam in the future, or even for a democratic form of government in South Vietnam. They died 1 week before the President announced his intentions to meet with South Vietnamese President Thieu at Midway. They died in time to be honored this year on Memorial Day. How many more will be honored next year?

I sincerely believe that President Nixon wants only to end our involvement in this tragic chapter in American history. I also believe that while we are negotiating an end to our involvement not one American life should be needlessly sacrificed. In order to assure this, I urge President Nixon to immediately rescind the orders of last fall to General Abrams "to keep maximum pressure on the enemy on the ground."

It is frustrating to see that, while we negotiate, the number of our offensives is up, the number of our enemy contacts is up, and our casualties are up. We have endured countless numbers of military offensives. They have, we read, resulted in many "gallant victories for U.S. troops." They have also resulted in 35,265 dead, with an average age of 20 years, thousands of wounded, and hundreds of permanently maimed men.

It is now time for a different offensive—a peace offensive. An offensive designed to reduce the number of casualties, designed to reduce our active participation in a conflict we are now trying to extricate ourselves from. The components of this offensive are the immediate withdrawal of at least 50,000 American troops; an end to all search and destroy missions and other military offensives involving the use of U.S. troops; the immediate redeployment of our military units to strategic enclaves along the coastal perimeters of South Vietnam; and the use of American air power in South Vietnam to coincide with the actions of South Vietnamese ground troops.

These steps will, I believe, create new and lasting initiatives toward peace. They will make it clearly evident to all nations where our intentions really are. They will be solid evidence of the fact, made clear by the President, that we do not seek a military victory in South Vietnam, but that we seek only peace. Many, of course, will ridicule such a proposal. They will state that we have a moral obligation, a commitment to South Vietnam. To them I say that we also have a moral obligation, a commitment, to mankind. If we can put men on the moon, then we should be able to end war and all of the suffering and hardships contingent to it here on earth.

To those who say it is unpatriotic to question our involvement in Vietnam, our role in the world, I say it is unpatriotic not to question it. We are only 6 percent of the world's population. We are neither omnipotent or omniscient. We cannot impose our will on the other 94 percent of mankind. We cannot right every wrong or reverse each adversity. There cannot be an American solution to every problem. How can we solve the problems of Vietnam, Indonesia, or Czechoslovakia if we cannot first remedy the ills of Chicago, Los Angeles, or New York? How can we ask young men to die and then tell them they cannot vote? How can we feed the multitudes abroad while living with our own hungry? How can we condemn students on campuses while we are ravaging countrysides?

We are a great and powerful Nation but we must begin to understand the limitations of power. President Kennedy once said:

> The men who create power make an indispensable contribution to the nation's greatness, but the men who question power make a contribution just as indispensable.

For several years now, soldiers and statesmen alike have discussed Vietnam in terms of the proper usage of our power—military and diplomatic. But on Memorial Day, 35,000 American families will discuss Vietnam in terms of a son, a husband, a father who is gone forever. Their discussion of the war is in much more meaningful terms—those of life and death. Is life so cheap that we can ignore these facts? How long can we continue to gamble with men's lives? The lines of the poet could well be applied to those who have died in Vietnam:

> I gave my life for freedom—this I know:
> For those who bade me fight had told me so.

Khesanh, Danang, the DMZ, and Hamburger Hill will, in the years ahead, be gallant but gruesome additions to war's hall of fame. The faces of the dead will be forgotten by all but those who loved them. We must ask ourselves as parents, as Americans, how long can we continue to let this tragic waste go on?

We have proven the credibility of our power only to unmask the illusion of our ominiscience. We have killed thousands of enemy troops. Our weapons and our soldiers have successfully met the test. But who is the real victim of this war? Is it our country, poisoned and torn by dissent and violence, or is it only 35,000 families for whom the war has reached home via a telegram from the Pentagon? Or is it the men who come home—forever scarred, physically or mentally? War has many victims. The casualty lists do not contain the death of a spirit, the demise of national pride. This is a difficult thing to pinpoint, but deep within the American psyche, I feel we have suffered the wounds of Vietnam collectively as a nation.

On this Memorial Day, while honoring the dead, we must give much more thought to what this war means in the individual terms of life and death. Is there a more precious gift than life itself or a more tragic extension of life than death? For a young boy in Vietnam, life is but the shadow of death and the dead are shadows of the living.

The promise of America for our children is not an infantryman's rifle, it is not the horror of war. It has been said that the "youth of a Nation are the trustees of posterity." How many of our children and theirs will have their posterity affected, their lives scarred, by a war that they did not start, that we seem unable to end? How many more fathers will never see their children, how many mothers, their sons? How many more men will be denied the chance to complete the process of growth that is life itself? The skills of life come so slowly, but the emptiness of death comes quickly.

The history of our involvement in Vietnam is replete with errors of judgment on all sides, mine included. We have, I think, begun to recognize many of these mistakes. But our tragedy has been that we learn so little and forget so much.

This year, let us not forget the sacrifices that thousands of gallant men have made for our country, but also let us try to learn or understand that America must stand for justice, compassion, for peace. Our obligation to mankind should be more important than our ego. As Camus wrote:

> I would like to be able to love my country and still love justice.

We must, in God's name, for our sakes and those of our children, end the war.

STUDY OF THE OIL SITUATION MUST BE CARRIED OUT IN A SPIRIT OF REALISM

(Mr. BUSH asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BUSH. Mr. Speaker, Washington is a complete city, within which you hear many amazing things—from the astute to the absurd.

While the climate is conducive to sober and intelligent reasoning, so is it also to clamorous emotionalism. In the case of the oil import program, it is the latter aspect that currently prevails.

I would like to cite a particular case in illustration: Recently there was some allegedly serious testimony before a Senate committee suggesting that if it were not for the oil import program there would have been no massive blowout such as occurred off the Santa Barbara coast. That is a sample of what happens when emotionalism takes over the function of reason.

But there was more: this testimony advanced the theory that if we were not unduly protecting our high cost production in this country, the oil companies would not have to be pursuing—at an extra cost—marginal production offshore. In other words, if we had a lot of cheap foreign oil available, no oil company would have to turn to the expensive offshore areas for drilling, and thus there never would have been a troublesome blowout. All of this would be rather amusing if it were not so serious.

The proponents of a weaker oil import program seem totally unwilling to look at the world problems as they are. The obvious turmoil in the Middle East escapes the concern of those who attack the oil import program as merely a gimmick to perpetuate the selfish self-interest of the major oil companies and of the rich independents.

I must confess that the emotional climate created by any discussions of oil problems on Capitol Hill disturbs me deeply. It is very difficult to debate on a factual basis as my committee—the Ways and Means Committee—considers the various questions pertaining to tax reform. But especially the oil import issue is being clouded by wild and fantastic emotionalism.

Independent operators and companies alike recently gave testimony that revealed serious shortages of the national gas supply, decline in the number of wells drilled, dwindling reserves and declining figures in the ratio of reserves to production. The seriousness of this testimony was never challenged—never questioned. But it seemingly fell on deaf ears; the only result has been a highly vocal, emotional response—an argument that in this day and age of high tax burdens, oil is victimizing the American people.

We do not have to go back very far in our history to recall a time when our allies frantically turned to us for support of their needs in oil. The two Suez crises brought home to our allies the fact that the free world could not risk a dependence on Middle East oil. And yet, right here in our own country, critics of the oil import program are prepared to overlook altogether our basic national security requirements. They are simply unwillingly to face the fact that certain import controls are essentially if we are to have a strong domestic oil industry.

I would especially like to clarify one point. I feel that today there is plenty of justification for tax reform. The American taxpayer is overburdened and cries for relief. I also feel there is plenty of room to consider ways of improving the oil import program but I think these matters should be decided on the basis of facts—not by hysterical appeals to emotion.

I am hopeful that the study of the oil situation ordered by the administration will be carried out in a spirit of scrupulous realism, and I am hopeful that the bleat of the demagog will be muted, thus leaving us finally with nothing more nor less than the cold, hard facts to consider. If this be the case, I am confident that those making this study will conclude that it is in the best interests of this Nation to have a strong oil import program.

LAW AND ORDER: A DOUBLE STANDARD?

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, there has come to my attention a most remarkable memorandum issued by the National Coal Association which in effect instructs coal operators that they can overlook and ignore the standards of coal dust published in the Federal Register on May 20. On that date, Secretary of Labor Shultz, acting under the authority of the Walsh-Healey Public Contracts Act, set a maximum dust level of 4.5 milligrams of coal dust per cubic meter of air in all mines producing coal for Federal contracts.

Two days after the publication of this clear and unequivocal standard in the Federal Register, the National Coal Association published a memorandum which is a flagrant attempt to encourage violation of the law. The memorandum is contained in a publication entitled "The Letter of the Law," which is subtitled "A National Coal Association Report on Legal and Tax Developments." It is dated May 22, 1969. After reviewing the coal dust standards promulgated by the Secretary of Labor, the memorandum contains this astonishing paragraph:

> Your editor believes the Labor Department has imposed some "dust" standards which cannot, at the moment, be measured by any one in the Labor Department (and by few people in the Bureau of Mines); further, that the new rules do not seem to impose upon any specific person the obligation of seeing that the new rules are complied with; and still further, that in all probability coal mines which are supplying coal to TVA and other government agencies will probably be "all right" if they comply with whatever rules happen to be forthcoming from Federal legislation (expected in the near future) governing coal mines generally.

Mr. Speaker, many people wonder why so many coal miners are killed, injured, or incur pneumoconiosis—black lung. They ask: "Why can't we enact effective health and safety laws to prevent disasters such as killed 78 men at Farmington, W. Va., on November 20, 1968, and why cannot we do something effective to prevent black lung before it chokes the miners to death?" Down through the years, the coal operators have taken a very cynical attitude toward effective health and safety legislation. They have fought protection of the coal miners every step of the way. They have opposed Federal legislation, because they know that Federal inspections can be tougher than State inspections. They have tried to water down and pull the teeth on every coal mine health and safety bill which has come before the Congress. And they are doing precisely the same thing in 1969.

Meanwhile, the weak and supine attitude of the top leadership of the United Mine Workers has allowed the feudal approach of the coal barons to persist and proceed unchecked. When the Director of the Bureau of Mines, John F. O'Leary, took office on October 20, 1968, he set the stage for a newer approach in the enforcement of the law—weak though the law is—now on the statute books. Following the Farmington disaster on November 20, Director O'Leary initiated a series of moves designed to tighten up the mine inspection system and close those mines where the threat to safety created imminent danger to the coal miners. You should have heard the screams of the coal operators when the Federal inspectors went in to close down the unsafe mines. The coal operators, who had grown accustomed to violating the law, seemed to feel that they had a vested right in continuing to violate the law.

The memorandum of the National Coal Association which I quoted above is part of precisely the same pattern and attitude. We have heard a great deal about the necessity for law and order in this Nation, law and order on the campuses, law and order in our cities, law and order on the streets. Yet, here comes the National Coal Association with a direct invitation to its members to violate the law. How can we hope to have law and order or respect for the law anywhere in the Nation if the coal barons have a double standard and encourage their own members to violate the law?

Mr. Speaker, I am sure there will be those who claim that I have misread the clear import of the memorandum, or that I have "quoted it out of context," or that they really did not mean it as an incitement to violate the law. I consider this memorandum to be so serious, Mr. Speaker, that I intend to refer it to the Attorney General and to the Secretary of Labor for their comment and action.

THE LATE DR. ABRAHAM VEREIDE

The SPEAKER pro tempore (Mr. GONZALEZ). Under a previous order of the House, the gentleman from California (Mr. TALCOTT) is recognized for 25 minutes.

Mr. TALCOTT. Mr. Speaker, I have requested this time as President of the House prayer breakfast group—as well as for myself personally—to acquaint my colleagues with the life and work of Dr. Abraham Vereide. Therefore, Mr. Speaker, I ask unanimous consent to revise and extend my remarks, and also, Mr. Speaker, that all Members may have 5 legislative days within which to extend their remarks relating to the life and work of Dr. Abraham Vereide; and also, Mr. Speaker, that I may include several extraneous items, particularly, the column of David Lawrence in the Washington Star of May 19, 1969, entitled "Prayer Breakfasts Are a Memorial." Mr. Lawrence knows, because he was a founder of the prayer breakfast in Washington and in the House and Senate.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. TALCOTT. Mr. Speaker, Dr. Abraham Vereide, who was a Methodist minister and a founder of International Christian Leadership, to promote prayer breakfasts, died Friday at Montgomery General Hospital after a heart attack. He lived at 3360 Chiswick Court, Silver Spring.

Born in Norway, Dr. Vereide came to the United States in 1905 with 10 cents in his pocket. He worked for railroads and mines in Montana before gaining admission to Northwestern University's Garrett Theological Seminary.

He was ordained a minister in 1908 and was a pastor between 1910 and 1935 in

Kenosha, Wis., Spokane and Seattle, Wash., Portland, Oreg., and Boston, Mass. He became an American citizen in 1913.

Between 1921 and 1924 he was superintendent of the Pacific Northwest District of the Norwegian-Danish-Methodist-Episcopalian Church. He established a Goodwill Industries branch in Seattle during the 1920's and was associate general superintendent for Goodwill in Boston from 1931 to 1934.

With a group of 19 business executives, Dr. Vereide in 1935 founded the prayer breakfast group in Seattle—a movement aimed at cultivating Christian leadership in government, business, education, and other professions.

In 1941, Dr. Vereide came to Washington and met with Members of Congress at the Willard Hotel. The result was the formation of separate Senate and House breakfast groups which meet once a week while Congress is in session.

The meeting also led to International Christian Leadership presidential breakfasts, held at the opening of Congress each year. The group also holds breakfast meetings for Governors, mayors, and professional groups around the world. Dr. Vereide was executive director emeritus of the organization at the time of his death.

His wife, Mattle B., died January 30.

The House Thursday prayer breakfast group is the most venerable of all extralegislative groups in the House or Senate. It meets every Thursday, while the House is in session, in the Capitol for breakfast and fellowship. It is nondenominational, nonsectarian, nonpolitical, nonpartisan. The prayer group initiated the spirit and the tide of ecumenism—or cooperative religion—which is increasing today. The prayer group has enormous influence upon those who attend, the Congress and men everywhere.

The first prayer breakfast of this sort was held in Seattle during April of 1935, when a group of prominent business executives gathered at the urging of this outstanding immigrant, Dr. Abraham Vereide. One of the group frankly admitted that his "conscience no longer permitted him, as a deacon of his church, to act kind of religious on Sunday and differently during his business and social life during the week." Dr. Vereide lived his religion every day. This is the essence or the objective, I suppose, of our prayer breakfasts.

Partly because of Dr. Vereide, and partly because of the House and Senate prayer groups, there are annual prayer breakfasts sponsored by almost every Governor, many mayors, and a Presidential prayer breakfast. More significantly, at this moment, other prayer breakfasts are occurring throughout the world—privately, without notice or publicity—not just among ordained ministers, priests, or missionaries, but among lay leaders of government and business.

Members of the House, former Members and our elected counterparts from other countries are eligible to attend. The speakers and discussions are "off the record," permitting a free and open discourse and an intimate exchange of ideas. To my knowledge, there has never been a violation of this understanding of confidence.

In this Chamber we may be fiercely political, partisan, adversary and aggressive; but downstairs we can relax, speak freely, question openly, discuss thoroughly, enjoy warm fellowship and remain true friends.

All of us are grateful for Dr. Vereide's idea and his selfless, sustained efforts to perpetuate the idea of prayer breakfasts, here and throughout the world.

Additionally, Dr. Vereide was the organizer, the guiding genius and spirit of International Christian Leadership. The House prayer breakfast group is not a promoter or sponsor of the ICL, as it neither promotes nor favors any particular church or group or theology.

One Biblical meaning of "deceased" was not death, but "exodus"—a deliverance, liberation, emancipation—a beginning, a new beginning as it were.

Death to us is a physical event; but the personality, the spirituality, the important parts of a human being, lives on.

Dr. Abraham Vereide's physical body has been laid to rest. It ceased to function last Friday, May 16. But his personality may live forever. He was that unique among men.

He was a Christian, yes; he loved Christ devoutly; but he was admired and respected by men and clergy of all religions. He became a naturalized citizen of the United States in 1913, and he loved his adopted Nation truly; but he was admired and respected by many men of all nationalities. He was an uncommon man and loved by all who knew him.

He influenced thousands of men. Of all men in the theological arena today, his influence may extend the furthest and endure the longest.

All of us have many memories of Dr. Vereide. The week before he died I sat next to him at a prayer breakfast in the Senate side of our Capitol when we met with some elected representatives from Spain. He held a forceful philosophy. He was truly a disciple of Christ. Truly a man of God. It was often said that the only ability he required of any of his friends, associates or followers, was availability.

Mr. Speaker, the editorial by David Lawrence is as follows:

[From the Washington (D.C.) Evening Star, May 19, 1969]

PRAYER BREAKFASTS ARE A MEMORIAL

Abraham Vereide—the father of the prayer breakfast movement—who helped to create hundreds of prayer groups throughout the United States and in 70 countries of the world, has just passed away at his home in Washington at the age of 82.

Few men in American history, inside or outside the church, have exercised as much influence as did Dr. Vereide through the banding together of laymen of all religions to seek spiritual guidance in their personal and business life.

Dr. Vereide was responsible for the establishment in 1941 and 1942 of the Senate prayer breakfast and the House prayer breakfast, each of which meets weekly while Congress is in session. There are no sermons preached by ministers, but a member of the group acts as the leader at each meeting. All discussions are off the record.

The Senate and House groups hold a presidential prayer breakfast each year, which is attended by several hundred guests, including the President of the United States and high officials from all branches of the federal government.

There are gubernatorial prayer breakfasts annually in 47 states. In a number of states, regular gubernatorial prayer breakfasts are held similar to the weekly meetings of groups in the Senate and House.

Abroad, the movement has taken hold on every continent. In recent years, the chief of state has participated in annual prayer breakfasts in countries like Canada, Brazil and Korea.

The groups are nondenominational and nonsectarian. Persons of all faiths are invited to join in the prayer breakfasts. While the spread of the movement has been facilitated by the International Christian Leadership organization, founded by Dr. Vereide, each breakfast group in every city, state or country is spontaneously organized and operates on its own.

Dr. Vereide served for a number of years as a Methodist minister, and was for four years associate general superintendent of the Goodwill Industries of America. It was in 1935 that he put into motion the idea of the prayer breakfast group, setting up the first one in Seattle, Wash. As the movement spread, the International Christian Leadership was founded in 1947 as an instrument to encourage formation of the groups worldwide. Its basic budget of less than $80,000 a year is provided by contributions from individuals who are in the groups.

Today there are in the City of Washington alone about 40 prayer breakfast groups. Many of them are in the federal agencies, where the staff of a commission or department organizes a weekly prayer breakfast meeting. In groups throughout the country, members include judges as well as business and professional men and state and city officials. The attendance varies somewhat from week to week, but generally between 15 and 25 persons are present. This affords an opportunity for an intimacy of expression between individuals such as is not ordinarily developed.

The meetings usually begin at 8:30 a.m., and during the first half-hour of breakfast, there are conversations back and forth across the table. Both Republicans and Democrats participate. At 9 o'clock, the member who has been designated to lead presents a paper for 15 minutes, after which there is 15 minutes of discussion followed by a closing prayer.

Over the years, some close friendships have been built up in these meetings, including a better knowledge and understanding of each other between members of opposite parties. Frankness prevails, and the emphasis is on conscience and adherence to moral principles.

Even after some members of the House and Senate have left office, they frequently come back to the prayer breakfast meetings. The same experience is reported by those who attend the prayer breakfasts in the executive branch of the government here as well as in several of the parliamentary governments of the world.

Dr. Vereide's achievements have been known to a relatively small number of people, but he has left behind a lasting legacy in the form of prayer breakfast groups. It is likely not only to live on, but to grow as the movement continues to expand among the people on every continent of the globe.

Mr. ADAIR. Mr. Speaker, the passing of Abraham Vereide is a grievous loss to all of us who knew this great man. It has been the privilege of myself and my family to have been closely associated with Abraham and his family for a number of years now, and this association has indeed meant a very great deal to us.

Other speakers have detailed his life history and the work which he initiated

and carried on as only he could have done. Without Abraham Vereide, I feel quite certain we would not at this time have firmly established the presidential prayer breakfast, the prayer breakfasts for Governors of the States, and many more prayer breakfasts for mayors of our cities. This is just one, but a major one to be sure, of the many aspects of the work of this man.

He believed firmly that our national leadership and the leadership of nations throughout the world should be led by God. Convinced of this, in recent years he and his associates have established contacts in literally scores of countries throughout the world for the purpose of bringing his idea—"Leadership led by God"—to those nations.

While Dr. Vereide, being himself a minister, had the greatest respect and admiration for clergymen, he believed wholeheartedly that it was necessary also for laymen to become involved in the work of the Lord and this concept was a lodestar in his life.

Abraham Vereide was a gentle, dedicated man, who was not only, as his biographer called him, "a modern viking," but he was also truly a modern saint. Mrs. Adair and I will miss him more than we can say.

Mr. McCLORY. Mr. Speaker, I am pleased to participate in this memorial tribute to a great American and spiritual leader, Dr. Abraham Vereide. It was my privilege to meet Dr. Vereide on a number of occasions and to listen to the inspired words of faith and dedication as he uttered them with eloquence and deep feeling—albeit with a bit of his native Norwegian accent.

As the founder of the congressional prayer breakfast groups and as the principal influence behind the presidential prayer breakfast ceremony, Dr. Vereide will be remembered as long as these important activities endure.

Dr. Vereide's noble deeds and his influence for good have had a lasting effect in the world in which we live. It is my understanding that the International Christian Leadership organization which he founded has encouraged the establishment of prayer breakfast groups among public figures in more than 40 countries. Indeed, I have had the privilege of meeting representative governmental leaders from Canada, Australia, Colombia, and other countries.

There is no question in my mind that these men will continue the work which Dr. Vereide began and will want to rededicate themselves to the great tasks which Dr. Vereide undertook and which he carried on throughout his long and productive life.

Mr. Speaker, in addition to these personal expressions of respect for Dr. Vereide, I want also to thank his son, the Reverend Milton Vereide, who delivered a moving eulogy to the memory of his father at the memorial service held last week at the Fourth Presbyterian Church in Bethesda. Several of my colleagues and I attended this service, which was conducted by Dr. Richard C. Halverson, pastor of the Fourth Presbyterian Church. Other members of Dr. Vereide's family were present at the service and all indicated that they were worthy legatees of a great and lasting heritage. Fortunately for the world this heritage is shared with many others. It is gratifying to recall at this hour that this spiritually minded man brought courage, understanding, and healing to a world in dire need of these blessings.

Mr. Speaker, in expressing these thoughts, I want also to communicate to all of the members of Dr. Vereide's family my deep sympathy and affection.

ONE-BANK HOLDING COMPANIES—THE BIGGEST THREAT TO SMALL BUSINESSMEN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. PATMAN) is recognized for 45 minutes.

Mr. PATMAN. Mr. Speaker, the small- and medium-sized businessman is facing one of the greatest threats to his existence in this country.

That threat is in the form of the one-bank holding companies which have sprung up all over this Nation.

Through this loophole in the 1956 Bank Holding Company Act, these banks are able to use the holding company device to grab off small businesses of all kinds—everything from insurance to travel agencies. There is not a single small business enterprise that is not endangered by this movement of one-bank holding companies.

Yet, Mr. Speaker, most small businessmen and their organizations and lobbyists are standing idly by and watching this trend overwhelm them from all sides. The small businessman had better wake up before it is too late.

Mr. Speaker, the Banking and Currency Committee has just completed hearings on legislation to control these holding companies and to prevent the banks from using their monopoly powers to absorb and destroy other nonbanking businesses.

H.R. 6778, which I introduced on February 17, would place the one-bank holding companies under the regulation of the 1956 Bank Holding Company Act. In short, under H.R. 6778, banks would have to be banks. They could not use the holding company device to become predators in the business community.

Anything that the bank holding company did would have to be "closely related to banking" under the provisions of H.R. 6778.

The Nixon administration and its Secretary of the Treasury, David M. Kennedy, have proposed a countermeasure which would give the one-bank holding company broad leeway to move into nonbanking fields. The administration's proposal would allow the bank holding companies to acquire anything that they could show was "related to finance in nature."

Everything in this economy, of course, is "related to finance" in some manner. So the administration language is simply an open invitation to the big banks to start after the small businessman in earnest.

The administration legislation—if adopted—would declare "open season" on America's small business community.

The administration bill would be a giant step toward the concentration of power in a handful of large banks with a variety of business enterprises as satellites in the holding company web. Every movement in business would revolve around a large commercial bank as the center of a holding company operation.

It would lead to what Dr. Willard Mueller of the Federal Trade Commission was describing when he said:

> If the present accelerated trend of merging nonrelated companies continues, all major economic decisions in the United States may be made by less than 200 persons within a decade.

This trend poses a serious threat not only to the small merchant who faces the loss of his business, but to every consumer. Under a system of huge cartels, controlled by the financial giants, the consumer does not have a chance. His demands for better goods and lower prices will be ignored if we allow the economy to be concentrated in a few hands through this holding company device.

Already these bank holding companies—using the one-bank loophole—have moved into more than 100 different types of nonbanking enterprises around the country. They control department stores, agricultural enterprises, manufacturing. And in some cases, they have even grabbed off the communications media and are operating radio and television stations.

The list of businesses the banks have grabbed off through the one-bank holding company device is endless. They include farms; jewelry stores; insurance companies; real estate operations of all kinds, including serving as agents, brokers and managers; hotels and motels; motion picture production firms; motion picture theaters; hospitals; hardware stores; railroads; trucking firms; warehouses; tire and tube companies; soft drink bottling companies; motor vehicles equipment; building contractors; mail-order houses; wholesale grocery operations; and automobile rental firms.

The list goes on and on and it is growing daily.

So it is obvious that no business—not a single small businessman—is immune from this takeover by the one-bank holding companies. And it is time the small business community realized this fact. They have been tremendously slow to react to this danger.

Mr. Speaker, I want to be specific about some of these danger areas.

The travel agency business traditionally is a small business and it faces extinction unless we regulate these one-bank holding companies. The administration unfortunately has announced that it has no objections to the banks moving into the travel business. In other words, the 6,000 small businessmen who operate travel agencies will lose their enterprises to the bank holding companies with the administration's blessing.

This Congress has a great opportunity—the opportunity to save 6,000 small businesses in this one area alone.

In defense of their acquisition of travel agencies, the banks have been spreading the propaganda line that they have always been in the travel business. They claim that they should be allowed to continue what they claim is a traditional service. This is so much hogwash.

The banks were not in the travel agency business in any meaningful fashion until the Comptroller of the Currency, James J. Saxon, illegally ruled in 1962 that no restrictions should be placed on national banks' entry in this field. That opened the door and now the administration is seeking to legalize and legitimize the Saxon ruling through the one-bank holding company bill, H.R. 9385.

Let us see just how true the banks' claims are about their longstanding activity in the travel business. The truth is, Mr. Speaker, that only 40 banks nationwide were engaged in any form of the travel business in 1958. But after the Saxon ruling, that number doubled almost overnight and by the beginning of this year it had grown to 150 banks. In other words, the big rush came on the heels of the Saxon ruling. And it is safe to assume that most of the major banks would move into the travel business if the broader administration version of the holding company legislation is enacted.

Mr. Speaker, the testimony of Peter H. Grimes, of Concord, Mass., who operates travel agencies in three towns clearly illustrates what these small businessmen are up against when the bank holding companies are allowed to move in. Here is what he said:

Travel agents are not afraid of competition, in fact they thrive on it. However, a bank as a competitor is a different matter.

No other business institution with such overpowering assets could potentially exert the pressure and influence as a bank can. At the same time banks are protected by law against non-banking competitors.

Travel agents must use banks to handle their deposits, receipts, and payments. Consequently, the bank has a ready made source of information on anything the travel agency customer does. With their wholesale adoption of computer techniques, the bank can analyze the travel business from any angle and can bring to bear upon its complexities the entire resource of a banking enterprise.

If the bank acts as confidential financial advisor to the agent, that is one thing, but if the bank uses its privileged position as a competitor, or even a potential competitor, that is quite another.

Mr. Speaker, the Congress should not allow the banks to swallow up these 6,000 small businessmen.

And even more vulnerable to the predatory raids of the one-bank holding companies is the data processing industry—a new and growing field. The banks have spotted this lucrative area and have every intention of taking over the hundreds of new enterprises that have entered data processing in the last few years.

Today there are about 1,600 data processing firms, two-thirds of which have gross income of $300,000 or less per year. They are small- and medium-size businessmen.

But, the banks are moving fast under the claim that they have "excess capacity" in their own computers and that they must be allowed to sell this excess in competition with the data processing industry. Of course, it is obvious that the banks are consciously investing in larger and larger data processing equipment for the very purpose of moving outside of the banking area.

The president of United Data Centers, Inc., Mr. Bernard Goldstein, appeared before the Banking and Currency Committee on April 29 and described the situation in this manner:

The word "conglomerate" is a little tarnished today, but—it is explicit. That is why the banks have selected a newer and softer word: congeneric. The intent remains exactly the same. Let banking organizations explain the congeneric relationship to one of their first targets, data processing services—it cannot be done. The usual attempt is in terms of excess hardware—but we who are informed know that this is not so. First, computers come in all sizes, costs, and speeds; hence selectivity will solve excess capacity. Second, for those banks still too small for their own small computer, larger correspondent banks are frequently most willing to provide standard bank data processing. Finally, for those banks both too small for their own computer and obsessed with not wanting their correspondent banks to be exposed to confidential data, Congress has already provided enabling legislation for bank data processing cooperatives.

Forgive me if I say that the great national banks have given birth not to a mere mouse—but to a rat. And, as you know, a rat is much bigger, much uglier, a much hungrier animal. And, gentlemen, do not doubt for a minute that, in the spirit of the rat, the One Bank Holding Companies, with the encouragement provided by Comptrollers of the Currency who only say "yes", and of deceptive placebos like the Administration Bill before this Committee, will gobble up countless companies until they metamorphose, sooner than you think, into cartel-like, Japanese-style industrial giants capable of modifying the fabric of our national life.

Needless to say, this sort of industrial giant we have described may be well suited to the needs of a country like Japan and that is the business of the Japanese. But, what you must ask yourselves is, "are they suited to the future needs of this country?" And—even more important—are they compatible with our traditional freedom, particularly the freedom of opportunity?

And closely related to this grab in the data processing field is the big banks' giant stride in providing accounting services. In many communities, the big banks are engaging in unfair competitive practices against the thousands of professional accountants and certified public accountants.

Nationwide, there are an estimated 100,000 independent CPA's, at least another 50,000 professional accountants. These independent, small businessmen cannot compete with the banks and they should not be expected to do so.

Here, as in other areas, the possibilities for the banks to force "tie-in" arrangements are unlimited. The bank which makes the local businessman a $50,000 loan can quietly urge him to use the bank's own accounting services. The individual accounting firm cannot meet this type of competition.

The administration bill, H.R. 9385, specifically turns the Nation's insurance business over to the bank holding companies. It does not even attempt to hide this fact. It is in the language of the bill.

This poses an extreme danger to the nearly 600,000 people who are employed in insurance agency businesses throughout the Nation. These agencies are, for the most part, small local enterprises, one of the cornerstones of our free enterprise system. Already, in many States, these insurance agencies are fighting for their lives against the encroachment of the big bank holding companies, which are moving into the insurance agency business. And now the administration bill would legalize this massive raid on thousands of small insurance agents.

Actually, the insurance agent faces an attack from two sides in the administration bill. There is nothing in the administration bill that would prevent a bank holding company from moving directly into the insurance agency business. But, more significant, is the fact that the administration bill would allow the bank holding companies to acquire huge insurance companies. And when this is done, you can rest assured that the bank holding companies will establish their own agencies and in most cases will not even bother to buy out the existing agencies. They will just create their own and force the existing agencies out of business.

There is little doubt that the big banks, which have formed one-bank holding companies, have their eye on the large insurance companies. For example, the First National City Bank of New York, the Nation's third largest bank, has announced plans to acquire the huge Chubb Insurance Corp., one of the Nation's largest.

And various news media have indicated possible mergers between Chase Manhattan National Bank and Travelers Insurance Company; Manufacturers Hanover Trust Company and the Continental Insurance Companies; and Morgan Guaranty Trust and Aetna Life Company.

These banks, along with the First National City Bank, hold almost 16 percent of the financial and trust assets of all commercial banks in the United States. The four insurance companies comprise almost 6 percent of all the insurance company assets in the United States. By combining the bank holding companies and these insurance companies, four banking institutions would control approximately $115 billion worth of assets.

This is the kind of concentration of economic power that is implicit throughout the administration's bill.

The one-bank holding company situation also poses real dangers to the banks operating in the small- and medium-sized communities around the country. The one-bank loophole provides the means for the big banks to make the "boardinghouse reach" into territories of locally owned banks.

Through this device, a large bank can come in and absorb major businesses right in these communities. A local factory—perhaps the major employer in a town—can be absorbed overnight as a

subsidiary of one of these holding companies. And when this happens, do you think the local bank will continue to handle the payroll and the account of this concern? Do you think that this factory will be turning to the local independent bank for loans?

The answer is obvious. That factory will be operated as a wholly owned subsidiary of the financial conglomerate. It will be turning to the holding company's own bank for all service in the financial area.

Once this local enterprise is absorbed, its days may well be numbered as a member of the community. The decisions to close the plant, to expand it, to diversify it, will not be made locally, but in the offices of the absentee financial conglomerate. This is no theory. This kind of disappearance of small firms as a result of conglomerate activities is occurring all over the Nation.

The Assistant Attorney General for Antitrust in the Nixon administration, Richard McLaren, has expressed great alarm over this very fact. And I quote from Mr. McLaren's testimony before the Ways and Means Committee of the House of Representatives recently:

> I am concerned over the human dislocations which result from these mergers. When the headquarters of one or two large companies are moved from a smaller city to New York, Chicago, or Los Angeles, there is a serious impact upon the community . . . the community loses some of its best-educated, most energetic and public-spirited citizens. Even some larger cities may become "branch house cities" whose major business affairs are directed by absentee managers.

Mr. Speaker, unfortunately, many people have defended the banks' boardinghouse reach by talking about the need to "modernize" and the need to "be contemporary" and the need to "innovate."

These defenders of the banks' boardinghouse reach are now claiming that business innovation is dependent on the concentration of economic power in the hands of a few commercial bank holding companies.

No one disagrees with the need to have an innovative enterprise system in this Nation. I am all for it. But I do not accept the theory that the banks are the only enterprise that can provide innovation. If we are dependent on the banks for innovation, then the Nation is indeed in a serious situation. The banks have traditionally been the very opposite of innovative. The concentration of this power as contemplated in the administration's holding company bill would stifle competition and would put an end to innovation.

Competition has always been the moving force behind innovation in the American free enterprise system. The whole history of banking and banking legislation recognizes that banks are in a privileged position in the economy. They are, for all practical purposes, monopolies, granted certain rights, immunities, and limitations. They have great privileges—necessary privileges—which no other corporation enjoys.

It is improper and wrong for the banks now to ask that they be allowed to move into nonbanking areas with these special privileges and immunities. Carrying with them their special status as monopolies, or quasi-monopolies, the banks can only be "unfair competitors" in these nonbanking areas.

It is the responsibility of the Congress to make sure that the special privileges and rights that it has granted the banks are not used to compete unfairly with other segments of the business community. The banks have been accorded a special place in the economy with special responsibilities. They should be required to remain in the area of banking. They should not be allowed to move into other fields such as insurance, travel agencies, or accounting, any more than these businesses should be allowed to become banks.

Mr. Speaker, I have talked about a few of the small business enterprises directly threatened by the one-bank holding companies and by the laxity of the administration's approach to regulation in this area. But, let me emphasize that the dangers are not limited to the enterprises I have mentioned here. Every businessman, every enterprise, is under attack from these one-bank holding companies.

It is unfortunate that so few small businessmen and small business organizations have come forward to defend their position before the Congress. It is unfortunate that so little is being done to counter the lobbying being engaged in by the Treasury Department and the big banks. Mr. Speaker, I hope that the organizations that are supported by the small businessmen throughout the country will go to work on this issue. I hope that they will alert their membership to the grave dangers. Frankly, I do not understand the lack of activity on the part of the small business community. This legislation is life or death for them.

Likewise, Mr. Speaker, I hope that the consumer organizations and others who have long spoken out against unfair competition and against monopoly will come forward before this legislation is enacted. The consumer organizations have as much to lose as anyone if the big banks are allowed to change the economic system in this manner.

Mr. Speaker, many of us on the Banking and Currency Committee are willing to make the fight to control the predatory activities of these one-bank holding companies. But it is necessary that the groups affected come forward and present their case to all Members of the Congress. Now is the time to act.

FIVE-TO-FOUR DECISIONS: THE TIME FOR A RULING BY CONGRESS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. SAYLOR) is recognized for 30 minutes.

Mr. SAYLOR. Mr. Speaker, through the courtesy of the Library of Congress, I am today able to present for publication in the CONGRESSIONAL RECORD a compilation of 5-to-4 decisions by the Supreme Court over the past 15 years.

I offer this information as additional evidence of the need to adopt House Joint Resolution 82, to provide that Congress, by a two-thirds vote of both Houses, be enabled to override a decision by the Supreme Court. In offering this list I wish to point out that my request to the Library involved only the so-called liberal rulings by the Court and that I would welcome an addendum of so-called conservative decisions should any of my colleagues feel it advantageous to provide such material. Every such verdict, regardless of which viewpoint it may reflect, supports my position on House Joint Resolution 82.

The appearance of 5-to-4 decisions is especially timely in view of the current furor over the Abe Fortas affair. The case underscores the danger of permitting one branch of Government, in which a single individual has virtually immutable power over the life and property of every citizen, to function without the semblance of the restraint intended in our system of checks and balances. Now that the fallibility of the Court is finally admitted, Congress should lose no time in pursuing a course necessary to protect this Nation from further misinterpretations of the Constitution and misuse of authority granted by the Constitution.

Our responsibility to act now may have been foreseen many years ago, for Thomas Jefferson wrote in 1823:

> At the establishment of our Constitution, the judiciary bodies were supposed to be the most helpless and harmless members of the government. Experience, however, soon showed in what way they were to become the most dangerous; that the insufficiency of the means provided for their removal gave them a free hold and irresponsibility in office; that their decisions, seeming to concern individual suitors only, pass silent and unheeded by the public at large; that these decisions, nevertheless, become law by precedent, sapping, little by little the foundations of the Constitution, and working its change by construction, before any one has perceived that that invisible and helpless worm has been busily employed in consuming its substance. In truth, man is not made to be trusted for life, if secured against all liability to account.

Earlier in 1821, Jefferson had written:

> It is a misnomer to call a government republican, in which a branch of the supreme power is independent of the nation.

Rather than permit the Supreme Court to remain independent of the Nation and free to undermine the intent of the Constitution and the responsibility of the legislative branch, I submit that Congress is obligated to adopt House Joint Resolution 82 not only to apply effectively the system of checks and balances but also to restore the confidence of the people in a government currently under serious criticism.

Congress is not alone in protesting the Court's penchant for making laws to conform with the idiosyncratic philosophies and notions of a bare majority. Conscientious Justices themselves are becoming increasingly concerned at the unauthorized broadening of the judiciary's prerogative by the Supreme Court.

Because his remarks are so pertinent at this time, I ask that the RECORD show the complete article by Justice Hugo Black that appeared in the Washington Sunday Star of March 24, 1968. It follows:

JUDICIAL "ACTIVISM" AND "RESTRAINT": A JUSTICE DEFINES THE DIFFERENCE

(By Justice Hugo Black)

Judges may also abuse power, of course, not because they are corrupt, but because of a completely honest belief that unless they do act the Nation will suffer disaster. Unfortunately such honest beliefs too often reflect nothing more than an all-too-common human hostility to change.

Other judges, with an equally honest belief that changes are absolutely imperative, take it upon themselves to make changes which Congress alone has legislative power to make. Thus, for the reasons that I have been discussing I strongly believe the public welfare demands that constitutional cases must be decided according to the terms of our Constitution itself and not according to the judges' views of fairness, seasonableness or justice . . .

JUDICIAL ACTIVISM

With what I have said in mind, I would next like to discuss a name which of late years has crept into our vocabulary and which has frequently been applied to me, "judicial activist." In the main this term has been used as one of criticism and reproach aimed at federal judges, particularly Justices of the United States Supreme Court who, in deciding cases before them, are charged with either (1) being willing or even anxious to determine constitutional questions that could have been avoided or (2) determining constitutional and other legal questions not on the basis of what the law is but on what the deciding judges believe it should be. Since this name "activist" has been applied to me as a label, which unfortunately I think has served as a substitute for careful thinking and writing and also as a fallacious shortcut to unjustified conclusions, I would like, so to speak, to set the record straight.

There is one school of legal thought that seems to rest on the premise that it is an unpardonable constitutional sin for a judge to decide a case on a constitutional ground if there is any possible excuse either to refuse to decide it at all or to decide it on some statutory or other non-constitutional ground. A violation of this judge-created judicial offense is often given the bad sounding label of "judicial activism" and the judge who commits the sins is branded an activist.

I cannot myself subscribe to the view that judges should always and invariably avoid a determination of constitutional questions if it is any way possible to dispose of a particular case on a non-constitutional ground. There are few cases, if any, where judges cannot conjure up and articulate arguments that are at least plausible to get rid of cases on non-constitutional grounds. Such a resort to merely plausible reasons to avoid deciding constitutional questions has never seemed to me to be an ennobling example of judicial piety, morals or ethics. The necessity for complete candor in deciding cases cannot, in my opinion, be outweighed by any supposed dogmatic imperative to avoid constitutional questions.

THE PUBLIC WELFARE

There come times when the public welfare calls loudly for putting an end to constitutional doubts about laws that may vitally affect the daily lives and practices of millions of people. Such doubts about highly valuable constitutional or statutory rights may cause delays in their enjoyment tantamount to their complete destruction. And persons subjected to burdensome duties by new untested statutes frequently may be caused to suffer irreparable losses by dilatory judicial practices that prevent constitutional tests of those new laws in the courts.

A good example of this kind of thing is the statute establishing the Subversive Activities Control Board. This is a law, which as I stated in my dissenting opinions in *Communist Party v. Subversive Activities Control Board* and *American Committee for Protection of Foreign Born v. Subversive Activities Control Board*, is a bill of attainder; imposes cruel, unusual and savage punishments for thought, speech, writing, petition and assembly; and stigmatizes people for their beliefs, associations and views about politics, law and government. And yet since 1951, when a three-judge District Court in *Communist Party v. McGrath* refused to rule on the constitutionality of the Subversive Activities Control Act, important provisions of this statute have been enforced.

In case after case affecting so-called "communist front" organizations the parties have been told that the crucial constitutional issue was not yet ripe. This reached what in my mind was the height of absurdity in the case of *Veterans of the Abraham Lincoln Brigade v. Subversive Activities Control Board*, where, after fighting their way up through the tangled web of administrative and judicial review for 10 years, the petitioners' constitutional questions, when they finally reached the Supreme Court, were remanded to the lower court because of the staleness of the record.

DUBOIS CLUBS

Again this term the DuBois Clubs of America attempted to challenge the constitutionality of the Subversive Activities Control Board, and you would think that after 16 years those associations threatened by the Act would finally be entitled to a decision by the Supreme Court as to just how far Congress can go in establishing a pervasive regulatory scheme in the First Amendment field of speech, assembly and association. But once again a majority of the Court refused to meet and decide the constitutional issues. (*WEB DuBois Clubs of America* v. *Clark*, —— *U.S.* ——.) In this case there was a clear possibility that the delay involved could very well result in the disintegration of the affected organization before it could have its constitutional claims adjudicated since the pressure inherent in registering with the Board had already begun to take its toll.

Indeed, as the petitioners pointed out in *DuBois*, the Attorney General himself had said that "one of the major purposes of the Act" was to destroy affected organizations before administrative proceedings began and that "most groups petitioned [to register] become defunct or dissolved before action could be taken." My reaction to this is that it is an outrageous violation of our Constitution that such a Board, which serves no useful function and to some extent at least appears to have become a sinecure for politically expedient appointments, is allowed for any length of time to curtail the exercise of the First Amendment rights of speech, assembly and association. And this has been allowed to happen because of a judge-created doctrine that it is inherently good to avoid constitutional issues.

Here another label or name comes into focus; it is "judicial restraint." For this is the term frequently applied to the doctrine of avoiding constitutional questions and leaving them up in the air as long as there is a possibility of deciding a case on other grounds. Once again I think this term is ambiguous and ill-conceived and when used in this way, it is right to say that I am no apostle of this kind of judicial restraint, although, as I have made clear earlier, I believe strongly that judges are restrained by the Constitution, and that changes in that basic charter should be made by the people and their representatives and not by judges.

JUDICIAL ABDICATION

By avoiding constitutional issues in cases such as those concerned with the Subversive Activities Control Board and others to which I need not now refer, I think the Supreme Court abdicates the responsibility assigned it under Marbury v. Madison, with which I fully agree, that the Judicial Department of our Government has the last word in deciding whether a statute is in accord with the Constitution. As Justice Marshall said there:

"The powers of the Legislature are defined and limited; and that those limits may not be mistaken, or forgotten, the Constitution is written. To what purpose are powers limited, and to what purpose is that limitation committed to writing, if those limits may be, at any time, be passed by those intended to be restrained? . . . Certainly all those who have framed written constitutions contemplate them as forming the fundamental and paramount law of the nation, and, consequently the theory of every such government must be, that an act of the legislature, repugnant to the Constitution is void. This theory is essentially attached to a written constitution . . ."

I believe that the responsibility of judicial review was fully understood by those who wrote the Constitution, and certainly by those who most carefully considered the problem. This fact is shown, I think, by the Federalist papers, the records of the debates in the Constitutional Convention and in the States, and the Annals of Congress' report of the debates on the Bill of Rights. Madison, himself, in arguing for adoption of the Bill of Rights stated:

"If they are incorporated into the Constitution, independent tribunals of justice will consider themselves in a peculiar manner the guardians of those rights; they will be an impenetrable bulwark against every assumption of power in the Legislative or Executive; they will be naturally led to resist every encroachment upon rights expressly stipulated for in the constitution by the declaration of rights."

JUDICIAL OBSTACLES

I think that the Framers were right in believing that such judicial power is an essential feature of our type of free government, and I believe it ill behooves the courts to restrict their usefulness in protecting constitutional rights by creating artificial judicial obstacles to the full performance of their duty.

The essential protection of the liberty of our people should not be denied them by invocation of a doctrine of so-called "judicial self-restraint." This term has been made an alluring one by its worshippers connoting noble judicial conduct, somewhat as the term "judicial activism" has been used to connote something ignoble.

But, as I have tried to make clear, when judges have a constitutional question in a case before them, and the public interest calls for its decision, refusal to carry out their duty to decide would not, I think, be the exercise of an enviable "self-restraint." Instead I would consider it to be an evasion of responsibility.

In sum, I think determining when a judge shall decide a constitutional question calls for an exercise of sound judicial judgment in a particular case which should not be hobbled by general and abstract judicial maxims created to deny litigants their just deserts in a court of law, perhaps when they need the court's help most desperately.

Consequently, if it is judicial activism to decide a constitutional question which is actually involved in a case when it is in the public interest and in the interest of a sound judicial system to decide it, then I am an "activist" in that kind of case and shall, in all probability, remain one. In such circumstances I think "judicial self-restraint" is not a virtue but an evil.

MATTER OF OPINION

When I get to the other meaning of "judicial activist," however, namely, one who believes he should interpret the Constitution and statutes according to his own belief of what they ought to prescribe instead of what they do, I tell you at once I am not in that group. The courts are given power to inter-

pret the Constitution and laws, which means to explain and expound, not to alter, amend or remake. Judges take an oath to support the Constitution as it is, not as they think it should be.

I cannot subscribe to the doctrine that consistent with that oath a judge can arrogate to himself a power to "adapt the Constitution to new times." The soft phrases used to claim that power for judges have siren-like appeal. For one who has a legitimate power to interpret there is at first a certain persuasive note in the constant repetition to him that in explaining a Constitution meant for the ages he should not stick to its old 18th century words but substitute others to make the Constitution best serve the current generation. And there is a certain appeal in the argument that the dead should not control the living. But adherence to the Constitution as written does not mean we are controlled by the dead. It means we are controlled by the Constitution, truly a living document. For it contains within itself a lasting recognition that it should be changed to meet new demands, new conditions, new times. It provides the means to achieve these changes through the amendment process in Article V. Twenty-two Amendments have been added since the Constitution was adopted, some of them with very little difficulty or delay, and I have no doubt that others will be adopted when the sound views of the people call for them. . . .

Nor should Congress overlook these earlier remarks of Justice Black at the Columbia University Law School Carpentier Lectures:

Other judges, with an equally honest belief that changes are absolutely imperative, take it upon themselves to make changes which Congress alone has legislative power to make . . .

The Courts are given power to interpret the Constitution and laws, which means to explain and expound, not to alter, amend, or remake.

A present member of the Court who apparently is of the opinion that the Court must take upon itself the duty to change laws is Justice William Brennan, if the following paragraphs appearing in the Washington Daily News are from an accurate account of his address to the National Council on Crime and Delinquency:

Justice Brennan said case after case brought before the court showed that neither congressional nor state legislation had been taken to enforce the Constitution.

"All too often," he said, "the practical choice has been between the court doing the job or no one doing it at all."

In his dissent to the Wesberry against Sanders decision in 1964, Justice John Marshall Harlan wrote:

This Court, no less than all other branches of the Government, is bound by the Constitution. The Constitution does not confer upon the Court blanket authority to step into every situation where the political branch may be thought to have fallen short. The stability of this institution ultimately depends not only upon its being alert to keep the other branches of government within Constitutional bounds, but equally upon recognition of the limitations on the Court's own functions in the constitutional system.

In the infamous Miranda case, Justice Harlan was joined by Justices Byron White and Potter Stewart in expressing astonishment that the Constitution can be read to support the Court's new rules on custodial police interrogation.

New rules and new laws and new policies by the Supreme Court cannot be tolerated, Mr. Speaker. Justice White stated further in his dissent on the Miranda ruling:

If the Court is here and now to announce new and fundamental policy . . . (its) text and reasoning should withstand analysis . . . and not proceed . . . on speculation alone . . . There is, in my view, every reason to believe that a good many criminal defendants, who otherwise would have been convicted on what this Court has previously thought to be the most satisfactory kind of evidence, will now . . . either not be tried at all or acquitted, if the state's evidence, minus the confession, is put to the test of litigation . . . In some unknown number of cases the Court's rule will return a killer, a rapist or other criminal to the streets . . . to repeat his crime wherever it pleases him.

For the further elucidation of my colleagues on the desirability of adopting House Joint Resolution 82, I include the Library of Congress' brief statements on the significance of each of the landmark 5-to-4 rulings in the RECORD.

The 5-to-4 rulings alone explain why convicted criminals prowl the streets, Communists cannot be kept off of our school faculties or out of our defense plants, military deserters can flee to other countries without fear of being stripped of U.S. citizenship and obscene material is being distributed to children scarcely out of the Walt Disney age groups.

The Library of Congress material follows:

THE LIBRARY OF CONGRESS,
Washington, D.C. November 2, 1964.

From: American Law Division.
Subject: 5 to 4 Supreme Court decisions. 1954–1963.

This will refer to your request of October 26, 1964 for the number of 5 to 4 United States Supreme Court decisions in the last ten years on constitutional questions.

During the October Term, 1954 to October Term, 1963 the Supreme Court rendered 88 decisions on a veto of five to four on constitutional questions (including companion cases decided with the main opinion, but not including decisions and orders of the court without opinion). Since it is frequently difficult to invoke a clear distinction between a "constitutional" question and one which does not involve a constitutional problem, we have also included a further list, so as to furnish a complete tabulation of all 5 to 4 opinions during this period. On other questions (e.g., statutory interpretations, criminal procedure) there were 74 five to four decisions.

The constitutional decisions are:

1. Ellis v. Dixon, 349 U.S. 458 (1955).
2. U.S. v. Twin City Power Co., 350 U.S. 222 (1956).
3. Slochower v. Board of Education, 350 U.S. 551 (1956).
4. Griffin v. Illinois, 351 U.S. 12 (1956).
5. Delli Paoli v. U.S., 352 U.S. 232 (1957).
6. In re Groban, 352 U.S., 330 (1957).
7. Pollard v. U.S., 352 U.S. 354 (1957).
8. Rowoldt v. Perfetto, 355 U.S. 115 (1957).
9. Moore v. Michigan, 335 U.S. 155 (1957).
10. Green v. U.S., 335 U.S. 184 (1957).
11. Lambert v. U.S., 355 U.S. 225 (1957).
12. City of Detroit v. Murray Corp., 355 U.S. 489 (1958).
13. American Motors Corp. v. Kenosha, 356 U.S. 21 (1958).
14. Peroz v. Brownell, 356 U.S. 44 (1958).
15. Trap v. Dulles, 356 U.S. 86 (1958).
16. Brown v. U.S., 356 U.S. 148 (1958).
17. Green v. U.S., 356 U.S. 165 (1958).
18. Thomas v. Arizona, 356 U.S. 390 (1958).
19. Public Service Comm. v. U.S. 356 U.S. 421 (1958).
20. Ciucci v. Illinois, 356 U.S. 571 (1958).
21. Kent v. Dulles, 357 U.S. 116 (1958).
22. Dayton v. Dulles, 357 U.S. 144 (1958).
23. Hanson v. Denckla, 357 U.S. 235 (1958).
24. Gore v. U.S., 357 U.S. 386 (1958).
25. Bohlen v. Board of Education, 357 U.S. 399 (1958).
26. Crooker v. California, 357 U.S. 433 (1958).
27. Lerner v. Casey, 357 U.S. 488 (1958).
28. The Tanges v. Skovgaard, 358 U.S. 588 (1959).
29. United Pilots Association v. Halecki, 358 U.S. 613 (1959).
30. Brown v. U.S., 359 U.S. 41 (1959).
31. Bartrus v. Illinois, 359 U.S. 121 (1959).
32. The Monrosa v. Carben Black, Inc., 359 U.S. 180 (1959).
33. Frank v. Maryland, 359 U.S. 360 (1959).
34. Irvin v. Dowd, 359 U.S. 394 (1959).
35. Uphaus v. Mycas, 360 U.S. 72 (1959).
36. Barenblatt v. U.S., 360 U.S. 109 (1959).
37. Allegheny County v. Nashuda Co., 360 U.S. 185 (1959).
38. Anonymous v. Baker, 360 U.S. 287 (1959).
39. Rosenberg v. U.S., 360 U.S. 367 (1959).
40. Carr v. Matteo, 360 U.S. 564 (1959).
41. In re Sawyer, 360 U.S. 622 (1959).
42. Abel v. U.S., 362 U.S. 217 (1960).
43. Mitchell v. B. B. Zachry Co., 362 U.S. 319 (1960).
44. Parker v. Ellis, 362 U.S. 574 (1960).
45. Levine v. U.S., 362 U.S. 610 (1960).
46. Kiam v. Rosenberg, 363 U.S. 405 (1960).
47. Flemming v. Nester, 363 U.S. 603 (1960).
48. Gonzales v. U.S., 364 U.S. 59 (1960).
49. Wolfe v. North Carolina, 364 U.S. 177 (1960).
50. Elkins v. U.S., 364 U.S. 206 (1960).
51. Rios v. U.S., 364 U.S. 253 (1960).
52. McPhanl v. U.S., 364 U.S. 372 (1960).
53. Shelton v. Tucker, 364 U.S. 479 (1960).
54. Carr v. Young, 364 U.S. 479 (1960)—companion case to Shelton, *supra*.
55. Times Film Corp. v. Chicago, 365 U.S. 43 (1961).
56. Wilkinson v. U.S., 365 U.S. 399 (1961).
57. Braden v. U.S., 365 U.S. 431 (1961).
58. Stewart v. U.S., 366 U.S. 1 (1961).
59. Konigsberg v. State Bar, 366 U.S. 36 (1961).
60. In re Anastalpo, 366 U.S. 82 (1961).
61. Cohen v. Harely, 366 U.S. 117 (1961).
62. Eli Lilly and Co. v. Sav-On-Drugs, 366 U.S. 276 (1961).
63. Communist Party v. Control Board, 367 U.S. 1 (1961).
64. Scoles v. U.S., 367 U.S. 203 (1961).
65. Gori v. U.S., 367 U.S. 364 (1961).
66. Poe v. Ullman, 367 U.S. 497 (1961).
67. Baxton v. Ullman, 367 U.S. 497 (1961)—companion case to *Boxton*.
68. Cafeteria Workers v. McUlroy, 367 U.S. 886 (1961).
69. Killian v. U.S., 368 U.S. 231 (1961).
70. Oyler v. Boles, 368 U.S. 448 (1962).
71. Crabtree v. Boles, 368 U.S. 448 (1962)—companion case to *Oyler*.
72. Mong Sun v. U.S., 371 U.S. 471 (1963).
73. Kennedy v. Mendoza-Martinez, 372 U.S. 144 (1903).
74. Rusk v. Cort, 372 U.S. 144 (1963).
75. Townsend v. Sain, 372 U.S. 293 (1963).
76. Draper v. Washington, 372 U.S. 487 (1963).
77. Gibson v. Florida Legislative Committee, 372 U.S. 539 (1963).
78. Downum v. U.S., 372 U.S. 734 (1963).
79. Florida Avocado Growers v. Paul, 373 U.S. 132 (1963).
80. Haynes v. Washington, 373 U.S. 503 (1963).
81. Fahy v. Connecticut, 32 United States Law Week (LW) 4021 (1963).
82. Rugendorf v. U.S. 32 LW 4298 (1964).
83. U.S. v. Barnett, 32 LW 4304 (1964).

84. Parden v. Terminal Railway, 32 LW 4393 (1964).
85. General Motors v. Washington, 32 LW 4482 (1964).
86. Malloy v. Hogan, 32 LW 4507 (1964).
87. Escohedo v. Illinois, 32 LW 4605 (1964).
88. Jackson v. Denno, 32 LW 4620 (1964).

Cases involving other questions are:

1. Indian Towing Co. v. U.S., 350 U.S. 61 (1955)—statutory construction, hereafter abbreviated to S/C.
2. Ryan Co. v. Pan-Atlantic Corp., 350 U.S., 124 (1956)—S/C.
3. Rea v. U.S. 350 U.S. 214 (1945)—Federal Rules of Criminal Procedure.
4. East Texas Lines v. Frozen Food Exp., 351 U.S. 49 (1956)—S/C.
5. Cahill v. New York, N.H.&H.R. Co., 351 U.S. 183 (1956)—procedure.
6. Offutt Housing Co. v. Sarpy County, 351 U.S. 253 (1956)—S/C.
7. Darley v. Mayo, 351 U.S. 2/7 (1956)—this case involved a constitutional matter but the court dismissed it for lack of jurisdiction.
8. Black v. Cutter Laboratories, 351 U.S. 292 (1956)—this case involved also a constitutional matter, but the court dismissed it for want of a federal question.
9. Jay v. Boyd, 351 U.S. 345 (1956)—S/C.
10. Reed v. Pennsylvania R. Co., 351 U.S. 502 (1956)—S/C.
11. Farr v. U.S., 351 U.S., 513 (1956)—procedural matter.
12. Massachusetts Bonding Co. v. U.S., 352 U.S. 126 (1956)—S/C.
13. Labuy v. Howes Leather Co., 352 U.S. 249 (1957)—S/C and federal criminal rules.
14. Nilva v. U.S., 352 U.S. 385 (1957)—federal criminal rules.
15. Baltimore & Ohio R. Co., v. Jackson, 353 U.S. 325 (1957)—S/C.
16. Arnold v. Panhandle & S.F.R. Co., 353 U.S. 360 (1957)—S/C.
17. Jackson v. Taylor, 353 U.S. 569 (1957)—S/C.
18. Fowler v. Wilkinson, 353 U.S., 583 (1957)—S/C.
19. Smith v. Sperling, 354 U.S. 91 (1957)—procedural matter.
20. Swanson v. Traer, 354 U.S. 114 (1957)—procedural matter.
21. Nashville Milk Co. v. Carnation Co., 355 U.S. 373 (1958)—S/C.
22. Safeway Stores v. Vance, 355 U.S. 389 (1958)—S/C.
23. F.T.C. v. Standard Oil Co., 355 U.S. 396 (1958)—S/C.
24. Kernan v. American Dredging Co., 355 U.S. 426 (1958)—S/C.
25. U.S. v. Ball Construction Co., 355 U.S. 587 (1958)—S/C.
26. County of Marin v. U.S., 356 U.S. 412 (1958)—S/C.
27. Masclale v. U.S. 356 U.S., 386 (1958)—criminal procedure.
28. Leng May M. v. Barber, 357 U.S. 185 (1958)—S/C.
29. Rogers v. Quan, 357 U.S. 193 (1958)—S/C.
30. U.S. v. A&P Trucking Co., 358 U.S. 121 (1958)—S/C.
31. Romero v. International Term Co., 358 U.S. 354 (1959)—S/C.
32. S.E.C. v. Variable Annuity Co., 359 U.S. 65 (1959)—S/C.
33. U.S. v. Shirley, 359 U.S. 255 (1959)—S/C.
34. Arroyo v. U.S., 359 U.S. 419 (1959)—S/C.
35. T.I.N.E., Inc. v. U.S., 359 U.S. 464 (1959)—S/C.
36. Pittsburgh Plate Glass Co. v. U.S., 360 U.S. 395 (1959)—criminal procedure.
37. Galax Mirror Co. v. U.S., 360 U.S. 395 (1959)—criminal procedure.
38. Farmers Union v. Day, 360 U.S. 525 (1959)—S/C.
39. Inman v. Baltimore & Ohio R. Co., 361 U.S. 138 (1959)—S/C.
40. Flora v. U.S., 362 U.S. 145 (1960)—S/C.
41. Telegraphers v. Chicago & N.W.R. Co., 362 U.S. 330 (1960)—S/C.
42. Miller Music Corp. v. Daniels, Inc., 362 U.S. 373 (1960)—S/C.
43. Nuikkanen v. McAlexander, 362 U.S. 390 (1960)—S/C.
44. U.S. v. Republic Steel Corp., 362 U.S. 482 (1960)—S/C.
45. Schaffer v. U.S., 362 U.S. 511 (1960)—criminal procedure.
46. Karp v. U.S., 362 U.S. 511 (1960)—criminal procedure (companion case to *Schaffer*.)
47. F.T.C. v. Brech & Co., 363 U.S. 166 (1960)—S/C.
48. U.S. v. Brosnan, 363 U.S. 237 (1960)—tax law.
49. Bank of America v. U.S., 363 U.S. 237 (1960)—tax law (companion case to *Brosnan*.)
50. Schilling v. Rogers, 363 U.S. 666 (1960)—S/C.
51. Cory Corp. v. Souber, 363 U.S. 709 (1960)—S/C.
52. Sunray Oil Co. v. F.P.C. 364 U.S. 137 (1960)—S/C.
53. Sun Oil Co. v. F.P.C., 364 U.S. 170 (1960)—S/C.
54. Nichalic v. Cleveland Tankers, Inc., 364 U.S. 325 (1960)—S/C.
55. Polites v. U.S. 364 U.S. 426 (1960)—S/C.
56. Callanan v. U.S., 364 U.S. 587 (1961)—S/C.
57. Green v. U.S., 365 U.S. 301 (1961)—Federal Criminal Rules.
58. Milenovich v. U.S., 365 U.S. 551 (1961)—Federal criminal procedure.
59. Horton v. Liberty Mutual Ins. Co., 367 U.S. 348 (1961)—S/C.
60. Lott v. U.S., 367 U.S. 421 (1961)—S/C.
61. American Automobile Assoc. v. U.S., 367 U.S. 687 (1961).
62. Mechling Barge Lines v. U.S., 368 U.S. 324 (1961)—S/C.
63. Hill v. U.S., 368 U.S. 424 (1962)—Federal criminal rules.
64. Foller v. C.B.S., 368 U.S. 464 (1962)—S/C.
65. Schlude v. Commissioner, 372 U.S. 128 (1963)—S/C.
66. Wisconsin v. F.P.C., 373 U.S. 294 (1963)—S/C.
67. California v. F.P.C., 373 U.S. 294 (1963)—S/C (companion case to *Wisconsin*.)
68. Long Island Co. v. F.P.C., 373 U.S. 294 (1963)—S/C (companion case to *Wisconsin*.)
69. National Equipment Rental v. Szukhent, 32 L.W. 4070 (1964)—federal rules of civil procedure.

71. U.S. v. Shannon, 32 L.W. 4443 (1964)—S/C (companion case to *Red Ball*).
72. Aro Mfg. Co. v. Convertible Top Co., 32 L.W. 4459 (1964)—S/C.
73. U.S. v. Pen-Olin Co., 32 L.W. 4707 (1964)—S/C.
74. Berman v. U.S., 32 L.W. 4721 (1964)—criminal procedure.

HUGH C. KEENAN,
Legislative Attorney.

THE LIBRARY OF CONGRESS,
Washington, D.C., August 1, 1968.

From: American Law Division.

Subject: Five to Four Dissents in Supreme Court Decisions, October Term, 1964 to October Term 1967, Inclusive.

This will refer to your request of July 25, 1968, for a list of the five-to-four decisions of the United States Supreme Court from the October Term 1964 through the October Term 1967 (June, 1968), to supplement our listing of these decisions dated November 2, 1964, which covered the decisions from the October Term, 1954 to October Term 1963. Attached hereto is the new supplementary list, covering both constitutional and statutory cases.

HUGH C. KEENAN, JR.,
Legislative Attorney,
American Law Division.

FIVE-TO-FOUR DECISIONS OF U.S. SUPREME COURT FROM OCTOBER TERM, 1964 THROUGH OCTOBER TERM, 1967, SUPPLEMENTING SIMILAR LIST OF NOVEMBER 2, 1964, COVERING PERIOD FROM OCTOBER TERM, 1954, THROUGH OCTOBER TERM, 1963

I. CONSTITUTIONAL DECISIONS

1. Cox v. Louisiana, 379 U.S. 559 (1965).
2. United States v. Brown, 381 U.S. 437 (1965).
3. Estes v. Texas, 381 U.S. 532 (1965).
4. Rogers v. Paul, 382 U.S. 198 (1965) (the four dissenters thought simply that the case should be set down for argument and plenary consideration).
5. Rosenblatt v. Baer, 383 U.S. 75 (1966).
6. Brown v. Louisiana, 383 U.S. 131 (1966).
7. Ginzburg v. United States, 383 U.S. 463 (1966).
8. United States v. Guest, 383 U.S. 745 (1966) (four dissenters in part only).
9. Elfbrandt v. Russell, 384 U.S. 11 (1966).
10. National Association for the Advancement of Colored People v. Overstreet, 384 U.S. 118 (1966).
11. Riggan v. Virginia, 384 U.S. 152 (1966).
12. Texas v. United States, 384 U.S. 155 (1966).
13. Miranda v. United States, 584 U.S. 436 (1966) (the four dissents here also apply to the companion cases of Vignera v. New York, Westover v. United States, same citation).
14. Schmerber v. California, 384 U.S. 757 (1966).
15. Adderley v. Florida, 385 U.S. 39 (1966).
16. Fortson v. Morris, 385 U.S 231 (1966).
17. Hoffa v. United States, 385 U.S. 293 (1966) (two of the dissenters merely stated they would dismiss the writs of certiorari as improvidently granted).
18. Time, Inc. v. Hill, 385 U.S. 374 (1967).
19. Garrity v. New Jersey, 385 U.S. 493 (1967).
20. Spevack v. Klein, 385 U.S. 511 (1967).
21. Spencer v. Texas, 385 U.S. 554 (1967), together with Bell v. Texas, same citations (5–4 dissents in both cases).
22. Keyishian v. Board of Regents, 385 U.S. 589 (1967).
23. Zuckerman v. Greason, 386 U.S. 15 (1967).
24. Kaye v. Co-Ordinating Committee on Discipline of the New York Bar, 386 U.S. 17 (1967).
25. Cooper v. California, 386 U.S. 58 (1967).
26. Giles v. Maryland, 386 U.S 66 (1967).
27. McCray v. Illinois, 386 U.S. 300 (1967).
28 Afroyim v. Rusk, 387 U.S. 253 (1967).
29. Reitman v. Mulkey, 387 U.S. 369 (1967).
30. Curtis Publishing Co. v. Butts, 388 U.S. 130 (1967).
31. United States v. Wade, 388 U.S. 218 (1967).
32. Gilbert v. California, 388 U.S. 263 (1967).
33. Walker v. City of Birmingham, 388 U.S. 307 (1967).
34. Jacobs v. New York, 388 U.S. 431 (1967).
35. Powell v. Texas, 36 Law Week 4619 (1968).
36. Miller v. California, 36 Law Week 4699 (1968).

II. DECISIONS ON OTHER BASES: (S/C MEANS STATUTORY CONSTRUCTION)

1. Hamm v. Rock Hill, 379 U.S. 306 (1964) (Statutory Construction (SC)) (Civil Rights Act of 1964).
2. All States Freight, Inc., et al. v. New York, New Haven & Hartford Railroad Co., et al., 379 U.S. (1964) (S/C: Longshoremen's and Harbor Workers Compensation).

5. Cameron v. Johnson, 381 U.S. 741 (1965) (S/C: 42 U.S.C. 1983; 28 U.S.C. 2283, Federal civil procedure).

6. Harris v. United States, 382 U.S. 162 (1965) (Federal rules of criminal procedure).

7. Linn v. Plant Guard Workers, 383 U.S. 53 (1966) (S/C: National Labor Relations Act).

8. Kent v. United States, 383 U.S. 541 (1966) (Juvenile Court Act, District of Columbia).

9. Federal Trade Commission v. Dean Foods Co., 384 U.S. 597 (1966) (S/C: Clayton Act, Federal Trade Commission Act).

10. Nichols v. United States, 384 U.S. 678 (1966) (S/C: Bankruptcy Act) (the four dissents are to a part only of the majority opinion).

11. Greenwood v. Peacock, 384 U.S. 808 (1966) (together with No. 649, Oct. Term, 1965, Peacock v. Greenwood, same citation) (S/C: 28 U.S.C. 1443 (1, 2), Federal removal statute).

12. Baltimore & Ohio Railroad Co. v. United States, 386 U.S. 372 (1967) (S/C: Interstate Commerce Act).

13. Woodwork Manufacturers v. National Labor Relations Board, 386 U.S. 612 (1967) (S/C: National Labor Relations Act).

14. Houston Contractors Association v. National Labor Relations Board, 386 U.S. 664 (1967) (S/C: National Relations Act).

15. Waldron v. Moore-McCormack Lines, 386 U.S. 724 (1967) (Admiralty-Longshoremen's and Harbor Workers Compensation Act).

16. Gardner v. Toilet Goods Association, 387 U.S. 167 (1967) (S/C: Federal Food, Drug, and Cosmetic Act).

17. Abbott Laboratories v. Gardner, 387 U.S. 136 (1967) (S/C: Federal Food, Drug, and Cosmetic Act).

18. National Labor Relations Board v. Allis-Chalmers Manufacturing Co., 388 U.S. 175 (1967) (S/C: National Labor Relations Act).

From: American Law Division.

Subject: Significant 5–4 Supreme Court "Liberal" Decisions on Constitutional Cases, 1953–1968.

This will refer to your request of November 20, 1968 and our Conversation in that regard on the impact of a two-thirds vote rule which would be imposed on the Supreme Court by a proposed constitutional amendment which would set that requirement of voting by the justices on all cases involving an interpretation or application of the United States Constitution. In accordance with that conversation, we have selected what may be considered significant decisions from 1953 to the present (decisions announced on Nov. 19, 1968) arranged by informal topic descriptions and giving a brief statement on the significance of each ruling; for purposes of highlighting a holding, a brief indication of some dissents is given also.

This listing of five-to-four decisions is, of course, limited, not only to constitutional cases, but also to those decisions the holdings of which may be loosely described as "liberal"; those which may be loosely described as "conservative" rulings are not included. There are many of these and they too would be affected by the "two-thirds" rule.

A. SELF-INCRIMINATION

1. *Public Employees.* In *Slochower* v. *Board of Education*, 350 U.S. 551 (1956) a teacher at a New York City public college was dismissed from his job when he refused to testify before a Senate investigating committee concerning his past Communist connections. The City Charter provided that whenever a city employee invoked the self-incrimination privilege to avoid answering before a legislative committee a question concerning his official conduct, his employment shall terminate. The majority of five held this denied due process because no notice and hearing was provided, while the minority of four justices held that a government has the right to protect itself against undesirable employees not meeting its standards of conduct.

2. *State Trials.* In *Malloy* v. *Hogan*, 378 U.S. 1 (1964) the court held that the Fifth Amendment's privilege against self-incrimination applies to state as well as to federal trials, and that an accused should not have to explain how a question might incriminate him before he may claim the privilege. The dissent pointed out that precedent had established that the privilege of self-incrimination does not apply to the States and to force it on them now is to diminish state sovereignty.

3. *Public Employees.* In *Garrity* v. *New Jersey*, 385 U.S. 493 (1967) a New Jersey statute provided that state employees who invoked the self-incrimination privilege in official investigations into their conduct in office forfeited that office. Certain police were here under such investigation; warned of this law, they testified. Later their statements were used in criminal prosecutions against them. The Court held that such statements could not be used, because that would infringe upon their constitutional privilege to remain silent and not incriminate themselves. The dissent urged that the State had a right to fire employees in such circumstances and this consequence of itself was not a true denial of the constitutional privilege.

4. Self-Incrimination Clause is Now Held Applicable to Disbarment Proceedings, and a 1961 Supreme Court Decision to the Contrary is Now Overruled. In *Spevack* v. *Klein*, 385 U.S. 511 (1967) the Court overruled a holding only six years old that the Fifth Amendment's Self-Incrimination Clause did not apply to State disbarment proceedings. The four dissenters were distressed that the bar can not protect the profession against those suspected of misconduct through simple investigation: this case, it was asserted, immunizes unscrupulous lawyers from the consequences of their misdeeds and dishonors the entire bar, and it was contended that the Constitution does not require this.

B. RIGHT TO COUNSEL

1. *Waiver of Right to Counsel.* In 1957 the Court held in *Moore* v. *Michigan*, 355 U.S. 155, again five-to-four, that a waiver of the right to counsel in 1938 by a 17 year old, very ignorant Negro boy in a murder trial was invalid because he said later that he was intimidated and did not understand the charges, thus a denial of due process. The dissenting four pointed out that the Court reached this conclusion only on the boy's say-so against much contrary evidence, after the passage of many years.

2. Counsel Must be Present at Line-ups in Criminal Cases. In *United States* v. *Wade*, 388 U.S. 218 (1967) the accused was identified by a witness at a post-indictment line-up at police headquarters; his lawyer was not with him. This was held to deny him his Sixth Amendment right to counsel. The dissent stated that the Court here simply showed its suspicion of all police practices and that nothing here indicated improper police procedures.

C. DOUBLE JEOPARDY

1. In *Green* v. *United States*, 355 U.S. 184 (1957) the jury verdict against a defendant accused of homicide was silent as to first degree murder but convicted him of second degree murder. The appellate court reversed, he was retried, and convicted of first degree murder. The Supreme Court, five to four, held this violated the Double Jeopardy Clause, since the jury was dismissed and sentence passed after the first verdict came in. The dissent pointed out that this flew in the face of established legal precedent in the Supreme Court and that precedent should be followed, so that tradition can be maintained in the law.

D. CITIZENSHIP

1. Military deserter from armed forces in wartime does not lose citizenship. In *Trop* v. *Dulles*, 356 U.S. 86 (1958) the court held unconstitutional an act of Congress stripping citizenship from deserters from the military forces in time of war; Congress has no general powers to divest citizenship and if it did, this would constitute "cruel and unusual punishment" under the 8th Amendment.

2. One who flees abroad during war to avoid military service may not be stripped of his citizenship. In *Kennedy* v. *Mendoza-Martinez*, 372 U.S. 144 (1963) the court held unconstitutional an act of Congress divesting one of citizenship who fled abroad during war to avoid the draft, as a denial of due process. Companion case, Rusk v. Cort, 372 U.S. 144 (1963).

3. One who Knowingly Votes in Foreign Election can not be Deprived of His Citizenship. In *Afrovim* v. *Rusk*, 387 U.S. 253 (1967) the Court held unconstitutional an act of Congress stripping citizenship from one who votes willfully in a foreign election, overruling a ten-year old decision holding this to be constitutional. The dissent pointed out this is a wholly arbitrary ruling, expressing the majority's own political feeling and is law-making.

E. PASSPORTS MAY NOT BE DENIED TO COMMUNISTS

In *Kent* v. *Dulles*, 357 U.S. 116 (1958) the Court held, five to four, that the Secretary of State cannot deny passports to persons because of their Communist beliefs and associations because this would deny their liberty to travel under the Fifth Amendment. This is so even if the person accused of Communist connections is also shown to have had connections with Communist spy rings. *Dayton* v. *Dulles*, 357 U.S. 144 (1958).

F. SEARCHES AND SEIZURES

1. Evidence seized by state police in violation of the Fourth Amendment against unreasonable search and seizure may not be used in a Federal trial, even though Federal officers took no part in the illegal search. *Elkins* v. *U.S.*, 364 U.S. 206 (1960). Companion case, *Rios* v. *U.S.* 364 U.S. 253 (1960).

2. A reasonably accurate description of a place where narcotics had been sold, plus the hurried flight of a person at that place when narcotics agents identified themselves held not sufficient for probable cause for arrest under the Fourth Amendment. *Wong Sun* v. *United States*, 371 U.S. 471 (1963). The four dissenters pointed out that this goes against the grounds of probable cause that reasonable, prudent men, trained in police work, would employ, greatly hampering police work.

G. PUBLIC OFFICERS AND EMPLOYEES

1. State teachers may not be compelled to disclose associations with unpopular groups, such as the NAACP. In *Shelton* v. *Tucker*, 364 U.S. 479 (1960) a state law required teachers in the public schools to file affidavits showing organizations to which they had belonged in the past five years as a condition to continued employment. The teachers here refused to sign such affidavits and were fired. The Court held this violated due process by adbridging their freedom of association and speech. Companion case, *Carr* v. *Young*, 364 U.S. 479 (1960).

2. State Employees May Not be Forbidden to Join Communist Party and Other Subversive Groups.

In *Elfbrandt* v. *Russell*, 384 U.S. 11 (1966) Arizona required State employees to take an oath that they are not knowingly members of the Communist Party or other subversive groups dedicated to overthrow of the Government, where the employee knows of such unlawful purpose. The Court struck down this oath as violating the First Amendment's freedom of political association. The dissent pointed out that even in this Court precedent held that a State has the right to condition public employment upon such oaths, and cannot be compelled to hire those who willfully join subversive organizations, knowing of their purposes.

H. CONDUCT OF CRIMINAL TRIALS

1. Indigents must be afforded trial transcripts free for appeal. In *Draper* v. *Washington*, 372 U.S. 487 (1963) it was held that it denies due process for a trial transcript to be denied to the poor, where moneyed persons can always get a copy for appeal. The dissenters pointed out that the Washington Supreme Court had passed on the appeal, and found it frivolous.

2. Televising Criminal Trials Inherently Invalid. In *Estes* v. *Texas*, 381 U.S. 532 (1965) it was held that televising a criminal trial was in itself invalid as a denial of the right to a fair trial under the Due Process Clause. The dissent could not see this as a *per se* violation of the Constitution, undignified though it may be, without particular circumstances making it a violation.

I. LEGISLATIVE INVESTIGATIONS OF SUSPECTED COMMUNIST-INFILTRATED GROUPS CURBED

In *Gibson* v. *Florida Legislative Investigation Committee*, 372 U.S. 539 (1963), the Court held unconstitutional an effort by the Florida legislative committee to compel disclosure of the membership lists of the Miami NAACP in order to determine whether that group was Communist-infiltrated, as violative of the First Amendment's freedom of association. A proper ground must first be laid to show a connection between the Miami NAACP and Communist activities, before an intrusion upon First Amendment rights will be permitted. The dissent could find no legal precedent for distinguishing between Communist infiltration *of* groups and similar activity *by* Communist groups.

J. CONFESSIONS

1. The Supreme Court will not accept a jury's determination of the voluntariness of a confession, but will consider the matter anew. In *Haynes* v. *Washington*, 373 U.S. 503 (1963), a jury had found defendant's confession voluntary, but the Supreme Court said it would not accept this finding, but would consider all the circumstances of the confession to decide anew if it was in truth voluntary. Mere prolonged questioning by police, said the dissent, is not enough to show the defendant's will is overborne.

2. Criminal suspects must be furnished counsel and warned of right to silence, during police questioning. In *Escobedo* v. *Illinois*, 378 U.S. 478 (1964) a criminal suspect, during police questioning, was refused the right to consult his lawyer and was not warned of his right to remain silent. For these reasons only his confession, made during questioning, was held inadmissible since he was denied his constitutional rights (Sixth Amendment) to counsel. The dissent argued that the test for a confession should be its voluntariness only; otherwise police work is too much hampered.

3. Juries may not try the voluntariness of confessions in criminal cases. In *Jackson* v. *Denno*, 378 U.S. 368 (1964), it was held that it violates due process for the jury (or judge, if he is the trier of fact) to also judge the voluntariness of a confession, for that prejudices the accused: the jury is bound to be influenced by the confession, even if it rejects it. Some other body should determine this issue. The dissent pointed out that long-standing precedent in the Court permitted the States to leave to the jury the question of the voluntariness of confessions and that this is one more encroachment on the federal system.

4. Police questioning of a suspect held incommunicado is inherently a denial of due process and will always be invalid unless a suspect, before questioning, is warned of his right to remain silent, have a lawyer with him, and to have one furnished if he is poor. *Miranda* v. *Arizona*, 384 U.S. 436 (1966).

K. CIVIL RIGHTS

1. Civil Rights Protesters may demonstrate near public buildings in the face of an ordinance forbidding it. In *Cox* v. *Louisiana*, 379 U.S. 559 (1965) the Court overturned the conviction of civil rights protesters demonstrating near a courthouse, where a city ordinance forbade such activities, because city officials had advised them it was alright to do so, thus constituting, it was held, entrapment.

2. Peaceful "Sit-In" in Public Building by Civil Rights Protesters is not Punishable as a Breach of the Peace. In *Brown* v. *Louisiana*, 383 U.S. 131 (1966) a group of Negroes were convicted of breach of the peace for sitting-in quietly in a Louisiana public library which was segregated. Their conviction was held invalid as violative of their First Amendment right to peaceably assemble and protest. The dissent urged the view that the State has a legitimate interest in maintaining order in its public buildings in order to carry on its proper governmental functions.

3. State Constitution may not Forbid the Passage of Open-Housing Laws, even if such Provision of the Constitution is approved by Voters at the Polls. In *Reitman* v. *Mulkey*, 387 U.S. 369 (1967) a popular referendum, approved by the voters, forbade the future enactment of open-housing laws. The Court held this improperly involved the State in race discrimination and was invalid under the Fourteenth Amendment. The dissent argued that the Constitution does not require the States to pass open-housing laws and does not forbid repeal of such laws; and that a permanent ban on such laws in the future by constitutional provision is not prohibited by the 14th Amendment.

L. COMMUNIST PARTY

1. Communist Party members cannot be punished for holding labor union jobs. In *United States* v. *Brown*, 381 U.S. 437 (1965) the Court held unconstitutional a section of the Labor-Management Reporting and Disclosure Act of 1959 which made it a crime for Communist Party members to willfully hold executive jobs in labor unions because this is a bill of attainder, punishing named or described persons as such, not for their general activities. The dissenters pointed out that the court here was ignoring the reality that it is Communist Party members who are likely to cause labor strife and Congress should be permitted to keep them out of labor unions.

2. A state cannot Require its Teachers to State that they are not Members of the Communist Party, advocates of forcible overthrow of the Government, and are Not Guilty of treasonous and seditious acts. In *Kevishian* v. *Board of Regents*, 385 U.S. 589 (1967), the Court struck down New York's law that would make public school teachers swear to the above before entering on their employment. All this is to vague, says the Court, and violates academic freedom. Up to now, points out the dissent, such State laws have been permitted by this Court and States have relied on this; but now it is all thrown out and State efforts to keep Communists and traitors off the public school system are at an end, due to this case.

HUGH C. KEENAN, Jr.,
Legislative Attorney, American Law Division.

FEDERAL FINANCIAL DISCLOSURE ACT OF 1969

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. RUPPE) is recognized for 10 minutes.

(Mr. RUPPE asked and was given permission to revise and extend his remarks.)

Mr. RUPPE. Mr. Speaker, today I am reintroducing the Federal Financial Disclosure Act of 1969, so that a bipartisan group of 21 cosponsors may join with me. The new cosponsors are: Messrs. BUTTON, HAMILTON, SCHWENGEL, WALDIE, WEICKER, CORBETT, PODELL, BIESTER, BUSH, SCHERLE, LLOYD, REES, MIKVA, ANDERSON of Illinois, MCCARTHY, VANDER JAGT, HECHLER of West Virginia, CUNNINGHAM, EDWARDS of California, MOSHER, and DELLENBACK.

I am particularly pleased to note that four of these Members serve on the Judiciary Committee which would be responsible for holding hearings on this type of legislation. This is indicative of the type of support gathering for this act in Congress.

This legislation calls for full public financial disclosure by Members of the House of Representatives, Senators, key congressional employees, justices and judges of the U.S. courts, the President, the Vice President, Cabinet members, and policymaking officials of the executive branch as determined by the Chairman of the Civil Service Commission, and candidates for Federal office, I originally introduced this legislation on May 15, and addressed this Chamber at that time. A full text of the bill is included in the CONGRESSIONAL RECORD following my remarks of that date. The version of the Federal Financial Disclosure Act being introduced today amends my original bill to include officers and key employees of the House of Representatives and the U.S. Senate.

It is time to come up with a straightforward reporting law. The public will no longer be satisfied with half measures—and with good reason. Both the House of Representatives and the other body, during the last Congress, adopted financial reporting procedures. As a result, Representatives and key employees of the House are required to list publicly sources of major income, substantial business interests, and income from single sources. However, a list without accompanying financial statements is not truly meaningful. There are such extensive loopholes in the present system that, as I remarked when I originally introduced this legislation, the present financial reporting procedure is little better than a sham and a facade. I note that in the other body Senator GEORGE AIKEN was the lone vote against the current Senate procedure. At the time of Senate consideration, Senator AIKEN stated that he would not, and I quote, "be a party to the perpetuating of a fraud upon the American people." The Senate public financial reports, of course, are even more meaningless than the House reports. The executive branch and the judicial branch are not even required to file detailed financial statements. The time for straight-forward honest legislation is here.

I know that there are many honest, trustworthy, and dedicated colleagues in this Chamber who oppose this kind of legislation because it is certain that some irresponsible individuals in the press and in politics will distort our financial statements, make false assumptions based on half truths and attempt to lead the public to untrue conclusions about our motives and actions in the conduct of public business. Unfortunately, these are the risks that must be taken. The Dodd, Powell, Baker, Long, and Fortas affairs have cast a cloud of suspicion over all of us and our institutions of government. We must now recognize that restoring confidence in those who hold the public trust is crucial.

Therefore, we must be prepared to surrender a measure of our privacy to attain that goal. There is no longer any alternative to full public disclosure by high officials in all three branches of the Government. I urge that the House of Representatives consider and pass this legislation during this session of Congress.

GENERAL LEAVE TO EXTEND REMARKS

Mr. RUPPE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

FRAUD IN AMERICA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, last year the CBS television network broadcast a 1-hour program entitled "Hunger in America." That film portrayed conditions that were shocking. But the film went far beyond the realm of reality, and in fact was in large part a fraud. CBS has never acknowledged its false statements and misleading pictures, despite overwhelming evidence in two separate investigations—one by a journalist and another by Government investigators—that the film insofar as it treated San Antonio was fraudulent and wildly inaccurate.

Now it turns out that CBS not only committed a fraud, but that it violated the law in its attempts to put together a shocking show. In San Antonio virtually every person who appeared on the show received payment for his services—$5 was typical. The amounts of money involved are small indeed, and many of the payments are labeled as for "release." But the principle involved is large, and the law in such cases is clear.

In ordinary news practice television reporters do seek releases from persons filmed. But seldom are releases paid for. And never is a person paid to wait at home for 3 days while the film crew gets around to the person for an interview, or is promised payments or services. Yet CBS did make such payments, contrary to section 317(a) of the Communications Act of 1934, the basic law of brodcasting, which says:

> All matter broadcast by any radio station for which any money, service or other valuable consideration is directly or indirectly paid . . . shall be announced as paid.

Mr. Speaker, a token payment is one thing, but the question is whether CBS was making payments out of charity or in recognition of a service. If it was charity, all I can say is that this corporation could have been more generous than it was without touching its coffers, or nicking them. If it was payment for services, CBS was reporting the lines of performers, and misrepresenting the performances as spontaneous news.

I am charging CBS with the violation of section 317 of the Communications Act and demanding that FCC take action.

Mr. Speaker, tomorrow I will show in great detail the fraud that CBS perpetrated.

Television is a powerful, perhaps the most powerful media in existence. Its power for telling the truth is great, but so is its power for deception. I believe that this country has a right to expect that its media do not broadcast deception and fraud. I believe that there is little evidence to show that the networks understand or accept their great responsibility. I have asked that Congress consider licensing the networks, or devising some method of bringing accountability to the networks. I again call upon the chairman of the great Committee on Interstate and Foreign Commerce, to look into this matter, and consider what action the Congress might take.

Mr. Speaker, I insert in the RECORD the following news articles in respect to this fraud:

[From the San Antonio (Tex.) Express and News, May 24, 1969]

CONTRIVED DRAMA LESSENS FORCE IN APPEAL FOR HELP TO HUNGRY

"Hunger in America," the Columbia Broadcasting System's award-winning documentary of a year ago, created a public outcry against the intolerable conditions depicted.

The scenes in San Antonio were dramatic and heart-rending. They tore at the conscience.

But in less than a week after the show was aired it developed that the producers of the film had exercised a good deal more than dramatic license. They had, in fact, falsified portions of the local scenes and staged others.

These findings, which were first revealed in this newspaper a year ago, have now been confirmed by a congressional investigation. It is a shameful story and one that can only bring discredit to the CBS news organization.

The network has known for a long time that it had been gulled by its own camera crews and writers. Yet it chose not to admit the error. Worse still, it continued to defend the show and permitted it to be shown throughout the world.

It should also be pointed out that the San Antonio segments could not have been filmed had it not been for the cooperation CBS received from various welfare agencies.

The camera crews, for instance, were given complete freedom to work in the premature ward at the Robert B. Green Hospital in spite of the danger to tiny infants struggling for life. Employes at the Green helped the crew take pictures of premature babies knowing that the documentary was going to misrepresent them as suffering from malnutrition.

One city employe, investigators found, shut the door to a food surplus center so that a crowd of people on welfare would build up and imply long lines and inefficiency.

The oddest thing about "Hunger in America" is that the network did not have to go to such lengths.

The poverty situation here is bad, perhaps as extreme as in any large city in the nation. There is low income and there are hungry children. Fathers do sire large families and abandon them. There are illiterate people and people who do not speak the language. There is undernourishment and malnutrition.

The wonder is that CBS felt the need to interject show biz when the truth would have served as well.

By doing so its integrity has been held up to question. Its news department has shown that it places entertainment values ahead of truth.

[From the San Antonio (Tex.) Express and News, May 24, 1969]

PANEL SAYS HUNGER FILM "STAGED"

An investigation by the U.S. House Agriculture Appropriations Committee has confirmed an Express-News story that a scene of a dying baby filmed at the Green Hospital was false.

The committee in a report made public Friday said this and other assertions made by CBS in "Hunger in America" were false and "shocking to all of us."

"It appears that many of the incidents described or photographed were staged as though for a Hollywood production," the congressional committee report said.

Concerning the San Antonio segment of the sensational film, the committee said a CBS crew paid one housewife at the rate of $5 per day to stay home and wait for her family to be filmed and that a child identified as an 11-year-old prostitute was actually taken from a foster home and returned to the Bexar County Juvenile Court hearing room so the crew could use her in the film.

Committee investigators also have discovered that a boy identified as a hungry junior high school student was rejected for the food stamp program last summer because the father was buying two homes and had an equity of $1,680 in the second home, which was more than allowed for these programs.

Investigators also learned that a CBS crew induced City Welfare Dir. John Bierchwale to close the doors of the then-operating surplus commodity distribution center for one hour and 45 minutes so a line of about 20 people would form to be used in the film. This segment of the film, however, was not used.

A San Antonio physician told committee investigators that the CBS crew attempted to induce him to go with them to examine hungry people. The doctor said he declined because the crew was only interested in sensational material and wanted him to say things with a more sensational impact than he was willing to say.

The doctor said he was accused of being evasive when he would not bend the truth.

"Probably the most touching part of the film and one which CBS later said 'moved the nation to tears' was the scene of a baby being given resuscitation in the hospital after which it appeared motionless," the report said.

Express-News writer Kemper Diehl in a story on July 14 reported that the infant did not die of malnutrition as CBS claimed but of problems associated with being born prematurely.

U.S. Rep. Henry B. Gonzalez engaged with CBS in a dispute over the film and inserted Diehl's story into the Congressional Record.

Jack E. Coughlin, director of Community Relations, Bexar County Hospital District, reported to the committee that hospital rec-

ords show that Dr. Luis Rey Montemayor pronounced the baby dead at 3 p.m. on Oct. 29, 1967, five days after birth, "from septicemia, meningitis, and peritonitis with underlying cause being prematurity," the congressional report said.

The report said Dr. Montemayor was on duty and rushed to the isolette to attend the baby after being told there was an emergency. The doctor said he noticed the film crew started filming his efforts to revive the infant.

He said the baby finally responded, although it appeared not to respond for some time, but died two days later, when it suffered one of a series of cardiac and respiratory arrests.

Dr. Montemayor remarked that CBS was wrong in depicting the baby as dying of starvation since there was no evidence of malnutrition. He pointed out the baby was premature.

The doctor said a CBS representative attempted to get him to say that a contributing factor to a premature birth was malnutrition, but he said he told CBS there was no evidence of this in the case of the baby used in the film.

Mrs. Ester Medrano, who now lives in the Mirasol Homes but lived at 808 S. Leona St., was interviewed in the film and the family depicted as not having anything to eat. In response to a question, she said in the film she told her children there was no food in the house and:

"They just have to lay down like that until the next day and see if we can find something to eat."

She later told congressional investigators that actually her family was on the USAD commodity distribution program but that the children did not like the powdered milk and beans distributed. Following their appearance on the program, the family was given $135 a month from the state. This payment was reduced to $123 a month under the state cutbacks.

Blasting the CBS film, the congressional report said this was one illustration which served to "demonstrate the effort made to inflame the American people."

Explaining that "our country's press and other news media are free," the congressional report said, "They have been throughout our history and always should be but somehow we must make them responsible."

The report said the public has a right to expect responsible reporting from the news media and concluded:

"The nation's best interests are simply not well served when appeals to emotions are substituted for reason . . ."

[From the San Antonio (Tex.) Light, May 24, 1969]

FBI SAYS TV USED TO INFLAME NATION

WASHINGTON.—A House subcommittee investigation, compiled with the use of FBI agents, charged the Columbia Broadcasting System Friday with attempting to inflame the public about the nation's hunger problems.

The report said the network used "sensational-type material" in a television documentary, "Hunger in America," including a scene of a dying infant who was not really suffering from malnutrition.

Rep. Jamie L. Whitten, D-Miss., said he made the investigation results public "to indicate the complete lack of objectivity in these TV programs on alleged hunger conditions." Whitten, chairman of a House appropriations subcommittee, ordered the investigation.

A committee spokesman said FBI agents were used to gather the information for the report which was critical of the CBS program and of another report on hunger, a widely publicized book called "Hunger in America."

Kenneth Sprankle, the committee's staff director, said the FBI agents who were used during the hunger investigation were considered House employes during that time.

Whitten said under a system established "many years ago" FBI agents are loaned to the Appropriations Committee for its investigations.

Richard S. Salant, president of CBS News, said in a statement later Friday that the network "stands behind its 'Hunger in America' broadcast.

"We have found nothing to contradict its basic findings and conclusions," Salant said. He continued:

"Various allegations of false or misleading information in 'Hunger in America' made in the subcommittee's report, had been made previously. We investigated those allegations and found nothing to confirm them. We reaffirm the results of that previous investigation.

"We will, of course, investigate the accuracy of the new charges, which on their face seem to be minor."

In a summary of its complaints against the CBS documentary, Whitten's report alleged:

A baby depicted as dying of starvation, actually was born prematurely, weighed only two pounds, 12 ounces and died five days later of causes unrelated to nutrition.

A San Antonio mother of eight children, who regularly earned $5 a day as a domestic, was paid $15 by CBS to remain home for three days until the network camera crew arrived.

Bexar County Commissioner A. J. Ploch was quoted out of context when he said "You'll always have hunger . . . and . . . you've got to have Indians and chiefs."

The results of the subcommittee's investigation were inserted into the record of a budget hearing held before the subcommittee March 17. Whitten made them public Friday at the same time the Appropriations Committee approved a bill approving money to feed the poor.

The committee's report, accompanying the bill, said the CBS television program and the book, "Hunger, USA", were "shocking evidence of attempts to inflame the American people instead of providing the facts."

But the committee admitted that hungry Americans do exist and said the Agriculture Department "must locate such people and see that they are properly fed."

The committee appropriated the maximum amount previously authorized by Congress for food stamps—$340 million, up $60 million from the current level. It approved $312 million for school lunch subsidies, an increase of $59 million. It also provided $445 million for direct food distribution and "special feeding" programs, up $42 million from the current year.

These amounts were part of a $6.6 billion package to finance the Agriculture Department for the fiscal year beginning July 1. The total was about $50 million less than proposed by President Nixon.

Meanwhile, Sen. Marlow Cook, R-Ky., urged the Senate Agriculture Committee to include a national income standard in the food stamp program. Cook said "hundreds of thousands of hungry people" are ineligible for stamps because they live in states with an unusally high living cost.

"A man in Kentucky who earns over $200 is not eligible for food stamps, but just across the river in Indiana he could earn $275," Cook said. "In West Virginia he could earn $250 and in Ohio $260" and still buy the stamps, he said.

"It's a matter of rank discrimination," he said. "A man in Kentucky who is in need of food assistance is turned away just because he earned $200, but if he lived in Indiana he would be eligible. You look at that man and say, 'I'm sorry, you just don't happen to live in the right state'."

Congress "took the easy way out" by letting each state determine the income level for eligibility in the food stamp program, Cook charged.

However, Sen. Jack Miller, R-Iowa, said stamps should be issued only for purchase of "nutritious foods." He also suggested that poor families whose children receive free meals at school, get that much less in food stamp help.

"We're talking about what could amount to $200 million," Miller said. "The administration would be expensive but it might be worth it."

[From the San Antonio (Tex.) Light, May 24, 1969]

GONZALEZ

U.S. Rep. Gonzalez Friday night said there is a possibility legal action will be filed against CBS to recover damages the film "Hunger in America" caused to HemisFair.

Gonzalez said the feasibility of such a suit presently is being explored by several community leaders.

"The CBS so-called documentary did irreparable harm, especially last year when it coincided with HemisFair," the congressman said.

"It was almost a calculated and deliberate attempt to sabotage HemisFair," he said.

The film generally painted an unflattering picture of San Antonio.

One episode, described by congressional investigators as "the most touching part," depicts a baby in a San Antonio hospital "dying of starvation."

The investigators, in uncovering a number of inaccuracies in the film, reported that, in fact, the infant had died from complications coincidental with prematurity.

Gonzalez said the Congressional report confirms opinions he expressed several months ago. "It represents a very troublesome aspect of the television prime time networks," he said. "The networks have awesome power. They must be made accountable and responsible."

The congressman noted that he and several other representatives have introduced bills that would make TV networks accountable to regulatory commissions just like local radio and television stations are now.

"The networks control more than 93 per cent of the prime viewing time in our nation," Gonzalez said. "Their spokesmen actually talk as if they are above the law and have more power than the government itself."

THE FAILURE OF THE DEPARTMENT OF AGRICULTURE TO ADMINISTER THE FOOD STAMP PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 30 minutes.

Mr. FARBSTEIN. Mr. Speaker, I have today sent a letter to the Secretary of Agriculture, the Honorable Clifford M. Hardin, complaining of the failure of the Department of Agriculture to adequately administer the food stamp program. The letter calls attention to the pending return to the U.S. Treasury, by the Department of Agriculture, of approximately $30 million in unspent money appropriated for the food stamp program in fiscal 1969. It questions why the Department, which anticipated "this surplus" at the beginning of the calendar year, failed to increase the scope of the program with over 150 counties interested in securing food stamp programs and 62 submitting formal applications. I see many good uses to which the Department could have put this "surplus money," first on the list being extension of the program to the 440 counties which have no food program. The Department, however,

discouraged counties from filing formal applications citing "insufficient funds."

It appears to me that funding by the Department "very shortly" of the 62 counties for which formal applications have been made may be the result of investigations by my staff of the administration of the food stamp program. The Department appears to require outside pressure in the form of congressional attention before it will act to expand the hunger program.

I bring these facts to the attention of my colleagues in the hope that this shocking situation can soon be corrected. If it is not, we are talking about the lives of 16 million Americans.

All my information about the administration of the food stamp program comes from official sources in the Department of Agriculture.

I include a copy of my letter to Secretary Hardin, as well as the list of 62 counties which currently have applications for food stamp programs under "active consideration" by the Department of Agriculture following my remarks in the RECORD:

MAY 27, 1969.

Hon. CLIFFORD M. HARDIN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: I am writing to inquire how it happens that your Department has begun actively considering the applications of the 62 counties which have applied for funding under the Food Stamp Program since investigation by my staff.

This investigation uncovered existence of applications of these 62 counties and your intention of returning to the United States Treasury on June 30th, $30 million in unspent money appropriated for the Food Stamp Program. I was informed by your Department that it was aware of this anticipated "surplus" in food stamp appropriations "at the beginning of the calendar year".

Although your Department indicated that these 62 applications would probably be funded "very soon", your Department estimates that the cost of funding for an entire year would be only $6 million (one-half million per month). Thus, almost the entire $30 million will still be returned unspent to the United States Treasury at the end of this fiscal year. At the same time, I am informed by your Department that you are discouraging other counties from applying due to a "lack of money". I cannot understand this contradiction.

The number of counties currently eligible for funding under the Food Stamp Program is 100 less than the goal of the previous administration. The number of participants similarly is one-half million less. It has been estimated that with the level of appropriations for 1969, these two goals could be achieved. It is, therefore, not surprising that you are returning $30 million to the Treasury.

Certainly with 16 million hungry and malnourished in this country, and 440 counties which today have no hunger program, there are useful purposes to which this "surplus" money could be put. The money could be used to fund not only the 62 counties which have formally applied, but approximately 90 others which your Department indicates would apply if it were not your policy to discourage further applications for the program. The money could also be used to fund the approximately 240 other counties which have been designated as "eligible" for participation in the program but have never received any Federal money for an ongoing program (the latter figure includes 199 out of 235 counties approved on November 18, 1968, and 41 out of 135 approved in the previous designation).

It could also have been used to fund the $1 million demonstration application submitted by the City of New York which your Department indicates it has authority to fund. It could have been used to increase the average participation rate which is only 30% because little is being done in many areas to see that those potentially eligible know of the existence of Food Stamp Programs in participating counties.

It could have been used to make access to food stamps easier to the participants. Many of the distribution centers appear to be deliberately located in inaccessible places.

It could have been used to lower the cost of food stamps. But it was not used for any of these purposes.

I am shocked by the lack of any sense of urgency on the part of the Department of Agriculture and by the complete absence of any actions indicating a commitment to the President's goal of establishing, as quickly as is humanly possible, a food program in every county. If that commitment existed, it would not have required a field trip by a Senator to secure the establishment of two experimental free food programs in South Carolina. It would not require hearings on hunger in the Nation's Capital to secure a supplemental food program and a $3 to $4.5 million non-school summer child nutrition program for Washington, D.C. It would not have required a Senatorial field trip to Collier County, Florida, to get you to "actively consider" a free commodities program for that county which the Office of Economic Opportunity would administer out of its own funds.

If that commitment existed, the Department, at the first sign that there would be unused money available, would have acted to increase the scope of its current programming to utilize the unused money. It would have (and still can) request the full authorized level of appropriations for food stamps for fiscal 1969. This would allow you to get a head start on the President's stated objective of expanding the program this fiscal year and during the early part of the new fiscal year, while the program is operating on continuing resolutions and before the new appropriations bill is passed three or four months after the beginning of the new fiscal year.

I think it is ridiculous that on June 30th, with 16 million hungry and malnourished in our country, your Department will be returning $30 million in food stamp money to the United States Treasury unspent.

With kind regards, I am,

Sincerely yours,

LEONARD FARBSTEIN,
Member of Congress.

Counties with formal applications for food stamp programs pending before the Department of Agriculture as of May 26, 1969, are listed as follows:

ARKANSAS

Searcy County, Third Congressional District, John P. Hammerschmidt (R).

CALIFORNIA

Fresno County, Sixteenth Congressional District, B. F. Sisk (D).

Santa Cruz County, Twelfth Congressional District, Burt L. Talcott (R).

Yuba County, Fourth Congressional District, Robert L. Leggett (D).

San Luis Obispo County, Twelfth Congressional District, Burt L. Talcott (R).

GEORGIA

Clayton County, Sixth Congressional District, John J. Flynt, Jr., (D).

Effingham County, First Congressional District, G. Elliott Hagan (D).

Early County, Second Congressional District, Maston O'Neal (D).

Taylor County, Third Congressional District, Jack Brinkley (D).

Glascock County, Tenth Congressional District, Robert G. Stephens, Jr. (D).

Miller County, Second Congressional District, Maston O'Neal (D).

Fannin County, Ninth Congressional District, Phil M. Landrum (D).

LOUISIANA

East Feliciana County, Fifth Congressional District, Otto E. Passman (D).

St. Mary County, Third Congressional District, Patrick T. Caffery (D).

MASSACHUSETTS

Worcester (city) County, Fourth Congressional District, Harold D. Donohue (D).

Taunton County, Tenth Congressional District, Margaret M. Heckler (R).

MICHIGAN

Alpena County, Eleventh Congressional District, Philip E. Ruppe (R).

Kent County, Fifth Congressional District, Gerald R. Ford (R).

Lenawee County, Second Congressional District, Marvin L. Esch (R).

Emmet County, Eleventh Congressional District, Philip E. Ruppe (R).

MINNESOTA

Traverse County, Seventh Congressional District, Odin Langen (R).

McLeon County, Second Congressional District, Ancher Nelsen (R).

MONTANA

Wibaux County, Second Congressional District (Vacant).

Broadwater County, First Congressional District, Arnold Olsen (D).

Dawson County, Second Congressional District (Vacant).

Gallatin County, First Congressional District, Arnold Olsen (D).

Daniels County, Second Congressional District (Vacant).

Beaverhead County, First Congressional District, Arnold Olsen (D).

Pondera County, First Congressional District, Arnold Olsen (D).

NEBRASKA

Nuckalls County, Third Congressional District, David T. Martin (R).

NEW MEXICO

Catron County, Second Congressional District, Ed Foreman (R).

Dona Ana County, Second Congressional District, Ed Foreman (R).

Grant County, Second Congressional District, Ed Foreman (R).

Hidalgo County, Second Congressional District, Ed Foreman (R).

Luna County, Second Congressional District, Ed Foreman (R).

Socorro County, Second Congressional District, Ed Foreman (R).

NEW YORK

Oswego County, 31st Congressional District, Robert C. McEwen (R).

NORTH CAROLINA

Columbus County, Seventh Congressional District, Alton Lennon (D).

Johnson County, Third Congressional District, David N. Henderson (D).

Wayne County, Third Congressional District, David N. Henderson (D).

Vance County, Second Congressional District, L. H. Fountain (D).

OHIO

Defiance County, Fifth Congressional District, Delbert L. Latta (R).

Henry County, Fifth Congressional District, Delbert L. Latta (R).

Paulding County, Fifth Congressional District, Delbert L. Latta (R).

PENNSYLVANIA

Fulton County, 12th Congressional District, J. Irving Whalley (R).

SOUTH DAKOTA

Clay County, First Congressional District, Ben Reifel (R).

Deuel County, First Congressional District, Ben Reifel (R).

Fall River County, Second Congressional District, E. Y. Berry (R).

Grant County, First Congressional District, Ben Reifel (R).

Hamlin County, First Congressional District, Ben Reifel (R).

Hand County, Second Congressional District, E. Y. Berry (R).

Jerauld County, Second Congressional District, E. Y. Berry (R).

Marshall County, First Congressional District, Ben Reifel (R).

TOKENISM REVISITED—RURAL HOUSING PROGRAM DISCRIMINATED AGAINST BY FEDERAL GOVERNMENT

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, on May 15 the CONGRESSIONAL RECORD published my report made on federally assisted housing programs for the rural poor of the Nation. That report showed that only 87,000 units have been provided for poor families in rural America by the Farmers Home Administration and the low-rent housing programs of the Housing and Urban Development Department throughout the history of these programs. The label of "tokenism" must be applied to this effort when it is compared with the problem of adequate housing in rural America which has 4.8 million substandard dwellings, over half the Nation's total of 8.2 million.

Shortly after the publication of this report, the House Banking and Currency Subcommittee on Housing held the first annual hearings on housing goals required by the Housing Act of 1968.

A series of questions, based on the Farmers Home and HUD housing report, were submitted to Farmers Home at that time.

Mr. Speaker, the replies to those questions serve to point out once more that the Farmers Home Administration is so inadequately funded and staffed that it will never make a dent in the overwhelming housing needs of impoverished families in rural America. Farmers Home has said that it is the only agency providing housing of any significance in rural areas of 5,500 population or less—most of rural America—but it must be added that its performance is disgracefully inadequate when compared with the need. This conclusion is repeatedly underscored in the replies to the questions which follow:

Question. As estimated, HUD's low rent housing projects, more than any other program of that agency, serve the rural poor, providing about 66,433 units.

Farmers Home programs benefiting the rural poor are:

Units under its insured loan program this is to say all loans issued to families with incomes up to $5,000	15,066
Units under its rental housing program—by Farmers Home estimate half the number of units provided by its rental housing loans	2,127
Family units provided under labor housing loans and grants	3,903
Total	21,096

The combined programs, therefore, have provided about 87,533 units for rural poor families. This is about 2 percent of the 4.8 million occupied substandard dwellings and .6 of 1 percent of the 14 million poverty stricken in rural America.

At this rate of progress, how long do you think it will take to live up to the Housing Act of 1949 as amended and provide decent housing and suitable living environment for our rural poor?

Answer. The length of time required to provide decent housing and suitable living environment for our rural poor depends primarily on two considerations, namely:

1. The rate at which the housing programs adapted to rural areas are accelerated, and

2. The enactment of legislation to make adequate housing available to those low-income families who do not have the financial capability to repay a loan.

Question. How many vacancies exist on the Farmers Home staff? (It is reported that Farmers Home has to lose two people before it can hire one new staff member because of budgetary restrictions.)

How long, on the average, does it now take to process a loan?

How many new staff members will be provided by the $24 million increase proposed for fiscal 1970 for loan administration purposes? Is this enough?

Are most of the loan administration staff members trained in housing or is their field of expertise really agriculture?

Answer. Under the Federal Expenditures Control Act of last year, we have been able to fill only one out of two separations since September 1, 1968. Prior to that time, July 1 to September 1, we could not fill any vacancies other than where firm commitments had been made prior to June 30. As of April 30, 1969, we had 596 authorized permanent positions vacant.

The length of time required to process a rural housing loan varies widely depending on factors such as backlog of applications ahead of the particular family involved, the availability of loan funds, whether the family wants to buy, build or improve a home, the extent to which the family has assembled documents, such as plans and specifications, and the condition of title. If no waiting list existed, funds were available and the family was ready to proceed, a loan could be completely processed in about 60 days.

The $24 million increase proposed for fiscal 1970 would permit our hiring about 2,380 additional employees. If these funds become available early in the fiscal year, they will permit us to carry out the projected program levels.

Our staff members at the county level are agriculture college graduates. Many of them have some background in engineering and structures. At the State level we have engineers and some architects who help train county staff in the technical aspects of housing.

Question. Two million dollars has been allocated to Farmers Home for insured low interest loans under HUD's section 235 program created by the Housing Act of 1968. Farmers Home itself has indicated this fund could provide $30 million to $40 million worth of loans for about 10 thousand housing units.

How much of this money has been utilized?

Answer. As of May 17, 1969, 144 commitments had been made on section 235 insured mortgages. These loans committed $108,864 of the $2 million allocated to the Farmers Home Administration.

The unavailability of interested lenders and income limits in most areas have retarded the use of the section 235 program.

Question. The Housing Act of 1968 established a national goal of 26 million new housing units in ten years.

How many of these units should be built in rural America in view of the fact that it has more than half the substandard dwellings in the nation?

How many units each do you expect the private and public sectors to provide?

How much of an investment will be required by both?

Answer. About 7 million adequate units will be needed in rural areas. Most of these will be new starts.

About half are estimated to need public assistance. Some will require more assistance than is currently authorized.

The total investment for both private and publicly assisted rural housing is estimated to be about $70 billion.

Question. The purpose of the Farmers Home insured loan program was to provide more money for rural housing while maintaining its direct loan program at the level which existed at the time the insured loan program went into effect. Instead, the direct loan program has suffered deep cuts and the current high interest rate situation has crippled the insured loan program because of the difficulty encountered in selling mortgage paper. Under these circumstances, would it not be better to return to the stability of the direct loan program to escape the vagaries of the monetary system? If not, what should be done to break the log jam and move Farmers Home paper?

Answer. Although direct loans offer some advantages, the problem has been in obtaining sufficient funds through the appropriation process to fund a high volume housing program.

If Farmers Home Administration insured loans could be sold as mortgage backed certificates or as certificates of participation, their marketability would be greatly improved.

Question. In recent years offers of outside financial help, including one from an agency of the State of New Jersey, have been made to Farmers Home in an effort to speed the administration of loans in the field. Farmers Home personnel have refused such help despite their own admission that their offices are severely understaffed. Do you agree with their decision? Why shouldn't such offers be accepted? Should legislation be offered to make such help possible in the future?

Answer. We are developing an agreement with the State of Maryland to have one or more of its employees assist our county

supervisors. In our judgment, providing an adequate permanent staff for the Farmers Home Administration would be preferable to making extensive use of personnel of other agencies.

Question. If the present high interest rate situation preventing the sale of most of Farmers Home mortgage paper remains unchanged, the agency expects to end this fiscal year with $172 million in unsold housing paper on hand, nearly 2½ times more than the total at the end of the last fiscal year, and it faces the prospect of entering the new fiscal year with its insured home loan program running at half speed against a record high backlog of more than 70 thousand applications for insured home loans, nearly half again as many as there were at the close of fiscal 1968.

What immediate steps should be taken to break this log jam?

What help is the Treasury Department and the Federal Reserve Board giving you?

Answer. Two specific actions have been taken to improve the liquidity of the RHIF. One is the sale of $100 million of assets of the fund to FNMA. The other is an increase in the rate of return offered to investors. These actions were taken with the consent of the Treasury.

Question. It has been reported that the size of Farmers Home field staffs in many of its county offices has not changed, or has changed very little, in the past five or ten years despite the fantastic housing needs of rural America. Is this true? If not, how much of an expansion has taken place and has it been across the board?

Would you say that the states where the largest numbers of Farmers Home housing loans and grants have been made are the states which have the largest field staffs or are there instances where states which have smaller staffs have actually administered proportionately larger numbers of loans and grants?

Answer. There has been only a modest increase in the field staff of the Farmers Home Administration in recent years despite the sharp increase in volume of loans to be made and serviced. The proposed 1970 budget would permit an increase in man years of 65 percent above the 1965 level while the volume of loans would increase 188 percent.

We have tried to deploy our available staff in a manner consistent with the workload.

Question. HUD is about to launch a $20 million experimental program to develop manufacturing techniques for low cost housing. Do you view the requirements of rural and urban America as being identical in terms of manufactured housing, or should there be special experimental projects for rural housing alone? Should Farmers Home have its own experimental housing program? If not, should a part of the HUD project be devoted strictly to low cost rural housing needs?

Answer. Rural areas provide more opportunity for manufactured homes because building codes and zoning requirements are more flexible. Land also is more readily available at a reasonable cost in rural areas.

Some of these funds, in our opinion, should be used in rural areas. A joint venture between HUD and the USDA might be the best practical approach.

DIRECT AND INSURED RURAL HOUSING LOANS MADE, CUMULATIVE FROM BEGINNING OF PROGRAM THROUGH JUNE 30, 1968

RURAL HOUSING LOANS PAID IN FULL BY REFINANCING

As of January 1, 1968, 11,865 rural housing borrowers had paid their loans in full by refinancing. This represented one-third of those whose loan accounts had been fully satisfied.

Housing for elderly financed by the Farmers Home Administration cumulative as of December 31, 1968

Type of Units:	*Number of units*
Single family homeownership units	8,505
Multifamily rental units	2,325

(NOTE.—Multifamily rental units for elderly, as a rule, are built in small rural towns with from 500 up to 5,500 population. Occupants of this type of housing must be rural residents. Generally, they are persons from the immediate community who need a decent place to live or a home that is more convenient than the one in which they have been living.)

GOVERNORS OF STATES FAVOR PATMAN BILL ON BETTER MARKET FOR MUNICIPAL BONDS

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, for sometime, I have been pointing out the need for tax reform to reduce the loopholes involved in tax exemption of State and municipal bonds. Obviously, I have no intention in making this proposal to make it more difficult for States and local communities to finance their tremendous facilities expansion requirements in the years ahead. Indeed, the very opposite must be done. And my bill, H.R. 2115, will do just that.

The present tax exemption situation aids most those who least need the income—commercial banks, fire and casualty insurance, and higher income tax bracket individuals. By allowing States and municipalities, if they so choose, the right to offer taxable debt issues, on which the Federal Government will bear one-third of the interest cost, my bill will serve directly to channel back to the States and localities some of the tax savings which are now being reaped by the higher income recipients, and, at the same time, the revenues of the Federal Government will be increased.

Chairman WILBUR MILLS, House Ways and Means Committee, is now diligently working on this, as well as other tax problems and, due in major part to his efforts, there now appears to be a consensus forming in favor of reform.

Mr. Speaker, I, therefore, wish at this point to place in the RECORD a letter I recently sent to Chairman MILLS relative to my bill, and congratulating him on his outstanding efforts on this important task of tax reform.

MAY 19, 1969.

Hon. WILBUR D. MILLS,
Chairman, Ways and Means Committee,
House of Representatives,
Washington, D.C.

DEAR WILBUR: I was very interested and pleased to read about the statement made to the Ways and Means Committee by Governor Tiemann on the question of Federal aid to states and municipalities in the financing of their public facilities.

The proposal to provide a Federal subsidy equal to as much as one-half the interest rate on bonds which states and municipalities choose to issue as Federally taxable securities represents the

same basic line of thinking as that behind the bill I have introduced (H.R. 2115). The bill would provide a subsidy in the amount of one-third of the interest costs on state and municipal bonds and would provide that the Federal Government would collect income taxes on such bonds, as I strongly believe they should. At the same time, it would give states and localities an option either to continue to issue tax exempt bonds, as at present, or to accept the subsidy with the consequence that the interest would be taxable to the holders of the bonds. My staff made calculations that indicate that there would be a net savings to the Government inasmuch as the amount of the subsidy would not be as great as the increase in Federal tax collections.

Inasmuch as state leaders have arrived at a consensus on this matter, I hope the Congress will quickly provide the legislative framework for minimizing the vast loophole provided in the present exemption of Federal taxes on municipal securities. As I pointed out in the Congressional Record of March 24, 1969 (page H1996), this loophole was estimated at $3.6 billion by Secretary of the Treasury Fowler almost two years ago. Since then, new long-term state and local offerings have been at an annual rate of $15 billion, and so the loophole would today amount to over $4 billion.

States and local communities must, of course, receive all the assistance which can be mustered if they are to survive the deluge of demands for new public facilities which will be placed upon them in the years ahead. As part of its continuing responsibility to inquire into the growth potential of the U.S. economy, to which local communities make such a vital contribution, the Joint Economic Committee, of which I am now Chairman during the 91st Congress, has under continuing study the growing public capital facilities needs of the communities in the years ahead. In our two-volume study of public facilities needs and financing published in 1966, we pointed out that publicly owned facilities financing in the succeeding 10 years would amount to the vast sum of $300 billion and that this figure would be raised to $500 if account is taken of all publicly oriented facilities including those under private ownership. Most of the $300 billion expansion will have to be financed through issuance of municipal securities.

Subsequent to the preparation of this basic study, the Subcommittee on Economic Progress held hearings in 1967, and last year, gathering evidence from knowledgeable officials of the local communities, the states and the Federal government. Their testimony, as well as events that have since unfolded, have clearly underlined the findings of that study as to both the growing needs of our local communities and to the pressures of financing the huge sums involved.

These developments have meant that, even under favorable circumstances, the localities would face extremely severe difficulties in raising needed funds. On top of all this, financing problems have been accentuated by the extremely tight money and capital market conditions which exist today and which show little signs of abating for some time to come.

I cite these circumstances—past, present and in prospect—to emphasize my concern that every effort must be made to see that states and local communities receive every bit of aid which can be mustered in their financial plight.

As you know on the monetary front, I, a Chairman of the Banking and Currency Committee, am particularly concerned by the fact that the present "tight money" policies are bearing most heavily on state and local communities. Municipal bond (high grade) yields have reached almost 5½%, almost a full percentage point above the average for 1968 and more than 2 percentage points above those of 1965. Mainly as a result of these conditions, new offerings of state and local bonds were off sharply in the first part of this year, with the monthly average in the first quarter estimated at $900 million, as compared with $1.5 billion in the second half of 1968. In contrast, corporate bond offerings continued at near record levels in the first 3 months of the year. I can promise the American people that I will continue to do my best to right this situation.

To return to the matter of the exemption of state and local issues from Federal taxation, I am convinced that if we allow the communities the choice of continuing to issue tax exempts or to issue taxable securities with the aid of a Federal subsidy, not only will the Federal Government improve its revenue position, but the states and local communities will be able to finance their requirements at reduced cost. This will be made possible out of the increased taxes on the high income recipients now taking advantage of the tax loophole. Part of this increase in taxes will then go directly to the states and local bodies, which have not been receiving the full benefit which the tax-exemption is supposed to provide. Our studies indicated that the tax-exemption is much more beneficial to wealthy holders than it is to the states and municipalities.

May I congratulate you on your fine efforts in this most important matter of tax reform.

Sincerely,

WRIGHT PATMAN,
Chairman.

COLLEGE STUDENTS IN CONSTRUCTIVE DEMONSTRATION

(Mr. BLANTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BLANTON. Mr. Speaker, the front pages of most of our newspapers almost daily are dominated with news of misbehavior of young college students. We often read of vandalism, of demonstrations which turn to violence, of sit-ins, sleep-ins, and burn-outs.

It has always been my contention that the students who participate in these headline-making activities actually represent only a minute minority of the thousands of college students. In fact, most students appreciate their opportunity to learn useful skills and increase their knowledge in our institutions of higher learning, and they are interested in improving the quality of their education.

In the Seventh District of Tennessee, which I am privileged to represent, we have a small church-related private college at Henderson, Tenn., called Freed-Hardeman College.

Mr. Speaker, I wish to insert into the RECORD a newspaper article from the Commercial-Appeal, Memphis, Tenn., which appeared on May 19, 1969. Although it did not make front page, it does tell about students "demonstrating" at Freed-Hardeman College, but a different type of demonstration.

The students, instead of burning down their buildings, worked hard to raise some money to help build a new science building.

In this day and time when many students would perhaps allow alumni, the development office, or other people outside their college to raise the money for a new building, these Freed-Hardeman young adults took it upon themselves to contribute to the growth of the college.

I would say this is a good example of some future nation-builders who are interested in progress, and are not intent on tearing down everything. I believe my colleagues and readers of the RECORD will find this article interesting.

[From the Memphis (Tenn.) Commercial Appeal, May 19, 1969]

FREED-HARDEMAN STUDENTS PHASE OUT "DEMONSTRATION"

(By Bob Parkins)

HENDERSON, TENN., May 18.—Many weeks of student demonstrations will end Monday at Freed-Hardeman College here, and the college administration will probably hate to see them close.

Instead of looting and burning campus buildings, Freed-Hardeman students launched a drive to raise initial funds toward cost of erecting a badly needed new science building. They set a goal of $6,500 and met it.

The money will be presented Monday to H. A. Dixon, president of the college, by student body president John Brumley of Hamilton, Ala., and Eddie Miller of Portageville, Mo., student body president-elect, who originated the student loyalty fund.

Mr. Brumley said when the idea was conceived, many said it couldn't be done. "But the students decided they wanted a new science building so badly that the best way to prove it was to raise some nuclear funds for the project."

Estimated cost of the building is $500,000.

Mr. Brumley said the money was raised by students and campus clubs in special projects and by asking the help of parents and friends in their hometowns. Auctions were held and one group picked strawberries near Bells, Tenn., Saturday to complete raising the amount needed.

He attributed the success of the drive to student involvement and enthusiasm. "About 90 per cent of the student body participated, and from the very beginning they adopted the motto 'Fire in my bones,' which has generated more spirit than any effort we've ever undertaken here," he said.

Mr. Dixon, the college president, said he was overcome by the gesture, which started without any suggestion from the administration. "It was very comforting to see students demonstrating constructively instead of destructively and promoting goodwill instead of strife," he added.

Mr. Dixon said the new science building would be built during 1969–70 "hopefully with the help of more student demonstrations of this type in future years."

WHO IS SAM HOUSTON JOHNSON?

(Mr. SNYDER was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SNYDER. Mr. Speaker, credit cards seem today to be more common than money. I notice that a Federal judge over in Ohio had some rather cogent comments on their issuance and use just last week.

Well, Mr. Speaker, I have been trying for almost a month now to get some credit card information. Somehow, no one wants to talk about the credit card I am interested in—and those few who will talk are stopped dead in their tracks by superiors if I want it in writing. It is all very mysterious—and all the while I am assured there is nothing wrong.

It seems as though on last May 2 at the Greater Cincinnati Airport, an airline ticket was issued to one Sam Houston Johnson for a flight aboard American flight 291—this ticket was issued on a credit card bearing the imprint "The

White House." I only know of one White House, it is at 16th and Pennsylvania Avenue here in Washington, and I have been assured that no one by that name either lives or is employed there, either now or on May 2. Maybe there is another White House—but then why is American Airlines so secretive? They will not talk at the Cincinnati Airport and their Mr. Pickell here in Washington is great at stalling me on my two calls to him.

Now good old Eastern Airlines verbally admits to EAL 202 382—when confronted with a number—and their very able and capable representative agreed to confirm in writing that taxpayers' funds were not being used to pay EAL 202 382 on which the imprint "The White House" appears—but very apologetically had to suggest later that I inquire of their "legal department." Superiors had stopped him.

Mr. Speaker, I want to know why all the mystery. I doubt that taxpayers are paying this man's bills—I do not think his bills would be honored at the White House—but what is wrong with somebody saying so in writing. The airport in question is in the 4th District of Kentucky and I have constituents who are not certain. I must be certain to properly inform them.

It is my hope that these remarks will get the airlines people to explain that the taxpayers are not picking up the tab, and second, how nonresidents of the White House acquire such a prestigious address on their credit cards.

DISTINGUISHED VISITORS FROM VENEZUELA

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, I take great pleasure in announcing that the House of Representatives was paid a visit today by a distinguished group of Venezuelans.

Sponsored by the North American Association of Venezuela, this visit was part of the ninth annual exchange, between our two countries, of political and public opinion leaders.

At a luncheon held here on Capitol Hill, members of the Subcommittee on Inter-American Affairs and of the full Committee on Foreign Affairs had an opportunity to engage in a frank and, I hope, mutually beneficial and informative exchange of views with our visitors.

All of us, I know, were deeply honored by the presence at the luncheon of the majority leader of the House, the Honorable CARL ALBERT, of Oklahoma.

Our guests included a member of the Venezuelan Senate, Luis B. Guerrero, columnist in Caracas daily El Universal; members of the Chamber of Deputies, Simon Antoni, Minister of Labor, 1967–68; Edilberto Escalante, former State Governor; Armando Sanchez; Arturo Hernandez, Deputy Minister of Mines, 1959–66; Miguel Vaimberg; Angel Zambrano, vice president FDP Party; Omar de Jesús Rumbos Morón, president, URD Parliamentary Block, National Congress, Caracas; several journalists, Americo Fernandez, correspondent of Caracas daily El Nacional in Ciudad Bolivar, Venezuela; Msgr. Juan F. Hernandez, editor Caracas daily La Religion, Catholic; Adalberto Toledo, news editor Maracaibo daily Panorama; and several other leaders, Felix Olivo, president, Carabobo State Legislature; Angel Yanez, secretary general of Falcon state committee of COPEI Party, businessman; Luis Feroleto, public relations director, Venezuelan Workers Confederation; Miguel Angel Granados, technical advisor, Venezuelan Cattle Raisers Association; Eloy Lares, rector, University of Caracas; Oswaldo Pulido, president of Chamber of Commerce, Ciudad Ojeda, Venezuela; Dr. Guillermo Vogeler, architect; and the North American Association coordinators, Vicente J. Cupello, Hugh Jencks, and Dr. Pedro Vallenilla.

Mr. Speaker, my good friend and colleague, the Honorable Abraham Kazen, Jr., of Texas, presided at the luncheon and speaking in Spanish, demonstrated most ably his full grasp of United States-Venezuelan and Latin American relations by making the following very pertinent remarks:

REMARKS OF HON. ABRAHAM KAZEN, JR.

Welcome to the United States Congress. My colleagues and I on the Foreign Affairs Committee are always pleased to have the opportunity to meet with groups such as this from Venezuela and hear first-hand about developments in your country and your impressions of this country.

I understand that in your case your presence here is the result of cooperation between private American citizens and companies in Venezuela and the Venezuelan Government; that these groups also sponsor a visit to Venezuela by American journalists; and that this is the ninth consecutive year that this exchange has taken place.

This kind of exchange between the political leaders, the writers, the teachers, the business and labor leaders of our two great nations contributes immensely to the cause of peace and friendship in our common hemisphere. That the exchange has been entirely the result of efforts by private Venezuelan and American citizens is all the more noteworthy and commendable.

We are particularly pleased and honored to have with us today a member of the Venezuelan Senate and seven members of the Chamber of Deputies. Your election last December was widely recognized and commented upon in the United States as a milestone in the history of your country, an indicator of the tremendous progress you have made in building and strengthening your democratic institutions in just ten years. Like the elections of 1958 and 1963, the elections of last year were orderly, peaceful and fair, with the participation of almost 95 percent of the eligible voters. But in addition, the people of Venezuela demonstrated in these elections their ability to transfer power peacefully and constitutionally from one party to another.

Much credit for that, of course, belongs to former President Raul Leoni and to your new President, Dr. Rafael Caldera; but full credit must go to all of Venezuela's political leaders, to all of its democratic parties, indeed to all of its people. I don't suppose that your transition period has been totally without problems; in fact, if you were to press me I might admit that there were some problems of adjustment involved in the transition which our own government has just gone through. So I know how you feel.

If politically Venezuela has set an example for all the hemisphere, the same can be said about its economy. It is well known that Venezuela has the highest per capita income in Latin America. What is perhaps less well known is how well you have managed your wealth. At a time when many countries are encountering increasing difficulty in dealing with a heavy burden of debt, your external public debt amounts to less than half your gold and dollar reserves and less than 14 percent of your annual exports. Your gold and dollar reserves are not only the highest in Latin America, but on a per capita basis are higher than those of the United States. At a time when many countries are suffering from seemingly uncontrollable inflation, Venezuela can report that its price level has increased less than three percent a year for the last ten years. While other countries go through round after round of devaluation, Venezuela can point to a currency whose value has not changed since 1961 and which is recognized by the I.M.F. as a "hard" currency.

Let us not be satisfied with the successes of our respective countries in the past; we must look beyond our national borders, if we are to broaden the continental markets. We realize that the Alliance for Progress, whose objectives are a peaceful revolution in the social and economic realm, is primarily and essentially a cooperative venture of Latin American countries. Our help and participation, as helpful as it may be, is only marginal as compared to the tremendous effort which the Latin countries have to put into this program.

For the past two months, our Subcommittee on Inter-American Affairs has been reviewing the Alliance for Progress, and we share with our friends in Latin America a feeling of disappointment that the steps which have been taken in the past years towards the objectives of the Charter of Punta del Este, have to some extent been short.

Your country, Venezuela, must play a vital role in the relations with your neighboring republics, for the future of the Alliance rests upon a cooperative spirit, if it is to be a success. We welcome your thoughts and proposals regarding the future course of the Alliance for Progress.

Again, let me bid you welcome to Capitol Hill, and express the hope that your visit and the remainder of your stay in this country will be pleasant and informative.

This is your house.

APOLLO 10—A MAGNIFICENT JOURNEY

(Mr. CASEY was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CASEY. Mr. Speaker, the magnificent and incredible journey of Apollo 10 is over and our proud and thankful Nation has welcomed back the men who made it such a success.

To Astronauts Tom Stafford, John Young, and Eugene Cernan my sincere congratulations and best wishes for a job well done—and a special thanks for making it possible for us to view by television the unbelievable wonders of space and the mysteries of our moon.

I share the great pride of all Americans in their accomplishment, and I know these men would be the first to acknowledge that their spectacular success could not have been possible without the earlier flights and the dedicated effort of the men and women of NASA and the aerospace industry. We, in Metropolitan Houston, take special pride in the fact that these men of warmth and humor we followed so closely on their journey are our friends and neighbors, and we are grateful they are home safe.

Much, in the coming days, will be written and said about the voyage of Apollo 10 and its great contributions to our space program, and to increasing mankind's knowledge of the mysteries of our universe. We must leave to the scientists, of course, the technical evaluation of all of the information Apollo 10 gained on its voyage. We at home, who watched and waited for the progress reports, can only place this spectacular success in the framework of our earthbound perspective. We know they have handed to us the key to the door of space travel. We know that if man's destiny is to reach out past the stars, then Tom Stafford, John Young and Gene Cernan have pointed out the road. And to follow that road is going to take courage, determination, and full support by the American people and their Representatives in Congress. And I, for one, intend to give it my support.

Mr. Speaker, in the Washington Evening Star today is an excellent article on the future prospects of this program, which I believe should be brought to the attention of all our people:

PLANETS ARE TRUE GOAL: NASA LOOKS BEYOND MOON

(By Orr Kelly)

HOUSTON.—The historic flight of Apollo 10 has shown that man can extend human life throughout the planets of our solar system, says Dr. Thomas O. Paine, administrator of the National Aeronautics and Space Administration.

Paine hailed the successful eight-day flight of Thomas P. Stafford, John W. Young and Eugene A. Cernan as proof that man can and will go to the moon—probably landing two Apollo astronauts there the afternoon of July 20.

At a press conference here shortly after the bull's eye Apollo splashdown in the Pacific at 12:52 p.m. EDT yesterday, Paine took a sharply different view of planetary exploration than Soviet scientists.

The astronauts were told Sunday of Soviet boasts that machines, rather than man, would be used to explore the "gloomiest corner of the solar system."

The astronauts were also told that Soviet scientists had been convinced by the landing of their two unmanned probes on Venus just before the takeoff of Apollo 10 that "man will never go there."

Paine took just the opposite view.

"While the moon has been the focus of our efforts, the true goal is far more than being first to land men on the moon, as though it were a celestial Mt. Everest to be climbed," he said.

"The real goal is to develop and demonstrate the capability for interplanetary travel. With some awe we contemplate the fact that men can now walk on extra-terrestrial shores.

"We are providing the most exciting answer possible to the age-old question of whether life as we know it on earth can exist on the moon and the planets.

"The answer is yes. Men working together with modern science and technology can extend the domain of terrestrial life through the solar system."

MARS LANDING

In Washington, President Nixon's science aviser said that in 10, 15 or 20 years it may be possible to contemplate a manned landing on Mars.

Dr. Lee A. DuBridge, president of the California Institute of Technology before he came to the White House earlier this year, made the speculation in testimony to a House Appropriations subcommittee. The testimony was given Feb. 25 but not made public until today.

"Where are we going to go with manned spaceflight after the moon?" Rep. Louis C. Wyman, R-N.H., asked at the hearing. "Where can we possibly go?"

DuBridge answered:

"I do not believe that the time is yet ripe for us to make specific plans for manned flights beyond the moon. Eventually, many people believe that man will land on Mars. I do not think it is technologically feasible to plan that now.

"Maybe in 10, 15, 20 years it would be possible, depending upon budgetary problems as well as technological problems and developments, to contemplate a manned landing on Mars."

DuBridge said he believed Mars was the only other planet in the solar system on which man could survive, and therefore, the only other planet to which a manned flight would be feasible.

"Venus might be contemplated but landing on Venus would be suicide because of the very high temperatures on the surface of the planet, with any technologies that we now possess," DuBridge said.

Paine declined to set a timetable for man's exploration of the planets, but both he and other officials at the Manned Spacecraft Center here seemed supremely confident that the Apollo 11 flight will be able to get off on schedule July 16 and land two men on the moon four days later.

"The Apollo 10 crew are pioneers who have brought men to the threshold of a new era," Paine said. "Today we see no obstacles on the path to the moon. Two weeks from today, when we have carefully reviewed the flight data and debriefed the crew of Apollo 10, we will know whether we will be ready to set forth on July 16."

But NASA will not hesitate to postpone the mission or bring the crew home early if necessary, Paine said.

During the entire Apollo 10 mission, there was only one problem that seemed to cause serious concern to space officials on the ground and that might threaten the launch date for Apollo 11.

That was the failure of the Lunar Module, or LEM, to transmit what is known as "high bit rate data" on its first low-level pass over the moon.

"High bit rate data" is the detailed information on its internal functioning that the LEM automatically feeds back to earth. By analyzing this information, ground controllers can know within moments if anything threatens to go wrong and can help the crew out of trouble.

Without successful transmission of this information, a limited amount of information is passed on automatically to the orbiting Command Module and can then be passed on to earth. But this information is incomplete and may arrive too late.

Dr. Robert R. Gilruth, director of the Manned Spacecraft Center, said he was worried about the problem of getting information from the LEM and that he very much wants both automatic information and voice radio contact when the LEM sets down on the lunar surface.

But this problem of communication with the Apollo 10 LEM as it swooped down over the moon last Thursday only occurred once and may have been simply a problem of getting antennae lined up properly—a relatively simple matter.

Even some of the problems with Apollo 10 that made news during the eight-day voyage around the moon now seem to officials here as of relatively little concern.

The most spectacular was the gyration performed by the LEM just as its lower portion was cast off on the second pass close to the moon.

Officials said the problem probably occurred because a switch appeared to be in one position but was actually in another position as viewed by Stafford.

The capsule for the Apollo 11 flight is already being redesigned to eliminate the laminated and fiberglass insulation that broke free in the Apollo 10 cabin and caused the crew some irritating but not dangerous problems.

CAUSE FOR LAUGHTER

The flight of Apollo 10 probably was as nearly flawless as any in history of man's venture into space.

One newsman, at a press conference following the splashdown, brought a roar of laughter when he asked in an accusatory tone why Apollo 10 ended its 830,776-mile journey around the moon 35 seconds late.

The astronauts, probably the healthiest and most cheerful crew ever to sail through space, spent a few hours on the Princeton, got a call from President Nixon, flew by helicopter to Pago Pago, in American Samoa, and then headed home to Houston in an Air Force plane.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. BINGHAM (at the request of Mr. ALBERT), for today, on account of illness.

Mr. HOSMER, for May 28, on account of official business.

Mr. HUNT (at the request of Mr. GERALD R. FORD), for May 26 and 27, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MILLER of Ohio) to revise and extend their remarks, and include extraneous matter:)

Mr. SAYLOR, for 30 minutes, today.

Mr. RUPPE, for 10 minutes, today.

(The following Members (at the request of Mr. CHAPPELL) and to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 10 minutes, today.

Mr. FARBSTEIN, for 30 minutes, today.

Mr. CULVER, for 10 minutes, today.

Mr. FARBSTEIN, for 30 minutes, on May 28.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. SNYDER and to include extraneous matter.

Mr. TALCOTT and to include extraneous matter.

Mr. HALL, immediately prior to the passage of the agricultural appropriation bill, today.

Mr. BARRETT, in the Committee of the Whole today, following the remarks of Mr. EDWARDS of California on his amendment.

Mr. LANGEN to revise and extend remarks in debate on H.R. 11612

Mr. OLSEN and to include extraneous matter.

Mr. FULTON of Tennessee (at the request of Mr. WRIGHT) following the remarks of Mr. WRIGHT in the Committee of the Whole today.

Mr. ECKHARDT to revise and extend his remarks immediately before the Committee rose on the agricultural appropriation bill today.

Mr. STEED to revise and extend his remarks during consideration of the Post Office bill in the Committee of the Whole today and to include extraneous matter.

(The following Members (at the request of Mr. MILLER of Ohio) and to include extraneous matter:)

Mr. CLEVELAND in two instances.
Mr. ROBISON.
Mr. ESHLEMAN.
Mr. ASHBROOK in two instances.
Mr. DELLENBACK.
Mr. ANDERSON of Illinois.
Mr. ERLENBORN.
Mr. HARVEY.
Mr. DUNCAN.
Mr. MESKILL.
Mr. MIZE in two instances.
Mr. DENNEY.
Mr. GROSS.
Mr. SNYDER.
Mr. MINSHALL.
Mr. MCDONALD of Michigan.
Mr. MCKNEALLY.
Mr. BRAY in three instances.
Mr. WYDLER.
Mr. HOSMER in two instances.
Mr. GERALD R. FORD.
Mr. CRAMER in four instances.
Mr. TAFT in two instances.
Mr. HARSHA.
Mr. BLACKBURN in five instances.
Mr. SCHWENGEL in two instances.
Mr. MAILLIARD.

(The following Members (at the request of Mr. CHAPPELL) and to include extraneous matter:)

Mrs. GRIFFITHS.
Mr. MOLLOHAN in three instances.
Mr. EILBERG in two instances.
Mr. LONG of Maryland in three instances.
Mr. GONZALEZ in two instances.
Mr. ALEXANDER.
Mr. FRAZER.
Mr. EDWARDS of California in three instances.
Mr. OTTINGER.
Mr. MATSUNAGA.
Mr. MINISH.
Mr. SHIPLEY in two instances.
Mr. HÉBERT.
Mr. HULL.
Mr. GARMATZ.
Mr. DADDARIO.
Mr. JONES of North Carolina in two instances.
Mr. MARSH.
Mr. TEAGUE of Texas in six instances.
Mrs. MINK in two instances.
Mr. MIKVA in four instances.
Mr. DONOHUE in two instances.
Mrs. HANSEN of Washington in three instances.
Mr. RARICK in six instances.
Mr. LEGGETT in two instances.
Mr. COHELAN in four instances.
Mr. OLSEN.
Mr. FARBSTEIN in four instances.
Mr. WILLIAM D. FORD in two instances.
Mr. RYAN in three instances.
Mr. GRIFFIN in two instances.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 133. An act to authorize the vessel *Orion* to engage in the coastwise trade; to the Committee on Merchant Marine and Fisheries.

S. 753. An act to authorize and direct the Secretary of Transportation to cause the vessel *Cap'n Frank*, owned by Ernest R. Darling, of South Portland, Maine, to be documented as a vessel of the United States with full coastwise privileges; to the Committee on Merchant Marine and Fisheries.

S. 826. An act to designate certain lands in the Seney, Huron Islands, and Michigan Islands National Wildlife Refuges in Michigan, the Gravel Island and Green Bay National Wildlife Refuges in Wisconsin, and the Moosehorn National Wildlife Refuge in Maine, as wilderness; to the Committee on Interior and Insular Affairs.

S. 2224. An act to amend the Investment Company Act of 1940 and the Investment Advisers Act of 1940 to define the equitable standards governing relationships between investment companies and their investment advisers and principal underwriters, and for other purposes; to the Committee on Interstate and Foreign Commerce.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 9328. An act to amend title 37, United States Code, to provide special pay to naval officers qualified in submarines, who have the current technical qualification for duty in connection with supervision, operation, and maintenance of naval nuclear propulsion plants, who agree to remain in active submarine service for one period of 4 years beyond any other obligated active service, and for other purposes.

BILL PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 9328. An act to amend title 37, United States Code, to provide special pay to naval officers, qualified in submarines, who have the current technical qualification for duty in connection with supervision, operation, and maintenance of naval nuclear propulsion plants, who agree to remain in active submarine service for one period of 4 years beyond any other obligated active service, and for other purposes.

ADJOURNMENT

Mr. CHAPPELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 8 o'clock and 14 minutes p.m.), the House adjourned until tomorrow, Wednesday, May 28, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

803. A letter from the Under Secretary of Defense, transmitting a report on support furnished in various locations from military functions appropriations, for the third quarter of fiscal year 1969, pursuant to the provisions of section 537 of the Defense Appropriation Act, 1969 (Public Law 90–580); to the Committee on Appropriations.

804. A letter from the Comptroller General of the United States, transmitting a report on a review of the effectiveness of the Air Force systems for managing manpower resources at airbases in Thailand; to the Committee on Government Operations.

805. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Federal Deposit Insurance Corporation for fiscal year 1968, limited by agency restriction on access to bank examination records (H. Doc. No. 91–120); to the Committee on Government Operations and ordered to be printed.

806. A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), transmitting notification of an increase in excess of 15 percent in the estimated cost of a construction project proposed to be undertaken for the Naval and Marine Corps Reserve; to the Committee on Armed Services.

807. A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), transmitting notification of the location, nature, and estimated cost of a facilities project proposed to be undertaken for the Air National Guard, pursuant to the provisions of 10 U.S.C. 2233a(1)(b); to the Committe on Armed Services.

808. A letter from the Deputy Assistant Secretary of Defense (Installations and Logistics), transmitting a report on Department of Defense procurement from small and other business firms for July 1968 through February 1969 pursuant to the provisions of section 10(d) of the Small Business Act, as amended; to the Committee on Banking and Currency.

809. A letter from the Commissioner of the District Columbia, transmitting a corrected draft of proposed legislation to authorize in the District of Columbia a program of public day-care services and to provide public assistance in the form of foster home care to certain dependent children; to the Committee on the District of Columbia.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 692. A bill to amend section 620 of title 38, United States Code, to extend the length of time community nursing home care may be provided at the expense of the United States (Rept. No. 91–268). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 693. A bill to amend title 38 of the United States Code to provide that veterans who are 70 years of age or older shall be deemed to be unable to defray the expenses of necessary hospital or domiciliary care, and for other purposes; with amendment (Rept. No. 91–269). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 2768. A bill to amend title 38 of the United States Code in order to eliminate the 6-month limitation on the furnishing of nursing home care in the case of veterans with service-connected disabilities; with amendment (Rept. No. 91–270). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 3130. A bill to amend title 38, United States Code, to provide that the Administrator of Veterans' Affairs may furnish medical services for non-service-connected disability to any war veteran who has total disability from a service-connected disability (Rept. No. 91–271). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 9334. A bill to amend title 38, United States Code, to promote the care and treatment of veterans in State veterans' homes (Rept. No. 91–272). Referred to the Committee of the Whole House on the State of Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 9634. A bill to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources (Rept. No. 91–273). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 763. A bill to provide for a study of the extent and enforcement of State laws and regulations governing the operation of youth camps (Rept. No. 91–274). Referred to the Committee of the Whole House on the State of the Union.

Mr. O'NEILL of Massachusetts: Committee on Rules. House Resolution 426. Resolution for consideration of H.R. 4204, a bill to amend section 6 of the War Claims Act of 1948 to include prisoners of war captured during the Vietnam conflict (Rept. No. 91–275). Referred to the House Calendar.

Mr. MADDEN: Committee on Rules. House Resolution 427. Resolution for consideration of H.R. 10946, a bill to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects (Rept. No. 91–276). Referred to the House Calendar.

Mr. PEPPER: Committee on Rules. House Resolution 428. Resolution for consideration of H.R. 11102, a bill to amend the provisions of the Public Health Service Act relating to the construction and modernization of hospitals and other medical facilities by providing separate authorizations of appropriations for new construction and for modernization of facilities, authorizing Federal guarantees of loans for such construction and modernization and Federal payment of part of the interest thereon, authorizing grants for modernization of emergency rooms of general hospitals, and extending and making other improvements in the program authorized by these provisions (Rept. No. 91–277). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of Illinois:

H.R. 11682. A bill to amend title 38 of the United States Code in order to deem certain full-time training duty as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. HANSEN of Idaho:

H.R. 11683. A bill to require certain certification with respect to odometers on motor vehicles used in commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. BENNETT:

H.R. 11684. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

H.R. 11685. A bill to amend Public Law 85–905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes; to the Committee on Education and Labor.

By Mr. BUSH (for himself, Mr. CAREY, Mr. COUGHLIN, Mr. CULVER, Mr. DELLENBACK, Mr. GROVER, Mr. HECHLER of West Virginia, Mr. MCCLOSKEY, Mr. PIKE, Mr. QUIE, Mr. RIEGLE, Mr. ROSENTHAL, Mr. ST. ONGE, Mr. TUNNEY, Mr. VAN DEERLIN, and Mr. WHALEN):

H.R. 11686. A bill to improve the operation of the legislative branch of the Federal Government, and for other purposes; to the Committee on Rules.

By Mr. CARTER:

H.R. 11687. A bill to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a high-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. CULVER:

H.R. 11688. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. GAYDOS:

H.R. 11689. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. GIAIMO:

H.R. 11690. A bill to authorize the minting of nonsilver coins in the denomination of $1; to the Committee on Banking and Currency.

By Mr. McDADE:

H.R. 11691. A bill to amend the Public Health Service Act to provide for the establishment of a National Lung Institute; to the Committee on Interstate and Foreign Commerce.

H.R. 11692. A bill to regulate imports of milk and dairy products, and for other purposes; to the Committee on Ways and Means.

By Mr. McFALL:

H.R. 11693. A bill to amend the U.S. Housing Act of 1937 to require the payment of prevailing wage rates (as provided by the Davis-Bacon Act) in the construction of new housing to be used as low-rent housing in private accommodations under the public housing program; to the Committee on Banking and Currency.

By Mr. MATSUNAGA:

H.R. 11694. A bill to provide for public disclosure by Members of the House of Representatives, Members of the U.S. Senate, justices and judges of the U.S. courts, and policymaking officials of the executive branch as designated by the Civil Service Commission, but including the President, Vice President, and Cabinet members; and by candidates for the House of Representatives and the Senate, the Presidency, and the Vice-Presidency; and to give the House Committee on Standards of Conduct, the Senate Select Committee on Standards of Conduct, the Director of the Administrative Office of the U.S. Courts, and the Attorney General of the United States appropriate jurisdiction; to the Committee on the Judiciary.

By Mr. MORSE:

H.R. 11695. A bill to amend the Internal Revenue Code of 1954 to provide that the cost of maintaining a retarded child in a professionally qualified custodial institution shall be deductible as a medical expense; to the Committee on Ways and Means.

By Mr. MURPHY of New York:

H.R. 11696. A bill to reclassify certain positions in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ROGERS of Florida:

H.R. 11697. A bill to amend the Federal Food, Drug, and Cosmetic Act to include marihuana as a depressant or stimulant drug regulated by that act; to the Committee on Interstate and Foreign Commerce.

By Mr. ROONEY of Pennsylvania:

H.R. 11698. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. RYAN:

H.R. 11699. A bill to provide that Federal assistance to a State or local government or agency for rehabilitation or renovation of housing and for enforcement of local or State housing codes under the urban renewal program, the public housing program, or the model cities program, or under any other program involving the provision by State or local governments of housing or related facilities, shall be made available only on condition that the recipient submit and carry out an effective plan for eliminating the causes of lead-based paint poisoning; to the Committee on Banking and Currency.

By Mr. SHIPLEY:

H.R. 11700. A bill to provide for orderly trade in footwear; to the Committee on Ways and Means.

By Mr. STAGGERS:

H.R. 11701. A bill to amend the Public Health Service Act, the Federal Food, Drug, and Cosmetic Act, the Community Mental Health Centers Act, and other acts to establish a comprehensive program to deal with narcotic addiction and drug abuse, to provide for control of marihuana, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. STAGGERS (for himself and Mr. SPRINGER):

H.R. 11702. A bill to amend the Public Health Service Act to improve and extend the provisions relating to assistance to medical libraries and related instrumentalities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE of Texas (by request):

H.R. 11703. A bill to authorize the Administrator of Veterans' Affairs to sell at prices which he determines to be reasonable under prevailing mortgage market conditions direct loans made to veterans under chapter 37, title 38, United States Code; to the Committee on Veterans' Affairs.

By Mr. WAMPLER:

H.R. 11704. A bill to abolish the Commission on Executive, Legislative, and Judicial Salaries established by section 225 of the Federal Salary Act of 1967, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. YATRON:

H.R. 11705. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

H.R. 11706. A bill to amend section 214 of the Foreign Assistance Act of 1961 to authorize additional funds for the purpose of providing financial assistance in connection with the expansion and improvement of American-sponsored medical facilities in Israel; to the Committee on Foreign Affairs.

By Mr. ANDREWS of North Dakota:

H.R. 11707. A bill, the Water Bank Act; to the Committee on Merchant Marine and Fisheries.

By Mr. BARING:

H.R. 11708. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income allowances paid under section 5942 of title 5, United States Code; to the Committee on Ways and Means.

By Mr. BLATNIK:

H.R. 11709. A bill to amend title 5, United States Code, to authorize the payment of the

expenses of preparing and transporting to his home or place of interment the remains of a Federal employee who dies while performing official duties in Alaska or Hawaii, and for other purposes; to the Committee on Government Operations.

By Mr. CRAMER:

H.R. 11710. A bill to deny tax-exempt status to private foundations and organizations engaging in improper transactions with certain Government officials and former Government officials, and to impose an income tax of 100 percent on income received by such officials and former officials from such foundations and organizations; to the Committee on Ways and Means.

By Mr. FASCELL (for himself and Mr. MAILLIARD):

H.R. 11711. A bill to amend section 510 of the International Claims Settlement Act of 1949 to extend the time within which the Foreign Claims Settlement Commission is required to complete its affairs in connection with the settlement of claims against the Government of Cuba; to the Committee on Foreign Affairs.

By Mr. FRIEDEL:

H.R. 11712. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. FULTON of Tennessee:

H.R. 11713. A bill to amend title 38 of the United States Code so as to provide that public or private retirement, annuity, or endowment payments (including monthly social security insurance benefits) shall not be included in computing annual income for the purpose of determining eligibility for a pension under chapter 15 of that title; to the Committee on Veterans' Affairs.

By Mr. GREEN of Pennsylvania:

H.R. 11714. A bill to permit officers and employees of the Federal Government to elect coverage under the old-age, survivors, and disability insurance system; to the Committee on Ways and Means.

By Mr. HARVEY:

H.R. 11715. A bill to amend title 28, United States Code, to limit the appellate jurisdiction of the Supreme Court in certain cases relating to the apportionment of population among districts from which Members of Congress are elected; to the Committee on the Judiciary.

By Mr. HATHAWAY:

H.R. 11716. A bill to provide for the control of mosquitoes and other biting flies including possible vectors of disease through research, technical assistance, and grants-in-aid for control projects; to the Committee on Interstate and Foreign Commerce.

By Mr. KLEPPE:

H.R. 11717. A bill to provide for conserving surface waters; to preserve and improve habitat for migratory waterfowl and other wildlife resources; to reduce runoff, soil and wind erosion, and contribute to food control; to contribute to improved water quality and reduce stream sedimentation; to contribute to improved subsurface moisture; to reduce acres of new land coming into production and to retire lands now in agricultural production; to enhance the natural beauty of the landscape; and to promote comprehensive and total water management planning; to the Committee on Merchant Marine and Fisheries.

By Mr. LONG of Louisiana:

H.R. 11718. A bill to amend the Federal Meat Inspection Act to require that imported meat and meat food products made in whole or in part of imported meat be labeled "imported" at all stages of distribution until delivery to the ultimate consumer; to the Committee on Agriculture.

H.R. 11719. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

H.R. 11720. A bill to declare a portion of Bayou Des Glaises, La., as a nonnavigable water of the United States; to the Committee on Interstate and Foreign Commerce.

H.R. 11721. A bill to provide for the election of circuit and district judges under the provisions of the article of amendment to the Constitution proposed by House Joint Resolution 692 of the 91st Congress; to the Committee on the Judiciary.

H.R. 11722. A bill to adjust the postal revenues and to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 11723. A bill to amend the Internal Revenue Code of 1954 to encourage higher education, and particularly the private funding thereof, by authorizing a deduction from gross income of reasonable amounts contributed to a qualified higher education fund established by the taxpayer for the purpose of funding the higher education of his dependents; to the Committee on Ways and Means.

By Mr. MILLER of Ohio:

H.R. 11724. A bill to provide incentives for the establishment of new or expanded job-producing industrial and commercial establishments in rural areas; to the Committee on Ways and Means.

By Mr. OLSEN:

H.R. 11725. A bill to amend title 37, United States Code, to provide for the procurement and retention of judge advocates and law specialist officers for the Armed Forces; to the Committee on Armed Services.

By Mr. QUILLEN:

H.R. 11726. A bill to amend the Agricultural adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. ROSTENKOWSKI:

H.R. 11727. A bill to amend the Internal Revenue Code of 1954 to allow a full-time student in good standing a deduction of $1,800 a year for his educational expenses, and to allow this deduction to other individuals who contribute to his educational expenses to the extent that the student himself does not qualify for the deduction; to the Committee on Ways and Means.

By Mr. RUPPE (for himself, Mr. BUTTON, Mr. HAMILTON, Mr. SCHWENGEL, Mr. SCHERLE, Mr. WALDIE, Mr. WEICKER, Mr. CORBETT, Mr. PODELL, Mr. BIESTER, Mr. BUSH, Mr. LLOYD, Mr. REES, Mr. MIKVA, Mr. ANDERSON of Illinois, Mr. MCCARTHY, Mr. VANDER JAGT, Mr. HECHLER of West Virginia, Mr. CUNNINGHAM, Mr. EDWARDS of California, Mr. MOSHER, and Mr. DELLENBACH):

H.R. 11728. A bill to provide for public disclosure by Members of the House of Representatives, Members of the U.S. Senate, justices and judges of the U.S. courts, and policymaking officials of the executive branch as designated by the Civil Service Commission, but including the President, Vice President, and Cabinet members; and by candidates for the House of Representatives and the Senate, the Presidency, and the Vice-Presidency; and to give the House Committee on Standards of Conduct, the Senate Select Committee on Standards of Conduct, the Director of the Administrative Office of the U.S. Courts, and the Attorney General of the United States appropriate jurisdiction; to the Committee on the Judiciary.

By Mr. VANDER JAGT:

H.R. 11729. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising and certain materials to minors; to the Committee on the Judiciary.

H.R. 11730. A bill to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. WYMAN:

H.R. 11731. A bill to amend the Internal Security Act of 1950 to prohibit certain obstructive acts and practices; to the Committee on Internal Security.

By Mr. FASCELL (for himself and Mr. MAILLIARD):

H.J. Res. 746. Joint resolution to amend the joint resolution authorizing appropriations for the payment by the United States of its share of the expenses of the Pan American Institute of Geography and History; to the Committee on Foreign Affairs.

By Mr. MEEDS:

H.J. Res. 747. Joint resolution proposing an amendment to the Constitution of the United States to grant to citizens of the United States who have attained the age of 18 the right to vote; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

198. The SPEAKER presented a memorial of the Legislature of the State of Florida, ratifying the 19th amendment to the Constitution of the United States, which was referred to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. KOCH:

H.R. 11732. A bill for the relief of Eva Ezri; to the Committee on the Judiciary.

By Mr. McMILLAN:

H.R. 11733. A bill for the relief of Kamal Sedky Basily; to the Committee on the Judiciary.

By Mr. McMILLAN (by request):

H.R. 11734. A bill for the relief of William Temes; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

H.R. 11735. A bill for the relief of Lt. Col. Frank Carlos; to the Committee on the Judiciary.

By Mr. VIGORITO:

H.R. 11736. A bill for the relief of Teresa Martelletti; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

126. The SPEAKER presented a petition of the county court, Deschutes County, Oreg., relative to the tax exemption for municipal bonds, which was referred to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

THE ORBITING ASTRONOMICAL OBSERVATORY (OAO–II)

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MILLER of California. Mr. Speaker, it was my privilege on May 22 to attend an awards ceremony at NASA's Goddard Space Flight Center, Greenbelt, Md., honoring the Government-industry-university team responsible for the magnificent accomplishments of the Orbiting Astronomical Observatory, OAO–II.

This spacecraft had been in orbit almost 6 months. It was launched from Cape Kennedy on December 7, 1968. Scientists say the OAO represents as great an advance in astronomy as Galileo's telescope. It is examining the universe from a wholly new vantage point, above the obscuring atmosphere of the earth.

One of the most impressive things about the Orbiting Astronomical Observatory is the teamwork that it symbolizes. I agree with Dr. Thomas O. Paine, the NASA Administrator, who said:

> We have proved that men and women at widely scattered geographical points, in varied walks of life and diverse occupations and professions, can work together as a team to accomplish one of the most difficult scientific and technological goals ever undertaken.

Mr. Speaker, I would like to place in the RECORD the program and the list of awardees at the OAO ceremony. A sampling of the names—names like Kupperian, Mitchell, Garbarini, Purcell, Roman, Spitzer, and Krueger—indicates what an all-American team effort the OAO really is.

I also wish to commend Dr. Frederick Seitz, President of the National Academy of Sciences, for the excellent address he delivered at the ceremony. Dr. Seitz is retiring as President of the Academy, and it was most appropriate that he was awarded the Distinguished Public Service Medal by Dr. Paine.

I include the awards as follows:

NASA HONORARY AWARDS AND MEDALS

Frederick Seitz, National Academy of Sciences, Distinguished Public Service Medal.

Jesse L. Mitchell, OSSA, Distinguished Service Medal.

Joseph Purcell, GSFC, Distinguished Service Medal.

C. Dixon Ashworth, OSSA, Exceptional Service Medal.

Arthur D. Code, Washburn Observatory, University of Wisconsin, Public Service Award.

Robert F. Garbarini, OSSA, Exceptional Service Medal.

Donald A. Krueger, GSFC, Exceptional Service Medal.

James E. Kupperian, GSFC, Exceptional Scientific Achievement Medal.

H. Robert Lynn, GSFC, Exceptional Service Medal.

Donald L. Moyer, Grumman Aircraft Engineering Corporation, Public Service Award.

Nancy G. Roman, OSSA, Exceptional Scientific Achievement Medal.

Jack Sargent, GSFC, Exceptional Service Medal.

Nicholas S. Sinder, Grumman Aircraft Engineering Corporation, Public Service Award.

Lyman Spitzer, Jr., Princeton University Observatory, Public Service Award.

Harold Wexler, Grumann Aircraft Engineering Corporation, Public Service Award.

Fred L. Whipple, Smithsonian Astrophysical Observatory, Public Service Award.

GROUP ACHIEVEMENT AWARDS

OAO–II Project Team: Launch Operations Support.

OAO–II Project Team: Launch Vehicle Management.

OAO–II Project Team: Project Management and Support, Administrative Support, Integration Support, Network Support, Project Management, Systems Review, Technology Functional Support, Test and Evaluation, Tracking and Data Support.

THE SAFEGUARD ABM SYSTEM

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27, 1969

Mr. YOUNG of North Dakota. Mr. President, one of the better arguments in support of the Safeguard ABM system was made recently by Representative MARK ANDREWS, of North Dakota.

The speech effectively answers many of the arguments of the opposition which have been received by Members of Congress in recent weeks. Because of the importance of this excellent speech, I ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SAFEGUARD ABM SYSTEM AND THE CAUSE OF PEACE

(Speech of Representative MARK ANDREWS Before North Dakota Motor Carriers Association, Fargo, N. Dak., May 17, 1969)

We have now entered an age of missilery, yet the basic fundamentals involved in our nation's protection are little different now from what they have always been. Some 194 years ago, a silversmith in New England named Paul Revere, mounted his horse one April night and rode, as history tells us, through "every middlesex, village and farm," to warn his neighbors of military invasion. Our American ancestors were few in number in 1775 and not blessed with an abundance of worldly goods.

The Colonists were obviously no match for the power of England with its enormous professional army and the world's largest fleet. You may well ask, "What was Paul Revere actually doing? What was the practical purpose of his famous ride?" He was buying time for himself and his neighbors to prepare. They had no way of knowing when the British Crown would turn loose on them a full scale military assault. They could not know whether they were inviting a new 30 year's war or a hundred year's war.

How could they be expected to fathom the intentions of an autocratic King. But knowing history, they were aware that the British Crown had always put down rebellion in its Dominions, and all the leaders were sent to London Dock to be hanged for treason. It was this knowledge which prompted the famous comment by Benjamin Franklin, after signing the Declaration of Independence, "We must all hang together, or assuredly we shall all hang separately."

So, a few days or a few hours of advanced warning could make a difference between life and death for them, or between organized resistance and the need to disperse into the wilderness beyond the King's authority.

Reflecting on American defense problems and the cost today, one is struck with the close parallel between the situation facing the colonists or 1775 and our own uncertain outlook. We are a nation without imperial pretensions. We have no desire to occupy any other nation or to bend its people to our will. We have set up a vast establishment called the Department of Defense, and we insist that its mission be confined directly to the defense of this Republic. Even so, we find that billions each year must be applied to defense activities. Why is this so?

It is so mainly because we cannot know the true intentions of our enemies, and we must try to prepare for every eventuality. We must buy time for survival and response if such a situation is ever forced upon us. And, even more important, we must make sure that our technical knowledge is advancing at a constant rate so that we have available to our nation the latest in sophisticated know-how in this age of satellites, moonshots and many other advances that were only dreamed of a decade or two ago.

We cannot hope to match the manpower of the 1,300,000,000 persons behind the iron and bamboo curtains of censorship and secrecy. We have no means of certifying the true intentions of their leadership. We can only be guided by assessment of their past actions. The history written in the U.S.S.R. since 1917 offers small reason to place confidence in their good intentions. For over 50 years they have preached that an agreement with the capitalist is nothing but a chance to take advantage of a sworn enemy. During the same 50 years they have done everything in their power to weaken self-government anywhere in the world and to promote the creation of police states.

Their essential attitudes have not changed, but we must face each new day with the realization that they are in the world with us. They do have very advanced weaponry. Their commitments are unreliable. Their objectives are uncertain. Their good faith is obscured by regular planned actions which seem to support continuation of an international strategy of terror. And, worst of all, their interpretation of just what advantage may be gained from any given situation is unknown on this side of the ocean until after they have acted.

While we all hope for a mutual cutback in armaments, the cutbacks must be mutual, and verification by the U.S. must be assured, so that we can know for certain what is going on in the closed society of the Communist World. Unfortunately, the Communists have never been willing to agree to the kind of verification considered necessary for our safety.

So much for the past and the present. What, then, of the future. If the foregoing statements do not still hold—if the mission of our Defense Department therefore, is to be changed—then the people must so signify. If our people are willing to risk a little more on Soviet good intentions, if our people feel that we don't need to stay abreast of technological improvements, then we can spend much less on national defense. But a decision of that kind, with today's weapons and tomorrow's advancements, can involve the very life or death of the entire nation. It cannot and should not be made by the President or Secretary of Defense or the Congress alone. The defense of our nation is a decision that involves all of us and should only be

made by all Americans. First, of course, we must have all the facts. Public officials can only weigh the risks, make available information and offer suggestions for protection from those risks. If the time arrives when the people conclude that the cost of that protection is too high, then the decision to recede and accept the greater risks must be the people's to make, as the risks are theirs to shoulder.

And, let's look frankly at the American mood of today. First, we're approaching the end, we hope, of a war—a war that has probably been the most unpopular our nation has ever been engaged in. Every time our nation has concluded a war there has been an overwhelming public opinion toward disarmament and against the military. It happened after the Civil War, after the Spanish-American War, After World War I, World War II and after Korea. Add to this feeling the fact that during the last few years the Defense Department has been less than prudent in many of its major contracts. The TFX scandal, for example, or the Sheridan tank case. Also, the draft, designed for the full mobilization of World Wars I and II, has been a bone of contention among our young men.

Thus, the situation is ripe for political opportunists who jump at the chance to exploit concern and seek headlines, rather than give the facts—self-seekers who fan the flames of discontent and attempt to cater to the mood and the emotions of the present, rather than the need, opportunities and obligations of the future.

It is easy to strike a responsive cord by saying, "Think of all the good things you can have by refusing to spend money for defense."—easy, that is, if you forget to add into your figures the cost of the risk of losing our freedom.

We even have a prominent politician in our own state who points out that the Minuteman Missile System was constructed to be impervious to nuclear attack. He asks, "What has changed that now makes it vulnerable?" This kind of statement certainly gains him the headlines he desires, but it completely avoids the obvious facts. He conveniently forgets that Soviet technology hasn't stood still in the last decade. Among other things, the Soviets have developed the SS–9 intercontinental ballistic missile, with a 20-plus megaton warhead, which is far more powerful than anything we have. With its payload equivalence of more than 20 million tons of TNT, if an SS–9 dropped anywhere near one of our Minuteman sites, the site would be totally ineffective.

If we were to follow his logic, we would still be driving around in Model T Fords and farming with horses, since there would be no such thing as obsolescence. The French would still be safe behind their Maginot Line, which was built in the early 1930's as totally impregnable. But, of course, technology caught up and passed them, and France was overrun.

The greatest need for President Nixon's ABM Program is not solely to deploy two sites or twelve sites or to protect us from a small Russian attack or a foreseeable Chinese attack, or a stray missile that may come in by mistake. The greatest need is to give continuity to the development of technology on our side of the iron curtain—technology that can give us the lead time we might so badly need in some difficult time in the future.

Roosevelt was told by many scientists that the atomic bomb would never work. President Truman had most of the scientific community in his time opposed to his go-ahead on the hydrogen bomb. President Eisenhower had the professors saying that we couldn't take accurate photos from satellites miles up in space to allow us to know what the enemy was doing. But, these Presidents all had the courage of their convictions. They all recognized that the military safety and thus the future of America depended on one thing—staying ahead in technical knowledge. Where would we have been during the time of the Cuban Missile Crisis if President Kennedy hadn't had at his disposal the lead in technology given this nation by the action and wisdom of Presidents Roosevelt, Truman and Eisenhower.

I have no way of knowing who the President of the United States might be a decade or so from now sitting at a world conference table with the leaders of the other nations that share this globe with us. But, whoever he might be, and whatever the time in history, it is vital to our best interests that he represent an America that is a first-rate power militarily.

When I was first elected to represent you some six years ago, the national budget totalled $111 billion. This year Congress is asked to consider a budget in which the funds requested total $192.9 billion. During the past six years total spending by the government has risen almost 74 percent. Our Defense budget request this year, of course, is still the largest one in our budget. Yet, in the time that I have been privileged to serve in Congress, defense spending has actually dropped from 45% to 41% of the budget, even though we've been involved in Viet Nam. These actual budget figures certainly belie the argument that our nation's fiscal problems are solely due to "runaway defense budgeting".

Now, what of the Safeguard System, originally called the Sentinel, the very development of which has spurred so much dissension. The idea of an ABM System is not new. It has been the subject of research for over 15 years—15 years during which dramatic advancements have been scored in our knowledge and abilities in space. A decade ago there was little hope held for its eventual success, but within the past two years we have seen giant strides made that now indicate the state of the art has progressed sufficiently to justify on-site deployment testing of such a system.

So much has been said and written about the Safeguard System that mass confusion seems to have resulted. I believe, therefore, it would be helpful to summarize for you at this point first, what the Safeguard is designed to do as part of our Nation's defenses; secondly, the positions taken by those who oppose it; and, thirdly, the responses of those who support it.

First of all, about the Safeguard System itself. As now proposed it would include two sites being set up for in-place, functional testing. If, at the end of this testing, it was found that the system performed well the two sites would be expanded to twelve which would then give us coverage of our country.

As now proposed, it is designed to do three things, and President Nixon pointed out these three in his message to the nation outlining the deployment of this system and the significant changes made from the Johnson sentinel concept. Mr. Nixon indicated it should: first, protect our present landbased ballistic missile forces, which because of new developments in the Soviet Union, were no longer as secure as we once had reason to believe; secondly, the Safeguard System would be capable of intercepting a minor attack from new and emerging nuclear powers such as China; thirdly, and perhaps most important, the Safeguard System would give us the opportunity of intercepting and shooting down a mistaken attack by a handful of missiles launched in error from Soviet Russia or anywhere else.

With over 2,000 missiles on both sides of the world ready to go, the possibility of a circuit closing by mistake is always with us. At the present time our only reaction against a mistaken attack would be massive retaliation with our own missiles.

Yet, we've heard one of our state's prominent politicians state, ". . . Why do we now seek to protect, with an ABM system, silos whose retaliation Minuteman missiles should be long gone in event of attack?" (unquote) I think most of us feel that if our nation is to remain dependent on the sole alternative of massive retaliation and instant incineration for the world in case of a small attack, then we indeed have entered an age of nuclear madness.

A defensive missile system is a long overdue complement to our offensive missile system. The Safeguard system contemplates the deployment of two units, one in North Dakota and one in Montana, to be constructed as research and development projects. The total cost is not tens of billions of dollars, as some would have you believe, but $2.1 billion with an initial expenditure of $900 million during the next fiscal year. These are, indeed, fantastic sums, but this expenditure next year represents slightly over one percent of our Defense budget. If for this we can gain a workable missile defense system and an alternative to massive retaliation, we will have made, I feel, a wise investment.

Now, just what is the Safeguard System. It is an interception and destruct system, utilizing both long-range and short-range radar identification of incoming enemy missiles, and long-range and short-range interception capabilities. The long-range anti-missile, the Spartan can intercept at a distance of several hundred miles. The short-range missile, the Sprint, can intercept up to 25 miles traveling at unusually high speeds to meet any enemy missiles that may have avoided contact with the Spartan. The long-range anti-missile, the Spartan, has been tested on many occasions, as has the Sprint. The new radar with a 360 degree detection ability has been used in our moonshot. The computers are within the state of the art and have now progressed sufficiently to justify on-site testing. Thus, while all the component parts are in existence at present, the "entity" needs to be tested and certified for real reliability.

The main substance of the arguments of the opponents of the ABM System can be grouped in four distinct categories.

First, that this is being done to keep the pipeline of the defense industries full and is stimulated solely by the military-industrial establishment.

Second, that the installation would be obsolete before it is built.

Third, that it would cost far too much money—money much better spent for the domestic needs of our nation.

Fourth, that this would escalate the arms race and make even more difficult the anticipated strategic arms control talks with the Soviet Union.

All of these arguments have been repeatedly met and answered by the President and other proponents of the Safeguard deplcyment. No solution has been given by the opponents to the three needs that the President stressed in justifying the ABM deployment:

One, the protection of a portion of our retaliatory force against a first strike.

Two, a protection of our nation against a small attack from a lesser nuclear power such as China.

Three, a way to deal with a missile fired in error by malfunction from one of the major powers.

The philosophy behind the Safeguard decision is, of course, the conviction that first strike capability is a threat of nuclear war, while second strike capability is a deterrent to war. Our defense officials are convinced that the Soviet Union is attempting to maintain second strike or deterrent force against our ICBM weapons. If the ABM is effective and deployed, we will have an assured second strike deterrent—far better than depending solely on massive numbers of offensive missiles as at present. There is no serious doubt that the best way to deter a nuclear attack is to maintain the unmistak-

able ability to inflict unacceptable damage on any aggressor even after absorbing a first strike on our forces.

It is interesting to observe at this point that after the announcement of the Safeguard System there were no questions raised by the Soviets regarding our desire to maintain an ability to inflict second strike damage. Initial reaction by the Soviet Press indicated very little concern about the matter because they feel it's proper for us to protect our defense capabilities.

In fact, in a press conference in London on February 9, 1967, shortly after President Johnson announced the study of an ABM System, Premier Kosygin was asked: "Do you believe it is possible to agree on the moratorium on the deployment of an anti-missile defense system?" He replied in part:

"I believe that defensive systems, which prevent attack, are not the cause of the arms race, but constitute a factor preventing the death of people. Some argue like this: What is cheaper, to have offensive weapons which can destroy towns and whole states or to have defensive weapons which can prevent this destruction? At present the theory is current somewhere that the system which is cheaper should be developed. Such so-called theoreticians argue as to the cost of killing a man—$500,000 or $100,000. Maybe an anti-missile system is more expensive than an offensive system, but it is designed not to kill people but to preserve human lives."

Kosygin's argument could well be used in our nation also. Moreover, it was after former President Johnson's announcement to proceed with the more provocative city-oriented Sentinel ABM System that the Soviet Union agreed to engage in strategic arms limitation negotiations. It is also significant that the Soviets are now on their second generation of deploying an ABM System, and that the British Government, as well as most of our NATO allies, have publicly supported the concept of the ABM. So much for the ABM System as military hardware and its effect on world opinion.

But, as I mentioned earlier, our people are suspicious of the expenditures made for defense. Who could help but be when one reads these stories in the newspaper about the TFX scandal. The plane contract was awarded, not to the low bidder, but to a company in Texas, which turned out a plane that not only cost three times as much as the original estimate, but has not been able to be used effectively yet by the Air Force. Also, the $1.3 billion Sheridan tank fiasco, which has produced a tank that at present is almost as hazardous for its crew as it is for the enemy.

Actions such as these cannot be condoned by any American, regardless of political party, and we can only hope that the Defense Department, under new leadership, will see that this type of contracting is not allowed to continue. But abuses of the procurement system cannot be allowed to be used as the justification for America to cut back much needed defense system deployment.

Certainly, the President, who is hard-pressed today to start new programs he feels desirable for the internal growth of our nation, would like to avoid the funding necessary for weapons of this type and use the money instead for dams, roads, bridges, education, and anti-crime programs and all of the many other things that America needs. He knows, however, because of the information he has at hand, that this system is absolutely necessary and vital for our nation's future.

All the billions spent on national defense during the "cold war" years are nothing but a repetition of Paul Revere's ride—an effort to buy security for ourselves, and time for the world to mature and solve its most dangerous problems without resorting to nuclear warfare. We can even, in some ways, compare Paul Revere's horse to the scientist's laboratory. Both have the ability of giving us that extra time we need so desperately. Time to stay ahead while we attempt to resolve our differences peacefully.

Fortunately, many weapons have been purchased and deployed but never used; and on reaching obsolescense were consigned to the scrap heap—but they kept the peace while they were on duty, and this is why they were developed.

Faced with all of these facts, what, then, will be my position as your Representative.

First, as of this time, I feel it is highly necessary to deploy—as research and development prototypes—these two Safeguard installations.

Second, it is important to know that despite what the confusers would have you believe, this is not an ongoing authorization to proceed. Anything beyond the original two prototypes sites will take a new authorization and a new appropriation by Congress. I will not support further funding beyond the $2.1 billion for these prototypes unless there is convincing evidence that the system does in fact work. Reliance on a faulty deterrent is more dangerous than no deterrent at all.

Third, I will not in any event base my position on blind acceptance of the good intentions of the Soviet Union. History forbids it. In the Cuban crisis we held a missile superiority of three to one and the showdown was resolved in our favor. But with all of the talk about our country being satisfied with parity or less in weaponry now, we must realize that the Reds might misinterpret and since they still do not understand free and open debate in an open society, may miscalculate our power. Hitler miscalculated and he confused himself into believing that America did not have the capability to resist and would not, in fact, resist. So, he took a chance and World War II resulted. Our apparent weakness invited that war.

Preservation of peace and avoidance of nuclear conflict has been a continuing effort. Our journey on that path has never been a partisan, political issue. It would be tragic if this tradition no longer holds. Perhaps many leading opponents of the ABM have always favored compromise at any cost. They fear confrontation. They fear the use of power by the American people. Yet, history teaches us that only evident military supremacy on the part of the free world can prevent war.

Fourth, I think it is a mistake to put the sole reliance on our nation's strategic defense in one system. We must face the fact that science is universal and holds no permanent secrets for exclusive use by any nation. Any weapon that can be built, will be built; but it might not be used. Such was the case with gas, and bacteria warfare weapons in World War II. Because both sides had them in quantity, they were not used.

It should be the function of diplomacy to concentrate on securing such international agreements as will encourage friendships among all nations and gradually make weapon building an expensive folly. Meanwhile, we have to remember that a police state will use any weapon if it can do so with impunity, as Hitler did with the V–2 rockets against England.

Fifth, I accept the definition of the Safeguard system as a wholly defensive weapon. A system with a range of a few hundred miles can hardly be an aggressors weapon, yet listen to the outcry from the same voices that always cry out in fear of any change on the chess board of world affairs—in the immediate postwar era when we decided to build a nuclear weapons force; next when we decided to build a hydrogen bomb; then when we decided to deploy an intercontinental rocket force; an again when we decided to construct the Polaris submarine fleet. Each time, the same people sang the same tune—we were aggressors, building weapons to blackmail the world.

Now by some tortured logic, these same people would tell us the system of rockets to cover a few hundred miles is escalation of the war threat because we are reducing the ability of an enemy to use his rockets against us. And, if we have an enemy who worries about that point, then he must have aggressive intentions. Presumably they would have us trust the Russians' good intentions as did the people of Czechoslovakia.

Sixth, I am convinced that we must reduce our total defense spending, which now stands at 8.9 percent of our gross national product. I would like to see us work toward a figure averaging 7 percent or less if possible. This should be able to be done without comprising our basic and necessary research programs or our strategic deterrent. Some policy of this kind is required or we will be drawn into a permanent and continuing role as world policeman.

I have confidence in our technology and our ability to remain ahead of an enemy qualitatively for as long into the future as we must, but since 1954 we have virtually alone held together the ranks of the free world and communism has been exposed in all of its weaknesses. It is now time for other nations to exert and defend their nationhood, if they will, and to police their own areas. If they won't our sons should not be offered as hostage for their failures.

We must move toward the conference table on disarmament, but we must also insist on verification of the other side so we can be sure that an agreement is not merely a worthless scrap of paper. The Kremlin has used our defense expenditures as an alibi for the obvious weaknesses of their political and economic system, their failure to unify their satellites, their failure to develop Russia internally, and their failure to meet consumer goods demand. It is to our long-term advantage to shatter that alibi and force exposure of their weakness in the eyes of their own people. We must do this by fostering the interchange of ideas and people between our countries, not by allowing an iron curtain to bar their peoples' eyes from what opportunities and freedoms exist in the rest of the world. We must move to have them understand us better, and we they. But, of course, once again let me add that in any dealings with the Russians, we have to make sure that all the cards are played face up on the table.

And, finally, let's not forget that the search for knowledge and the desire to broaden our technology must be a constant and sustained thing if we are to remain ahead.

Knowledge and design of this Safeguard ABM or any other weapons system is merely one more step in the drive to remain abreast or ahead of those who would oppose us and all we stand for. If, after site testing, it is a proven addition to the national security and if changing events in the world require it as a response, and if there is no acceptable alternative to meet the three identifiable dangers as laid out by President Nixon, then it certainly deserves support and deployment. That decision must be made in the 70's, but we will have the opportunity to make it only if we move ahead with test site deployment now. One very prominent and senior Democratic Member of the House put it bluntly, "I'd rather not need it and have it than need it and not have it."

Actually, a decision in support of ABM is no different than the first great military decision of our country, when the Continental Congress started its own Navy by purchasing and armoring the old French Ship "Bon Homme Richard", and directed John Paul Jones to patrol the Atlantic as a first line of defense for this continent.

In conclusion, I believe that the great majority of the people I have the privilege to represent in Congress—and, indeed, the great majority of the people throughout the nation, with their down-to-earth common sense, are having a tough time swallowing the so-called sophisticated arguments that conclude it is somehow bad to defend ourselves. Frankly, I

don't understand those who regard deployment of an ABM by our country as provocative, but not provocative of the Soviet Union to have already deployed two ABM Systems. Nor do I understand why it should be provocative of us to defend our Minuteman forces against a developing Soviet preemptive first strike capability, whereas it is not provocative of the Soviets to develop that destabilizing capability. We are told, if you pause to think about it, to stop our provocative action of punching the Soviets on their fist with our eyes. I sincerely hope that such an inverted Alice-In-Wonderland view of the world will not be allowed to prevail.

In the context of the total picture of history as it has been written, I would consider support of continued ABM development to be the action of a dove, not a hawk, for history leaves no doubt that only the strong can discourage attack and bring peace to the world of men.

YOUNG ARKANSAN DEPLORES LACK OF RESPECT FOR FLAG AND COUNTRY

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ALEXANDER. Mr. Speaker, I receive many fine letters from young people throughout the First Congressional District of Arkansas. These letters show a deep concern for the problems that face our country. They also indicate that the vast majority of our young people are a credit to our country and provide great hope for the future.

I received a letter from one of our fine young people in Jonesboro, Ark., the other day that I consider typical of the type of mail I am receiving from the young generation. I would like to share this letter with you and my colleagues at this time as an indication of the thinking of the young people in northeast Arkansas:

DEAR MR. ALEXANDER: My name is Carolyn Pitts, I'm 13 years old and I'm in the 7th Grade.

The reason that I'm writing is because I think we are not spending enough money, time and effort on the problems of America, and too much on the Space Program. I watched on television last week while delinquents at Harvard University made a mock funeral of the United States flag! It made my blood boil to think any American could stoop so low as to do a thing like that! The students claim they are striking because of "deplorable use of Brute Force" to quote a line of our daily paper, *The Jonesboro Sun.* This is only one incident.

Last night in Memphis, Tennessee, a group who called themselves Jimi Hendrix Experience made a poor copy of the National Anthem in which the tune was the only thing faintly recognizable. He prefaced it with "here's a thing they brainwashed you with at school before we could get a hold of you".

There are things like this going on all over the world today, and I, and many others are afraid that the Communists are behind all this and if we don't do something very definite to stop these things, I'm afraid America might someday be ruled by Communists. If we allow this to happen, all of the hardship our fore-fathers, soldiers and boys in Vietnam faced will be going to waste.

I love America; I am concerned about its future. If you are not already doing something about these things, I would appreciate your mentioning it and trying to get something done about it.

SENATOR DIRKSEN'S PROPOSALS ON EAST-WEST TRADE

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27, 1969

Mr. THURMOND. Mr. President, the distinguished minority leader (Mr. DIRKSEN), in an article published in the Reader's Digest for June 1969, has made one of the most significant contributions to the study of East-West trade that has appeared in recent years.

We are at present in a time when all of our relations with the Soviet Union and its allies are being reviewed to see whether measures should be relaxed or increased. Senator DIRKSEN in the Reader's Digest article points out that it is time to take a tough line on East-West trade. He says:

It is time for the U.S. to insist on getting from the Communists something in return—a *quid pro quo*—for scientific and technological genius they need so desperately from us.

Senator DIRKSEN suggests that we might get as concessions the following:

First. Payment of long-standing lend-lease debts;

Second. Guaranteed access to Berlin.

Third. Hands-off policy by the Soviets toward Latin America and the Middle East.

Specifically, the distinguished Senator from Illinois calls for the establishment of a free world trade organization to supervise all exchanges with the Soviet bloc. This is an urgent proposal. It would protect free countries against the disruptive tactics of Communist economic strategists. Senator DIRKSEN points out that American exports to the Soviets have jumped 56 percent since 1962. It is ridiculous to say that these goods are nonstrategic. Goods of any kind help the Soviets to solve their production bottlenecks and to allot a greater part of their economy to military production. Senator DIRKSEN says:

Many "peaceful" items sold to the Communists have clear military application.

To use just one example cited by Senator DIRKSEN: We have supplied the Soviets with technical data for the production of polystyrene, used in air conditioners, but polystyrene can also be used as a binder for explosives, as a rocket igniter, and as a component for ICBM's.

Mr. President, I am delighted that the views of the distinguished Senator from Illinois will be getting such wide distribution in the Reader's Digest among the people of our country and of the world. It is especially important that these views get the widest attention at a time when the administration is reviewing the abortive policies of the previous administrations.

Mr. President, I ask unanimous consent that the article, entitled "Needed: A Realistic East-West Trade Policy," be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEEDED: A REALISTIC EAST-WEST TRADE POLICY

(By Senator EVERETT M. DIRKSEN)

Seven years ago, a Senate subcommittee on which I served conducted an exhaustive probe of East-West trade and found that the United States and its allies were making a direct contribution to communist military and industrial strength.

What was then a serious situation has now degenerated into a critical one. Since 1962, American exports to the Soviet bloc have increased 56 percent, and those of U.S. allies 68 percent—to a total of $3.9 billion a year. Even more ominously, these shipments include material of undeniable military significance.

At a time when the Soviet Union and its satellites were keeping the Vietnam war going, the Johnson Administration unilaterally removed from the Commodity Control List more than 500 items previously barred for sale to the Soviet bloc without a special license. All were said to be "non-strategic"—"peaceful goods which may be freely exported without any risks to the United States' national interests." But a reading of the fine print turns up the following: rifle-cleaning compounds, propellers, industrial chemicals, crude rubber, aluminum and magnesium scrap.

Top Washington officials defended their decision to export $35 million worth of machine tools for a Soviet auto plant, on the ground that it will make the Kremlin more "consumer-goods minded." Senators protested in vain that there is nothing to stop the Russians from using these tools for making armored trucks and vehicles.

"As far as computers are concerned," a communist journal admits, "we are still living in primeval times. We are 50 times worse off than the United States, 15 times worse off than West Germany and Scandinavia." Yet, encouraged by Washington, top U.S. firms, including IBM and Sperry Rand, peddle their sophisticated electronic wares throughout the Soviet bloc.

Concern over such developments runs deep. "American policy on East-West trade is contradictory and self-defeating," reports Dr. Robert Strausz-Hupé, director of the University of Pennsylvania's Foreign Policy Research Institute.

"A complete policy revision is necessary to curb the enemy's military-industrial buildup," says Rep. Glenard P. Lipscomb (R., Calif.) one of Congress' top experts in the field.

"The United States must recognize the value of trade as a major cold-war weapon," says Samuel F. Clabaugh, research associate of Georgetown University's Center for Strategic and International Studies.

When the U.S.S.R. and its Warsaw Pact allies invaded Czechoslovakia last year, I called upon our government to institute an economic embargo of the Soviet Union. "It's the only weapon we have," I said. And I remain convinced that the Soviets have real reason to fear it.

East Depends on West. Actually, the communists are in desperate need of Western technological assistance. Spectacular Soviet achievements in rocketry and space exploration have distracted many from the fact that the Soviet economy is in dire straits. "We have the worst and most backward productive structure among the industrially developed countries," says Russian economist Abel G. Aganbegian. Industrial output per worker is one fourth that in the United States (agricultural output per worker, one twelfth), and the crisis is worsening.

The solution to the crisis lies with the West. The Soviet textile industry, for instance, is a severe drain on the economy, with its obsolete equipment and fantastic

waste of manpower. Not surprisingly, Soviet agents have fanned out across the free world to purchase what they term "turnkey" factories.*

The Russians could, of course, build the factories themselves. But, as experts at the Foreign Policy Research Institute spell it out, "If they can procure the model from the West, mediocre technicians can copy it. Meanwhile their best engineers need not be diverted from more important work."

As the State Department has concluded, "It is only with the infusion of Western technology, capital equipment and managerial and marketing support" that the communists can raise their productivity. Clearly, this dependence on Western technology represents a vulnerability that should be capitalized upon.

Bridge-Building? In recent years, President Johnson sought repeatedly to woo the communist bloc with promises of economic assistance. Trade delegations were dispatched to the U.S.S.R., Poland, Romania and Bulgaria. Lists of embargoed goods were slashed, and communist credit was guaranteed. American firms were encouraged to trade with bloc countries in a patriotic gesture that could lessen international tensions. Meanwhile, provisions of the Mutual Defense Assistance Control Act—designed to bar U.S. aid to nations supplying the communists with strategic goods—were simply not enforced. By word and deed, Washington demonstrated its faith in "bridges of friendship" to the East.

Not surprisingly, Soviet bloc trade with Western Europe boomed. An Italian firm has contracted to supply the communists with $90 million worth of computers and calculators. Dangling credits before the East Germans, Bonn hopes to increase its trade there 150 percent by 1975.

But Washington has been unalarmed. Indeed, the director of the State Department's Office of East-West Trade, Robert B. Wright, suggested in a remarkable speech last year that the government felt that increased trade could end the cold war, that "we have nothing to fear, nothing to lose." But Wright and other advocates of expanded East-West trade are laboring under two delusions:

1. That trade, by definition, promotes friendly relations. History tells us otherwise. Germany and Russia were trading up to the very day that Nazi panzer columns rumbled across the Soviet borders in 1941. Scrap iron sold to the Japanese by business-as-usual Americans was fashioned into the bombs dropped on Pearl Harbor.

The argument is made that "winds of change" are blowing across the communist empire, and that American assistance can encourage liberalization. But does it?

Consider Poland, the recipient of more than $550 million in U.S. aid and the only member of the communist bloc awarded our "most favored nation" tariff status. American assistance was supposed to mean a better life for the Polish people and to help Poland win independence from Moscow. Instead, the Polish hard-liners in control beefed up their 250,000-man army, tripled their rocket forces and quintupled their armored divisions. Exports to North Vietnam have been stepped up sharply; the regime's second-ranking official visited Hanoi to brag that Polish anti-aircraft batteries have shot down or damaged 40 U.S. planes. Not only did Polish troops march with the Red Army into Czechoslovakia, but Warsaw has promised volunteers to Ho Chi Minh if needed in the "struggle against the imperialist aggressor."

2. That "non-strategic" trade constitutes no danger to the United States. The distinction between strategic and non-strategic trade is largely imaginary. Western goods of any kind relieve production bottlenecks and enable Soviet planners to shift from domestic to military production patterns.

At the same time, many "peaceful" items sold to the communists have clear military application. Consider the technical data supplied the Soviets for the production of polystyrene—a chemical used in air conditioners and other "non-strategic" items, according to the Commerce Department. Polystyrene has other uses: as a binder for explosives, as a rocket igniter, as a component for intercontinental ballistic missiles.

Oil War. Merely cutting off the export of strategic goods is not enough, the United States must begin fighting the cold war with the same weapons as its adversaries, recognizing that trade can be a powerful, perhaps crucial weapon.

The Soviets themselves make no bones about it. "Trade policy is an integral part of our foreign policy," says top Soviet economist P. A. Chervyakov, and the record bears him out. In 1932, Stalin drastically cut purchases from the West—at great cost to Soviet economic development—in an attempt to intensify the free world's Great Depression. And a critical need for Western goods immediately after World War II did not deter the Soviets from holding such purchases to a minimum, in the belief that this would hamper Allied conversion to a peacetime economy.

Economic blackmail and political retaliation are practiced shamelessly. In 1949 when the Australians broke up a Soviet spy ring, Soviet purchases of badly needed Australian wool were immediately cut off. When Yugoslavia moved toward independence, the Soviets disregarded existing agreements and slapped a total embargo on all Russian-Yugoslav commerce. In 1958, the Russians shut off crude-oil deliveries to Finland, canceled orders and delayed trade negotiations there until certain conservative members of Finland's cabinet resigned. Such communist economic warfare is global. Prices are rigged, goods are dumped—all as part of the strategy to disrupt Western economies, to ensnare emerging nations and promote friction within the non-communist world.

Nothing demonstrates this quite so effectively as the "oil offensive" that the U.S.S.R. has waged for more than a decade. Kremlin strategists believe that the American oil industry is the "foundation of Western political influence" throughout the underdeveloped world. "If this foundation cracks," a Soviet theoretician has written, "the entire edifice may come tumbling down."

To this end, Soviet oil is dumped in Western markets at ridiculously low prices. While Czechoslovakia is forced to pay 18 rubles per ton, for instance, Italy pays less than eight rubles. Results: the Russians acquire badly needed Western currency, and the economies of the United States and its oil-producing allies are threatened.

Despite this, Washington has on numerous occasions approved the export of petroleum drilling equipment, even of an entire oil refinery, to the Soviet bloc.

Best Weapon. It is time for the United States to tie *its* trade to global politics, to insist on getting from the communists something in return—a *quid pro quo*—for the scientific and technological genius they need so desperately from us. By demanding political concessions for economic favors, as Georgetown Prof. Lev E. Dobriansky suggests, the United States will be following a practical alternative to complete embargo or haphazard liberalization.

Such a policy would allow for credits and cash payments, consumer goods and producer goods. Adaptable to changing conditions, it would infuse a consistency and a rationality into our trade relations with the entire communist bloc. The list of concessions would be graded. It could include the payment of long-standing Lend-Lease debts, guaranteed access to Berlin, a handsoff attitude by the Soviets toward Latin America and the Middle East.

Such a policy, to be effective, requires what is now tragically lacking—a sense of unity among the Western industrial powers. There must be established a free-world trade organization that would supervise all exchanges with the Soviet bloc, protect free countries against the disruptive tactics of communist economic strategists, and the outline effective countermeasures.

The need for a bold new policy on East-West trade is clear, as President Richard Nixon is well aware. As long ago as 1962, he demanded that the Western powers adopt a solid trade front in the struggle against communism. "Trade and economic sanctions must be wielded as a lever at the bargaining table to move the Russians from their intransigent positions," he said. "The Berlin Wall might have crumbled in a week if we had threatened a complete economic embargo on East Germany. The Soviet Union's support of guerrillas in South Vietnam might well have been traded for the right to buy Western goods. Western productivity, technical know-how and trade add up to one of our best weapons. We must use it in the cold war."

That was true then. It is even truer today.

*Such factories are designed, built, and installed by Westerners, who also train local people to run them, and thus turn over to Soviet managers the key to a complete, functioning plant.

STAR EDITORIAL POINTS TO PROBLEM OF FOUNDATION PAY TO JUDICIARY

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. CRAMER. Mr. Speaker, today's Evening Star carries an editorial, entitled "The Douglas Letter," which strikes at the heart of the unfortunate problem created by the acceptance of pay, by a Supreme Court justice, from a foundation.

Consequently, this perceptive editorial does much to underscore the need and propriety of the legislation which, at this moment, I am drafting in an effort to remedy this situation.

Simply put, my legislation would provide that "there shall be no outside services rendered, for pay, by anyone who has a judicial appointment and that there shall be no payment of any kind, no gratuities to any Federal Government employee, or elected officials, by any foundation."

The Evening Star's editorial reads as follows:

THE DOUGLAS LETTER

The statement issued by the Supreme Court's press officer on behalf of Justice Douglas is a curious document.

Its essence is that the justice "knew very little" about the tax troubles of the Albert Parvin Foundation, of which he was president at $12,000 a year until he resigned this month. This, however, neither denies nor disputes a New York Times report of a letter allegedly written by Justice Douglas on May 12 to Albert Parvin, for whom the foundation is named.

In that letter, according to the Times report, Justice Douglas denounced an Internal Revenue Service investigation of the foundation as a "manufactured case" intended to "get me off the court." He added that "I do not propose to bend to any such pressure."

This, on its face, was highly improper, even though the justice presumably did not expect the letter to be made public.

It is improper because it reveals a state of mind which disqualifies or should disqualify Justice Douglas from participating in the decision of any case involving the IRS which might come before the court in the future. To say the least, his bias is showing.

Another point: If Justice Douglas knew very little about the foundation's tax problem, as the press officer's statement says, how could he describe the IRS investigation, which began in 1966, as a "manufactured case"? Before making any such accusation, one might expect a Supreme Court justice at least to know what he is talking about.

Finally, the letter indicates that Justice Douglas gave some tax advice to Parvin. If he did, it was a gross impropriety, if not a violation of law.

This is too serious a matter to be hushed up or dropped. The fitness of Justice Douglas to stay on the court is very much in question. If there is reason to think there is more to it than has yet appeared, the Department of Justice should take possession of all documents and correspondence bearing on the relationship between the justice on the one hand and the foundation and Parvin on the other. This would make it possible to get to the bottom of this matter, which most certainly should be done.

I congratulate the Evening Star for its eloquent articulation of a very real problem which begs for remedy if public esteem and respect is to be restored with reference to the judicial branch of this Government.

A TEXAS EDUCATOR-SENATOR WRITES OF MEXICAN-AMERICAN PROBLEMS IN EDUCATION

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27, 1969

Mr. YARBOROUGH. Mr. President, when I was trying to have the Bilingual Education Act enacted, thousands of educators gave their assistance to that effort. One of those outstanding persons was Mr. Joe J. Bernal, State senator from San Antonio and a former classroom teacher. Senator Bernal's sensitivity to the educational difficulties of the Mexican-Americans and his outstanding knowledge made him a stalwart in our legislative efforts.

Recently Senator Bernal wrote an article entitled "I am Mexican-American," which was published in the National Education Association Journal of May 1969. Because of his ability and knowledge which is reflected in this article, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANITA INSISTS: I AM MEXICAN-AMERICAN

(By Joe J. Bernal, State Senator, Texas; social worker, Inman Christian Center, San Antonio)

The average Mexican-American drops out of school by the seventh grade. In Texas, almost 80 percent of students with Spanish surnames drop out before completing high school. In California, 73.5 percent of the state's Mexican-American students do not complete high school.

Some incidents that took place in a Texas high school where 98 percent of the students are Mexican-American may help to explain the high dropout rate.

"I don't know what the fuss is all about," the teacher said to her senior civics class. The "fuss" the teacher referred to was a potential walkout by 300 to 500 students who had made certain demands on their school personnel.

Their demands were simple. They wanted to select the nominees to the student council instead of having school officials name the candidates. Because some students were interested in going to college, they wanted chemistry and trigonometry and sociology taught in their school and they wanted to be counseled about available college grants, scholarships, and work-study assistance. Finally, they wanted to be taught about the contributions their ancestors had made to the state of Texas.

The civics teacher could see no reason for their demands, particularly the last one. "After all," she said, "you're all Americans."

Anita, one of the school cheerleaders, stood up and disagreed. "I'm not American. I'm Mexican-American. You're white and I'm brown."

Anita sat down, sobbing. She had never spoken up to a teacher before. But she was on sure ground, she felt. In spite of her tears, she felt glad that she had said what she had. She *was* Mexican-American.

Like many other Mexican-American girls, Anita had been taught at home to regard her bronze color as a matter for pride. After all, Anita told herself, the appearance of the Virgin of Guadalupe to the lowly Indian, Juan Diego, showed without any doubt that the Virgin, *La Virgen Morena*, had Anita's Mexican-American coloring. But Mrs. Smith wouldn't know that.

Color, of course, has been only one source of misunderstanding between Mexican-American students and many of their Anglo teachers.

The Mexican-American has maintained his mother tongue longer than has any other minority group. Whereas most immigrants largely replaced their mother tongues with English in one or two generations, the Mexican-American has clung to Spanish for three, four, and five generations. This is due primarily to the proximity of the Mexican border. Spanish language TV, newspapers, radio, and movies are commonplace in the barrios.

Many unfortunate classroom situations have arisen because schools and teachers have refused to recognize that Spanish is the social language of their Mexican-American students.

"¿Traes un lapiz?" Ector had leaned over to Juan for a pencil.

"I've warned you about speaking Spanish in my class," the teacher said sharply. "Go see the vice-principal right now, Ector. I can't have any more of that murmuring in Spanish."

Mrs. Jones was irritated. Too many of her students kept lapsing into Spanish. There was a school policy against the use of Spanish and she had a vague idea that there was a law against speaking Spanish in the schools of Texas.

Ector, a six-foot varsity tackle, was active in all school activities and popular with his peers.

I didn't do anything wrong, Ector kept repeating to himself as he made his way to the office. I get A's in Spanish class but when I use Spanish to whisper to a friend in Mrs. Jones' room, I get sent to the office.

Ector arrived at the vice-principal's office. After explaining why he was there, Ector sat through a 15-minute lecture on why it is very American to speak English.

Mr. Neill's lecture, which he had often delivered before, mentioned the vague law that prohibited the use of the Spanish language in the schools.

"Well, Ector, you can take three licks and go back to class or go home and bring your parents," Mr. Neill stated after the lecture.

I know I'm as good an American as he is, Ector thought to himself. My brother is in Vietnam and I'll probably be going, too. Why does Mr. Neill have to tell me about speaking English and being an American? I can speak it, and I was born in the United States. Mr. Neill wants to whip me! He's worse than Mrs. Jones. My father hasn't given me a licking since I was eight. Now he will have to miss work to come to school because my mother can't speak English. He's going to be mad.

"Well, Ector, will it be three licks or your parents?" Mr. Neill asked.

"The three licks."

The school district has now changed its policy and Spanish can be used whenever it enhances a teaching situation. High schools there offer courses in sociology, chemistry, and many other college preparatory subjects formerly considered too difficult for "Mexican" children. The high school where the incidents took place has had a change of administration and the new principal, a Mexican-American, is well aware that frequently schools have not been able to work successfully with Mexican-American students.

It is important for schools to recognize the advantages of being truly bilingual. The so-called language-educated person is skilled in reading, writing, listening, and speaking. Generally, the Mexican-American's Spanish language skill is limited to listening and speaking, sometimes to listening only. And yet the skill he has developed in speaking and/or understanding Spanish impairs his ability to become skilled in speaking and/or understanding English. Much of this can be traced to conflicting attitudes on the part of school people. His two languages are placed in constant conflict and it is difficult for him to achieve true proficiency in either.

In the classroom, much can be done to help Mexican-American students overcome this language conflict. The use of Spanish in the education process will help. In some cases Spanish can be used as the teaching language. For instance, bilinguists can be taught mathematics in Spanish. Admittedly, this will not improve their abilities in English, but at least their mathematical learning will not be held back because of their deficiency in English.

Intelligence tests, if they are to be regarded as such, that are not as heavily weighted on verbal ability should be developed, and until they are, teachers and counselors may inadvertently classify bright bilingual children as slow learners.

The schools need to consider the cultural and economic environment that surrounds the lower four-fifths of Mexican-American citizens. Having become a minority in the land that belonged to their ancestors, these people have existed in a system dominated by Anglo institutions—governmental, educational, and economic. They have expressed their rebellion against foreign institutions by withdrawing from the culture and clinging to their own Mexican-American traditions.

It is important that teachers show respect for the language and the culture their Mexican-American students cherish. Even if the teacher does not speak Spanish and the class is being conducted in English, he should allow a child to express himself in Spanish when he becomes stuck for words. When the teacher wants to encourage students to speak English to one another, he should not put it on the basis of "You're American. Speak American." Instead, he should say something like, "Yes, Spanish is a great lan-

guage—even Thomas Jefferson said so. You need English, though, to live and work in the United States."

Mexican-Americans have a proud heritage and they deserve to learn about it in school. They should study histories of Latin America. United States history ought to emphasize Mexican contributions. School libraries should make available biographies of Spanish-speaking leaders.

Students need to have the opportunity to learn about contemporary Mexican-Americans who are contributing to the American scene. Successful Spanish-speaking community leaders and college students should be brought into high schools to discuss career attainment. (Similarly, successful Mexican-American high school students should be urged to speak to elementary and junior high students to point out the advantages of remaining in school.)

Particularly helpful in adapting the schools to the needs of Mexican-American students will be for the teachers of these students to have special training—courses dealing with the education of the culturally different and economically deprived.

STUDENT UNREST AND CAMPUS RESEARCH

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. DADDARIO. Mr. Speaker, Don K. Price, dean of John Fitzgerald Kennedy School of Government at Harvard University, is an acknowledged authority on science policy. He has served most helpfully for the past several years as a member of the research management advisory panel of our subcommittee on Science, Research, and Development. On May 22, Mr. Price was honored as the recipient of the annual Midwest Research Institute citation in Kansas City, Mo.

In his acceptance speech, he brought insight and understanding to bear on the issue of Government-sponsored research in universities. Congress is greatly concerned with the charges and replies between student militants and school administrations over the relevance of these research grants and contracts. Don Price states:

We do need to see that our science and technology are made relevant to contemporary problems. But what the rebels need to learn—and it will be very difficult for many of them—is that relevance can be attained in society only by responsibility, and responsibility can be achieved only by organization, and by the discipline and self control that we need to make large scale organization successful.

Mr. Price notes the possibility that the Congress may react against campus confrontations "to force the transfer of research contracts from universities to more secure sites." He concludes:

Only if university faculties can take effective action to make it clear that they propose to defend universities as centers of learning and rational inquiry can they protect the academic community from serious political reprisal.

Mr. Speaker, because of the immediate interest to the Members, I include the text of Don K. Price's address at this point in the RECORD:

ADDRESS OF DON K. PRICE, DEAN, JOHN FITZGERALD KENNEDY SCHOOL OF GOVERNMENT, HARVARD UNIVERSITY, AND 1969 MRI CITATION RECIPIENT AT THE MIDWEST RESEARCH INSTITUTE ANNUAL MEETING OF TRUSTEES, KANSAS CITY, MO., MAY 22, 1969

The Midwest Research Institute award is an honor in which, of course, I take great pride, as I am sure all of my distinguished predecessors have done before me. But to me the honor is particularly gratifying for two reasons. First, any university administrator is likely these days to feel the need of any kind of consolation he can get. Second, honors such as this go in the normal course of things to scientists and business executives but come as more of a surprise to anyone who works in my field of interest.

Sir Bernard Darwin, one of the great English sportswriters of a generation ago, used to remark that golf was the most humbling game. I suppose that was because among the sports that he covered he never included public administration.

Work in public administration, in either its practical or academic aspects, is not calculated to build up a man's ego.

In the academic world it is not considered an elegant or rigorous field of study. In the eyes of the physicist or the economist it lacks theoretical rigors and it is tainted by a concern for the solution of immediate practical problems.

And in the world of practical affairs it is—at least in the United States—caught in the middle and squeezed badly between the power and the glory of political leadership on the one hand, and on the other hand, the smug certainty of truth and high moral standards that is properly cultivated in the several scientific and professional communities.

These are the old and traditional humiliations of American public administration. But now another has been added. We are ignored by student protest movements. (I knock on wood; at least I can say: up to now.) Student rebels attack their Presidents and Deans, they seize scientific laboratories, they demand that business schools be abolished. They obviously consider these the pillars of the Establishment. But they simply ignore schools of public administration as too insignificant to bother with. This is, I may add, a humiliation I find it possible to bear with equanimity.

Now it is obvious that student unrest, as difficult as it is to diagnose precisely, is a worldwide movement. One of its main common features is a discontent with scientific modes of thinking and with technological progress or its side effects. Some of its self-proclaimed leaders are also self-proclaimed Communists, but their movement has none of the ideological discipline of the Communist student movements of my youth. Wherever they crop up in the Soviet Union and its satellites they are treated very roughly indeed. Unlike the real Communists their purpose is not to build a political system on a base of scientific thought and technological advancement, but to challenge, on quasi-religious or moralistic grounds, the whole notion of material progress as based on technology without moral direction.

The way in which all of this has developed in the universities reminds me irresistibly of an O. Henry story. Some of you may be old enough to have enjoyed O. Henry and his greatest single creation, Jeff Peters, "The Gentle Grafter." Jeff Peters' greatest discovery, as he put it, was that "A trust is its weakest point." Jeff and his partner had escaped from Mexico after selling a silver mine they did not own. Then in a small town on the Rio Grande they established a real trust—a complete monopoly. They bought up all the saloons just before the town was isolated by a flood.

For a short time, with no interference from any meddling trustbusters, they jacked up the prices and were on their way to fantastic wealth. But Jeff Peters' partner, normally a teetotaller, decided to sample their stock. Whiskey moved him to oratory of the kind he had been brought up on as a boy. A few hours later, when Jeff found that no one was coming into the saloon any more, he went out to discover that his partner had organized a mass meeting, had given a rousing temperance lecture, and had gotten every man in town to sign a teetotaller's pledge.

Now the contemporary university is in a plight much like that of Jeff Peters. It had a big share—if not a monopoly—of basic research, which a frightened nation came to consider the key to national security and prosperity, and the Congress then came through with financial support beyond the wildest dreams of scientists of a generation ago. But many professors, unaccustomed to this heady prosperity and conscience-stricken about it, now undertake to persuade the nation that it is drunk on technological progress and ought to sober up—drunk either on the pride in new scientific weapons which ignores the dangers of a continuing arms race, or on the pride in industrial productivity which ignores the accompanying pollution of the environment and the neglect of social problems like hunger and racial inequities.

We should really worry less, I think, about the student rebels and more about the issues that their elders have persuaded them to raise. But I am inclined to think that they both have chosen the wrong target. They should concentrate their fire not on science or technology, but on the administrative and political system that supports and directs it.

This would be consistent with their demand for relevance. With this demand I find myself in sympathy, though they make it hard to sympathize with them by their manners. We should not reject the idea in the way we might refuse to buy a product that is plugged by a television ad, just because we hear the pitch made so repetitiously and loudly and offensively. We do need to see that our science and technology are made relevant to contemporary problems. But what the rebels need to learn—and it will be very difficult for many of them—is that relevance can be attained in modern society only by responsibility, and responsibility can be achieved only by organization, and by the discipline and self-control that we need to make large-scale organization successful. And this is why I think they should be concerned not only with science itself, but with the administrative system that supports and directs it. I would like to talk tonight about some of the faults of that system, which we should worry about, but also about some of its virtue.

Very few people have bothered to reflect on the fundamental changes in our national system of public administration that have taken place over the past generation. Even well informed people do not identify it as a fundamental administrative change, perhaps because it was not accomplished by people who thought of themselves as administrators. It was done much more by the scientists, the engineers, the physicians, and other professionals, with a big assist from politicians. The virtues of the new system have been energy, initiative, and extremely rapid scientific and educational advancement. But the cost has been the undertaking of many technological innovations that satisfied the professional ambitions of the innovators but carried with them considerable costs for human welfare.

What do I mean by this administrative

revolution? Back in that distant and rather calm and stodgy period which we recall as the early New Deal, it was still assumed that government functions were administered by government employees and that it was their job to do what their political superiors told them to do, not to initiate new policies themselves. By way of illustration I may recall that when the National Academy of Sciences recommended that government help fight the depression by making grants to research institutes and universities, "Honest Harold" Ickes refused on grounds that public funds should be spent only through public agencies, and a responsible hierarchy of public officials.

To some businessmen it may have looked like socialism to spend tax money through government relief agencies, but administratively it was a very conservative system. The typical civil servant, tightly controlled within the framework of the traditional government bureau, was in no position to undertake radical innovation: the institutional structure within which he worked was too much under the thumb of comptrollers and Congressmen, and he was not geared into the most profoundly innovative forces in modern society, namely, the intellectual power of modern science and the flexible enterprise of the private corporation.

But now all that has changed, and the scientists started it. The wartime system for the support of research decided boldly not to put the scientists into uniform or even on a civilian government payroll; it contracted with universities and industrial corporations for the research it needed, and for the development of that research into weapons systems, and even for the initial efforts to test those weapons in the field.

After the war, the system of administering government functions through grants or contracts with private corporations and institutions spread most rapidly first in such new technological programs as the atomic energy and medical research and space programs, but then to other fields. What would Harold Ickes—or for that matter Harry Hopkins—think if today he could see the most controversial parts of the poverty program administered largely through contracts with specially created private corporations which have largely bypassed the established system of state and local governments, and other parts through contracts with great industrial corporations?

In all these movements, of course, the research institutes and the universities, supported by government funds but enjoying the freedom and initiative that go with technically private status, have been profoundly innovative forces in our economy and in our society. They have greatly furthered a tendency which was already characteristic of our political attitude. They have made us as a nation less inclined to deal with public issues on the grounds of social theory or party ideology, and more inclined to approach them in the traditional mood of the analytical scientist or engineer. We are not mainly concerned to ask whether a certain policy is Jeffersonian or Hamiltonian, Catholic or Marxist. Instead, we are inclined to try to discover whether particular problems can be dealt with in more practical ways.

American students of public administration are just beginning to catch up with these developments. For generations they have been inclined to apologize for the American administrative system and to admire the more orderly and disciplined civil services of Great Britain and Western Europe. But now they see Great Britain and Western Europe beginning to look with envy on the dynamism, the flexibility, and the freedom of this curious system in which universities and research institutes are deeply involved in government policy but without any noticeable loss of freedom on the part of the professor or the research investigator. And we are even more surprised to note that the British civil service is now being made over avowedly in partial imitation of the American system, with its emphasis on technical and professional initiative rather than administrative regularity. Or that German universities, originally the model for our own, are beginning to imitate us.

Never and nowhere before have scientists and scholars been in such a favorable position to influence policy decisions while retaining a secure base of support. This new system, which has made it possible for government to intervene in the solution of social and economic problems without assuming the ownership or destroying the autonomy of our academic or business institutions, may help us avoid the apparent necessity of choosing between socialism and capitalism which seemed to confront us a half century ago.

The rebels of the New Left see this system, of course, in a different light. By getting deeply involved in current problems, the scientist (they say) has sacrificed his position of complete detachment from the system and forfeited his status as an independent moral censor. But the dilemma of the New Left is an absolute one. It is not possible to be relevant without also becoming responsible. Absolute purity in politics means absolute irrelevance. The universities and the research institutes of America are in the mainstream of the American political tradition as they search out new ways of putting their skills at the service of the public, in return for the support which is given them for their intellectual interests.

With respect to the methods of most of the recent student protests, I have no sympathy. But with respect to the underlying national and academic problems which are at the root of much of the protest, and which trouble the vast majority of students who have no part in disorders and violence as much as they trouble the rebels, I have the deepest concern. If we in the universities are to be responsible as well as relevant, in an effort to deal with those problems, we are going to have to make a more effective union between the work of the technological and scientific community on the one hand, and the administrators and students of administration on the other.

In the practical administration of government affairs, I have noted that the administrator is caught in the middle. The dynamic initiative comes from the bureaus and agencies whose purposes are dominated, many of them, by interest in technological progress, or in devising scientific and technical solutions to human problems. The typical bureau or agency, like the typical private corporation, is tempted to see the fate of the world as wrapped up within his particular institutional purposes. The fallacy of socialism indeed is that it does not see that this narrowness of view, this greed for irresponsible power within a narrow scope, is as great a temptation and a threat in a governmental as in a private institution; indeed in government, without the discipline of the balance sheet, it is harder to control, and its external costs—the costs that society generally pays for the profits or benefits of a particular program—may be harder to identify.

But the man who is put in a position of general administrative responsibility is the most likely to have these problems—these external costs—forced on his attention. Whether he is a political appointee, or a scientist who has moved up into the administrative hierarchy, or a career man trained in administration, he finds it hard to evade the issue when specialists disagree—when the agriculturalist differs with the fish and wildlife man on the dangers of pesticides, or areronautical engineer with the city planner on the development of airports, or the nuclear engineer with the public health doctor on the standards of safety for nuclear reactors, or the generals with the diplomats on new ballistic missile systems for either offense or defense.

If the administrator, as he deals with these dilemmas, is not to become the prisoner of the experts—if he is to be able to put the issues up to legislators in ways that the public can understand and ultimately control—he has to have help from experts outside the bureaucratic hierarchy. So must the political leader who proposes to attack the policy of the government. And either one will soon find that a scholar or scientist who has not been involved enough in a policy issue to understand it is worthless for this purpose. The virtue of the system we have developed since the second World War is that universities and research institutes are full of men who have had more than a nodding acquaintance with crucial policy issues and whose views are informed by something more than moral passion—indeed, by solid professional competence. If the rebels really want academic science to be relevant to social issues, they should applaud this system, which opens up the crucial issues for public discussion, with experts available to support criticism of current policies, in a way that is not possible in the traditional European system that isolates the scholar from the bureaucracy.

Now the whole system is threatened. The direct threat from the student rebels is not the main danger. It can be controlled—with help from the students themselves—as soon as university faculties conclude that it must be. The far greater danger comes from the indirect effects of student rebellions. For the support that Congress has provided in its annual appropriations is not something that the research world can afford to take for granted. Like any other vested interest the universities, after two or three years, came to think that annual appropriations could be counted on as a matter of right. But, as Jeff Peters noted, a trust is its weakest point. And I would judge that at this moment the whole financial and administrative structure of higher education and research in the United States is in danger, and only if university faculties can take effective action to make it clear that they propose to defend universities as centers of learning and rational inquiry can they protect the academic and research community from serious political reprisal.

Now if I were in an industrial or government laboratory or an independent research institute, I would be tempted to view this situation with malicious satisfaction, and with some cupidity. University scientists have been smug enough in the past to make this reaction inevitable. If students are disagreeable and politically unpopular, may not Congress be tempted to force the transfer of research contracts from universities to more secure sites? In the short run this is quite likely, and the shift in money may be followed by the transfer of professors who are inclined to think that labs without students may offer some attractions.

But in a fundamental sense the rest of the research world would lose as heavily as the universities by such a development. For the style, the attitudes, the sense of freedom, the obligation to share basic concepts for testing and criticism, that are fostered in the self-governing university faculty are the fundamental protections of the scientist wherever he works. This is not entirely a matter of intangible attitudes. The desire of the nonacademic laboratory to compete with the university for scarce talent gives it an incentive for maintaining an atmosphere of intellectual inquiry, and for encouraging scientists to remain actively engaged in the community of free scholarship, that might be lost entirely if a rigid bureaucratic bar-

rier should be erected between the two parts of the scientific community.

But although I am temperamentally a pessimist, I see some grounds for hope that the whole community of science will hang together on its general standards, and help provide the technical base, and perhaps even some of the moral support, for solving the problems that require the most urgent attention by the nation.

The first is that scientists now recognize the breadth and scope of the problems that have been caused by our uncritical addiction to technological and industrial progress, and our lack of attention to the problems that it brings. Scientists have been in the forefront of the movement to call attention to the pollution of our environment, and to demand remedial action. Scientists are beginning to be concerned with the other problems that we lump together rather indiscriminately as our domestic "urban problem"—problems of race, poverty, nutrition, housing, and crime—as well as with the global problems of population and economic development. In the field of national security, scientists, without assuming (most of them) that we are yet in a world where a great nation can dispense with military power, are beginning to appreciate how much security depends on other considerations than military hardware. And their broadening of concern in all these directions has led them to broaden their conception of science itself, to include the social as well as the physical and biological sciences in the equipment the experts need if their work is to be relevant to the issues of the next generation.

The second ground for hope is that the sciences are beginning to be incorporated into the processes of administration, in practice as well as in theory. Over the past couple of decades a new range of techniques for the study and control of administrative systems and of the methods of making decisions has been developed by the operations researchers and the systems analysts. And these new techniques will doubtless serve not merely to make management more efficient in carrying out predetermined policies, but also to let scientists and administrators together play a more effective role in the criticism of old policies and the formulation of new ones.

It used to be fashionable in scientific meetings to speak in glowing terms about the Utopia that we would build if the average citizen would only listen to the scientists. Now that the rebellion against science and technology is coming not from the man in the street but from within the academic community itself, any such note of optimism sounds fatuous. But in a time of troubles it is especially necessary to keep one's head; romantic despair and blind resentment are equally dangerous moods. I do not expect science alone to save us. But in the independent research institutes and the universities of this country we can nurture the rational and critical methods of thought—the habit of judging issues by intellectual as well as moral standards—that offer the greatest hope for the future.

STATEMENT CONCERNING WAR IN VIETNAM

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27, 1969

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks a statement concerning the war in Vietnam, forwarded to me by Mr. John Park Cravens, of Russellville, Ark. Mr. Cravens shares my conviction that the war in Vietnam should be brought to a conclusion at the earliest possible date.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY JOHN PARK CRAVENS, MAY 21, 1969

I can understand why America fought Spain in 1898, and World Wars One and Two, and the war in Korea. But I do not understand why we have let Castro and Russia take over Cuba right under our land's nose, and why our nation is now at war with North Vietnam thousands of miles away and backed by China and Russia, and other countries.

I do not understand why we took up a fight that France lost, and decided was hopeless and not worth the price. I do not understand why we have for years maintained a National Chinese, and forces of our own, on islands not far from the Chinese mainland. As I see it, our country is the victim of what General deGaulle and France avoided. The war we are now presently in in Vietnam is hopeless for several reasons as I see it.

America has internal disorders, and there is an explosive situation here at home that "has gotta give" and it is up to our country to change our Vietnam war policy now for our land's self preservation. Our nation should stop now, and no longer try to police the world.

No matter what enemy we fight, China and Russia will back the enemy to the hilt with money, arms, and other ways, and in a showdown with manpower. I love my country, and I am proud of its fighting its enemies heritage, but I do not believe in its exhausting its military and financial power in vain. Indeed there is such a thing as going too far with foreign financial and military aid.

I am a service-connected disabled veteran of World War One, and I have a son who is a service-connected disabled veteran of the war in Korea, and I have another son who has had military service. My forefathers came to America from Europe in the 16th Century, and several fought in the American Revolution. I write this letter as a patriot, and as a foe of communism. I am neither a Hawk nor a Dove, but a true average American who wants what is best for his land in everything.

God bless our space program and our heroes on their way to the moon now, and bring our sons home from Vietnam.

THE NATIONAL OCEANIC AND ATMOSPHERIC AGENCY

HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. SHIPLEY. Mr. Speaker, on May 15 the American Oceanic Organization had the great privilege of having as its principal speaker Dr. William A. Nierenberg, director of the Scripps Institute of Oceanography. Because of the pertinence and importance of the subject, I include Dr. Nierenberg's speech in the Extensions of Remarks of the RECORD:

THE NATIONAL OCEANIC AND ATMOSPHERIC AGENCY

(By Dr. William A. Nierenberg, director, Scripps Institute of Oceanography)

Mr. Chairman, ladies, and gentlemen, the subject perhaps is of the most pressing importance, and that is the Marine Commission's proposal to the President (now before the Congress), for a National Oceanographic and Atmospheric Agency—which I will call NOAA from here on, as does everyone else. In order to make my talk as useful as I can, I think I will take a somewhat different point of view than that in the Report itself, which, of course, is a very voluminous document. In addition, there is important supporting data in the equally voluminous panel reports. Rather than make a parallel argument in favor of NOAA, I will go the other way and examine the situation in the ocean sciences and technology as it has existed in recent history. To try to understand what has prevented its fullest development in our current governmental, industrial, and educational environment and only after we look at some of the pertinent problems, will I suggest what the appropriate role for NOAA would be in solving these problems. Before I do so, however, I have to furnish you some background.

My own personal thinking has been very heavily conditioned by the fact that I was very closely associated with the Manhattan Project during the war, and from 1950 to the present time, I was involved with the development of atomic energy (mostly, I must admit, in the laboratory and primarily as a group leader in the Radiation Laboratory of the University of California at Berkeley). Now during most of this period, I was not exactly famous for being an administrator. When you work in the laboratory, no matter how good the administration is, you see it by distorted vision.

In recent years however, I have come to appreciate the fact that the AEC has been a marvelous instrument of government policy; it has been very well organized to carry out this policy and has done a splendid job in all respects. And so to some degree I take the AEC as a model of what it is we can do if we want to. Comparisons and analogies are never perfect, and I would like to stress the one difference that does modify our thinking. When the AEC came into being, more or less by fiat, it had the entire field to itself. Essentially no part of its future activities had been preempted by any other government organization. Nowhere was there a history of involvement in a real sense by any other part of the government. Despite the sudden public interest in the field of the ocean sciences in recent years (and I would like to return to this point shortly), great achievements in ocean technology are not new. I must remind you that the Atlantic Cable is now over a hundred years old, and it will be a long time, given the technological level of the society in being, before we can achieve anything as great.

The Atlantic Cable was a gigantic feat in ocean technology: in the design of a cable for the deep abysses, the handling and the splicing of such a cable, the establishment of working shore stations through the surf, and the general difficult conditions of the beach. It was, in addition to all of this, a tremendous achievement in both theoretical and applied electrical engineering (called physics then) and, in fact, a whole branch of mathematics of the greatest importance was invented in conjunction with the design of the Atlantic Cable. Some of the greatest minds of the era worked on the problem. This is only one of many examples, and so we find the government historically, in many of its departments, deeply involved in many aspects of the ocean for good and sound reasons. Returning to our analogy, we find that the development of the subject is proceeding not at all well, at least for those of us that really know what can be done and what we think needs to be done.

I referred earlier to the general public interest—this is something I cannot very easily explain—but it has been nothing short of amazement for me to watch the exponential growth of public interest in the ocean sciences over the last decade. And when I say public, I mean the worldwide public; I also mean all levels of society: high school and college students, the busi-

nessman, the man in the street, the members of Congress, the international agencies, the diplomatic corps, and people in all countries. They clearly are ready and willing to pay for a major and substantial increase in our involvement with the world's oceans. As a result, those agencies of the United States Government that have been assigned responsibility for specific areas in ocean sciences and technology have indeed accelerated their efforts, have come to the Congress for increased support, and have very often obtained this increased support. I mention such agencies as ONR (in fact, the United States Navy in general), the National Science Foundation, the National Institutes of Health, the Department of Interior, the Atomic Energy Commission, in fact almost every department of the government. Yet what is lacking, in my opinion, is adequate government action in certain areas necessary to maintain the full thrust in the field that apparently is wanted by everyone. These are areas that are normally relegated to interagency coordinating councils, when no great steps forward are required, but which never function well when a major change in policy is desired. The first such area is manpower.

To get a feeling for the magnitude of the problem it is worth making a brief review of the situation immediately after World War II with respect to the proposal to develop an Atomic Energy Commission and a nationwide effort in the nuclear sciences. When the war was over, we were left with a heritage of ideas as to the future of the peaceful and military uses of atomic energy.

We also had a fund of manpower on which to draw. By example, as of the 31st of December 1945, there were 5,070 members of the American Physical Society—the majority of whom were active practicing physicists. Solid state research had not yet started its steep climb; the transistor was yet to be invented. No other major national effort was competing for the services of these physicists. With this pool of manpower it was relatively easy to staff not only the administrative aspects of the program—the planning aspects—but the field laboratories as well, and supply faculty and staff for the institutions that would supply the training of the future practitioners in the field. Almost from the outset, this effort was guaranteed a good source of superbly trained manpower. However, the point that is essential to the idea of a technological explosion is that there must be a small group of workers who, in a certain occupational sense, represent the key to that field. In addition, their ranks have to be augmented by large numbers of specialists in other fields. For example, the whole gamut of engineering, as well as medicine, biology, many aspects of chemistry other than the obvious one of nuclear chemistry, the industrial sciences such as banking, management, and so on are needed. But there has to be some central group of people who make one technological explosion different in content, aims, and aspirations from another. In the case of atomic energy, it was largely the physicist and nuclear chemist.

On the 15th of March 1955, the American Physical Society had 11,704 members, but another change took place. Physics was now well represented as a major curricular effort in essentially every university in this country. Its importance as a basic and fundamental science was now recognized on a nationwide basis, not only as an intellectual source and a support curriculum for others but as a basic input to the rapid development of modern technology. This is about the time of the beginning of our Space Program. It is true that in the intervening years there was a tremendous growth in the general area of solid state physics, and its importance to the modern technological explosion was becoming generally well recognized. Even so, there was still an adequate basis of manpower which, when coupled with that supplied from the aircraft industry, was sufficient to be able to plan and develop a burgeoning space industry.

In fact, a small sub-set of the physicists, known as cosmic ray physicists, were already reaching with their experimental equipment as far into space as they could at the time, and they were a very natural component of the group now loosely called "Space Scientists." Speaking as I am, of course, from the viewpoint of how to develop a major thrust in the direction of ocean exploitation, there is another significant point which should be noticed. It is very clear in the case of the Space Program that it was one whose central theme was very clearly and easily enunciated . . . it was one whose goal could be grasped and understood by people in all levels of our society. That central goal was to put man on the moon by the year 1970.

The fact that the goal could be simply stated in a few words does not make the technological job any easier. As we know, it presented a formidable array of technological problems that had to be overcome. However, we do not underestimate the psychological advantage to a nation that has a goal stated in very simple terms. It is far easier to marshal resources toward such a goal than one which is equally accepted but has to be stated in terms of ten or more goals, as is the case of oceanography. The case of atomic energy was not so easily put, yet again the goals could be more simply put than those for oceanography. The two programs are now largely self-sustaining, and we can note that the American Physical Society membership is 21,870 as of June 1, 1965, which indicates a growth far less than that of the two programs that the pool of trained personnel helped initiate.

The contrast with applied ocean sicence is clear. The equivalent pool of oceanic scientists is less than one thousand—some informed opinion believes it to be far less. It is from this reservoir of ocean scientists and engineers that we have to look toward for supplying the cadre of trained manpower needed for a major effort. To this cadre we will adjoin the same variety of engineers, medical people, executives, and others of the kind that were needed for the earlier programs. The number one thousand or less, however, is significantly less than in the earlier history to raise serious questions about the feasibility of a rapidly, expanding, well balanced program, unless this reserve is used with wisdom, and steps are rapidly taken to correct this deficiency. To underscore this difficulty, we must raise another aspect of the problem, and that is the one related to the diversity of the goals of the program. In terms of the manpower requirements, this can be roughly translated by the variety of disciplines in the organization of the parallel science of oceanography. The conventional divisions include physical oceanography, chemical oceanography, marine biology, biological oceanography, marine geology, inshore oceanography, theoretical oceanography (which is largely fluid mechanics on the oceanic scale). These have become largely distinct disciplines within the field, and they further subdivide the available manpower to levels that are clearly marginal in any of the important fields.

When we examine the origin of this deficiency in detail, we find real institutional blocks against any large output of ocean scientists, and we marvel rather that the pool is as large as it is. We take great pride at Scripps in the fact that so many of the important posts in oceanography are held by Scripps graduates or Scripps trained people. We feel that we have done our job well given the circumstances and the fact that we are largely a research institution.

We have increased our enrollment to 180 graduate students, and other institutions have made corresponding gains, but we are all reaching a saturation in the facilities allowed us for managing this population. The reasons are largely to be found in the present institutional structure. The University has been built almost exclusively on a departmental basis, and the important departments from the viewpoint of size and support are the basic disciplinary ones. The pertinent ones are physics, chemistry, biology, mathematics, geology, and engineering. This is fundamental for well trained oceanographers for it is to these departments that we turn for our qualified B.S.'s and B.A.'s for admission to our graduate schools in oceanography. However, these disciplines represent a vertical structure in our educational system for the components maintain their departmental characteristics from high school through the graduate school and even beyond into the post-doctoral area. This vertical structure within a discipline develops a synergism between its different levels which leads to a considerable economy in the structure and is particularly appealing to a public that faces mounting pressures from the dizzying rate of growth of the college population. As a result, professional research positions are supported in large part by the undergraduate teaching load, and graduate student support is largely accommodated by the undergraduate teaching assistant requirements. In some disciplines, notably chemistry, it is estimated that on a nationwide basis two-thirds of the graduate student's support derives from his employment as a teaching assistant.

By contrast, the interdisciplinary subjects, such as oceanography and meteorology in the sciences and archeology in the humanities (which we must note are largely in graduate studies), are not able to benefit materially from the undergraduate explosion. They are severely limited in student support, research appointments, and space. In principle, the undergraduate chemist could become a teaching assistant in the chemistry department while working for his Ph. D. in oceanography.

In practice, the chemistry department reserves these appointments for its own graduate students thus cutting off the interdisciplinary graduate department from an important source of student support. This is an important change from the pre-World War II sitation where the undergraduate department was large and fed the various professional schools with very little demand by its own graduate division which was relatively small. I can only easily cite the recent experience at Scripps which I believe is typical. This year we admitted only ten per cent of the qualified applicants to our graduate school. It is true that the average upper division grade point average of those admitted climbed to a spectacular 3.62. I feel that the process has become too selective and that we are excluding potential candidates of considerable talent and promise as well by not doing what we can to satisfy legitimate aspirations in a field that needs this talent.

I have dwelt on the manpower problem perhaps too much, but I did intend to go into one of the problems in more detail, since there is a certain commonality to all of them. The second obstacle in the way of developing the full program that is not being overcome today is a lack of specialized engineering groups attached to the major institutions, whose assignment is the development of the advanced technology that is peculiar to the field itself. By way of example, the AEC has well established engineering and planning groups that work years ahead on such problems as high-speed counting, computer technology special to bubble chambers, accelerator operations and, in fact, engineering groups that are designing accelerators for the future. In oceanography we need similar specialized groups independently supported but closely associated with the oceanographic community who work on such problems as advanced instrumentation,

communications, specialized ship computer technology, and similar problems.

Such groups simply do not exist right now, because the method by which support is derived for current ocean exploration and research is mostly on a project basis. By and large, we have no continuity guaranteed in our funding, and we operate primarily on a project-by-project basis. This method goes right up the line to Congress, and, very understandably, the Washington administrator is more anxious to exert himself for project funding for which payoff is more immediate in terms of reputation than in funding for long-range groups whose work is, by definition, never associated with specific research accomplishments—since by the time the research is in progress—he is working five years ahead again, and direct credit cannot be assigned to the agency which did the basic engineering support. As a result, I feel, the average technology in the ocean sciences is backward compared to what is used in other fields such as space and nuclear sciences.

This situation is almost exactly the same with another agonizing problem, that of actual laboratory and office space. I have discussed the problem earlier in connection with normal educational support, and while there was the problem of relatively low priority for global science, the hindrance for support for basic research again is one of the project support mode and the lack of a continuing capital investment. In fact, I could adjoin the building problem to the additional problem of capital investment; that is to say, the national capital investment in ocean science and technology. This is an extremely serious problem. I feel that our capital investment in terms of standard scientific instruments such as mass spectrometers, oscilloscopes, gas chromatographs, winches, cranes, to mention a diverse few, is in very poor shape. The reason is, of course, that the average proposal for a contract is usually not large enough to support the purchase of a major piece of equipment, which often can best be amortized over a variety of rather different projects. I have established a figure to my own satisfaction that a capital acquisition rate of between 10 and 20% of the operating budget is required. The cumulative effect of this continual capital investment represents just as much a measure of progress in the science and technology as capital investment does in any normal industry. In periods of budget cuts, which unfortunately occur with predictable frequency, the first item to go is the capital investment if it is not specifically earmarked as such and set aside. And if the prolonged period of lack of attention to this investment occurs, the technology remains relatively backward.

I have set aside as a special topic that capital investment which represents the oceanographic vessel. I think I can speak with some authority on the subject, since Scripps operates the largest oceanographic research field in the country and almost anywhere on the globe at any time. While the United States Navy, through the ONR and the NSF, has done relatively well under the circumstances in supplying us with vessels, the program has again been far from adequate because of the lack of a central funding agency which makes it its business to see that the nations' oceanographic fleet is adequate, modern, and supported on a long-term and sufficiently funded basis. It has been an extraordinary struggle to even come to where we are—most of the research that has been done in the United States until recently has been done with hand me down, made over vessels left over from World War II. We have been adding to our fleet the first of a series of research vessels designed from the keel up specifically for oceanographic research. The program, however, has slowed considerably, and the prospects at the moment look rather grim.

It is not obvious from what I have said so far that the monies involved in the four or five problems I have touched on are not very large compared to the overall expenditures in the program—but it is true. At the Scripps Institution, for example, we anticipate this year that our fleet cost would be approximately 15% of the total laboratory expenditures, perhaps a bit on the low side. Of course, without a fleet, we would hardly be oceanographers, or perhaps I should put it another way, someone who claims to be an oceanographer who does not go to sea is simply not one. In a certain sense the total budget is not an adequate measure of the health or the growth of the field. The distribution of these monies, their allocation, and their priorities are of considerably greater significance. The specific items I chose to put forward today represent just those items that always suffer the most when there is not a strong central planning agency with real influence over the funding with the clear responsibility for the overall state of the science.

As you have certainly come to realize, I have preferred to approach the problem by not endorsing NOAA in any blanket way, but rather to point out just those areas which I believe are areas of importance, at this moment almost of neglect, where the concept of a single agency does offer a solution. I dare say that in reviewing these problems (and if you accept these as real problems) other possible organizational solutions could be found rather than a single agency. I must say that I have thought about the problem a good deal, and for a number of years, and I have not been able to think of any other really adequate solution. For example, one could conceive of a centralized agency somewhat smaller in scope than that proposed by the commission, but then its responsibility would be considerably diminished, and its voice would necessarily carry less weight when pleading for its proper budgetary treatment. Also, one could consider creating a separate division within the NSF, for example, which could carry this responsibility, but again this division would be, at least in modern terms, much larger in operation than the rest of the Foundation and could, therefore, present certain serious problems with respect to the Foundation's primary role which is the support of basic science on all fronts. We could go on inventing this way more or less indefinitely, but I for one have found it very hard to escape the conclusion that some agency, similar to that proposed by the Commission, would be required if we are to make a really determined and concerned effort in developing the field of oceanography and applied ocean science.

PAY INCREASE BILL FOR VICE PRESIDENT AND OTHER TOP GOVERNMENT OFFICIALS

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks an editorial entitled "Example at the Top," published in the Los Angeles, Calif., Herald-Examiner of May 7, 1969.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXAMPLE AT THE TOP

Something incredible has happened. The U.S. Senate has shelved the big pay increase bill for the Vice President and other top government officials.

The House passed the measure in January and it was expected to have had easy sailing in the Senate. But something happened in the meantime. A huge and growing volume of mail from the constituents back home protested the big hikes in salaries at a time when, as Sen. Harry F. Byrd, Jr., of Virginia warned, "We are in a period of high inflation. If we're going to get inflation under control there must be an example at the top! What kind of example are we setting here?"

There was no organized letterwriting campaign. The deluge of protests simply expressed the indignation felt by a great many tax-burdened citizens.

The Senate's action should encourage all of us to realize public officials are sensitive to our opinions if we make them known.

Under consideration in the Senate in Sacramento is a bill to boost legislators' salaries 20 per cent. The same advice Sen. Byrd gave for Washington also applies in Sacramento. If inflation is going to be controlled and spending curtailed, there must be an example at the top.

DILLARD'S DR. DENT

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. HÉBERT. Mr. Speaker, Dr. Albert W. Dent, who has been president of Dillard University for 27 years, is retiring next month.

Dr. Dent has contributed much to community life, race relations, and education during his tenure at the university.

Dillard, which is located in my congressional district, is one of the country's finest educational institutions, and it is regarded so mainly because of the efforts and ingenuity of Dr. Dent.

Our community is proud of Dillard, and it is proud and thankful that we have had a person who bears the credentials of Dr. Dent. I personally regret that he will no longer be an official member of the educational community, but I know that Dr. Dent will continue to be active in educational community affairs.

I would like to call to the attention of the Members an editorial which appeared in the May 24 issue of the New Orleans States, which demonstrates the high regard the community has for Dr. Dent.

The editorial follows:

DILLARD'S DR. ALBERT W. DENT

The development of Dillard University is a measure of its president, Dr. Albert W. Dent, who retires next month after 27 years in office.

Its student body has more than trebled and its facilities greatly expanded during his tenure. It has benefitted from his innovative policies.

One outgrowth is, as a speaker said at this week's testimonial to Dr. Dent, Dillard is not a local institution, it is a national institution.

Yet development of Dillard does not fully measure its retiring president.

Before he came to the campus on Gentilly blvd. he was, as superintendent of Flint-Goodridge Hospital, an innovator who developed a forerunner of today's widely accepted group hospitalization insurance.

He has represented the nation at many international health meetings and has held presidency of national health organizations. Four presidents of the United States have

used his services as consultant on education and health.

In community life, Dr. Dent has variously held office with the United Fund, and worked as a member of the City Planning Commission. By gubernatorial appointment, he is a member of the Louisiana Commission on Human Relations, Rights and Responsibilities.

By no means do all these activities encompass the whole of Dr. Dent's endeavors on behalf of man and his community. But they do give an idea of the stature of the man who shortly turns the reins of Dillard over to another.

REMARKS OF GOV. WILLIAM G. MILLIKEN

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. HARVEY. Mr. Speaker, Gov. William G. Milliken of Michigan, on May 26, 1969, spoke in St. Clair, Mich., about the opportunities facing the Republican Party. He outlined his suggestions for broadening the base of the party and for making it more responsive to the needs and wishes of the American people. Governor Milliken's remarks relative to our young people are very perceptive indeed.

Mr. Speaker, our new Governor of Michigan has already achieved a remarkable record of accomplishment in the relatively brief period of 4 months. His remarks are worthy of consideration by all persons interested in our two-party system. I insert them in the RECORD as follows:

REMARKS BY GOV. WILLIAM G. MILLIKEN, MAY 26, 1969

Ladies and Gentlemen: It's good to be here among so many friends, to see so many people who I know can be counted upon to give not only their votes to the Republican Party on Election Day, but also their time and their energy on many other days as well.

I think loyalty is one of the cardinal virtues. It makes me very happy to see so many people here who have been loyal to the Republican Party for many years. I'm glad that we can count on you. I only hope that you will give us not only your allegiance and your time, but also your ideas on how we might strengthen our party and in turn, strengthen our country.

One thing we must do, of course, is to make sure that we don't lose the people we already have. But that is not enough. What I am going to talk to you about tonight is the need to broaden the base of our party, to attract to the Republican Party the kind of supporters who have tended to side with our political opposition.

I think the future of the Republican Party here in St. Clair County, in Michigan, and in the entire nation, is very bright—*provided* we take advantage of the enormous opportunities that lie before us.

We have some things going for us, after all. For the first time in eight years, we have a Republican administration in Washington. And that administration has made a beginning of which we can all be proud. The President's speech outlining the new proposals to end the war in Vietnam was a landmark of statesmanship. All through the administration, we are seeing the kind of practical approach to problems—cautious, patient, but innovative—which we have come to expect from Republican officials. And in Lansing, while we have big problems ahead of us, we are continuing in power—continuing the fine work which George Romney began and which completely reversed the fortunes of this state.

I think a great many voters are aware of this progress, and I think many voters who were independents or who were even of the opposite political faith have adopted a new openmindedness and a feeling of curiosity about the Republican Party.

1970 is a year in which Republicans have a golden opportunity to recoup losses where losses occurred, to make new inroads into Democratic strongholds, and to consolidate the gains which we made in 1968.

We could get into an endless debate about the best way to make those advances—the finer points of organization, financing, communication, issues, and so forth. But I think the key to Republican victories in the future is very simple—make a strong thrust into territory that we have long neglected.

And the territory we have neglected the most, it seems to me, is the territory occupied by young people. I won't bore you with the census report because I know you're already aware how the median age of our populace is rapidly shifting to the point where within a very few years, people *under 25* will outnumber those over 25.

Why is it that so many young people today are turning elsewhere in search of an idealistic framework for life, rejecting the distinctly American ideals of individual freedom which we so readily accepted and so faithfully retained?

I can't really answer that question. Perhaps you in Ann Arbor, with so many young people around you, have some answers. In any event, I think we ought to look beyond the surface of things—beyond the long hair and the rebellious behavior—in an attempt to find what youth wants, and what we might do about it.

I give a lot of speeches, and I also listen to a few. Every now and then I find time to read one that someone else has given, and sometimes I'm very impressed. One of the most important speeches of recent months was made by Dr. George S. Wald, a Harvard University biologist who won the Nobel Prize. In this speech, Dr. Wald talks about the Vietnam War, the ABM, and some of the political issues of the day. I don't agree with everything he says by any means, but I do believe he reminded us of something very important about today's youth. He reminded us that they are growing up with some *desperately serious problems* that never confronted their elders when *they* were growing up—the threat of nuclear war and a population explosion that could bring about world famine. And he said:

"I think I know what is bothering the students. I think that what we are up against is a generation that is by no means sure that it has a future."

And then he went on to say:

"Unless we can be surer than we now are that this generation has a future, nothing else matters. It's not good enough to give it tender, loving care, to supply it with breakfast foods, to buy it expensive educations. Those things don't mean anything unless this generation has a future. And we're not sure that it does."

I think everyone in this room realizes that the question whether young people have a future is, in the end, a political question. We all complain about the size and power of government, but the size and power of government is determined by political means. The questions of war and hunger are determined by political means, and that is why it's so important for us to strengthen our political institutions, to open the doors of our party wide enough to allow entry *by people of all ages, by people of all economic station, by people of all races.*

I can't think of another time in recent history when the opportunities were larger for Republicans than they are today. Look at the two groups which have, in the past, tended to favor the opposition—the young and the Negroes. Many of today's young people, especially college students, are impatient with slow change—they are radicals. But if we look beyond the speed with which they want to move, which is admittedly sometimes hard to do, I think we find that they believe some of the same things that Republicans have always believed.

We believe, as they do, that power ought to stay as close to home as possible, in the community and in the cities and in the states, and not—where it can be avoided—in the hands of the Federal Government.

We believe, as they do, that men must help those who are less fortunate than they are.

We believe, as they do, that every individual has talents and skills and must be allowed the greatest possible expression, and that society ought to be so established as to permit this expression.

We do not believe, as they do not either, that government must drive men to do good works—and there is abundant evidence to support our view.

Republican principles center around the belief that an individual should be free to achieve his full potential, and we do not regard this idea as radical. The foundation of our Republican belief is the inviolate freedom of the individual to pursue his destiny as long as that pursuit is consonant with the common good.

I think many young people would be surprisingly receptive to the Republican Party if we gave them the welcoming smile that they need for encouragement. Many of these young people question what their parents told them, and the truth is that many of their parents brought them on the pablum of our political opposition.

In any event, the young have a healthy skepticism for a government, a federal government, which has been allowed to grow too powerful. And so do we. That is only one of the ideological islands where we might meet to talk to the young.

No, I do not think the young, or Negroes, or other minority groups reject the Republican Party on ideological grounds at all. I think they have stayed away largely because they have not been very impressed with the warmth of the welcome they received from us.

I believe we must all work much harder to make that welcome really felt by those who knock at our doors.

Together, we have a great opportunity to move Michigan forward, but if our leadership should falter, that opportunity will be lost for us. 1970 will be a tough election year, and we don't have a moment to lose in preparing for it.

We need to begin now to find men and women of ability, integrity, appeal, and dedication to be our candidates.

We need to organize volunteers—to harness the energies of groups and inviduals, and especially of youth.

Our job—as a party of principle—is not just to listen to the people and reflect their wishes so that we can win power. Our job is to initiate two-way communication with the people, at every level, and by every means we can; to mold public opinion as well as to reflect it; to involve people directly in the shaping of a better state, a better nation, and a better quality of life. Our party must serve as the vision of the public—not merely its reflection.

Today, when more and more people have a growing sense of alienation, not only from each other but also from the decisions and the decision-makers that ultimately affect their lives, it is *absolutely vital* that there be at least one political party—the Republican Party—working at the grass roots—not just pleading for votes, but fighting for the people's efforts to put meaning back into their lives, involving the people directly in new approaches to the solution of human problems.

As Republicans, we must involve ourselves at every level with the incredibly difficult and complex social, economic, and political machinery that must be kept moving for the common good.

Our task as a broadly-based party must be to take the broad view of our society, its problems, and its opportunities, and to build toward a better future.

We must prove there is a better way.

In this concept lies our real hope for the future of this state and for the future of this party. The future of our party depends upon its ability to attract new people . . . independents, young people, minority groups, older citizens—all segments of our society.

All of us, whatever our age or outlook, will bear the consequences of the decisions which lie ahead.

And I need your help, and I know that I can count on it. I want to thank everybody here tonight for the time and energy you have devoted to your party, and in turn, your country.

STATEMENT BY GEORGE A. ROEDER OF THE CHASE MANHATTAN BANK ON ONE-BANK HOLDING COMPANY LEGISLATION

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MIZE. Mr. Speaker, during its deliberations on the one-bank holding company legislation, the House Banking and Currency Committee received a wide range of testimony on all the various aspects of the bills before us. For the benefit of Members who are seeking additional information on the issue, I wish to call attention to the statement presented to the commitee by Mr. George A. Roeder, Jr., vice chairman of the board of the Chase Manhattan Bank. His statement follows:

STATEMENT BY GEORGE A. ROEDER, JR., MAY 7, 1969

Mr. Chairman and Members of the Committee: My name is George A. Roeder, Jr., and I am Vice Chairman of the Board of the Chase Manhattan Bank of New York.

Our bank appreciates this opportunity to set out its views on the one-bank holding company. We feel that Congressional action on this issue will markedly affect the ability of the nation's financial mechanism to fulfill the complex demands that will be placed on it in the years ahead.

I commend the Chairman and members of this Committee for taking the initiative in seeking a responsible solution to a problem which, by its very nature, has many difficult aspects. In studying the Chairman's bill, as well as the other legislative measures designed to amend the Bank Holding Company act of 1956, I was particularly impressed with the thoughtful approach that was taken in each case.

Rather than commenting on these bills in detail, however, I would like to direct my remarks to five broader questions which, on the basis of your earlier sessions, seem to be of primary concern to the Committee.

The first is: *Why do commercial banks want one-bank holding companies?*

Let me respond by telling you why Chase Manhattan decided to form one. Incidentally, our holding company is not yet functioning but we do have the approval of our stockholders and the Comptroller of the Currency. Final reorganization merely awaits certain tax rulings expected in the next few weeks.

We decided after a good deal of reflection that a one-bank holding company would offer several advantages. It would enable us to explore new areas of profitable growth, provide greater safety for our depositors, and serve the public interest effectively by helping to meet the changing financial needs of the national economy.

In recent years, commercial banks such as ours have been facing increasing pressures, both internal and external.

Internally, the composition of our resources has shifted strongly from demand deposits to a growing dependence on costly time money. To date, the impact of this trend, plus the steady rise in other costs of doing business, has been offset by higher interest rates which have helped banks maintain their earnings. But bankers realize that this situation will not go on indefinitely and that the cost-price squeeze will continue to be a problem.

In addition, credit demands on banks are increasingly of a longer term nature, while much of the deposit growth is short-term in character. Even the time honored commercial loan is more frequently on a term basis. Short-term financing of business, the traditional function of the banker, has become relatively less important.

Externally, the commercial banks have seen more and more of their familiar terrain invaded by other types of financial institutions not subject to the same restrictions as banks.

For example, many product-oriented companies have formed or acquired captive subsidiaries to finance a growing volume of credit sales. Commercial paper brokers, foreign banks, leasing organizations and factors have also intensified their efforts to serve U.S. business. Equally important, sales finance organizations and small consumer loan companies have financed aggressive expansion programs through the direct placement of commercial paper in competition for resources with the banks. As a result, domestic banks have found themselves in a new competitive environment, both in gathering resources and in lending money. And while most enterprising banks welcome competition, in the present environment they are often at a competitive disadvantage because of statutory or regulatory restrictions.

Faced with the internal and external pressures I have described, the banks have sought an organizational structure that would offer greater flexibility for financing and greater geographical mobility to broaden their service base and strengthen their competitive capabilities.

In this respect, the one-bank holding company provides a useful vehicle.

Through a holding company, a bank can do some things more efficiently and more appropriately than it can by itself. Such activities as equipment leasing and factoring might well have a greater potential, as subsidiaries of a holding company, because of the ability to operate directly over a wider geographical area.

Through a holding company, a bank can position itself more favorably to move into profitable new areas of growth as they develop. Financing of supersonic transport planes, commercial satellites, and the successive "generations" of electronic computers will require far greater flexibility of the kind that the holding company structure offers.

Through a holding company, there is an opportunity to consider a wide range of activities in which risks have traditionally been relatively high. For such activities, more money from investors and outside lenders should be at stake, rather than the funds of bank depositors. Certain types of real estate, leasing and small loan transactions are cases in point.

The restraints currently imposed on banks have limited competition in certain financial areas with resulting losses to the public in terms of less competitive rates and less convenience.

The real estate mortgage field illustrates how a holding company can serve the public interest. Looking ahead over the next decade, we at Chase Manhattan see the demand for mortgage funds increasing at a substantially faster pace than either the financial market or the economy as a whole. To meet the projected annual need of some $80 billion in mortgage money by 1980, vast new sources of funds must be found.

Of course, commercial banks already play a role in the real estate field. It is a limited role, though, and properly so, in view of the risks involved and the fact that banks are using their depositors' money. Yet, somehow, commercial banks must be brought more fully into the mortgage field if the country is to have access to the funds so vitally needed for housing and urban development.

Through the one-bank holding company structure, the same innovative spirit and talents that have in recent years produced significant gains in bank efficiency, a broader range of services for the public, and greater access to these services, can be marshaled to bring enhanced capabilities and competitiveness to mortgage banking and other finance-related fields.

A second question in which the Committee has shown great interest is: *What should be the scope of bank holding companies?*

Chairman Martin and Vice Chairman Robertson of the Federal Reserve Board have emphasized in their testimony the evolutionary character of banking, stressing that this is a dynamic field that is constantly changing. We agree.

The technological and management revolutions in which we are caught up have resulted in banks being called upon to provide services which, not long ago, would have seemed quite remote from the traditional image of banking. Already, within a comparatively few years, the relations between banks and individual consumers have undergone changes that have sharply altered patterns of buying.

Before World War II, most commercial banks shied away from direct consumer lending, preferring to stick to the function of providing self-liquidating short-term credit to business. As our economy broadened, however, banks contributed to new services aimed at helping the consumer enjoy an automobile, a home improvement, or even a vacation while he was paying for it and without jeopardizing the future security of his family. They set up revolving credit plans, developed charge-account banking, established student-aid programs, and financed purchases through overdraft checking accounts.

For the businessman, banks have provided greater access to long- and short-term funds and greater variety in the packaging of these funds. This has been done in the form of secured and unsecured loans, lease financing, factored accounts and other variants. Banks have introduced complex money mobilization systems to speed the availability of funds, payroll deduction plans to eliminate waste and duplication, and a host of computer-oriented services to assist corporate clients with their operations and planning.

As we look ahead, we can see sound reasons for recommending that commercial banks—through one-bank holding companies—be fully competitive in such areas as mortgage banking, equipment leasing, factoring, insurance, property management, land development, computer services, ticket reservation services and other specialties related to the area of finance.

We would suggest that any legislative definition of the scope of banking be made as flexible as possible, consistent with the over-

all public interest, to accommodate the changing needs of our economy. We believe it would be extremely difficult to say with assurance today what activities will constitute banking in the 1970s and 1980s.

The bills before you provide different methods of restricting entry into non-financial fields. Another method which we ask you to consider would be to define what is *not permitted* and leave a good deal of flexibility within the permissible areas.

There has been in Federal banking law since 1919 a model for legislation confining certain types of companies to financial business. This law—the Edge Act—was designed to permit federal incorporation of companies doing international financial business. Rather than beginning with general prohibitions and attempting to carve out a financial exception, the Edge Act permits these special financial holding companies to hold the stock of any international corporation "not engaged in the general business of buying or selling goods, wares, merchandise or commodities in the United States." This has worked out very well over the years, and a similar approach might be taken to the Bank Holding Company Act.

It would be up to the supervisory agencies to make a judgment on precisely what fields bank holding companies might enter, depending upon the changing needs. Since the supervisory agencies would be reporting to Congress from time to time, the legislative branch would have an opportunity to adjust the regulatory structure as experience required.

A third question which has been raised frequently during these hearings is: *How should the one-bank holding company law be administered?*

Witnesses have discussed the issue of whether authority to determine permissible activities should be centralized in one Federal agency or dispersed in three.

Our preference would be for the three-agency arrangement on the ground that it would not give the total power to any single administrative agency, while still ensuring uniformity of standards.

It is true, of course, that such an arrangement might prove somewhat cumbersome. It might even slow down the process of determining the permissible areas of bank holding company activities. But, in this case, if thorough deliberation leads to sound policy, the economy will benefit and the banking community will not suffer.

We would strongly favor an arrangement under which the approval of two of the three agencies would be sufficient for sanctioning any guideline. Certainly, no one agency can claim a monopoly on highly talented individuals or wise decision-making.

To ask for unanimity in each case could paralyze the evolutionary development of banking and finance. It could dam up the forceful tide created by demands for new services and for more flexible methods of financing.

A fourth question is: *What about a "grandfather clause"?*

Although Chase Manhattan probably would not be directly affected by such a clause, we believe that some provision should be made to allow those holding companies that acquired subsidiaries in good faith to retain them.

To insist upon divestiture of long-established business relationships, which were legal and proper at the time they were entered into, seems to us a harshly punitive measure.

We are not prepared to say what would be the most appropriate cutoff date, but in our judgment it should predate the large-scale movement of banks to embrace the holding company structure.

A fifth question is: *What broad criteria should be considered in drafting the final legislation?*

In this connection, we would offer three specific suggestions.

Existing laws: We feel that the Committee should carefully evaluate the operation of present laws before superimposing another layer of restrictions. Many of the problems generally cited as arising from joint control of banks and non-banking companies are, in fact, dealt with by legislation already on the books.

For instance, the problem of conflict-of-interest is covered by Section 23A of the Federal Reserve Act which significantly restricts financial relationships between insured banks and their affiliates including holding company affiliates.

The antitrust laws are aimed specifically at problems of undue concentration of resources, and the fact that the acquiring company also owns a bank should not necessitate special distinctions and controls.

Years of antitrust enforcement by the Attorney General and the courts have shown the vigor and adaptability of the existing statutes. For example, they include appropriate safeguards against tie-in relationships. As the Supreme Court ruled in the recent U.S. Steel case, the extension of credit is clearly a "tying product" whose use may be illegal under the Sherman Act if the person extending the credit has sufficient economic power and a substantial amount of business is foreclosed by the tie. Assistant Attorney General McLaren stated in his testimony here that this decision may well have reduced the need for any such provision in the legislation now under consideration.

Geographical Restrictions: It seems to us that no geographical restrictions should be placed on holding company subsidiaries that are not deposit-gathering institutions. It makes little sense to restrict one company to state and banking-district lines because it happens to own a bank, while other companies providing similar services are free to establish offices on a regional or nationwide basis. The policy of Congress and of the states of protecting deposit-taking institutions from competition should not be applied to other services financed in a different way. Such restrictions would eliminate much of the efficiency, effectiveness and added competition inherent in the bank holding company.

Interlocking Directors: We believe the provisions of Chairman Patman's bill regarding interlocking directors and officers between banks and other financial institutions could work a hardship on banks in smaller communities. In these areas there may be a limited number of persons with the training and experience to serve as directors of financial institutions. It may be very difficult for a local bank or insurance company to make up a board without including a person who is simultaneously a director of another financial institution. The suburbs and rural communities would stand to lose the services of valuable people under terms of this provision, and that would be a regrettable loss.

There have been no indications that abuses exist which would require the blanket prohibitions that have been proposed. However, if it is felt that some legislation is desirable, it might be appropriate to apply to bank holding companies a provision similar to the one that now applies to savings and loan holding companies. That is, to require the approval of the appropriate authority before interlocks between bank holding companies and other banks or holding companies would be permitted.

These, then, are some of the considerations we feel the Committee should take into account in drafting legislation which, hopefully, will safeguard one-bank holding companies against abuse without stifling the good that can come from this development if properly directed.

In setting out legislative ground rules, we believe all concerned would be well advised to look not only at what banking is today but at what it could and should be in the future, to ask not only where banking has been but also where it is going.

We would hope that any legislation growing out of your deliberations would fulfill what we see as vitally important twin objectives: maximum protection for the funds of depositors and maximum flexibility for banking institutions to adjust to the changing needs of our economy and to remain fully competitive.

If these objectives are met, we feel confident that the public interest will be well served.

SENATOR ROBERT GRIFFIN GAINS IN STATURE

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. GERALD R. FORD. Mr. Speaker, several recent editorials have paid tribute to Michigan's extremely able and distinguished junior Senator, BOB GRIFFIN.

Our Nation owes a great deal to this courageous man of principle, and I insert these editorials at this point in the RECORD:

[From the Jackson (Mich.) Citizen Patriot, May 12, 1969]

SENATOR ROBERT GRIFFIN GAINS IN STATURE

Michigan's junior senator, Robert P. Griffin, appears to be moving closer to the designation of a man of great stature in the United States Senate.

Every turn of the wheel of political fortune, and particularly as it involves the strange case of Justice Abe Fortas of the United States Supreme Court, makes Senator Griffin look better.

A rise above the crowd in the Senate is not an accident. It comes only from ability and good judgment—and courage to take the lumps when the going is rough. High integrity and ability must be combined in a man who would make his mark in the Senate. Being a "nice guy" and a vote-getter are not enough.

Senator Griffin came through his trial by fire in a magnificent fashion when he dared to oppose President Johnson's nomination of his long-time friend and legal adviser to the position of chief justice.

Griffin began a lonely crusade to block the nomination, something which is rarely done in the horse-trading atmosphere of Washington. He was chastised even by the leadership of his own party in the form of Sen. Everett Dirksen. Democrats and assorted liberals jumped on Senator Griffin and accused him of everything from "McCarthyism" to reflecting on the dignity of the high court.

The senator kept his campaign in a low key and avoided extreme charges. He had done his homework and made his point. Many of his early critics, including Dirksen, joined him in blocking the nomination.

Even after the battle was over, Griffin was subjected to sporadic attacks. He played it cool and did not revel in his victory.

The recent revelation of indiscreet conduct by Justice Fortas tends to prove that Senator Griffin was correct in his earlier campaign to block elevation of the Justice to the highest judicial post in the land. Again, he played his hand in a low key.

While many of his fellow senators were grabbing headlines by demands for the resignation or the impeachment of Fortas, Senator Griffin spoke softly. He refused to even make a big thing of reports of threats

against his life because of his role in the Fortas affairs. He mentioned, as he had previously, touching only the "tip of the iceberg" in bringing out the facts about the conduct of the justice.

Again, Senator Griffin is avoiding sensationalism and most certainly is carefully marshaling his facts. His acts are in keeping with what is supposed to be the dignity and the capacity for careful deliberation in the United States Senate.

In this era of hip-shooting headline hunters in every branch of government, the general tendency is to underestimate a man with Senator Griffin's methods.

The Democrats in Michigan made that mistake in 1966 when, as a relatively obscure member of the House, Bob Griffin slaughtered the old "champ", G. Mennen Williams, in the race for the Senate seat.

Dirksen, Johnson, Fortas and Co., underestimated him when he took on the dragon of the "Establishment" in opposing the nomination of Fortas for chief justice.

Fortas and adherents to the political school of thought which holds that indiscretions and impropriety are forgivable so long as no actual laws are violated, again may be underestimating the gentleman from Michigan.

Nice, quiet guys don't necessarily finish last; at least not when they know what they are doing and have the courage to make their valid points.

[From the Saginaw (Mich.) News, May 20, 1969]

GRIFFIN'S PRINCIPLED ARGUMENT VINDICATED

One man's fall from grace should never be used to advance another man's place. And any man who would so contrive to feed from the personal misery of another is no man at all.

In politics, however, the cruel game is often played out to the end, whatever the embarrassment.

It is inevitable, therefore, that the resignation of Justice Abe Fortas—forced by public revelation of damaging outside financial connections—produces a dichotomous effect. As Mr. Fortas fades from public life the public servant image of Michigan Sen. Robert P. Griffin is enhanced.

We are certain, however, that in this case Sen. Griffin wishes with all his might that he had been wrong rather than right way back when. To know this decent, principled Senate moderate at all is to know that at this hour his own agony at having been the one forced to carry the battle to bring another down is nearly as great as that of Mr. Fortas.

In this instance, of course, it is undeniably Sen. Griffin who emerges the victor in the ages old battle matching principle against political expediency. "Cronyism" is the word Sen Griffin gave it—and it revived an old cliche that still echoes around the American political scene.

Memories are not so short that recall of the Griffin role in the failure of Abe Fortas to gain Senate confirmation as Lyndon Johnson's choice for chief justice of the U.S. Court escapes anybody. It will have its effect on the American political appointive process for a long time to come.

Nor can one easily forget the tongue-in-cheek and oft times direct verbal put-downs Griffin endured when he arose to oppose the Fortas nomination.

In retrospect, however, the Griffin part in the Fortas tragedy deserves to be kept in clear context. Griffin never opposed Fortas' right to hold a seat on the Supreme Court bench. Nor did he ever try to minimize the Fortas legal competency.

What he did do was stand, when others were content to look the other way, and that was evolving around the selection of a man to hold a job as important as that of the chief justice of the United States.

It looked wrong then to a man of Griffin's legal background for a lame duck President to even exercise that prerogative and it looked even worse for the nomination of Fortas to be tied to the resignation of Chief Justice Earl Warren. Later, of course, Griffin did raise more serious questions about extra-legal fees accepted by Fortas for a series of lectures at American University.

We ourselves took a dim view of Griffin's "cronyism" argument and an even dimmer view of subsequent attempts to smear Fortas as a lover of pornography because of certain high court decisions in which he had been involved. Let it be kept firmly in mind, though, that Sen. Griffin's principled cause never hit below the belt. As it gathered ultra-conservative allies it did become somewhat ridiculous and embarrassing even to the Michigan senator.

Unfairly he was linked to the Strom Thurmond-James Eastland ideological approach to things. He did pay a price for sticking to his guns—but stick to them he did. When it became obvious that more serious questions raised by Griffin such as the traditional right of advice and consent and the system of checks and balances were really the transcending issues—not personal vendetta—the Senate did finally wake up and Mr. Johnson withdrew the nomination at Fortas' request.

Subsequent events, which Griffin ironically had nothing to do with, have vindicated the senator's principled reasoning and sound judgment when it comes to passing approval on Supreme Court nominations—good for a lifetime.

In the tough world of politics, where it is all too often the unpopular and unprofitable thing to stand on principle, Bob Griffin looks strong and reliable.

[From the Detroit (Mich.) Free Press, May 11, 1969]

FORTAS COULD COOL CRITICS BY QUITTING SUPREME COURT

(By John S. Knight)

Admittedly, the current imbroglio over alleged improprieties by Associate Justice Abe Fortas is damaging to the Supreme Court and the image it presents to the people.

It will give rise to further public skepticism about the nation's highest tribunal, the quality of its decisions and disbelief in the men who make them.

Notwithstanding, and before angry citizens begin again to despair of our constitutional process, let it be remembered that our Founding Fathers in their infinite wisdom established three branches of government—the executive, the legislative and the judicial.

Thus we were given a government of checks and balances, with each branch serving to restrain the excesses of the other.

The Supreme Court, whose primary role is to interpret the law and rule upon its constitutionality, can likewise find that a president has exceeded his authority.

Congress, as the legislative body, does make the laws. The President exercises the right of veto on legislation he deems to be unwise or improper. In turn, Congress can override a veto by a two-thirds vote. The power of impeachment also resides with the Congress.

The trials and tribulations of Associate Justice Fortas began with his nomination by President Lyndon Johnson on June 26, 1968, to become chief justice of the United States.

Almost immediately thereafter, opposition to the Fortas nomination was mounted by Michigan's Sen. Robert P. Griffin who discovered that Fortas had accepted a $15,000 fee for conducting a seminar at American University, an act which Sen. Griffin considered to be improper. Griffin also charged that Fortas committed an impropriety in acting as President Johnson's personal adviser after he had taken his seat on the Supreme Court.

In attacking Fortas, the Michigan senator predicted that "we have only uncovered the tip of an iceberg." Subsequent events proved him to be a perceptive legislator.

By early fall, Sen. Griffin's anti-Fortas campaign had so intensified that a Senate filibuster against the nomination could not be broken by administration leaders. The President withdrew Mr. Fortas' name on Oct. 2, 1968.

Recent revelations by Life magazine that Justice Fortas accepted $20,000 from the Wolfson Family Foundation in 1966 when industrialist Wolfson was having difficulties with the government suggest that Mr. Fortas was sadly lacking in judgment.

The fact that Fortas returned the money 11 months later, following the indictment of Mr. Wolfson for selling unregistered stock, in no way excuses his error. Nor does Justice Fortas' explanation that he performed no services nor rendered any legal advice to the Wolfson Foundation mitigate the mistake.

Canons 4 and 24 of the American Bar Association say in part: "A judge's official conduct should be free from impropriety. . . . A judge should not accept inconsistent duties; nor incur obligations, pecuniary or otherwise, which will in any way interfere or appear to interfere with his devotion to the expeditious and proper administration of his official functions."

To add to the controversy, Knight Newspapers has discovered that no record of the Fortas payment appears in the Wolfson Family Foundation's report of income and expenses for the year 1966, although the Internal Revenue Service has known about this payment for at least two years.

Pending investigation, it is unknown whether there is any evidence which might lead to charges against the associate justice.

But it is no overstatement to say that the Fortas case has hurt the stature of the Supreme Court; that only his resignation can ameliorate to some extent the damage which has been done.

For the record, as they say, I confess to having supported President Johnson's nomination of Justice Fortas.

At the time, the attacks upon him appeared to be politically motivated and engendered by Republicans yearning to pin back Lyndon Johnson's ears. I took the lofty view that politics had no place in Supreme Court appointments; that the President's wish should be honored.

In the light of developments to come, I was wrong. Sen. Robert P. Griffin is to be honored for his opposition to Justice Fortas. He proved to be far more knowledgeable than his critics.

The U.S. Senate's successful filibuster against the Fortas nomination is a classic example of how the checks and balances given to each branch of the federal government work in practice.

For the Senate, by refusing to yield to the will of the chief executive, proved at least in the Fortas case that the Congress need not be a rubber stamp for the President.

And this, under our federal republic, is what government is all about.

[From the Detroit (Mich.) News, May 7, 1969]

FORTAS EXPOSURE JUSTIFIES GRIFFIN CRUSADE

(By J. F. Ter Horst)

WASHINGTON.—If it had not been for a fight led by Michigan's Senator Robert P. Griffin, the chief justice of the United States today probably would be Abe Fortas.

And, as such, the nation today would have the uncomfortable knowledge that its supreme legal authority had received $20,000 from the family foundation of Louis Wolfson, a controversial financier, during the time Wolfson was attempting to avoid eventual conviction as a stock market manipulator.

Fortas was tendered the money in January, 1966, three months after ascending to the high court, according to Life magazine, and returned it 11 months later. Fortas has acknowledged as much, saying the money was to have been used for Wolfson foundation research studies that he did not have time to undertake.

Against the background of the latest Fortas hubbub Griffin now looms as a senator whose anti-Fortas campaign in 1968 has been substantially vindicated. Even pro-Fortas senators are critical of the justice now.

Griffin claims no powers of clairvoyance were behind his decision to oppose President Johnson's nomination of Fortas as successor to Chief Justice Earl Warren.

His grounds then were based on Fortas' longtime friendship with Mr. Johnson—Griffin called it cronyism—and a belief that a post as important as chief justice should be filled by whoever would be elected president in November.

Questioned before the Senate Judiciary Committee, Fortas acknowledged he had, while a member of the court, given Mr. Johnson advice on handling the Vietnam war and the 1967 Detroit rioting.

Asked whether he had engaged in any other off-the-bench activities, Fortas responded that he believed he had made "a full disclosure."

Shortly after that. Griffin declared that the Senate's inquiry into the Fortas case had "exposed only the tip of the iceberg."

Then followed the revelation last September that Fortas had accepted a $15,000 teaching fee from funds raised by a former law partner from one-time business associates of the justice.

It was this disclosure that finally soured the Senate on Fortas and led to Mr. Johnson's withdrawal of his nomination to be chief justice.

Just why Fortas' involvement with the Wolfson foundation did not emerge then is a mystery to Griffin.

For his part, Fortas apparently did not consider it relevant to the Senate's investigation of his fitness to serve as chief justice—or he did not remember it.

This time Griffin is not leading the hue and cry over Fortas. He can sit back and let others—including some of Fortas' friends of last year—carry on the fight he began.

All the young Michigan Republican has done this time is lend his voice to the demands of others.

Griffin noted that the allegations against Fortas "indicate a breach of the extraordinary insulation which must exist between members of the Supreme Court and private interests in order to avoid even the appearance of impropriety."

And he is supporting the suggestion of Senator Edward M. (Ted) Kennedy that Fortas might want to appear before the Judiciary Committee again to explain the Wolfson case.

Friends of the associate justice think he may very well tender his resignation when the June term of the court ends. Some of his old defenders, as well as old critics, think Fortas ought to consider it.

Editorialized the Washington Post: "Unless Justice Fortas can provide a more compelling explanation, publicly and in some reasonable detail, he can best serve himself, the court on which he sits and his country, by stepping down."

The New York Times declared Fortas' explanation "falls far short of adequacy. . . . The dignity of the Supreme Court requires the most exhaustive disclosure of every aspect of the Wolfson affair."

The Fortas case is perhaps the most dramatic aspect of something that long has puzzled Washington observers. Why do some members of the judiciary, particularly those on the Supreme Court, feel it necessary to have substantial outside activities involving private remuneration?

Members of the Supreme Court, for example, are now paid $60,000 a year. Their appointments are for life. They are entitled to full-pay retirement at 65 after 15 years on the bench.

Over the years there has been a growing tendency for some justices to take on, for pay, such extra activities as lecturing, teaching and writing. Perhaps the most productive in these fields has been Associate Justice William O. Douglas.

Before going on the beach, Fortas was one of the best-known and most highly paid attorneys in Washington. Mrs. Fortas also is a skilled lawyer. They have no children.

There is talk of enacting a law against outside earnings by members of the court in order to reinforce official integrity. That would be even more palatable, to the public at least, if it also applied to members of Congress.

[From the Spokane (Wash.) Spokesman-Review, May 7, 1969]

GIVE A CHEER FOR SENATOR GRIFFIN

Abe Fortas almost became chief justice of the United States Supreme Court last year.

His failure to be confirmed by the Senate—after then-President Lyndon B. Johnson sought to promote his own nominee for the position of associate justice—can be attributed largely to one man, Michigan Republican Sen. Robert P. Griffin.

Mr. Griffin was not even a member of the Senate Judiciary Committee, which had approved the nomination. But he had a firm conviction and he championed it effectively.

He said on Oct. 1, more than three months, after the Fortas nomination had been submitted, and just before the Senate rejected a motion to cut off debate on the question:

"I took my stand and I have worked so hard to build support for my position, precisely because I am concerned about the Supreme Court as an institution—because I believe the American people should respect the court and hold it in high esteem."

A Senate impasse having been reached, Mr. Johnson then withdrew the Fortas nomination at the request of Mr. Fortas.

In view of the revelations made when that nomination was being considered, and the revelations regarding Mr. Fortas that have since been uncovered, the convictions and the actions of Sen. Griffin have been well vindicated.

That courageous man from Michigan did his duty as a United States senator. He deserves high commendation for the vital part he played in preventing Mr. Fortas from becoming the nation's chief justice.

TURMOIL ON OUR COLLEGE CAMPUSES

HON. EDWIN D. ESHLEMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ESHLEMAN. Mr. Speaker, over the past several weeks, many Members of Congress have individually, and in some instances collectively, expressed their dismay and concern about the turmoil that has spread on college campuses throughout our Nation. We are hopeful that the disorder will not result in the kind of repressive reaction by the Federal Government which would destroy the concept and practice of academic freedom. Yet, we are aware that unless effective and meaningful steps are taken to curb campus lawlessness, academic freedom is threatened by coercive forces from within the college community.

It would seem that the greatest need on the campus today is for college and university authorities to assert their proper role of protecting and preserving order. Administrators and faculties have the power under law and, more importantly, the obligation to end coercion as a means of influencing educational policy. They have a duty to assure our free society, which supports higher educational institutions, that rule by muscle will not be substituted for the rule of reason.

I am pleased that the executive committee of the Association of State College and University Faculties in Pennsylvania has unanimously endorsed a resolution which expresses a strong opinion that action by the academic community to curb campus disorder is mandatory if governmental intervention in college affairs is to be avoided. This resolution is the type of expression which holds out real hope that present crisis in education can be dealt with by educators themselves. I include the text of the resolution in the RECORD at this point:

RESOLUTION BY ASSOCIATION OF PENNSYLVANIA STATE COLLEGE AND UNIVERSITY FACULTIES

The Association of Pennsylvania State College and University Faculties expresses its deep concern about the loss of academic freedom which has occurred at numerous colleges and universities throughout the nation. This situation has resulted from the actions of some students and professors who, though in a small minority, have acted in an irresponsible, destructive and sometimes lawless manner to disrupt the teaching, research and administrative functions of their institutions.

Using unjustified coercive methods, this group has overriden democratic processes to force consideration or acceptance of their demands.

We urge administrators and faculties in our institutions of higher learning to take such prompt and effective action as is within their power to prevent such coercion of any or all segments of the college and university community. We believe that only through prompt action will our institutions be able to convince the public that governmental action is not necessary. To remain silent and inactive at this time is to invite intervention by outside forces.

PUTTING MINORITY GROUPS TO WORK

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ERLENBORN. Mr. Speaker, although our points of view may differ, there is hardly an American who is unconcerned that not all Americans participate in the mainstream of our society. Whatever our individual points of view, I believe each of us will profit by reading a speech delivered March 24, 1969, by Gilbert E. Dwyer, vice president for administration of the Kennecott Copper Corp. at the spring meeting of industrial relations specialists in the mining industry of the United States and Canada.

Mr. Dwyer provides a perceptive sketch of how this situation came about, pre-

sents a realistic assessment of this trial of our times, and then enthusiastically challenges his colleagues to become involved in the solution he offers.

I feel fortunate that Mr. Dwyer's driving address came to my attention, and I heartily commend it to my colleagues:

ADDRESS OF GILBERT DWYER

Within the last two decades we have been witness to a telescoping of time unique in the history of mankind. Never has the speed of political, scientific and social change been so accelerated in our world.

In the speeding years since the conclusion of World War Two, we have seen the rapid decline of all but two of the traditional world powers . . . balanced by the emergence of new nations in Africa and new powers in Asia. The maps of today are vastly changed from those of twenty years ago and reflect an ideological spectrum that often changes overnight.

In 1945 the Age of the Atom burst upon us through a dreadful instrument of war. Today knowledge is brushing away some of the fear and much of the mystery that once surrounded nuclear fission, and that awesome force is being refined into an exotic and useful power source.

In 1954, we had one electronic data processing system in the United States. Two years later there were 59. By 1968 we had 6,000 electronic brains far surpassing the speed of the human mind. In a fantastically short period, the Age of Cybernetics has already undergone three generations of obsolescence and improvement.

The Jet Age has shrunk the world as we know it and made it possible to equate thousands of miles of difference with mere hours of time. The first commercial jet passenger service was inaugurated in 1952; today the convenience and speed of jet travel is taken for granted.

And now, we are attending the birth of a Space Age. In less than a dozen years we will have come from Sputnik to space walks to a man on the moon.

Today, each new age springs into life long before the last has even neared full growth, and the acceleration has only begun.

For most of us, the attempt to fully assimilate the changes which so affect our lives is a battle we are beginning to lose. We have to accept them without being granted the time to examine these changes in terms of consequences. But we can accept them readily, because largely they have been good to us.

As members of the technocracy, we reap more benefits than penalties. We acknowledge the hope inherent in human organ transplants. We enjoy the convenience of jetliner travel. Vicariously, we experience the excitement of space exploration and find practical uses for the scientific fallout. We share in a warm and prideful security as useful participants in our remarkable and affluent society.

But there are Americans who cannot share our excitement, who cannot cope with the bright new world that technology is speedily building around us, because they cannot begin to comprehend it; because they are standing still amidst the rush of progress. In these Americans, the speed of change generates fear and the fear that forced withdrawal and aimless apathy is now beginning to foster fury.

These Americans are the "have-nots," the disadvantaged—the intellectually, socially, and emotionally shortchanged who have no active role in our race into tomorrow, who reap no rewards from the scientific fallout bought, paid for, largely understood and welcomed by those who are the "have" segment of our national society.

The Department of Labor defines a disadvantaged person as one at the poverty level of income, who is partially or wholly unemployed, and has one or more of the following characteristics: a school dropout, a member of a racial minority, less than 22 or over 45 years of age, or physically, mentally or emotionally handicapped.

It is estimated that 13 million Americans fall within this definition.

Our technological society demands education and skill as the credentials for active participation. As the American society becomes ever more technological in its orientation, more sophisticated in its mechanisms, the requirements for admission become increasingly demanding. And it becomes less and less likely that the disadvantaged, drawing only on their own resources, will pass the entrance exam.

Cruelly, if unintentionally, our burgeoning technocracy has provided the deprived poor with a graphic and constant reminder of how the other part—the affluent part—our part—of society lives. Each day television places the disadvantaged in a reviewing stand from which they can watch a sumptuous parade of all the wonderful things within the reach of most of us: gleaming electric kitchens in geometrically landscaped split-levels; fabulous vacations in Europe or the Caribbean; well-stocked family dinner tables at which the only dispute is which brand of frozen beef stroganoff is best; gleaming new automobiles driven by men in dinner jackets and women in sequined gowns; wholesome, "typically American" families concerned with the solution of vapid problems.

Disadvantaged Americans cannot view this parade without glancing from the world of the haves to the harsh realities of their own lives, framed in squalor, disease, deprivation, and hunger. They know only too well they've been left out.

Constantly reminded that *our* changing world has no place for *them*—that it is leaving them further behind as it gains momentum—these Americans in growing numbers are joining that hard core of citizenry who have given up, who are resigning themselves to becoming dependents of our affluent society.

Look at the evidence. In 1961, 45 Federal agencies were concerned with social problems. Their expenditures total $9.9 billion. Today there are 435 agencies spending $25.6 billion. Federal welfare costs alone now total $3.7 billion a year. Add to this the welfare costs of local and state programs . . . another $3.3 billion . . . and we have an annual welfare bill of $7 billion. One out of eight New Yorkers is on welfare.

Reliance on welfare often represents the only security left to the deprived American. But he pays a high price in accepting this doubtful security. He sacrifices or warps his sense of pride and ambition, replacing them with bitterness and hopelessness. The welfare recipient also barters away the birthright of his children. The dependency that leads to apathetic membership in the welfare class can become almost genetic.

An alarming parallel exists between today's hard core of disadvantaged Americans and the "mobile vulgus" of ancient Rome. The mobile vulgus provided us with the contemporary word "mob" and a memorable object lesson.

Like many of the modern disadvantaged Americans, the Roman mob was conditioned to rely on the generosity of government. Comprised of the poor of Rome, those without skill or craft, or farmers who had been driven from their lands, this stratum of the Roman citizenry clamored regularly for the bread and circuses provided by the Empire's rulers, the degree of loyalty of the mob to the existing government was based largely on the degree of largesse that government could afford to dispense.

As the Roman mob grew in size and became a social institution, the economic burden it generated became massive. And the mob became a dominant political factor. Violent and volatile, it was a disruptive force that could topple governments. Eventually, the Roman mob played a not inconsiderable role in accelerating the decline of the Roman empire.

Within the last few years, America has witnessed new and violent expressions of the frustrations felt by its own "mob," by those citizens who live outside the establishment. Our nation's capital has been besieged by armies of the poor. Dissident organizations whose militancy ranges from picketing to full-scale revolution have become active throughout the country. Crime in slums and ghettos is increasing at astronomical rates and spilling over into the middle-class backyards. Nearly all of our major cities have been wracked by riots and looting. These reactions led Time magazine to say last year that the United States seemed to be "verging on a national nervous breakdown."

It doesn't require graduate work in sociology to understand why minority groups comprise that segment of disadvantaged America that is most alarming, demanding, and violent in its protests. The minorities represent that part of our citizenry that is most deprived in terms of housing, education, and opportunity.

The Negro, Spanish-American, and American Indian have been watching our national ballgame through a knothole for generations. Now they want to get into the grandstand and into the game. Everybody else in the country gets a turn at bat.

So let's assume we're going to let the Negro, Spanish-American, and Indian play. What position? The key ones are already held by the insiders. And how do we fit the minority groups into our pennant-winning team without endangering our world championship? The problem is a tough one but solution is essential. The alternative is to turn the ballpark into a fortress and hope the fences will hold—but we know they won't.

The principal way to allow the minority groups into our national ballgame—and to heal the widening rift that is threatening to topple our very way of life—is to help them find dignity and hope for the future. The most obvious way to do this is to provide them with meaningful employment.

But how do you *make* jobs? How do we take the hundreds of thousands of disadvantaged whites, Negroes, Indians, and Spanish-Americans and work with them to build for them a productive future?

Often we hear a simple solution offered: take all the able-bodied but lazy people on welfare and make them work for their welfare checks. No work . . . no eat.

Even a cursory examination of this approach shows that it is unworkable. The days of the CCC and the WPA are long past. Those were short-term solutions to a massive, worldwide economic problem shared by nearly all. In an affluent society government make work projects are acceptable to neither those who pay for them nor those employed by them. Why should a man do meaningless or demeaning work for a check that he has been led to expect as his right *without* working. Do you stop his welfare payments? Do you starve his family into submission? Or do you destroy the family unit on which our society is based by driving the male out of the welfare-supported home? We've tried them all, and failed, because we've made the critical mistake of assuming that everyone believes in the traditional American veneration of work as an extension of pride.

As an evidence of human dignity, a fulfillment of an ultimate human need. But this is by no means a universally accepted concept. In many cultures throughout the world, it is deplored or derided. Yet we make the critical mistake of trying to force-feed it into the minds of our own minority groups, while denying to them the uniquely American social and economic mobility which makes the concept worthwhile.

The bulk of ghetto-dwelling unemployed Negroes and Spanish-Americans no longer see dignity in work. The daily facts of life in the ghetto or shantytown help convince them that only the suckers work. In their society the real status is granted to those who live by their wits in the slum jungles . . . by the pimps, numbers runners, and drug pushers.

It is an exercise in futility to criticize this culture our own indifference created. We *must* accept that the unemployed minorities have no environmentally-conditioned respect for work. And we *must* recognize that the welfare system we developed has compounded this negative concept.

It has become obvious to all that our approach to this growing problem has been a paradoxical blending of repression and charity. The turning point was the 1954 Supreme Court decision to integrate education; the first real ray of light came ten years later with the formation of Plans for Progress. Increasingly, these past three years, the government has come to realize it can't solve the problem alone.

The job of government is to enact the laws to make discrimination illegal, to set up the legal guidelines to make us care, and to enforce those laws and guidelines. It has done and is doing this job exceptionally well.

But to bring its efforts to fruition, it must turn to that sector of our nation that has been most instrumental and successful in accelerating our national progress: private enterprise. Government now has voiced its conviction that only with the assistance of the business community can any real progress be made toward productive integration of minority groups into our society and economy.

Another glance at the history books will show us that we have been successful in the past. We integrated millions of European immigrants into our society . . . and profited by their contributions. But while the integration of the Italians, the Irish, the Germans, and other Europeans stands as historic evidence that we *can* do the job, we must recognize that doing the same thing for today's minorities is a great deal more difficult.

Times have changed. During the large immigrations around the turn of the century, the United States was fast becoming an urban-industrial society. There was a demand for strong backs to build that society in the cities and to link the cities together into an economic chain. The European immigrants provided the needed unskilled labor. The most menial work was acceptable, because American freedom was worth almost any price to them. Eagerly urged to play a productive and essential role in building the nation, they eventually became an accepted part of the society.

Neither the opportunities nor the spirit that permitted integration of European immigrants into our national structure exists for today's minority groups.

At the same time Negroes and Spanish-Americans began to flock to our cities and towns, the market for unskilled labor was being greatly narrowed. That market has continued to grow smaller as our society grows more sophisticated, more oriented toward technology, with its heavy emphasis on skills, specialization, and mental work. The Negro and Spanish-American are at least fifty years too late to apply for the jobs that were available to the Irish or Italians.

One thing hasn't changed, however. Like the European immigrant, the Negro, Spanish-American, or American Indian is still faced by the towering obstacle of prejudice.

It is essential that we recognize prejudice to be an inescapable influence in American life. The identification of minority groups with their peculiar traits is a base element of American humor and folklore.

We have all been exposed to the caricature of the siesta-loving Mexican, the watermelon-eating Negro with natural rhythm, the Irishman with an addiction to booze and brawls, the money-loving Jew, the dumb Swede—the list goes on and on. No one in this room would be lost for meaning if I used the words spade, kike, frog, wop, mick, spik, hunkie, kraut, Jap, or polack.

If we are going to become actively engaged in the struggle to assimilate the remaining minority groups into our productive society, and we are, because we have no other choice, we must realize that prejudices exist within ourselves . . . and that they exist in our friends, families, employees, business associates, and the minority groups, themselves.

Let's realize that prejudices are not personality aberrations but are a normal facet of developing human attitudes. As human beings, we must categorize, translate specifics into general concepts. We could not function otherwise. We learn prejudices through years of contact with our culture and environment.

There is nothing unusual about prejudices *per se*. They become a problem when we permit them to exert unreasoning influence on our social or business habits, when we fail to recognize them for what they are—a decision-making convenience. Thus, the problem lies not in recognizing cultural and ethnic traits—they *do* exist—but in prejudging individuals from an ethnic or racial group, assuming, without knowing, that they will display all or any of the desirable and undesirable traits ascribed correctly or incorrectly to their minority. Conversely, it is just as illogical—today, at least—for the member of the minority to assume he doesn't have a chance because he will be unfavorably prejudged.

Prerequisite to any degree of success in integrating today's minority groups is to gain control of our own prejudices, to understand how they color our thinking, and to gain an understanding of the prejudices of the individual minority group members. In our efforts to bring them into the work force we will have to set aside not only racial or ethnic prejudices, but the employment practices prejudices we have so carefully built over the years.

Standard tests and interviewing techniques are worse than useless. A large measure of the managerial paternalism we fought so hard to rid ourselves of will have to be resurrected, because we must reach out to these people and guide them into our society.

We have evidence that this *can* be done. Steps—rapid and substantial steps—*can* be taken to supply meaningful jobs for minorities and to attract them to accept these jobs and hold them.

More than 400 companies are active in Plans for Progress, an organization of businessmen whose mission is the emphasis of equal employment opportunities. Since 1965, Plans for Progress has scored impressive gains in integrating minority group personnel into the work forces of the member companies. The percentage of minority group members employed by the participating companies has increased at a rate of 72 percent—almost twice as fast as the 37% rate for total employment.

The short but impressive record of the National Alliance of Businessmen stands as proof that a partnership of business and government can take great strides in solving minority group unemployment. In cooperation with the Department of Labor, businessmen voluntarily joined in a project called JOBS: Job Opportunities in the Business Sector. A little over a year ago the program began operating in 50 of the nation's largest cities. The target was the hard-core unemployed, heavily concentrated in minority groups. Industry was to provide the jobs. The government would help to identify and recruit the people and provide much of the money needed to train them. At the end of its first year, the JOBS project had placed 125,000 people, exceeding its goal by 25 percent. For the second year, the goal is 200,000 jobs—500,000 by 1971.

The Federal government is doing *its* part. The Manpower Administration has just kicked off its Concentrated Employment Program which targets 20 cities and two rural areas that are outside the territories covered by the NAB. And they are continuing a series of campaigns aimed at training disadvantaged youth: the Job Corps, Neighborhood Youth Corps, Work Experience, New Careers, Operation Mainstream, and many others.

Foremost in the ranks of the businesses undertaking the industry share of the effort are the manufacturers: companies in the automotive, aircraft and aerospace, electronics. Food processors, distributors, and marketers have also accepted a key role.

An examination of what we are doing in the metals industry is both encouraging and discouraging. We *have* done a great deal. The metals companies have been and are active in philanthropic support of a wide variety of organizations working to better the lot of the minorities. These range from community hospitals to the United Negro College Fund. And the metals industry in the West has moved steadily toward integrating Spanish-Americans into its work force, if not significantly into supervision and management.

But we can and must do a great deal more. The fact that many of us work far removed from the major cities where the problem manifests itself in violent ways, does not mean the problem is limited to urban ghettos. This is a *national* problem. In some respects it is an *inter*national problem. It hurts our entire country. It reaches out from the cities to touch us all. It *is* ours to solve.

In the mundane world of the businessman, where the frontiers have been relegated largely to the laboratory, what could be more challenging than to become involved in the struggle to integrate this last isolated segment of our population into our society? What could be more exciting than to throw out the rules and find the new ways to develop this vital human resource?

If the challenge isn't enough, there should be a realization that every businessman, as a matter of conscience, should be involved in solving the minority problem. And involvement should not be construed as the lowest possible level of compliance with the laws that outlaw employment discrimination.

While solution of a challenging problem plus the matter of social conscience should be motivation enough for any of us, more hard-headed reasons compel us to begin.

First of all, you and your fellow executives are citizens as well as businessmen. A substantial portion of the taxes you and your companies pay is now being funneled into welfare payments and social improvement programs. We must accept that there will always be some Americans who, because of age or disability, will need financial assistance from the government. But you are particularly well equipped and positioned to effectively help prevent this massive welfare cost from becoming even greater.

Consider that the minority groups are growing at a faster rate than the rest of the country. Unless we help them to join the work force now, we can project our *present* welfare costs as only a *small* part of what we will have to bear in the future.

Then, as businessmen, remember that your future is closely tied to the nation's social and economic health. If the country does well . . . you tend to do well. In dollars and cents, perhaps the argument is more convincing. It is estimated that putting 350,000 people to work would add $1 billion to the national output. It is even more impressive to realize that such a move would cut a like amount from the national cost of welfare. This switch from the debit to the credit side of the national ledger spells a $2 billion improvement in our economic picture.

And I am sure that everyone here has become increasingly conscious of the tight labor market above the menial or unskilled level. Trained people—both blue- and white-collar—are in great demand. That trained labor market promises to get tighter and tighter. The only logical solution is to train the unskilled now.

There is a final reason for all of us to become involved in creating jobs for the unemployed minorities. It's a very simple and perhaps unpleasant one: The government is going to make you. Today mere compliance with the equal opportunity laws isn't acceptable. The measure of whether you are conforming to the law is not mere compliance but *affirmative action.*

The Equal Employment Opportunity Commission which enforces Title VII of the Civil Rights Act has applied for the cease and desist powers held by other Federal agencies. While these have not yet been granted, the EEOC has received full backing from the courts in expanding its operations.

More EEOC investigators are moving into the field seeking industries or companies that—while they may not practice discrimination in hiring—are making no *active* effort to integrate minority groups into their work forces.

The EEOC has demonstrated a sharp understanding of how helpful the press can be in focusing a critical spotlight on companies who thought they could get by with token compliance.

Witness what occurred earlier this month when the EEOC flew 25 officials and staff to Los Angeles to hold well-publicized hearings on minority-hiring practices of the local aerospace, motion picture and television industries. An electronic calculator was used on the spot to project that it would take 15 years for one company to attain a 3% minority penetration into management. Unacceptable, said EEOC.

The annual EEO–1 report required of any company with more than 100 employees provides government with a handy balance sheet on your employment practices with regards to minorities. They can inspect these reports and readily see whether you are hiring more Negroes or Spanish-Americans than last year—and whether those already on your payroll are moving up the promotion ladder.

The Office of Federal Contract Compliance is another key government agency looking over our shoulders. As of July, 1968, this agency required companies who had 50 or more employees and were holding government contracts over $10,000 to maintain *written* programs of affirmative action applicable to minority group employment.

And these *must* include a timetable for the full achievement of equal employment opportunity goals.

And let's not be misled into believing that the Nixon Administration will take a soft line on the guidelines set during the previous Administration. There is every reason to believe that Washington, in its examination and sorting out of the agencies and regulations, will tend to make them stronger and more effective.

Challenge, conscience, good business, good citizenship—these are the principal reasons why so many businessmen across the country are already deeply involved in helping to solve this critical national problem. These are the reasons why every company represented in this room is going to have to face up to its responsibility to integrate its work force. The unemployed of the minority groups *must* be made productive members of our society. They *must* become a credit rather than a debit in the national economy.

And it is essential, too, that we all become involved now. The fantastic speed of change in the world has made delay a luxury we can't afford. The problem of the unemployed Negro, Spanish-American and American Indian has gone unsolved too long. Further delay can only aggravate and escalate the problem. Conscious delay places us in the precarious position of ignoring the directives of government . . . and being open to attack and criticism, loss of business and public goodwill.

As specialists in the broad field of personnel management and industrial relations, we in this room will play a paramount role in getting our industry more extensively and decisively involved in adding and fully utilizing more Negroes, Spanish-Americans, and American Indians to the work force. You will have to counsel—perhaps even prod—management on the need to get moving. You will have to be prepared to blueprint and build the programs . . . then make them work.

It's going to be an exciting, demanding, frustrating job. You'll not only have to get a man to work, but find the ways to rebuild his hope, his aspirations, his innate desire to believe in his own worth and usefulness so he'll stay with it. You will fail frequently and have to try again. You'll have to bend and break the rules, the employment standards you worked so hard to build up. You'll have to develop pre-entry level jobs to get these people ready to do the kind of work you automatically expect of the average beginning worker. And all the time you're doing this, you will have to cope with your present employees and their unions and convince them that what you're doing is right and fair and necessary.

It's a once in a lifetime opportunity to bring into play every one of your abilities, skills, techniques. Today's greatest problem is a personnel problem, a chance for each of us to prove our worth as professionals. Let's take that chance.

JUSTICE FOR MILITARY LAWYERS

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. OLSEN. Mr. Speaker, the Judge Advocate General's Corps of our military services face a serious crisis today in that they are not able to replace the senior and experienced officer members of their legal staffs. If the armed services could grant incentive and professional pay to military lawyers as they do for doctors, this serious problem could be overcome.

Those who finish their first tours of duty are leaving the legal staffs of our military services for the most obvious reasons. They owe it to their families and themselves to go into private practice or Federal service since their salaries will be $4,000 to $5,000 a year more. This is bad enough but when they look ahead, they will see that the gap will widen to $8,000 a year in Federal service to a figure of $14,000 in private industry. Each of us in the Congress in private practice should ask ourselves in the same circumstances what we would do? I think the answer is that we would return to private practice.

There is an additional problem and it is a serious one for the armed services. The Military Justice Act of 1968 has increased the responsibilities of the legal profession and the need for a greater number of military lawyers. That act was a promise by the Congress to provide a truly just military justice system. The pressure in all of American society is tremendous and this includes the military. We must be able to meet any confrontation from extremist groups in the military service as well as anywhere else. A truly respected military justice system will protect our Armed Forces from the contagion which extremist groups wish to spread to our military service.

Mr. Speaker, we owe it to ourselves to pass H.R. 4296, to do for our military lawyers what we have already done for our military doctors. Professional pay and incentive pay per month is needed to raise the military lawyers pay enough so that an individual who is willing to give up a good salary in military life can at least afford to stay in the military service. We have done this for military doctors. We must do it for military lawyers.

I am offering for the RECORD a copy of table of comparative pay schedules of military and civilian lawyers, I am also introducing a companion bill to H.R. 4296, which I hope will receive consideration from the Committee on Armed Services.

The comparative table follows:

Military	July 1, 1969 military pay and allowances	Civil service grade	July 1, 1969 civil service pay range	Bureau of Labor Statistics, June 1968
O–2 1st lieutenant/lieutenant (jg.)	$7,409.88	GS–11	$11,233 to $14,599	$12,602
O–3 captain/lieutenant	$8,868.24 to $13,079.88	GS–12	$13,389 to $17,403	15,283
O–4 major/lieutenant commander	$9,558.96 to $14,974.56	GS–13	$15,812 to $20,555	17,936
O–5 lieutenant colonel/commander	$11,050.08 to $17,600.76	GS–14	$18,531 to $24,093	22,152
O–6 colonel/captain	$13,349.64 to $21,169.08	GS–15	$21,589 to $28,069	28,841
O–7 brigadier general/rear admiral (LH)	$17,473.62 to $24,095.84	GS–16	$25,044 to $32,559	
O–8 major general/rear admiral (UH)	$20,425.20 to $27,275.76	GS–17	$28,976 to $32,840

AG HALL A PLEASANT TRIP

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MIZE. Mr. Speaker, the Agriculture Hall of Fame, near Bonner Springs, Kans., continues to grow in importance as one of the Nation's tourist attractions. A recent editorial in the Leavenworth, Kans., Times set forth some of the features of this showplace. With the thought that thousands of people will be traveling through Kansas this year on their vacation trips, I want to place this editorial in the RECORD and call attention to what there is to see at the Agriculture Hall of Fame. We, in Kansas, hope that many tourists will include a visit there in their vacation plans.

The editorial follows:

AG HALL A PLEASANT TRIP

If you've never visited the Agricultural Hall of Fame you've missed a bet. Located near Bonner Springs, not far from the Bonner interchange on the Turnpike, the Ag Hall is just a short drive from Leavenworth.

It has been called a year 'round living memorial and show place for agriculture. It opened in 1965.

So far three buildings make up the museum area where power machines, old time farm implements and exhibits associated with farm life and all phases of agriculture are displayed. On weekends flags from all 50 states are flown along a circle drive. In the summer a steam train takes the small fry for a ride.

The Hall owns 275 acres with the rest of the land owned by Wyandotte County and the State of Kansas. Eighty of the Hall's acres have been turned into a soil conservation area with terraces, grading and seeding, waterways and a lake. The 3,000 Soil Conservation Districts in the U.S. voted at their assembly in 1967 to assist the Hall in developing a model soil conservation program for the entire acreage.

Last year the "Pioneer Village" was started with the acquisition of an old Methodist Church and all its fixtures. A school built at the turn of the century has also been moved to the village. Future plans call for a store, city hall, jail, railway depot and train.

The Agricultural Hall of Fame was brought into being as a national educational and historical corporation in 1960 under a charter granted by Congress.

Its ambitious seven-year program contemplates the construction of 10 buildings at a cost exceeding $12 million, to bring into being a national tribute to the heritage of farm and ranch. The Center will memorialize leaders in agriculture, exhibit the story and artifacts of rural living and electricity, and exhibit different soils and rock structures to relate agricultural history.

A transportation building will show the history of different means of travel and transporting of farm products. Other facilities will display the story of food and fiber; the care, feeding and breeding of farm animals; the growing of vegetables, fruits and ornamental plants; and items of industry that pertain to agriculture such as oil, steel, paper, lumber, and minerals.

An agricultural library has been started which already has over 7,000 volumes. A model farm is in the plan where actual farm life and operation may be viewed by visitors.

Adjoining the Hall of Fame is the Wyandotte County park with picnic and playground area.

The Agricultural Hall of Fame is well worth seeing now. In a few years it should be a "must see" for all Kansans and thousands of tourists.

SENATOR INOUYE'S SPEECH AT COOK COUNTY DEMOCRATS DINNER IN CHICAGO

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MIKVA. Mr. Speaker, last week, Senator DANIEL K. INOUYE spoke at a dinner of Cook County Democrats in Chicago, Ill. His words need heeding, not only by Democrats but by all concerned about our country and its future. The problems of youth—and their solutions—received an analysis that is outstanding. For the benefit of those who did not have an opportunity to hear Senator INOUYE's outstanding address, I include it in the RECORD.

ADDRESS BY SENATOR DANIEL K. INOUYE: ON RETURNING TO CHICAGO

Mayor Daley, fellow Democrats, my friends:

I am honored indeed to have been invited to share in this traditional and illustrious occasion. Perhaps you will forgive me if I am a little awed tonight, for at this annual event I am conscious that you have heard from a distinguished parade of great national leaders. Their presences have been in keeping with the magnitude of the contribution this great city has made to our country, and to the seemingly endless flow of ideas and energy in so many fields that have come from Chicago. Mindful of this, I know such good friends will understand the sense of responsibility I feel tonight.

Just nine months ago I stood on another rostrum in this city and offered the keynote address of the 1968 Democratic National Convention. Much has been written and more has been said about the events of that convention, and I do not propose to add to them here. But I suggested on that occasion that our country had entered a time of testing, testing whether this nation conceived in liberty and dedicated to opportunity for all its citizens can not only endure but continue to progress. If the truth of that statement was not fully evident on that August evening last year, I submit it is amply evident by now. And if it were not clear then, it is surely clear now that the events of Chicago in August were hardly an isolated agony. They have been approximated too many times again and in too many places.

Last August I asked that we as a nation reject violence as a means of protest, and with violence those who preach it. If we have had more violence since then, we have also, I believe, grown less patient with it. That is as it should be, and our resolution to reject such tactics and leaders should continue to grow stronger.

But it is to other resolutions that I would like to invite your support tonight. Tonight I would invite your commitment to resolutions aimed more at renewed progress than simple endurance, resolutions aimed at making us one society in healthy motion again, a society that can once again engage the constructive commitment of all Americans. For it is a painfully demonstrated fact that not all Americans feel this commitment today.

During the last nine months the term revolution has become ever more common coin. It is spent increasingly frequently in describing the uprising of the black minority determined to have its equal share in the individual dignity and opportunity we have long preached as our philosophy. This we understand, even if the implementation of our understanding is still grossly inadequate. But revolution is also used to summarize the aims of many in a whole generation, a generation that is predominately white, a generation that is increasingly educated and even affluent in its own right, a generation that will some day *be* "The Establishment." And *this* revolution, *these* revolutionaries—if that be the proper term for them—we do *not* understand.

On reason we fail to understand this new discontent is because we ourselves have been engaged in a revolution. We and other modern technological societies have been engaged in this revolution for some decades now, and with greater or lesser vigor we are still engaged in it. Simply stated, that revolution has sought to prove in practice that our societies can produce enough material wealth to meet our peoples' needs. And we define those needs rather broadly—to encompass medical care for the aged and education for the young, for example, as well as adequate food, clothing and shelter for all our citizens. Our revolution has been toward a society in which every man, woman and child, regardless of the circumstances of his birth, should have access to this age-old dream of men and relatively unlimited opportunity to realize the spiritual wealth that we have always assumed would stem from them.

Our revolution has been a success. We have proven that we have the resources and systems to produce what we need. And, having achieved adequacy of production, we are producing the additional margins that make for affluence on a scale the world has never before known. Look at Chicago as one highly conspicuous example. During 1968 your gross metropolitan product climbed nine percent to $45.2 billions, wages and salaries jumped a record $1.9 billions, and corporated profits increased by a billion dollars. In fact, only nine nations outside the United States produced more than metropolitan Chicago.

Yes, in so many ways we are a success. But our very success highlights in sharp contrast the areas of failure. If we have proven we can produce enough, we have hardly insured the adequate or equitable distribution of our wealth and opportunity—not with the poverty and prejudice, the opportunity denied that still blots our landscape. Our revolution is hardly an unqualified success when the waste of our affluence litters and pollutes our land, our water and our air. And we are also coming to find that quality in life does not necessarily stem in direct proportions from quantity, nor spiritual wealth and contentment from material well-being.

One thing we *have* produced in unprecedented and still-growing abundance, however. That, as Yale scholar Kenneth Keniston has noted, is our own critics on a mass basis. These, I am afraid, are our young people of today.

The fact is we are dealing today with not a "new generation" but a "unique generation," the likes of which we have never seen. Back in the Middle Ages, a child was forced into adulthood when he was less than ten years old. That difficult period we now call adolescence was made possible by the mass production techniques of the Industrial Revolution. Now in our post-industrial society, where technology has so sharply reduced the quantitative demands on the work force, we are creating still another, strikingly different phase of human growth and development, a phase characterized by the triumphant fact that today one out of every two Americans of age is going to college. And graduate school, formerly the refuge of the wealthy or scholarly few, has now become so commonplace that many young Americans do not come to grips with the economic exigencies of life until they are nearly thirty.

Spared the necessity of earning a living until then, in many instances spared even the responsibilities of marriage, the student generation has a new freedom to criticize, to assail what he sees as wrong in our society, to protest the unachieved if not to build what is needed. This generation, product of our successful revolution, does not yearn for a decent standard of living as we did; it assumes it because it grew up with it. Its goals, however ill-defined, have moved far beyond those we were raised on.

I am no scholar of this great historical change but even we who are not scholars must understand what has happened. Because if there is one thing clear it is that we can expect more of it. If we have created a new *type* of generation we can hardly expect it to behave identically with our own at their age. And this in turn means that if we do not open our ears and hearts to the voices of the young we will be condemned to continuous crises, to a perpetual series of fruitless confrontations. And when we realize that by next year there will be no less than 100 million Americans under the age of 25, the magnitude of the consequences for our society becomes apparent.

Listening, then, what do the voices of the young tell us? If there is a single tune it is certainly being sung in the key of impatience. Secure in their unprecedented affluences and educated in idealism, the young are impatient with the areas in which our revolution is incomplete. They are impatient to the point of anger with the pockets of poverty and whole regimes of racism. That our generation has apparently discovered these inequities only recently they see as evidence of our hypocrisy, as they do the ease with which we retire personally from our self-trumpeted battles leaving the waste from our campaigns strewn about us. Insulated from the combat of daily existence, they are disgusted with the intellectual absurdity of war. And more free to express their individuality than any of their forebears, they are nevertheless frightened and frustrated at the prospect of becoming numbers in some vast IBM system manipulated by amoral and faceless forces

This, I believe, is what we hear if we listen. This is what is being said by the great numbers of our young people who are *not* the voices of violence. This is what is being said by the *best* of offspring, who are telling us that affluence is not enough, that there must be more, a deeper meaning. And I wonder, having heard, whether we would entirely disagree with their accusations?

Now most of us, myself included, have criticized the young for their failure to have a positive program for the revolution many of them are proclaiming so loudly. We have asked, "What trees do they plant?" Perhaps we ask too much. Perhaps we are so stung by what we see as ingratitude and even rejection that we in the process have failed to renew and revitalize the leadership the young have always expected of their elders. Whether we think of ourselves as politicians or public servants, that is an epitaph few of us would want on our political tombstones.

I, for one, do not intend to accept that epitaph, nor to abdicate so easily. On the contrary, I believe we should search our minds and consciences for new goals to engage the young and the revolution they will be carrying on after our days have passed. And among these goals I think we must find the following:

First, we must complete our own revolution, pledging ourselves to new vigor in the extension of adequacy and opportunity to *all* sectors of our society. Simply because we have proved that the job can be done in broad brush, we cannot afford a hiatus in completing the job. Of course, it will take another generation to accomplish. That merely means we have no time to rest in beginning a renewed assault on the intolerable vestiges of poverty and prejudice. Our hungry must be fed, our unskilled educated and trained, and new employment opportunities opened. Our welfare system must be drastically overhauled. And we must begin now.

Second, we must come to terms with our environment that in time our industrialized society may live in harmony with it. We have had assortments of anti-pollution legislation, intermittent though praiseworthy beautification programs, well-intentioned though often catastrophic urban renewal projects, and area-oriented though politically toothless plans. But we have lacked a systematic *national* plan, we have failed to provide adequate methods of funding and administering such plans as we have come up with. And above all, we have failed to give the rehabilitation and preservation of our environment the attention and priority it must have. I propose we begin the remedy of this neglect with a comprehensive national commission to establish the guidelines for future action. The commission should have both theoreticians and experienced pragmatists. It should, as well, have on it men who can dramatize its findings and its prescriptions for the future. And it should be established on a continuing basis so that should our attention to this problem lag, it will be dramatically refocussed. This is a truly major national program—one that again will take generations to accomplish—but we can hardly look our grandchildren in the eye, let alone our children, if through further neglect we despoil our dwindling natural resources and pollute the environment that sustains us.

Third, we must put a responsible end to the foolish and enormously wasteful arms race. If we and our fellow citizens of this world continue to race pell mell into evermore sophisticated and expensive weapons systems even the wealth of our revolution will eventually be consumed with little left for other urgent programs. Arms control is a well-established dream and in the past five years we have taken some significant first steps toward its realization. But with an annual defense budget that now totals $80 billion these first steps are not enough. We must look for others that can responsibly be taken and prepare ourselves to accept reasonable calculated risk in executing them. Fortunately, the Congress has an early opportunity to act in this regard through the rejection of the anti-ballistic missile system, the so-called safeguard, that the present administration is proposing. As a member of the Senate Armed Services Committee for more than six years I am convinced that our security does not demand this system, that its advertised initial cost of $8 billion is seriously understated, and that the principal effect of its adoption would be to kick off a new spiral in the arms race. We should reject it. The Congress also has an opportunity to participate more fully at the real source of our defense commitments, in more critically reviewing the national commitments we undertake around the world. Again this review will be complex and time-consuming, but I am convinced we as the most direct representatives of the people must give more attention to our responsibilities in this area. We cannot afford to do otherwise.

Fourth, we who have been elected to lead must look anew to our integrity—not merely to the fact of it but to the appearance of it. One of the characteristics of our youthful critics is their skepticism and even growing distrust of our institutions and the seemingly distant men who man them. If we are to progress, we cannot afford this distrust. Neither should we resent publicly demanded guarantees that the great responsibilities of public office are being impartially discharged. For as Thomas Jefferson said, one of the great strengths of our system is that "every man would meet invasions of the public order as his own personal concern." We need new articulations of the canons of ethics for public servants, whether elected or appointed, and new standards of public disclosure. We can make much progress in this area, and with relative ease. We can begin in the Congress. But others at many levels must join in a new public morality as well. For if we who make, administer or interpret our laws are suspect, then the rule of law itself is crippled. There is no more room for cynicism in this critical area of our society.

Fifth, we must open new channels and new avenues for the voices and feet of the young. For we need their ideas and help as we need their confidence and trust. I do not advocate turning our universities over to communes of students, anymore than we would turn our corporations over to councils of workers. But we must do better than we have to ensure a sense of participation by our young in the decisions that will shape not only their individual minds but the society they will inherit. Again it is far easier to begin than it is to complete the process wisely. But in this day of greatly advanced education, what excuse do we now have for not opening the vote to 18-year-olds, as one pending Constitutional amendment would do?

We in Hawaii have held a constitutional convention at which we lowered the voting age to 18 and the minimum age for holding elective office to 20. However, I am chagrined to tell you it was rejected by our voters. Hawaii could have set a pattern I think could well have been followed in all 50 States.

The youth of America have proved their worth. They are not only better-educated, but better informed and more serious than their parents. They are a concerned, if unruly, generation, which has grown up in the shadow of the atomic bomb. They must be reckoned with, listened to, and their participation not only admitted, but, to the best of our ability, guaranteed.

I am neither wise enough not arrogant enough to claim that these goals—so simple of statement, so difficult of execution—will be enough. But I do strongly believe that they are the very minimum we must espouse. Without our commitment to them, we will see our own achievements eroded in an avalanche of confrontrations and the so-called generation gap may become a widening chasm. Committing ourselves to them, however, we can reengage the ideals and energies of the new generations. And, together with our sons and daughters, we can build a society that, as John Gardner has prescribed, is truly capable of continuous renewal.

THE ELIZABETH CITY, N.C., COAST GUARD BASE

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. JONES of North Carolina. Mr. Speaker, I have the honor of having in my district, the largest U.S. Coast Guard airbase in the world. Recently, the Coast Guard branch of service, and the Elizabeth City, N.C., base in particular, has received a very high honor, for in 1969, for the first time in its history, the U.S. Coast Guard, an agency of the Department of Transportation, will participate in the Paris Air Show.

Two aircraft from the Coast Guard Air Station in Elizabeth City, N.C., will take part in the U.S. portion of the international show.

A giant HC–130B Hercules four-engine turboprop search-and-rescue plane and an HH–52A amphibious helicopter, make up the Coast Guard entry.

The HC–130B is an all-weather, high-speed, long-range transport plane. It is used for search and rescue far at sea, for transporting personnel, emergency equipment, as well as for aerial observations on the Coast Guard-operated international ice patrol.

The Hercules carries the latest communications gear. It can fly at 350 knots or better at 25,000 to 30,000 feet.

The HH–52A helicopter has been a workhorse for the Coast Guard in recent years. It is a turbine-powered amphibious craft equipped with a special platform designed to facilitate water recovery. It is the first helicopter to be built with a boat hull.

The helicopter can cruise at 98 miles per hour and has a loading capacity of 3,000 pounds. It can fly 190 miles, pick up an injured person with rescue hoist and basket and return to its home base with a 10-percent margin of fuel remaining.

The helicopter will be dismantled and flown to Paris in the big HC–130B. The schedule calls for the craft to leave Elizabeth City, N.C., on May 24. The planes will be on display in Paris from May 29 through June 8.

Elizabeth City is the largest Coast Guard air establishment in the world. In addition to the air station which performs hundreds of rescue missions a year, Elizabeth City is also the location of the Coast Guard's only aircraft repair base.

HIGH PRICE OF NEGLECT

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. TALCOTT. Mr. Speaker, one of the major ingredients of understanding is perspective. Too often our thoughts are restricted and circumscribed by our refusal to consider several viewpoints. In attempting to solve some of our societal problems, we are inclined to think only of ourselves, our group, or our special interest. Shortsighted or narrow views can boomerang. The following editorial, from the San Luis Obispo Telegram-Tribune, points up one specific aspect of this dilemma.

Children are dissatisfied with what their elders spend for their education. Elders are dissatisfied because the expenditures for youngsters' education, welfare, and national security have so inflated the cost of living that the pensions for which they paid and relied upon are not enough.

By attempting to provide every person in America with more and more benefits, we fan the fires of inflation and take away expected benefits of social security.

We cannot afford to neglect any segment of our citizenry—but if we are to have enough resources to satisfy the needs of everyone, then everyone must produce to his capacity and we cannot permit any of our resources to be wasted.

We must not neglect the economic, social, and emotional security of our elder citizens by permitting their expectations of security payments to be diminished. This group is least able to cope with the high price of neglect.

The editorial follows:

[From the San Luis Obispo County Telegram-Tribune, May 13, 1969]

HIGH PRICE OF NEGLECT

The point has been made, and with reason, that the harassed taxpayer is ignoring the younger generation with a short-sighted rejection of nearly all school bond and tax measures at the polls. The consequences of such stinginess, we are told, may be even harder to pay than the increased taxes would have been.

The fact is, we may already be paying for a similar indifference to the older generation. We have been shamefully stingy toward our senior citizens, and the rejection of school tax measures may well be one of the consequences.

It is not guesswork to say that many elder Americans, particularly those on fixed incomes, have developed a habit of voting against all local tax increases, for schools or anything else. And there is no need to guess why.

A recent report to the U.S. Senate found three of every 10 Americans over the age of 65 living in poverty. Not merely trying to keep up with inflation, like everyone else, but struggling to survive on incomes of $100 a month and even less.

The Senate report said that older citizens in general have less buying power now than they did in 1961. That includes some who have always lived in poverty and some who have lived on welfare, but also many who have worked steadily and lived comfortably. The real shame, as pointed out by the report: "Many of these people did not become poor until they became old."

Can this really be what a lifetime of working and paying taxes earns a citizen of the richest nation in the world?

Congress has voted some increases in Social Security benefits, but not nearly enough to provide protection from the constant erosion of inflation. Wage earners find their pay raises nibbled at by the declining value of the dollar, but older people on fixed incomes aren't merely nibbled at by inflation—they're being eaten up by it.

Attempts to make Social Security benefits keep pace with the cost of living have failed, partly because of public indifference to senior citizens, and a misunderstanding of what Social Security is. It is NOT a form of welfare, a handout or a dole. It is a retirement system in which the payments are made to, and the pensions paid by, the government.

The idea that people should not be allowed to collect substantially more in pensions than they contribute in payments is obvious nonsense. A dollar paid into the Social Security fund 20 years ago was worth perhaps twice as much as a dollar paid out in benefits now.

The olders have not taken to the streets to underline their grievances, as students and even some welfare recipients have, but they have been making themselves felt in the classic democratic fashion, at the polls. If they oppose more money for schools and pay raises for public employes, who can blame them? How many of us would react otherwise in their situation?

If the welfare of our youngsters is being neglected in forced educational cutbacks, it is partly because we have too long neglected the welfare of our oldsters. Our senior citizens deserve a better shake, and the rest of us deserve the consequences of not giving it to them.

BIG SHOES TO FILL

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ZWACH. Mr. Speaker, long before I came to Congress I have had a very high regard for the watchdog work of that great Senator from Delaware.

I was most sorry to hear, that, true to his principles, he was retiring at the end of his present term.

He will be missed by the Congress and by the people of the United States. He leaves big shoes to fill.

If there is anyone with the qualifications to fill those shoes, that person is Congressman BILL ROTH, who, I am happy to hear, has declared for the office.

I am happy and proud of the work the Congressman from Delaware has been doing, especially his momentous work on cataloging the Federal aid programs. Initiative and knowledge are his trademarks.

During his service in Congress, BILL ROTH has distinguished himself in many fields.

As much as I regret the retirement of Senator WILLIAMS, I feel his seat will be well occupied should the people of Delaware see fit to name BILL ROTH as his successor.

And I will be as sorry to see Congressman ROTH leave the House as I am sorry at the departure of Senator WILLIAMS from the other Chamber.

Mr. Speaker, I join my colleagues in congratulating BILL ROTH for his great contributions and wishing him all good luck in his quest for a Senate seat from the great State of Delaware.

THE CHALLENGE OF THE SEVENTIES

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. OTTINGER. Mr. Speaker, I would like to call to the attention of my colleagues and the Nation the remarks made by Mr. John G. Heimann, senior adviser to the Secretary, Department of Housing and Urban Development, before the Mortgage Finance Conference, American Bankers Association, on May 5, 1969. I believe that Mr. Heimann's remarks are worthy of attention by Members of Congress, and I am pleased to have this opportunity to insert his statement in the RECORD, as follows:

THE CHALLENGE OF THE SEVENTIES

(By John G. Heimann)

This nation is increasingly aware of its responsibilities, both domestic and international. As the aspirations of all people increase, so do our responsibilities to these people. Fulfillment of aspirations is the Challenge of the Seventies.

It is popular to remark these days that our problems are outracing the solutions. This I do not believe. In the past, we have faced up to the facts and then designed policies and programs to achieve a public goal.

This meeting is primarily concerned with housing. But we must not lose sight of the fact that what we are really talking about is the quality of living for people. And this is more than housing. It is schools, it is jobs, it is a human environment, it is all of the opportunities and amenities for which this nation is known and for which it can be justifiably proud.

Yet, within this society, there are vast numbers of our people who do not share this prosperity, who do not have opportunities, and who live in surroundings that are, at best, degrading. Our task is to right this deplorable condition. And one of the most important components is the development of decent housing for all.

The dimensions of our national housing needs were spelled out by the Congress in the 1968 Housing Act. These goals—26 million new housing units over the next decade—are necessary, but if the goals are to be realistic we must make adequate plans, now—

Plans for manpower training.

Plans for improving the building process through new technologies, new materials, and new methods of aggregation.

Plans for the rational use of land.

Plans for stimulating local governments to develop imaginative methods of regulations, control over land use and cost, as well

as the development of adequate public facilities and services.

And certainly, plans to finance this growth.

There will be growth, without a doubt, unless all the computers used by all of the demographers have blown a tube. By the year 2000, our population will increase by some 100 million people. This means we will have to build 100 new cities of a million people each, or perhaps a large number of new communities with fewer people. But the quantity of the problem remains the same. Not only must housing be created for our new citizens, but also we must provide the many services required in order to maintain and improve our way of life.

The expectation of this growth certainly gives rise to much economic optimism. In fact, there is some reason to believe that this expectation has been a contributing factor to the recent inflationary mentality. Many of today's businessmen have seen how inflation combined with rapid economic growth washed out past mistakes. This use of inflation as economic absolution can prove fatal, however, once it becomes a part of business expectation. The expectation of inflation is a poor substitute for sound business judgment.

By 1972, we anticipate a Gross National Product somewhat in excess of $1 trillion. By 1978, the GNP will be almost $1½ trillion.

Within this GNP, we believe that the housing industry will grow at even a faster rate. This year, we anticipate that the construction of housing will account for somewhat more than 3% of the GNP. By 1973, if we are to meet the goals set by Congress, housing will account for 4.4% and by the late 1970's, 5% of the GNP.

You may ask what justification is there for housing to absorb an even larger percentage of the GNP? The answer in both human and economic terms is simply that the demand is there. But the demand was there before and it was not filled. Therefore, if we are not to continue this imbalance between demand and supply we must do some hard planning.

Our planning, though, must be different from what we have done in the past. Historically, the housing industry has been used as a contracyclical tool of economic policy. As Secretary Romney recently said in a letter to the Wall Street Journal, "Until homebuilding is regarded as the creator of product to meet basic needs—needs just as fundamental as steel or mining or automobiles—this nation will continue to suffer from an improvident disequilibrium between the supply and demand for housing." It is obvious that this disequilibrium can be measured in terms of human suffering and human waste, and what is more uneconomic than the underutilization of our most precious national resource—its people. I do believe that this nation is sufficiently mature to rethink past procedures in order to satisfy present and future needs.

The Nixon Administration is thoroughly aware of this problem. The request for the repeal of the 7% investment tax credit is an indication of its concern. As noted by Herbert Stein of the Council of Economic Advisers, "It seemed at least to some of us who were involved in the discussions (about repeal of the investment tax credit) that there were more important things at this juncture in history to do with the Federal budget, with the national output, than to make even more rapid a rate of growth, that is already very rapid . . . We now have a number of commitments to the poor, to the cities, to the development of housing and even to allowing middle class people to retain a larger share of their incomes for their own expenditures—which would be somewhat easier to meet if the investment credit were repealed."

It is also important for us to be cognizant of the incredible effect inflation can have upon the financing of housing. The homes of Americans have been paid for with long-term, fixed-income capital. We have been able to extend these benefits only because we have anticipated a relatively constant economic condition in weighing security against expected risk.

Recently, we have seen a questioning of this concept. If this is the beginning of a long-term change in the public attitude, then we must completely rethink our long-term financial needs.

Frankly, I doubt that excessive inflation will become a continuing way of life. President Nixon's determination to halt this trend is well known. For the first time in many years, we are effectively using both monetary and fiscal measures to dampen the inflationary fires and to curtail the expectation of a continuation of inflation. Therefore, our attention should remain focused on the challenge of the 1970's within an economic system similar to that of today.

We face the beginning of a time of great need for housing with a mortgage market that has many institutional weaknesses. Some changes are underway or proposed, which you will be discussing later on in this meeting, such as the mortgage-backed security, the various provisions of the 1968 Housing Act, the proposed method of creating a secondary market for conventional mortgages, and others. These and many other changes can be anticipated.

As we consider them, let us not lose sight of the complexity of the problem. Too often, we seek the magic one-shot cure and too often we end up only adding to the problems as we build into our system short-term solutions for long-term problems. Perhaps what we need most today is a complete review of the financial institutions serving this nation. These systems have worked well for many years. But, in fact, they were designed in other times for other reasons.

Accordingly, I feel that a thoughtful reevaluation of our financial systems is necessary and in the national interest. It is conceivable that the conclusions of such a study will point the way to but modest changes. Even so, they will have value, since it will mean that we have taken the time and the trouble to make certain that what we have works well.

Within the panoply of the financial system, the role of the commercial banker looms large. The commercial banking system cannot help but be deeply involved in our urban problems and in housing. The question is, how will the commercial banks gear themselves to face the challenges and opportunities of the 1970's in these two areas? For example, some of the following questions must be considered and answered by you:

Should our commercial banking system undertake a major commitment to urban development, or should we rely more upon other financial institutions that can be insulated somewhat from monetary policy?

Through change of the regulatory powers or reserve requirements, should banks be urged into mortgage investment?

These and a host of other questions come to mind. It is important, I feel, for people such as yourselves who are trained and experienced in a broad variety of financial areas to become involved in this dialogue of role and responsibility. Within your institutions you have great financial knowledge and expertise which needs to be shared.

The "Challenge of the Seventies" is often partnered with the phrase "the urban crisis." In order to change the challenge into opportunity, the crises cannot be one of perception or will, for if we fail to objectively comprehend our national needs, then the opportunities will be substantially diminished.

Today we do, indeed, face a challenge. Let us make it into an opportunity.

TOWARD A SOVIET AMERICA

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. RARICK. Mr. Speaker, the news that the Soviet-trained labor exploiter, Walter Reuther of UAW, has now taken over the Teamsters is only surpassed by his decree that he will use his new labor alliance to oppose defense of the United States against Communist nuclear missiles, to aid Communist aggression in Southeast Asia, and to foment revolution in our streets. This sounds less and less like a legitimate labor organization.

Perhaps many of the young workers of this generation do not recall that this same Walter Reuther was the man who, while being trained in Moscow in Red labor organization, wrote a letter to associates in Detroit and signed it "Yours for a Soviet America."

That letter best explains his goals, in undermining American defense, aiding the Communist enemy, and organizing for violence and disorder in our cities.

I include an article from the Washington Star following my remarks:

[From the Washington (D.C.) Evening Star, May 27, 1969]

LABOR ALLIANCE PROGRAM OPPOSES ABM, WAR

(By Richard Critchfield)

United Auto Workers' Walter Reuther has succeeded in enlisting the relatively conservative Teamsters Union in an apparently wide-ranging social crusade.

Teamster delegates at a founding conference of the Alliance for Labor Action—a partnership formed by the UAW and Teamsters last July—yesterday endorsed resolutions opposing the antiballistic missile plan, calling for an end to the Vietnam war and for a drive to help the poor and the black organize politically.

The 500 delegates attending the conference also unanimously endorsed more conventionally liberal labor causes such as better housing, schools, medical care and full employment.

Reuther also called for an end to "the insanity of the arms race" and for a "taxpayers revolt" led by the ALA.

Apparently responding to press coverage of yesterday's meeting, Fitzsimmons was emphatic today in emphasizing the new coalition is not intended to be a rival of the AFL–CIO.

"I again want to underline and repeat that this is not a rival federation of labor. I am again repeating that we indorse and underline that labor must remain steadfast and one house," he said.

The ALA's function is to organize new workers and carry out social programs and "those purposes alone," he said.

FITZSIMMONS "GOES ALONG"

Apparently going along, at least with Reuther's rhetoric, was Frank E. Fitzsimmons, 61, the soft-spoken Teamster general vice-president who has been running the nation's largest union while James R. Hoffa is serving a prison sentence for jury tampering.

Except for joining in the call to stop the Vietnam war, Fitzsimmon's words were relatively conservative. He urged an organizing drive among government employes, white collar and farm workers and called for repealing the Landrum-Griffin Act.

UNIONS PLEDGE PAYMENTS

Under the new setup, Fitzsimmons will be in charge of the ALA's organizing effort and Reuther of its social action program.

Both unions have pledged to put up 10 cents per member per month to build the ALA's treasury. With a combined membership of nearly 4 million, this could provide a yearly income of around $4.5 million.

In a speech to the conference, Sen. George McGovern, D-S.D., today congratulated the ALA on forming what he called "this great new alliance of our two largest and most influential labor unions." He praised the ALA's stand yesterday in calling for an end to the Vietnam war, deferral of the ABM and an appeal for greater understanding of campus unrest.

Both UAW and Teamsters spokesmen yesterday sharply criticized military spending. Harold J. Gibbons, the Teamster boss in St. Louis, said that by opposing the ABM, "a large segment of the U.S. labor movement" has shown itself against "the stupid kind of path where money and resources are being squandered in a stupid war and a stupid arms race."

Emil Mazey, UAW secretary-treasurer, said that "when this dirty nasty war is over" the labor movement must ensure the $30 billion saved is not spent by "the military-industrial complex."

The key domestic resolution passed was for "community unions" which called for ALA organizers to go into the ghettos and help black communities develop "the skills, organization and economic and political strengths they must have to achieve self-sufficiency and self-direction."

WHAT THE FLAG MEANS TO ME

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ROBISON. Mr. Speaker, recently the Carantouan Chapter of the Daughters of the American Revolution in my district sponsored a project in the Waverly, N.Y., schools designed "to encourage further study and activity in patriotism." The focal point of this most worthwhile project was a student essay contest entitled "What the Flag of the United States of America Means to Me."

I take this opportunity to congratulate the winner, Miss Deborah Crouse, a student at Waverly Junior High School, for expressing in so refreshing a manner what I am sure are the compatible feelings of many of my constituents.

It is with great pride that I command this inspiring essay to the attention of my colleagues.

I include the essay as follows:

WHAT THE FLAG OF THE UNITED STATES OF AMERICA MEANS TO ME

The American Flag means many things to many people. To some it is the symbol of freedom. It is just a piece of cloth to others. There are even those who scorn and burn it.

To me, the American Flag has a deeper meaning. As I come to school of a morning and glance up, I see more than a piece of cloth decorated with stars and stripes. In the flag I see a nation young and immature, a nation full of all kinds of people, of all creeds and colors, who have their own feelings and ideas about our nation.

In the flag I see our fathers and brothers fighting under our flag to help another country gain her rights and freedoms.

The Stars and Stripes represent President Nixon, an Afro-American, an Apache Indian and me standing together, giving the Pledge of Allegiance.

Our flag represents every individual and all individuals of America. We are all under one common bond. The flag is this bond.

The flag symbolizes all the freedoms and rights of men which are outlined in the Constitution and Declaration of Independence.

Old Glory represents to me, one nation, indestructible and indivisible. We pray that our nation is under the grace of God and gives liberty and justice to all.

In conclusion, I think our American Flag represents the true goal of every person on earth and every person that has ever lived since the beginning of time. This is the divine goal to which every man has aspired himself.

These are the things which should be and someday, will be in our nation. Then our beautiful flag will float on the breeze in all her true glory.

This is what the American Flag means to me.

DEBORAH CROUSE.

WAVERLY, N.Y.

REQUESTING AN INVESTIGATION OF BERKELEY VIOLENCE

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. EDWARDS of California. Mr. Speaker, serious events in the city of Berkeley during the last 2 weeks are of national concern. One young man has died, another may be blinded, more than 100 persons have been injured, thousands of people have been gassed, including patients in a hospital, and several hundreds have been arrested, but the tensions in Berkeley continue. I have been told by those on the scene no end is in sight.

The young man, James Rector, who died was from my congressional district. His activities in Berkeley on the day he was shotgunned are unclear, but insofar as I know there is no evidence to indicate he was among the demonstrators. There is clear evidence, on the other hand, that some of the injured were innocent bystanders, on legal business in Berkeley.

The mother of the dead young man has issued a plea, a plea which I believe bears repeating.

No James Rector Memorial People's Park—

She said:

No day of mouring. Just an end to the turmoil that may cause the death of other young men.

I join in her prayer for the end of turmoil in Berkeley and for the end of violence.

For that reason, I am joining with my colleague, JEFFERY COHELAN, of Berkeley, in asking that the U.S. Attorney General's excellent conciliation service take immediate steps to intervene in Berkeley. I also am joining in his request that the National Commission on Violence study and report on the Berkeley situation.

The seriousness of the situation in Berkeley is spelled out in the words of Peter Barnes of Newsweek. The charges he makes are key to the questions I am asking U.S. Attorney General John Mitchell to investigate—

For seven days in May, the effective rulers of this occupied city and university were 3,000 unknown men in uniform, headed by two generals and a sheriff playing war games with real people's lives . . .

The real danger in California is not the students, nor the tree-planting street people, nor even that handful of genuine revolutionaries that Reagan so piously condemns. It is the uncontrollable use of paramilitary force without responsibility; it is the helplessness of such representative institutions as the Berkeley City Council (whose meeting during the violence was a charade); it is the fearful reluctance of moderate public officials to speak out.

I have written the U.S. Attorney General asking that he investigate and clarify what has happened in Berkeley so that sane conclusions can be reached.

First, I have asked the Attorney General to investigate the circumstances surrounding the death of James Rector, including a determination as to whether he was one of the demonstrators, or an innocent bystander. I am asking the investigation on the basis of whether James Rector's civil rights were violated.

On the same grounds I am asking the U.S. Attorney General to answer, if possible, some other serious questions involved in the disturbance at Berkeley:

First. How many persons were wounded on May 15, and by whom?

Second. Among the injured, how many were arrested and on what charges?

Third. How many of the injured can be identified as having some part in the demonstrations and how many can be identified as being innocent of any involvement in the demonstrations?

Fourth. How many of those arrested May 22 in the widespread sweep were demonstrators and how many were in the area on legal business?

Fifth. Were the civil rights of those arrested, as charged in newspaper accounts, violated and was there any mistreatment of those arrested by the arresting officers?

The answers to these questions through an impartial investigation will, I hope, do much to quiet the tensions in Berkeley.

More is needed both for an immediate cease-fire and for long-term peace on the campus.

An end to provocations is needed on both sides. I would hope there will be a lifting of the ban on the right of assembly in Berkeley, combined with discretion on the part of those who wish to assemble, and to protest.

The national student protest movement was born in Berkeley a little less than 5 years ago. It has spread from there across the Nation.

During the last 3 years a president of the University of California has been fired, new members of the university board of regents have been appointed, presidents of State colleges have been repeatedly changed, budgets cut, and the National Guard has been used. Yet there is no peace on the campus.

The Governor of the State of California has called the situation in Berkeley "war," and used that as an explanation for why innocent people have been hurt. If it is war in Berkeley, then the Governor must bear his responsibility for its increased violence during the last

3 years. I recommend to him the words of our President—

We cannot learn from one another until we stop shouting at each other—until we speak quietly enough so that our words can be heard as well as our voices."

The tensions on campus cannot be solved by shotguns, rifles, bayonets, aerial tear gas bombing, or rocks and bricks.

Instead there must be a serious examination of the issues, a definition of the problems, and the proposal of new answers to solve those problems.

If we do not find these answers, then Berkeley again will be but the first of a series of ever more violent clashes, which can only end in disaster.

RISE IN CHILD ABUSE

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mrs. GRIFFITHS. Mr. Speaker, last week I placed a series of articles from the Detroit News on the subject of Michigan's battered babies in the CONGRESSIONAL RECORD. These articles pointed to the emotional and physical horrors of child abuse where in Michigan alone last year the reported number of cases totaled 766.

However, child abuse is not only a problem in the State of Michigan but in our entire Nation. Recently, the New York State Department of Social Welfare announced that in 1968 there was a 30-percent increase in the number of reported cases of child abuse. This was discussed in a recent New York Times article entitled "Rise in Child Abuse," written by Howard A. Rusk, M.D. This article stated that in the last several weeks five children have been killed at the hands of their parents and that of the 987 cases reported in New York City last year 36 were fatal. Certainly, I cannot stress too much the importance of curtailing child abuse and that I feel every citizen has a responsibility to report any suspected case of mistreatment of children. This problem can be found today among people of every educational, religious, socioeconomic, and geographical background in America.

At this point, I place the text of the article in the CONGRESSIONAL RECORD for everyone to read:

RISE IN CHILD ABUSE: PROBLEM REQUIRES MORE TRAINED HELP, MORE FUNDS AND THE COOPERATION OF ALL

(By Howard A. Rusk, M.D.)

Last week the New York State Department of Social Welfare announced that in 1968 there was a 30 per cent increase in the number of reported cases of child abuse.

Certainly the problem of child abuse in New York City has been highlighted by the fact that in the last several weeks five children have been killed at the hands of their own parents.

New York City is not alone in this problem. Similar increases are being reported throughout the country.

There is also no doubt that there is increased professional concern with the problem and less tolerance of the "rights of parents" for those who practice child abuse.

Ironically the law for the protection of animals was enacted before child protection statutes. In fact the successful use of animal protection statutes in behalf of a cruelly abused little girl in 1874 provided the impetus for the founding of the New York Society for the Prevention of Cruelty to Children in 1875.

BATTERED CHILD SYNDROME

Professional concern among physicians came from the first study of the problem in 1961 by Dr. Henry Kempe at the University of Colorado Medical Center.

It was from this study that the terrifying and ugly new medical phrase was developed—the battered child syndrome.

In this study, 71 hospitals reported treatment of 302 such cases in a year. Of the group, 33 had been abused so severely they died and 85 others suffered permanent brain damage.

Of the 987 reported cases in New York City last year 36 were fatal.

Before Dr. Kempe's study, California was the only state in which parental abuse of the child was a criminal offense. All states now have such laws. The New York City law was recently amended to attempt to improve reporting.

Effective June 1, hospital personnel, social workers and school officials will be added to the list of those engaged in the healing arts required by law to report cases of child abuse.

The state law required that such cases be reported orally as soon as practicable and that a written report be submitted to local social service officials within 48 hours. Presently the major source of reports is from hospitals.

Unfortunately there was a sharp decline last year of 40 per cent in the number of suspected child abuse cases reported by physicians. The number of cases reported by physicians dropped from 15 per cent in 1967 to 9 per cent in 1968.

One of the reasons for the decrease may be that some physicians hesitate to report such cases because of their belief that the right of privileged communication is violated. However, persons and institutions required by law to make such reports are provided immunity from civil and criminal suits brought about as the result of their reports.

AVOIDING INVOLVEMENT

In many instances physicians and other health and social welfare workers simply do not want to get involved in a messy situation.

Commissioner George K. Wyman, New York State Department of Social Welfare, pointed out in last week's announcement that "Disturbing as this figure is, it tells us an incomplete story because there are many other such cases of child-battering—hundreds more—that are not reported by persons aware of them."

He stressed that under-reporting is a serious situation especially if the dead or abused child has brothers or sisters living at home but not protected.

This is underlined by the fact that 14 per cent of the children reported last year in suspected abuse cases were siblings. These 135 children were from 56 families in which two or more children were suspected of being abused.

What such an environment of terror means and does to a child is too horrible even to contemplate.

Studies have shown that parents are the offenders in most instances of child abuse. There are some cases, however, of other persons such as baby-sitters, paramours and siblings as the offenders.

Last week this writer discussed the problem with Dr. Vincent J. Fontana, who has long been interested in the problem. Dr. Fontana is director of pediatrics, St. Vincent's Hospital and Medical Center, and medical director of the New York Foundling Hospital. He said:

"The child abuse law that we now have in all states in the United States in itself is just the first step that can be taken to protect the abused or neglected child.

"What is more important is what happens after the report.

LACK OF COMMUNICATION

"At the present time, from our experience we have found there has been little or no communication between various disciplines that are responsible for protecting the child and assisting the parents. This applies to the physician who does the reporting, the child protective unit that does the investigating, and the judge who makes the determination as to whether the child is to be returned home or goes to an institution or foster home.

"Unless there is mutual cooperation and communication with follow-up under these various disciplines, the job of protecting the child and helping to assist the parents will not be realized.

"In attempting to solve these tragic problems it is hoped that there will arise a mutual respect between the physician, social worker and judge so that a proper decision may be reached to protect the child from further abuse and possible death."

In reality, Dr. Fontana's hope can only be accomplished if there are adequately trained people in the child protective unit, sufficient funds to employ a large enough staff to handle the large number of abused and neglected child problems and an adequate number of judges in the family courts.

The blame is not on any individual but an overwhelming caseload and an inadequate staff.

The reporting of suspected cases of child abuse should not be limited to professional workers in the field of health and welfare. Every citizen has a responsibility to report any suspected case of child abuse.

LESSON OF TVA IS IGNORED BY FLOOD-RAVAGED STATES

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. DUNCAN. Mr. Speaker, the Tennessee Valley Authority has been a living classroom for thousands each year—not only from this country but for people around the world—who come to the Tennessee Valley to see how a system of dams and power facilities has brought health to the land and a better livelihood for the people.

Marquis Childs wrote in the May 14, 1969, Washington Post that TVA's lesson is being ignored by many flood-stricken States.

I would include this article in the RECORD at this time.

LESSON OF TVA IS IGNORED BY FLOOD-RAVAGED STATES

(By Marquis Childs)

The rivulets, the small streams, the great rivers run brown with the precious soil that each spring is lost forever. This is a heedless waste of the capital of a land ravaged by the quick-buck builders and the highway promoters who will not be satisfied until the whole country is covered with concrete.

It has been going on for a long time. As predictable as the first crocus, appeals come to Washington for help under the Federal disaster act to repair flood damage. The total so far this year is $12,750,000 which is little enough alongside the vast sums this capital deals in.

Yet, as a measure of the cost of putting back bridges, restoring roads and sewage plants and providing temporary homes for the homeless, this says a lot about the cost of years of neglect and indifference. Of the total, California, where the builders have stripped steep hillsides and perched houses and apartments on perilous slopes, got $8-million. The balance went to Minnesota, North Dakota, South Dakota and Iowa. While last January's prolonged rainfall on the West Coast and the heavy snows in the Midwest increased the likelihood of serious flooding, there is no reason to believe that the same thing will not happen next year and the year after that ad infinitum, with the same demands on Washington to pay for a patching job again.

On a recent tour of the Tennessee Valley this reporter saw an example of the work of the Tennessee Valley Authority that has gone a long way toward eliminating floods and restoring the health of the land in that region. The contrast showing what can be achieved by not shying away from that scare word, planning, is striking.

Oliver Springs, Tenn., a town of 3600 had a severe flood in July, 1967. It was in the nature of a flash flood, as storm water roared down Indian Creek, which runs through the town. Oliver Springs has had 16 major floods since 1905, 11 occuring after the construction of nearby highways.

As the town surveyed the devastation to schools, roads and homes in the steamy aftermath of the flood, TVA came in. They did not say, "Okay, we're going to put in some dams and fix things up for you." The first move in accord with long-established policy was to enlist support from the townspeople themselves. They were asked by TVA representatives. "Do you want to join in a common effort to rebuild the town and try to insure that there will be no more flooding? If you do we're prepared to help."

Mayor J. H. Burney, a quiet-spoken Tennesseean who is a guard at the nearby Oak Ridge atomic plant, saw what an opportunity this was. He started in at once to get understanding and support for a comprehensive plan to which local citizens contributed ideas. Cooperating with Burney was Jim Point, a part-time TVA consultant working for a graduate degree in city planning at the University of Tennessee. Point showed remarkable skill in beating a patch through the jungle of Washington agencies involved in one way or an other with the project and pulling them together.

The result was a redevelopment program that will cost $5,700,000, TVA will spend $1,-920,000 including the share to be put up by Oliver Springs. The balance is from the gaggle of Federal agencies—Housing and Urban Development, the Water Pollution Control Administration, the Appalachian Regional Commission—that have a finger in the pie. When the work is completed total benefits on an average annual basis are put at $1,344,600. This is broken down in flood prevention, the enhancement of land values, public housing, recreation and the savings in transportation as a result of rerouting highways.

Nothing could better illustrate TVA's primary goal—to build up the region so that people will want to stay rather than migrate to the cities. With seven Southern and border states in the region, including Mississippi and Alabama, TVA claims the rate of migration for Negroes has been cut in half over the past three decades. At the start of the experiment in reconstructing a whole area two-thirds of employment was in agriculture, with 12 per cent in manufacturing. This is reversed today, with 30 percent in industry and 12 per cent on the farms.

Strict conservationists grouse over some TVA decisions where favorite trout streams and a bucolic setting are the issue. But TVA has built 22 major lakes that are a source of pleasure and profit to hundreds of thousands not only in the area but for visiting vacationers.

Denounced as socialism at its inception, TVA by the year 2009 will have repaid the Government all money invested in power facilities through appropriations, and the properties will still be Government-owned. Today Federal expenditures in the area are only 60 per cent of the national average and that includes Oak Ridge and the space installation in Alabama. While the TVA pattern might not fit another region, the lessons are there to be learned as America's rivers elsewhere run brown with irreplaceable topsoil.

LOG EXPORT PROBLEM

HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mrs. HANSEN of Washington. Mr. Speaker, many Members of this House have expressed interest in the log export problem in our national forests and Bureau of Land Management lands. During February, when the Appropriations Subcommittee on Interior and Related Agencies held their hearings, I asked the U.S. Forest Service to explain their procedure and in the nature of the selection of areas for exportation. I have received a reply dated May 16 from Mr. M. M. Nelson, deputy chief, which outlines the procedure. For your information I am placing it in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., May 16, 1969.

Hon. JULIA BUTLER HANSEN,
House of Representatives.

DEAR MRS. HANSEN: This is in further response to your inquiry of February 28, 1969, relative to the distribution of exportable volume under Part IV of the Foreign Assistance Act of 1968. We are pleased for the opportunity to review the procedures developed to implement export controls from the National Forests.

Part IV of the Foreign Assistance Act of 1968 restricts export of logs from Federal lands west of the 100th Meridian to 350 million board feet per year, through 1971, except for minor species found to be surplus to domestic need. At time of signing the Act, the President assured the Government of Japan that "we will give full consideration—bearing in mind United States domestic requirements—to Japan's desire to have the law administered in a manner least harmful to our trade relations."

Allocation of the exportable volume under the Foreign Assistance Act continued the pattern established by the joint action of the Secretaries of the Interior and Agriculture in April 1968 when they required domestic processing of all timber offered for sale from the National Forests in western Washington and western Oregon, from selected National Forest areas east of the Cascade Divide and all Oregon and California Grant lands in Oregon. The Secretaries provided that 290 million board feet of timber sold from the National Forest land and 60 million board feet of timber sold from Oregon and California Grant lands would be exempt from the domestic processing requirement during the ensuing period ending June 30, 1969.

High level discussions between the Governments of Japan and the United States led to the joint understanding that the basic patterns already established as to areas and species of timber would be maintained in implementing the domestic processing requirements. Guidelines for allocating exemption volume under the Secretary's regulations for domestic processing were based on these understandings.

The pattern of log exports was established by examining exports for a 3 year period, 1965 through 1967, from the Washington Customs District (all ports north of the Columbia River excluding the Columbia River) and the Oregon Customs District (all Columbia River ports and all other ports in the State of Oregon). During that period, 67 percent of log exports to Japan from the Pacific Northwest originated from the Washington Customs Districts and 33 percent from the Oregon Customs Districts. Exemption allocations between the Agencies and to the various National Forests were based on established trade patterns and estimates of log export supply sources. Other factors were also considered in allocating the exemption volume to National Forests:

Amelioration of anticipated adverse impacts of the domestic processing requirements on dependent local timber using industry, established exporting industries and ports.

Relative volume of species accepted in export trade during previous years.

Where export trade pattern was not established but feasible, exemption allocations were evaluated in relation to species and volume needs of local industries.

Application of these guidelines resulted in 60 percent (174 million board feet) of the 290 million board feet of exempt volume being allocated to the National Forests from which logs had been shipped through the Washington Customs District and 40 percent (116 million board feet) to the National Forests from which logs had been exported through Oregon Customs District.

The timber sales programs covering fiscal year 1969 from the National Forests in Washington and Oregon were published in June, 1968. These announcements indicated the volume by individual sales exempted from the domestic manufacturing requirements. Total exemption quotas and allocations to individual sales were discussed at timber purchaser meetings. The timber industry apparently accepted the allocations as being equitable; none protested the allocation of exempt volume under the Secretary's Regulations.

Part IV of the Foreign Assistance Act was implemented on January 1, 1969. It embodied the restrictions already imposed by regulations of the Secretaries, including the 350 million board feet exportable volume limitation, but it enlarged the area to include all Federal lands west of the 100th Meridian. Total allocations of the exemption remained unchanged, with 290 million board feet assigned to the Forest Service, 60 million board feet to lands under the jurisdiction of the Bureau of Land Management.

Export activity intensified in California following the April 1968 domestic processing requirements imposed by the Secretaries of Agriculture and Interior. As a consequence, 15 million board feet (about 5 percent) of the Forest Service allocation of 290 million board feet was moved from the Pacific Northwest to California at the time Part IV of the Foreign Assistance Act was implemented.

Tentative Forest allocation of the remaining exemption volume to the National Forests of Oregon and Washington was based on 95 percent of that allocated under the Secretary's domestic processing requirement. Some adjustments were made as a result of comments from Forest Supervisors. The adjustments recognized the reduction in the allowable cut on the Mt. Baker National Forest resulting from establishment of the North Cascades National Park. The final result was that 162 million board feet (59 percent) of the 275 million board feet exemption was allocated National Forests from which

export originated to the Washington Customs District, and 113 million board feet (41 percent) to National Forests from which export originated to the Oregon Customs District. Provision was made to assign some of the exemption quota allocated the Olympic National Forest to the Shelton Federal Cooperative Sustained Yield Unit.

Exempt volume allocations were discussed by Forest Supervisors at timber purchaser meetings held in February 1969. Allocation to National Forests, to individual sales and procedures for administering the requirements of Part IV of the Foreign Assistance Act of 1968 were fully discussed at these meetings. The point was made that assignment of exempt volume to a particular sale does not require such volume be exported. Rather, the decision to export rests with the purchaser. Reaction of timber purchasers at the February meetings indicated satisfaction with the allocations and procedures established to administer Part IV of the Act.

HELLO COMPUTERS, GOODBYE PRIVACY

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. GALLAGHER. Mr. Speaker, since the 1966 hearings of our special Subcommittee on Invasion of Privacy, the Nation has become aware that the efficient whir of the computer may, in reality, be the sound of man's dignity and privacy being shredded. While most Americans acquiesce to the request not to fold, mutilate, or spindle computer cards received from impersonal organizations, they do not receive a corresponding reassurance that they themselves will not be folded, mutilated, and spindled.

This potential danger caused by the recognized and essential benefit of computer applications is the subject of numerous scholarly reviews. Virtually every college and university in the country now has seminars and courses on the impact of technology on the individual. Harvard University's program on technology and society, the American Academy of Arts and Sciences working party on the social implications of the computer, and the National Academy of Sciences' computer science and engineering board privacy group are but three of the major efforts now underway to plow a parallel row to that first laid out by our special subcommittee. Two brilliant books, "Privacy and Freedom," by Dr. Alan Westin, and the soon-to-appear "The Death of Privacy," by Dr. Jerry Rosenberg, soberly amplify the concerns our privacy investigations have uncovered.

Perhaps the most compelling evidence that we are disclosing a deeply personal issue has been the attention given to computer privacy by magazines not normally associated with discussing the impact of congressional investigations. The May 1968 Playboy contained a superb description of the controversy surrounding the suggested national data bank by Dr. Westin. Now Cosmopolitan has published what is undoubtedly the best written account of computer privacy to appear since the preface of the Committee on Government Operations August 1968 report, "Privacy and the National Data Bank Concept."

"Hello Computer, Goodby Privacy," in the June 1969 Cosmopolitan presents an entertaining view of the ramifications of computer technology and does so in terms which everyone can understand and enjoy. The author, Mr. Richard Boeth, has created a sprightly and stimulating piece of journalism.

Mr. Speaker, Mr. Boeth is obviously a very talented and very funny writer. There are those who would reject the importance of his work because they believe that only the ponderous can be meaningful, that only the boring can be significant. I would like to publish the statement made in response to that pompous opinion by the man who heads my privacy investigation staff, Charles Witter:

> Let's reach an understanding: You don't regard me as stupid because I am witty and I won't regard you as intelligent because you are dull.

Ignoring the arrogance of that remark, I believe Mr. Witter makes a valid point and one that should be kept in mind particularly by those who must wade through the insipid goo of much govermentally generated prose.

Mr. Speaker, Mr. Boeth writes so clearly, so well, and so amusingly about the issue of computer privacy that I am delighted to enter his article in the RECORD at this point:

HELLO COMPUTERS, GOODBYE PRIVACY—OR, 1984 IS JUST AROUND THE CORNER

(By Richard Boeth)

Back in the comparatively rustic and uncluttered world of the early 1960s, officials of the huge, California-based Bank of America woke up one morning to discover a problem looming. Statisticians had figured that by 1970, in order to service the banking needs of all the people of California, the Bank of America would have to *employ* all the people of California as clerks. The paperwork was piling up that fast, and there was no way to stop it. Since this all-inclusive hiring program held no appeal for anyone, the bank called in General Electric, one of the builders of large electronic computers, and in due course most of the bank's routine operations were "computerized." That is, large and incredibly fast electronic machines took over the clerkly jobs of recording, storing, and giving back on request all the mountains of data pertaining to the bank's billions of transactions with its depositors, creditors, and the rest of the American banking system.

It is difficult to rant and rave too much about the importance of those electronic machines. Without them the Bank of America—and in short order most of the other banks in America—would have choked to death on paper. One cannot imagine the banks of the nation going out of business, of course, but they would have been so impeded and finally so shackled by the blizzard of paper that the whole nature of the American economy, and hence American life, would have changed drastically, and presumably for the worse. Exactly the same thing is true for scores of other major industries as different as insurance and the airlines, the latter of which could not handle anywhere near their present number of bookings without computers to tell them which seats were available on which flights. The Federal Government would collapse without computers; the credit-card empire would not have existed at all. Wall Street got along nicely without computers for two centuries, and thought it could *continue* to get along without them. In the past two years it has been so inundated with paper that it had first to close one day a week and finally shorten its trading time by an hour a day.

The lesson, then, is that these electronic machines, which can pull out stored information at the rate of 100,000 numbers or characters *per second*, are not a mechanical convenience at all but a flat necessity, and their impact is being felt in every sector of American life. In the words of Dr. Robert M. Fano, an M.I.T. professor, computer scientist, and one of the few persons around who looks at men and machines with equal knowledgeableness: "The effects of the computer on society will be more important than those of the printing press."

All this startles those of us who have always thought of computers as endearing little metal things that whirred, clanked, beeped, and, finally—*tapockataqueep*—projected the (wrong) Presidential winner on the basis of partial returns from three districts in Nutley, N.J. True, true, if pressed we could probably have indentified those unfolded, unspindled, and unmutilated punch cards that come in every month from Con Edison, the Diner's Club, and Texaco as having been upchucked from a computer, but even so they are surely only bookkeepers' *helpers*.

Not so. Those punch cards, in fact, may well have cozied us into a false sense of complacency, a deadly unawareness of what computers are capable of. For example, the monthly bill comes in from Esso, right, and it's been sent to you by way of Formosa, and you are damned if you are going to pay the 47-cent penalty for "lateness" when it was their fault. So you enclose a brief, witty note with your check, explaining that they sent the bill via Formosa and that you're not going to pay the 47-cent lateness penalty. And then the next bill comes in—maybe via Formosa, maybe not—and there is no reply to your letter, no acknowledgement of it, either, only the 47-cent lateness penalty noted in the usual box. And so you write more letters, longer and angrier, the last going by registered mail to the president of Standard Oil, and you don't care about the 47 cents but you just want to know *if there is anyone in the whole company who can read and answer a letter*. And, of course, all you get back is another punch card, which you rip up along with your Esso credit card (I went through this ordeal a few years ago with Esso, obviously, but everybody's been through it with one company or other), and you vow never to have anything to do with that idiot company again. So far, fine. You're just reacting as any red-blooded American would. But then we all make our basic mistake: *We assume the computers must be stupid*. We also assume that the people who install and use them must be stupid, and we may be right or wrong about that, but we are fatally wrong and extremely foolish to think that the machines are dumb. Because the next step is to think that because machines are dumb they are not to be taken seriously by bright, sophisticated folk such as ourselves. And the next step after *that* is that the machines throw us all in prison and dissolve the key with a laser beam.

The truth is that these machines are incredibly bright, capable, and powerful, and we cross them at our peril, even when they send us someone else's department-store bill. The best *aide-mémoire* in dealing with computers is REMEMBER THE ASTRONAUTS. Whether you are inspired or appalled by the effort and cost of the moon venture, it is all a scientific and engineering marvel ranking right up there with the first atomic bomb and Joe Namath's right knee. Billions and trillions of calculations went into the design of the spacecraft, its engines, and its flight plan (including an unprecedented bit of celestial navigation), and this work could not have been duplicated without computers even if you had armed the entire population of Japan with abacuses and set them to work for one hundred years.

So the people who know a little something about computers don't make jokes about computer mistakes. One reason is that the machines themselves don't make mistakes more than about once in every two or three billion calculations. The odds are astronomical (in favor of the computer) that any computer error is really a *programming* error; i.e., that the machine has been given the wrong information in the first place or instructed to do the wrong things by the entirely human being who use it. (These mistakes can be expensive; a single programming error wiped out Mariner I, a moon-shot rocket, at a cost of $18,000,000.) A second and just as important reason why people don't make jokes about computers is that large batches of knowledgeable people, from computer builders to members of Congress, are getting to be frightened of computers and the uses that are already being made of them. It is not easy to be succinct and direct about these fears, because they derive from what Dr. Alan Westin of Columbia University, in his landmark book entitled *Privacy and Freedom*, calls the *"accidental by-product* of electronic data processing." This problem—the terrible fear—was summed up as best it can be by former Representative James C. Oliver of Maine: "It's my impression," he said, "that these machines may know too much."

That's the only *real* worry, then—just that machines may know too much, and that they can spill it all too fast. What people who know anything about computers are *not* worried about is the kind of computerized apocalypse that grips the popular sci-fi imagination, in which the machines go berserk, say, and bring down nuclear war on our unwilling heads. The leader of a nuclear nation must still *order* the atomic strike himself. (Of course, the computers can feed him misinformation horrendous enough to lead him astray. In October of 1959 our newest computerized Early Warning System in the Arctic flashed an increasingly baleful sequence of warnings all the way up to Emergency, the last step. It turned out that the computers had not been programmed to discount the effect of the moon's reflection on high ocean waves, and one bright night they reacted to this reflection exactly as if they were "seeing" an all-out Russian air strike. President Eisenhower, fortunately, had other information that contradicted the computer's moonshine, or we should all be algae.)

But why should knowledgeable computer people worry about the computers' knowing too much? Isn't that what they're there for, after all? And the answer is a vibrant yes—but! The danger is that the computers, in tandem, will collect so much information about all of us that they will have accomplished what amounts to a monstrous invasion of a whole nation's privacy. The process is already well under way. As Bernard Benson, a California computer manufacturer, has pointed out, the machines have already stored away an enormous amount of information about us—"your FBI record, childhood diseases, and the attitudes of your parents; school records, employment and tax records, contributions to charity, and even the records of your charge accounts and credit cards."

So far, at least, most of these records are stored in different places—in files belonging to the schools, employers, Census Bureau, Internal Revenue Service, etc. But what would happen if all these records were pulled together and filed in one place with *your name on them?* Just from the collation of existing data, the file would show all the pertinent and impertinent information about who you are, how much you make, where you go, how much you pay in taxes, which bills you're slow in paying, how much you spend at the liquor store, and which people you check into what motel with. As we move closer and closer to the day when we use no cash at all and do everything on credit, we move closer and closer to the day when our every move will leave its telltale bit of data behind. Collect all the data in one electronic machine and you've given the collector the key to your private life! "Where information rests is where power lies, and the concentration of power is catastrophically dangerous," computer manufacturer Bernard Benson has said. So it isn't the computer *itself* that will be dangerous—no, it is not mischievous or venal or able to have "motives." "We will all be at the mercy of *the man who pushes the button to make the machine remember,"* says Mr. Benson.

There is no chance, of course, that this sort of power would ever be allowed to lie around without a great many people trying to latch onto it. And sure enough, the U.S. Census Bureau, with the enthusiastic approval of the Commerce Department, Internal Revenue, and half a dozen other Government agencies, has been pushing with enormous eagerness for a National Data Bank that would file in one place everything that's known about everybody—taxes and medical histories, farm loans and Army discharges, fishing licenses and jail sentences. Now this data would be of vast *legitimate* use to sociologists, demographers, statisticians, and Government and industrial planners of all kinds. But there could also be a computer-wise bureaucrat somewhere back in the bowels of the building who could push a button and find out (from the spoor of computerized creditcard data) that you spent the weekend of February 1–2 skiing at King Ridge, in New London, New Hampshire, and that you charged your stay at the New London Inn on the same night as Porfirio Schussboom, the playboy diplomat who is being deported for moral turpitude with ski bunnies. Even if this information were true—and there is no guarantee that it would be—it is hardly any of that bureaucrat's business.

The prospect of the Data Bank has alarmed a lot of people, in and out of Government, in and out of the computer industry. The most potent force against the Bank so far has been a Special Subcommittee on Invasion of Privacy in the U.S. House of Representatives, headed by New Jersey Democrat Cornelius E. Gallagher. In a series of hearings over the past couple of years, the Gallagher committee has turned up disturbingly large mounds of evidence that these machines *already* "know too damn much," and also that their unique data-gathering, -storing, and -disseminating abilities are already sometimes being used for unsavory purposes. Among Mr. Gallagher's piquant exhibits:

A large New York firm was brought on the carpet by the Fair Employment Practices Commission for discriminating against blacks in its hiring policies. The company replied that this was impossible, since it used computers to screen and select employees. After a great deal of trouble, it was discovered that the man who *programmed* the computers was a bigot and did indeed fix the machines to weed out all blacks.

All the names of people who wrote into an early, computerized dating system were sold to a pornography peddler. The names could have been sold anyway in a manual system, but only the computers' speed could make the name-selling economical.

A large insurance company upped the rates for burglary insurance the minute a community acquired a certain percentage of blacks or Puerto Ricans. Once again, only computers have the speed and memory to keep track of neighborhood patterns quickly and cheaply enough to make this kind of discrimination possible.

It is known that the dangers of unrestricted computerization came to the White House's attention during Lyndon Johnson's tenancy. Johnson appointed a distinguished Midwestern professor to a Presidential commission—a crime commission, in fact. Routinely, the professor's name was sent off to the appropriate Government agencies for security clearance, and, routinely, the agencies' computers swallowed the name, blinked, and tapped out a message: "Associates with known criminals." Apalled, the Federal gumshoes ran the crime commissioner's name through the computer again, but the machine stuck by its guns: "Associates with known criminals."

When this information was passed along to Johnson, he erupted with several rangy, wide-open oaths, the gist of which was that the professor in question was a longtime goodbuddy and the blinketyblank computer people had just better find out what the hell they thought they were talking about.

Laboriously, by hand, in the old-fashioned, time-consuming way, the computer analysts checked back to see what their baby *had* been talking about. And sure enough, there was the evidence: Every Saturday during the football season, the professor phoned his local candy store and got down a $10 bet on his alma mater's football team. The candy-store owner was tied into the gambling syndicate in his minuscule fashion, the cops had a tap on his phone, and the next thing anybody knew, the security computers in Washington were disgorging the raw information that the distinguished professor was "associating with known criminals."

Fortunately for the dist. prof., he had earlier spent several years associating with known Presidents, and the ludicrous accusation was run to ground. But the incident is bemusing—not because it was rare but because it is so *common,* not because it happened to a highly placed friend of the White House but because such incidents may soon be happening every day to all of us. The National Data Bank is not a reality yet, but several states, including California, have pretty good junior models of it.

The most insidious snooping now being done is conducted by the country's 2500 credit bureaus, with their embarrassingly detailed files on you and 160,000,000 other Americans. Many of the larger local credit bureaus, with tens of millions of names on file, are already computerized; by 1973 the whole system will be linked into one huge computer network, so that a department store in Fort Lauderdale, Florida, at which you might like to open a charge account will be able to find out immediately that you refused, eight years ago, to pay for a bathing suit you'd bought in Akron, Ohio. Maybe the bathing suit disintegrated on the beach the first time you wore it and you were right not to pay—the credit bureau's report will take no notice of this, but will simply mark you down as a troublemaker and a deadbeat.

The credit bureaus are apparently so far out of line that two Senate subcommittees are vying with Gallagher's House subcommittee in trying to expose them and get some legislation written to control them. In the course of a clutch of hearings over the past two years, the Senate committees turned up some lulus in the abuse pattern. In Baton Rouge, a Raymond Maurer, successful commercial photographer, was unable to open a charge account at a hardware store last year because the credit bureau "remembered" some financial difficulties he had suffered when *starting* his business twelve years before. In Norfolk, Virginia, an insurance adjuster collected $1000 for slander after his company erroneously told a credit bureau he had been fired for taking kickbacks; the credit bureau, naturally on the side of its informer, got its revenge by marking the adjuster down as dangerous because he was "litigious," meaning that he'd take you to court for slander.

The credit bureaus keep very *diverse* information about the 160,000,000 individuals in their files—not only bank references, bill-paying habits, and incomes but such data

as job progress, divorces, debts, bank balances, and any and all legal actions (without recording whether you were in the right). And every bit of this information is open to any creditor who pays the $10 to $50 yearly fee, as well as to any Government agency.

"Credit bureaus," says credit executive Edward Kennedy, "have regarded cooperation with police, FBI, and other Government agencies (read Internal Revenue Service) as routine business and an obligation of good citizenship." To prove how easy it is for any snoop to dip into credit bureau data, Professor Westin had a staff aide at Columbia write the Greater New York Credit Bureau asking for all the dope on a girl in the office, saying only that they were thinking about promoting her. The credit bureau complied immediately, both on the telephone and in writing. When Westin told Congress how easily he obtained the information, the bureau's executive manager yelped at the "shocking abuse of the name of Columbia University"—thereby missing the point entirely. In the first place, what's so noble about Columbia University that its name should inspire an immediate opening of private files? In the second, what if the credit bureau in its wisdom was similarly inspired to invade privacy in the name of some less scrupulous organization?

The only person who has any major trouble getting at the data—including the hearsay and downright errors—in the credit bureau files is the victim himself. The bureaus will not allow citizens to look for possibly false charges in their files, and even if someone *knows* that his file contains misinformation, the credit bureaus are feisty about making changes. A woman in Mississippi learned that a local credit bureau had inserted into her file, without comment, the raw gossip of her neighbors that she was "peculiar," "scatter-brained," and "neurotic or psychotic." The woman had a fierce struggle, costing her a good deal of time lost from work, just to get the undocumented pejoratives "neurotic or psychotic" removed from the file.

The credit bureaus offer at once the most blatant and the most illuminating example of what can happen in a computerized society run amok. Personal information, obviously, has always been available to anyone who wished it, provided he was willing to put out enough money, time, and effort to get it. With the use of day-and-night surveillance and liberal bribes, plus a patient study (and possible purloining) of business, financial, tax, and travel documents gathered from a hundred different sources—using all of these sources and spending enough time—the Government or any interested private party could pull together a comprehensive dossier on just about any citizen this side of Howard Hughes. (Most European governments, on both sides of the Iron Curtain, *do* go to the trouble and expense.) But unless national security were on the line, or a major corporate coup in the offing, or a rich spouse about to be spayed in divorce court, it just wasn't worth the trouble for the Government or anybody else to gather private records about private citizens in such detail.

The computer has changed all that. When we say this, we don't blame the computer any more than we blame the Wright brothers for the London blitz. And when we say this, we don't overlook the fact that one has a bona fide scientific miracle on one's hands, just as the science writers have been telling us. With the technology already at hand, computers can do the work of all the world's libraries, all the world's schoolteachers, all the world's automobile drivers (as well as train, bus, and airplane drivers), and all the world's accountants, and they can cause cash money to disappear from the face of the earth. They can run all the assembly lines in all the factories of the nation, and then judge how well the work has been done and make the necessary corrections. They can get out the nation's bills, meet the nation's payrolls, and very nearly run the nation's homes. Stupendous. The trouble is that they can also make Big Brother tyranny of Orwell's 1984 arrive right on schedule, which is to say fifteen years from now, unless we take measures to insure that we don't turn over our freedom to the computers. As Lee Loevinger, a former member of the Federal Communications Commission, put it, "If it were not for the privacy issue, there would probably be no need to regulate the computer industry."

So what is an electronic computer anyway that it causes so many technological gasps and so much humanistic nailbiting? Well, it is a very large, very complex, very accurate, and very fast adding machine, with three basic new wrinkles. One wrinkle is that it is able to follow a set of instructions fed into it by punch cards or magnetic tape; the second is that it is able to store huge numbers of earlier calculations for use when needed, and the third is that it is able to electronically call forth the proper bits of information from its memory and do its new calculations in the proper sequence to lead to a solution instead of a meaningless conglomeration of figures. Everything else flows from these gifts. All the other mathematical functions, for example, are simply different kinds of addition, subtraction being upside-down addition, multiplication repeated addition, etc. Furthermore, all data and all concrete ideas can be expressed as numerical symbols. All your employment records in your current job can be encoded and stored in the computer as a series of numbers (a very long series of numbers, to be sure, but because of the computer's speed this is no problem). The machine can then be fed instructions which prompt it to search its memory for your file (your series of numbers), compute how long you have been with the company, for instance, refer to your salary level, and, finally, do a last computation according to a formula already given to determine how much vacation you get this year and, by matching your seniority against everyone else's, when you get it.

What makes all this storage of data possible is a revolution in electronics that began with the invention of the vacuum tube in the 1920s. A vacuum tube can be "fired"—or serve its part in an electronic relay—in a microsecond or one one-millionth of a second, making possible computations a thousand times faster than those of the most advanced mechanical computers. Strangely enough, it was not until fifteen or so years after the invention of the vacuum tube that anyone *needed* that sort of superfast computation. Then, in the middle of World War II, the Army found itself "desperate" for accurately computed artillery tables, which it wanted by the millions. Thus prodded, an engineer named Dr. J. Presper Eckert and a physicist, Dr. John Mauchley, took the familiar vacuum tube—thousands of them—and built ENIAC (Electronic Numerical Integrator and Calculator), the world's first wholly electronic computer, which went into service for the U.S. Army in 1946.

After that the deluge. As Jeremy Bernstein has written in *The Analytical Engine:* "If there is one world that characterizes the history of computers since 1950, the word is probably 'proliferation.'" Remington Rand delivered the first commercial computer, the famous UNIVAC I, to the Census Bureau in 1951 (it was honorably retired to the Smithsonian in 1963). Another UNIVAC, the first designed for ordinary business data processing, was delivered to General Electric in 1954. Today there are 51,000 digital computers in operation in the U.S. (more than twice as many as in all the other countries of the world combined); their total worth: about $22,000,000,000.

Today's computers are faster, more sophisticated, and a great deal more compact than the relatively lumbering ENIACs and UNIVACs. The "basic machine time" for one operation is now a nanosecond—a billionth of a second—instead of a microsecond. The new machines can do 100,000 additions a second, can read data from magnetic tapes and store it at the rate of about 100,000 characters a second. The bulky vacuum tube has been replaced, first by transistors and now by tiny silicon "chips" and tiny magnetic memory cores. Perhaps more important, the computers are becoming more accessible to their users. Until the new, third-generation computers came along, man could "talk" to the machines—give them instructions—only by translating his wishes into one of several artificial "languages," known by such names as FORTRAN or ALGOL. The computers, in turn, came ready-programmed to be able to translate FORTRAN into the billions of electrical impulses, all in proper sequence, which would lead to the solution of a mathematical problem or the name of a scofflaw or the firing of Apollo's retrorockets. Now the third-generation machines permit users to speak to them directly, using something very close to straight English and eliminating the need to use specialists—computer programmers—as translators.

The machines have gotten so fast that here and there they have had to be slowed down intentionally to keep within the perspective of their users. The telephone company in New York, for instance, now uses computers for "intercepts"—the process whereby the operator, when you dial a number that has been changed, cuts into the line, looks up the new number, and gives it to you. Now the operator (a live girl) punches the old number into a computer, which searches for it in its "memory," finds it, plus the new number, and flashes the new number to the operator—all in one-tenth of a second. The trouble is that the operator's consciousness needs *seven*-tenths of a second to take in the fact that she has punched the last digit of the *old number;* so as far as she is concerned, the computer has given the new number before it *knew* the old number, and the computer must therefore have made a mistake! At the phone company's request, the machine was slowed down.

It is interesting that the two most widely *predicted*—and feared—results of computer technology have not come to pass at all. The first was that man would lose control over the "intelligence" of his creation and end up with a Frankenstein monster on his hands, an independent, powerful, indeed superhuman, electronic intellect that would cackle fiendishly and foreclose on the human mortgage. Not so. Of course, the argument is semantic in many respects, and some computer champions argue that the machines are getting so much better in so many intellectual functions that they can be said to be approaching human intelligence. But the commonly accepted ultimate measure is the Turing test, in which a computer, in conversation with a skilled human interrogator, must successfully pass itself off as another human being—and by this measure the computers aren't making progress.

The second worry—"nightmare" is more like it—was that the proliferation of computers would eliminate so many jobs that we would have the worst depression—and most abject unemployment—in history on our hands. This frightening prognosis was a favorite of the late Norbert Wiener, otherwise known as "the father of automation," and about a decade ago the press was full of what seemed like justified scare stories. As with every other major technological advance, however, the computer has *created* more jobs than it has destroyed, though not necessarily more of the old *kinds* of jobs. Right now there is a howling need for tens of thousands of people to service and program the computers themselves!

For this and other reasons, the computer industry is in a pretty disheveled, not to say chaotic, state as it faces its glorious future. One major trouble is that while everyone knows pretty well what computers *can* do, no one is really sure what they should be *asked* to do. "All the sci-fi marvels are already within the state of the art, except that we can't go faster than the speed of light," says Dick Brandon, president of Brandon Applied Systems and one of the more out-spoken young swashbucklers in a swashbuckling industry. "But if the way we've used computers in business is any harbinger, boy are we in trouble! Not more than 50 percent of the computer installations are successful economically, for three reasons. One: People are buying them who shouldn't be—for prestige, whether or not they need them. Two: People are buying computers who don't know how to use them. Three: People underestimate their cost and overspend."

Brandon himself is eminently successful economically, having grabbed a modest but measurable capital chunk of an industry (computers) that did $18,000,000,000 worth of business last year, the fifteenth year that it could be called an industry at all. Dutch-born, Columbia educated, and only thirty-four, Brandon founded his own company four years ago and now says that he is "worth five or six million on paper and have $300 in the bank." Like all of his compeers, he thinks that the computer avalanche, with all its waste and abuses, is thundering along too fast to worry about such niceties as the destruction of the population's right to privacy. "We could build safeguards into the systems, but it wouldn't be profitable," he says.

Up at M.I.T. in Cambridge, Professor Fano agrees, with mingled enthusiasm and anguish, that there is no stopping the avalanche. "You can never stop these things," he says. "It is like trying to prevent a river flowing to the sea. What you have to do is to build dams, built waterworks, to control the flow." Dr. Fano is building his own dams in several directions. He's just finished conducting M.I.T.'s first seminar on the implication of computers to society, to see if he cannot instill in his students an awareness of all those privacy problems that Congress and the Federal Communications Commission are now disturbed about. "I'm coming essentially to the conclusion that it can't be dealt with by different disciplines," Dr. Fano says. "There is a terrible gulf of knowledge between society at large and the scientific elite, and this is enforced by the system itself. How is the individual even to know that the system is operating as it's supposed to? How *can* you generate a new breed of people who will be equally responsive to the needs of technology and humanity? We know that knowledge is power, but this means not only having the data at hand but having the ability to *extract* the relevant data. If this is limited to a few technological high priests in the Government and the large corporations, then the gap with the public will be immense and we are heading straight to *1984.*"

CIVIL DEFENSE OFFICER LAUDED

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. WYDLER. Mr. Speaker, many of our citizens work long and hard for their community and their country. Some of them receive plaudits and become famous. Others work quietly and receive little recognition, although their contributions are often very great. Such a man is Lt. Lawrence Petry of 177 Walton Avenue, Uniondale.

Lieutenant Petry served for 20 years in the unheralded job of Auxiliary Police officer with the Uniondale Civil Defense Unit 122. He recently retired, following long years of dedicated, loyal service as the unit treasurer and training officer.

I wish to commend Lieutenant Petry for his honorable and faithful service, which is an example to all of us who enjoy the benefits of a free society.

MISS MARION L. STUART HONORED AT TESTIMONIAL DINNER

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. EILBERG. Mr. Speaker, the world does not know of Marion L. Stuart, but the Olney community, which takes in a substantial part of my Fourth Congressional District, knows her very well. She is a schoolteacher—a remarkable lady in every sense of the word.

It was my pleasure on Thursday, May 22, 1969, to attend a testimonial dinner in her honor given by the Olney community. Supporting organizations included, but were not limited to, the following:

American Legion, Olney Post No. 388.

AMVETS, Olney Post No. 77, 512 West Ruscomb Street.

Barton Home and School Association.

Big Four Fathers' Association.

Catholic War Veterans, St. Helena's, Post No. 424.

Cook Junior High Home and School Association.

Creighton Home and School Association.

Feltonville Civic Association.

Feltonville Home and School Association.

Finletter Home and School Association.

Golden Age Club of Olney.

Greater Olney Community Council.

Kiwanis Club of Olney.

Lindley-Olney Lions Club.

Lowell Home and School Association.

Lower Olney Civic Association.

Morrision Home and School Association.

Olney Business Men's Association.

Olney Elementary Home and School Association.

Olney High School Alumni Association.

Olney High School Home and School Association.

Olney neighbors.

Olney Symphony Orchestra.

Veterans of Foreign Wars, Raymond T. Osmond Post No. 1692.

The faculty of Olney High School.

Financial institutions.

Community Federal Savings & Loan Association.

Fidelity Bank.

Founders Federal Savings & Loan Association.

Girard Bank.

Olney Federal Savings & Loan Association.

Olney High School has had many problems, but under Marion L. Stuart's capable leadership, there was no problem that has not been intelligently and effectively handled. Her plaudits are best summed up in the program book which accompanied the testimonial dinner, as follows:

TRIBUTE

With appreciation, the Olney Community acknowledges the vital and dedicated services Miss Marion L. Stuart has given the Olney High School since its opening in February, 1931, first at a teacher, later department head, Vice Principal and since 1953, as Principal. She is the first woman Principal to direct a co-educational comprehensive high school. She has capably directed the school of over 4000 pupils with its faculty of several hundred teachers and an all male administrative staff of five vice-principals and eight department heads. Though slight of body, she is a bulwark of strength and energy. A prodigious and indefatigable worker she has given unstintingly of her time, her very life, especially to foster good human relationship and understanding among pupils, teachers and parents. She is magnamimous of heart and mind, and is the embodiment of graciousness and refinement and culture. With restraint, she carries all confidences, disappointments and heartaches. Hysterical reactions are foreign to her nature. She is a creative and positive thinker, hopeful that right will prevail. She has indeed been a noble servant and leader of Olney High, an educator of first rank.

Thankfully the Olney Community pays tribute to Miss Marion L. Stuart for her devoted service of 50 years with the School District of Philadelphia, her interest in all community activities and for her exemplary life.

We feel confident that all who know her outside of our community join us in this tribute.

The entire Olney Community hopes she will be richly blessed in the years of her retirement.

OUR MEN

HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. SHIPLEY. Mr. Speaker, on Sunday, May 25, I had the privilege of attending a ceremony in Hutsonville, Ill., to honor the war dead of that community. This was truly a community endeavor, and I was greatly impressed with the public spirit and participation which resulted in this memorable dedication program. Under leave to extend my remarks, I would like to include in the RECORD a poem which was recited at the ceremony. The poem was written by Gary Cox, a Hutsonville High School student:

OUR MEN

(By Gary Cox)

We live in a land that is mighty and free.
Our land is more powerful than any could be.
Everything we have is in abundance, and more,
Our land has everything we can ask for.
But without our men, just where would we be.
We would not be a land that is mighty and free.
From the old Revolution, to the modern day war,
They have fought side by side, both the rich and the poor.

It made no difference, colored, or white,
These men did not care, they continued to fight.
These were tough men, and our hardships they bore,
So that we could have everything, we could ever ask for.

These men who attended Hutsonville High
Were no different, do you know why?
They went to fight, for their wonderful land,
And while fighting were struck down by the enemy's hand.

Indeed a great debt to our men do we owe,
Who fought for their country, the land they loved so.
Nowhere on earth could greater men be,
Then the men who fought, so that we would be free.

THE INSPIRING LIFE OF THE LATE HARRY GALPIN STODDARD

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. DONOHUE. Mr. Speaker, the poet writes:

Lives of great men all remind us
We can live our lives sublime,
And departing leave behind us
Footprints on the sands of time.

Last Wednesday, May 21, 1969, the life of a great man, Harry Galpin Stoddard, resident of my home city of Worcester, Mass., ended. His passing brought deep sadness to all our local citizens and throughout the Commonwealth.

Mr. Stoddard was a nationally recognized industrial executive who profoundly believed in and practiced the basic principles of our American free enterprise system.

He was a wise and compassionate man possessed of uncommon vision and an extraordinary capacity for leadership. He was intensely dedicated to the progress and development of the people among whom he lived and our Worcester community has been the grateful beneficiary of his goodness and genius over many, many years.

Particularly in this troubled and restless era of our national history, the story of his life sets forth an inspiring example that is preeminently worthy of more universal study and imitation.

At this point, I am pleased to include an editorial and excerpts from other articles appearing in the May 23, 1969, issue of the Worcester Telegram newspaper, describing Mr. Stoddard's unique career and presenting special tributes by some of his distinguished fellow Americans who valued his friendship and his counsel:

HARRY GALPIN STODDARD

Harry G. Stoddard's achievements in business, industry, civic affairs and philanthropic endeavors are well known in Worcester and Massachusetts, and are touched on in some detail elsewhere in today's Telegram.

For the moment, it is Harry G. Stoddard the man whom we wish to remember here.

Mr. Stoddard loved people. He liked to mix with them and talk about what concerned them. Yet, for all his notable accomplishments, he was reserved and self-effacing. Although he could not help play a role in public and philanthropic affairs, he did not seek the spotlight. Many of his good works received no publicity at all, and he preferred it that way.

There is no way to count the hours that Mr. Stoddard spent on community causes. The Worcester Community Services organization could not possibly be the tremendous agency for good that it is today had it not been for the enormous contributions of Mr. Stoddard—both in time and money—over the past half century.

The YMCA, the YWCA, the Worcester Memorial Auditorium, the Red Cross—these were the sort of endeavors that won Mr. Stoddard's unswerving support. He was of course, a pillar of strength to his own church, First Baptist, especially during the trying months after its building burned down in 1937.

Harry G. Stoddard was never one to talk much about his religious faith, but there is no question that the example of his father, a Baptist minister, was a strong influence on his whole life.

Those who knew Mr. Stoddard closely will long remember him as a man both of the strictest integrity and of warm human feeling. Although he took life and its responsibilities seriously, he was able to look at himself with a quiet, self-deprecating sense of humor.

Our community will long be indebted to him.

H. G. STODDARD DIES AT AGE 95

Harry Galpin Stoddard, 95, of 7 Massachusetts Ave., former president and chairman of Wyman-Gordon Co. and The Telegram and Gazette died late Wednesday night in his home after a long illness.

He was a leader for many years in Worcester's civic, industrial and lay religious life.

Educated in the public schools of Worcester, and an 1891 graduate of the old Worcester High School, Mr. Stoddard held honorary doctorates awarded by Worcester Polytechnic Institute, Clark University, Holy Cross College, and Springfield College.

BORN IN ATHOL

He was born in Athol on Sept. 13, 1873, son of a Baptist minister, the Rev. Darius Hicks Stoddard, and Emma Azuba (Galpin) Stoddard. He came to Worcester with his parents when he was 11 years old.

He took secretarial courses at Becker Business College following his graduation from high school in 1891, and was hired as an office boy at Washburn & Moen Manufacturing Co., pioneer wire-making concern here.

Mr. Stoddard soon afterward became stenographer and clerk in the company's order department, and later a salesman.

MADE ASSISTANT

In 1896, he was made assistant to Philip W. Moen, general manager.

Mr. Stoddard married Miss Janett Waring, daughter of Mr. and Mrs. Robert Waring, on June 28, 1898. She died June 23, 1963.

Washburn & Moen joined other independent local companies in 1899 to become American Steel & Wire Co.

Mr. Stoddard was made assistant manager of the new company and works manager in 1902.

YOUNGEST PRESIDENT

Two years later, he was transferred and left Worcester to serve for seven years as president of Trenton (N.J.) Iron Works, wire manufacturers employing several thousand workers, now American Steel & Wire's Trenton Works. Then only 31, Mr. Stoddard was known as the youngest president of an industrial concern of this size in the nation.

Mr. Stoddard returned to Worcester in 1911 to become vice-president and general sales manager of Wyman & Gordon.

He rose successively to the positions of treasurer and general manager.

ASSUMES OFFICE

In 1931, 20 years after returning from Trenton, Mr. Stoddard succeeded George F. Fuller as Wyman-Gordon Co. president.

Ranking as the nation's top producer of forgings, the company acquired an outstanding record of World War II achievement under Mr. Stoddard's leadership, winning repeated Army-Navy "E" and other awards for production excellence.

NAMED GOLDEN RULE FUND

Fully as active in civic life as in industry, Mr. Stoddard was a charter member of Worcester Welfare Federation, later Worcester Community Chest, and in 1920 was general chairman of its first Golden Rule Campaign. It was he who originated the name of the Golden Rule Fund as a distinctive feature of the Worcester agency program.

In 1938, after serving as a director and on the budget and special gifts committees, he succeeded the late Dr. Homer Gage as Community Chest president. He headed the organization until 1946.

The Municipal Memorial Auditorium also is in large part a measure of Mr. Stoddard's community spirit. He was a member of the commission that chose the sloping orchard of the old Stephen Salisbury farm as the Auditorium site in 1929. He also was one of 15 persons who joined to buy it.

SURVEY COMMITTEE

Mr. Stoddard was appointed to the representative Citizens Advisory Committee for the huge New Salem Street Redevelopment Project in 1957.

He was a longtime member of First Baptist Church and one of its most active and influential laymen, particularly in the critical years just after 1937 when fire destroyed its third edifice at Main Street and Ionic Avenue.

Mr. Stoddard was made a member of the parish's rebuilding survey committee, and was chairman of its finance committee when that board endorsed the new location at Salisbury Street and Park Avenue.

He presided at the 1938 cornerstone laying, and formally accepted the keys to the new church at its first worship service Sept. 10, 1939.

It was in 1939 that he was elected to the first of six successive one-year terms as moderator and administrative committee chairman of the parish.

He received his honorary degrees from Worcester Polytechnic Institute in 1941, Clark University in 1945, Holy Cross College in 1955 and Springfield College in 1958. The Holy Cross honor came after he had been chosen for the college's first "Distinguished Citizen of Worcester" award.

Stoddard Hall at Andover Newton Theological School in Newton Center honors Mr. Stoddard, who was a trustee of the school for 20 years. Ground was broken recently for Stoddard Residence Center at Worcester Tech.

During World War I, Mr. Stoddard was a leader in Red Cross relief and U.S. War Loan committee work.

He long exercised a personal interest in Goddard House, formerly Worcester Home for Aged Men. He was elected to its corporation in 1917, was made a director the following year, and served as president and finance chairman for 14 years.

Mr. Stoddard was the third Worcester resident to win the annual Isaiah Thomas Award of the Advertising Club, conferred in recognition of "distinguished community service." He was the 1952 recipient.

Worcester State College honored him as "one of Worcester's finest citizens" at its 12th annual scholarship tea in the spring of 1953.

Among awards from veterans of the armed services, Mr. Stoddard received in 1950 the Southern Cross Pin and an honorary membership from Worcester Chapter, Americal Division Veterans Association, for "distinguished service as a citizen of Worcester."

Mr. Stoddard was the father of the late Lt. Col. Lincoln W. Stoddard, who received five decorations and numerous citations for heroism as a veteran of 44 months of heavy combat service with the Army's famed Americal Division, in World War II in the South Pacific.

Mr. Stoddard was also honored in 1956 when he was the sixth person to receive the award of Worcester Post 105, American Veterans of World War II and Korea (AMVETS), for "outstanding and meritorious service to the veterans of the City of Worcester."

His "outstanding contributions to the Armed Forces Reserve program" brought Mr. Stoddard an Award of Merit from the Armed Forces Dinner committee in May of 1957.

HONORED BY AIR FORCE

In the same month, he received simultaneous honors from the Air Force and the Reserve Officers Training Corps program at Worcester Polytechnic Institute.

In personal politics a Republican, Mr. Stoddard was a presidential elector in 1956, being chosen in June of that year as one of the 16 Massachusetts members of the U.S. Electoral College. He was chosen president of the Bay State electors.

Mr. Stoddard was honorary chairman of financial campaigns of the YMCA and of the YWCA, two groups in which he had displayed much interest for many years.

CARDINALS JOIN IN TRIBUTE TO PUBLISHER-INDUSTRIALIST

Tributes from leaders in industry, business, civic, political and religious life were voiced yesterday to mourn the death of Harry G. Stoddard, former chairman and president of Wyman-Gordon Co. and The Worcester Telegram and The Evening Gazette.

John Cardinal Wright of Pittsburgh, Pa., who was first Roman Catholic bishop of Worcester, said "This Christian gentleman brought firmness, integrity and great love to his work for all of Central Massachusetts.

CITES INFLUENCE

"His influence went far beyond the wide world of industry and publishing in which he was a leader. Those of us who enjoyed his friendship still radiate into our sphere of influence the lessons learned from him. We pay part of our debt to him by our grateful prayers on his behalf."

U.S. Rep. Harold D. Donohue of Worcester characterized Mr. Stoddard as one "intensely dedicated to the progress and development of this community and its people.

"He had a gift for pointed and truthful expression when he didn't like a particular proposal. But his attitude was one of unfailing good humor and his counsel was always respected.

"Above all he was a wise and compassionate man, possessed of uncommon vision and an extraordinary capacity for leadership."

U.S. Rep. Philip J. Philbin of Clinton called Mr. Stoddard "a leader of which any community might well be proud, combining common sense, ability and wisdom with zeal for his work, strong public conscience and devotion to his family. By his unflagging industry, untiring attention to his duties, and insistence upon highest personal and public standards he set an inspiring example for all.

"He was a generous, considerate friend to many causes and to many people and his passing leaves a great void in the constructive, dedicated leadership of our time."

Richard Cardinal Cushing of Boston said of Mr. Stoddard:

"He was great in business and civic affairs and in philanthropy. May God rest his noble soul."

OTHER TRIBUTES

Other tributes published in yesterday's Evening Gazette came from Milton P. Higgins, chairman of the board of Norton Co.; Leverett Saltonstall, former U.S. senator and governor of Massachusetts; U.S. Sen. Edward W. Brooke; Gov. Francis W. Sargent; U.S. Sec. of Transportation John A. Volpe, former Bay State governor; Rev. Dr. Thomas S. Roy, pastor emeritus of First Baptist Church; Ladd Plumley, chairman and president of State Mutual Life Assurance Company of America; Harry P. Storke, president of Worcester Polytechnic Institute; City Manager Francis J. McGrath, and Robert D. Harrington, chairman of the finance committee of Paul Revere Corp. and vice chairman of Avco Corp.

QUIPPING PROF COMMUTES FROM NEW YORK

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. FARBSTEIN. Mr. Speaker, I am pleased to submit an article written in the Twin City Sentinel of Winston-Salem, N.C., about one of my constituents, Dr. Arthur Jasspe.

The article follows:

QUIPPING PROF COMMUTES FROM NEW YORK: WRITER, MUSICIAN REVEALS FORMULA FOR SUCCESS

(By Scherer James)

Dr. Arthur Jasspe commutes 1,136 miles each week to his job at Winston-Salem State College.

The new professor of English flies into Winston-Salem every Sunday night and flies home to New York City every Friday afternoon. In between flights he makes his transient home at the Carolina Hotel.

The airlines offer no commuter tickets. "They're taking all my money," he complained, chewing on a cigar.

Why not move to Winston-Salem? "I have to keep attached to my roots," he said. And the weekends provide time away from school to work on his plays and novels.

His wife, Myrtle Margaruite, is a social worker and assistant chief of training in the Bureau of Child Welfare in New York.

Interviewing Jasspe is like trying to find your way through the funhouse at the fair with a practical joker at your elbow.

"This is an interview New York style," he said, propping his feet on a desk. "You get the raw data."

Try to find out his age, and he'll tell you "I was born on my natal day."

A short, stocky man with bushy gray eyebrows, he wears a "union blue" suit and a black tie with a skull and crossbones design, which he calls the "school tie of the Sir Henry Morgan University of Corlears Hook."

And while he talks, he likes to pull out and wave the Library of Congress card listing his only published book, "Critical Theory and Playwrighting Practice of Contemporary American Playwrights, 1920–1940."

Jasspe also has written several plays—"Amertyl," a vampire tale in verse; "The Tarleton Story" about the Oedipus legend transcended into modern terms; "Seven Days Hath December," an anti-war play—but none of them have been produced yet.

"Seven Days Hath December," whose hero Edward Everette Kilroy, the third, jr. goes before the Security Council to prevent a war, will be produced by students at Winston-Salem State "sometime this year."

Although he proudly lists his membership in the American Legion, the Veterans of Foreign Wars and the Disabled American Veterans, he wrote the play "because I don't want other guys to lose their hearing like I lost mine in World War II." He now wears a hearing aid.

Jasspe even has a mathematical formula for a successful writing.

Which means "work equals the artistic components times the social and psychological components divided by the author's individualism times talent to the Nth power . . ."

Which means "the guy with the most talent will create a work of art."

Jasspe also is a composer and a member of the American Federation of Musicians. He has written several symphonic pieces, a string quartet, a solo horn piece.

"I write the best kind of music," he said.

He came to teach at WSSC through the Southern Education Program in Atlanta, which provides a placement service for Negro colleges in the South. Several other faculty members have been hired through the same program.

So far Jasspe likes teaching and likes his students.

"The best part is watching immature adolescents turn into mature adults under your very guidance," he said.

But his impressions of Winston-Salem, which he will not make public, are not as favorable.

"If you wrote down my comments, nobody would like them," he said.

"Anything I like in Winston-Salem is either illegal, immoral, fattening or costs $7.95 and three cents tax."

THE ANTI-BALLISTIC-MISSILE SYSTEM

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. EDWARDS of California. Mr. Speaker, the proposal to build a "thin" anti-ballistic-missile system makes no sense and instead would be a costly provocation to escalate the arms race between the Soviet Union and the United States. Some of the best scientific minds in the United States have pointed out the failures of the proposed system. In addition they have made clear that the system would not strengthen the defenses of the United States.

President Nixon in his presentations has outlined a time schedule which also makes clear the lack of need for an immediate decision on the ABM. We can safely delay construction of the ABM until we determine whether those negotiations will be fruitful. Many of us, including Senator EDWARD KENNEDY and Senator WILLIAM FULBRIGHT, as well as a number of Republicans, share these sentiments.

Further, I am opposed to plans to test the multiple warhead missile system—MIRV—this year. This system is an even greater provocation than ABM. Once it is tested, the arms race must continue because both sides will know the weapon can be deployed without warning. Present detection systems, which can detect the deployment of missiles, cannot detect whether they are single or multiple warheads.

The United States now has weapons enough to destroy all life on the planet earth many times over. We do not need new, costly, and more deadly weapons. Our defenses are strong, let us now concentrate on arms reduction.

PROFITABLE MERCHANT FLEET VITAL TO AMERICA

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MAILLIARD. Mr. Speaker, on May 21, the Under Secretary of Commerce, the Honorable Rocco C. Siciliano, spoke before the Propeller Club's annual Maritime Day dinner of the Port of Washington at the Sheraton-Park Hotel in Washington, D.C. On this occasion, Mr. Siciliano took note of the President's strong belief that a profitable merchant fleet is vital to America's economic welfare and defense capability. He made particular reference to the need to halt the deterioration of the past years, and to revive our maritime industry. "The difficulties of years past," he said, "have taught us that if we are to err, we would prefer to err on the side of action and initiative instead of on the side of indecision and reaction. Nor will there be any lengthy delay in coming forward with a program to achieve this."

I join with the Secretary's expressed optimism of a new hope for the future of the American merchant marine. I, therefore, offer to all of my colleagues in the House the text of the remarks made by Mr. Siciliano at the Propeller Club of the Port of Washington on May 21, 1969:

I am delighted to be here on this Maritime Day among so many friends and colleagues of the maritime industry.

President Nixon in his Maritime Day proclamation said, "A strong and profitable merchant fleet is vital to America's economic welfare and defense capability. The American flag on merchant vessels on the high seas and in foreign ports is a symbol of the Nation's dedication to peaceful trade throughout the world." I assure you that these are not just words. They are a statement of policy on the part of this Administration.

Traditionally, Maritime Day provides opportunity for the shipping industry to pause for a moment in the daily routine of meeting and solving individual problems, to take a look at the overall condition of the American Merchant Marine. There has certainly been far more "viewing with alarm" than "pointing with pride" on the part of industry and government commentators alike over the past several years. I agree that the alarm has been justified.

It would be hard to be proud of the fact that over two-thirds of the merchant ships of the richest and most powerful nation in the world are over 20 years old.

We can hardly boast of the fact that the world's greatest trading nation carries less than 7 percent of its own foreign trade—or about as much as, say, Belgium and New Zealand carry of their own trade.

It is no great cause for self-congratulation that a nation with a Gross National Product of over $887 billion spent only about $285 million—or 3 hundredths of 1 percent—of its total GNP on new merchant ships last year. This amount was equal to about four-tenths of 1 percent of our total foreign trade.

It would seem that the protection of $67 billion worth of trade would warrant the expenditure of sufficient funds to provide a merchant marine that would meet the requirements of our long-standing national policy—a fleet adequate to carry our domestic and a substantial portion of our foreign waterborne commerce and to serve as a military and naval auxiliary in case of war or national emergency.

As Under Secretary of Commerce, I have a prime responsibility for the promotion of U.S. trade and the support of our commerce. From personal work experience, I know that the American Merchant Marine is vital to our foreign trade, and makes an important contribution to our domestic prosperity. I have mentioned the very small proportion of our trade carried in U.S. flag ships. The share carried by our ships in every category—liner, non-liner and tanker—has been steadily decreasing over the past ten years, and the number of privately owned ships in service has also decreased.

The share of our liner cargo carried by such U.S. ships dropped from 32.3% in 1958 to an estimated 23.6% in 1968. U.S. non-liners, which carried 8.4% of such cargo in 1958, transported only 3.2% in 1968. U.S. tanker carried 7.6% of tanker tonnage in 1958 and only 5.4% in 1968.

Had our ships carried only the total of 12.2% of U.S. cargoes that was theirs 10 years ago, they would today be handling 70% more cargo, for in that ten-year period, our total waterborne trade has increased by that much. Had they carried 30% of our foreign trade, a figure which President Nixon has suggested as a reasonable goal, they would be carrying more than 4½ times as much cargo as at present. Think what this would mean to the future of our seamen, our longshoremen, our ship operators, our shipbuilders—the entire industry!

Is this impossible? I do not believe so. There are many indications it could be achieved. The advent of big, fast, efficient containerships in U.S. service, both subsidized and unsubsidized, is capturing for U.S. ships a good beginning of this high value cargo.

The ability of some unsubsidized lines to share in this trade through use of converted vessels without government operating aid is clear indication that U.S. flag ships can compete when they can use their advantages effectively—low-cost capital, American know-how, organizational efficiency, a highly advanced inland transportation complex.

The enormous increase in bulk trade, indicated by the doubling of non-liner cargoes in the past ten years, offers an opportunity to U.S. flag shipping that it would be negligent to miss. Bulk trade lends itself to efficient transportation, as witness the development of water transport of bulk cargo on the Great Lakes, with its low cost and fast turnaround. Bulk ships are being designed that will be at the same time specially adapted to certain bulk cargoes and will also have enough flexibility to carry more than one type of cargo, in order to avoid empty backhauls. Such ships lend themselves to standardization of construction, which should also decrease building costs.

The outlook for tankers is suddenly bright, with the discovery and exploitation of oil reserves in Alaska. If the Northwest Passage over the top of the world is found to be feasible, there will undoubtedly be an upsurge of tanker building for U.S. flag operation. Tankers, too, lend themselves to standardization, and to economies of scale in size and numbers.

I know that President Nixon is determined to restore our merchant fleet to the preeminence it once held among maritime nations. Yet we all know, also, that the difficulty experienced in the past in developing a new maritime policy has been only partly due to lack of available funds. Partly it has been due to past administrative restrictions on the use of appropriated funds. A serious drawback, too, has been the turmoil within the industry itself, its inability to agree on at least a few basic principles on which a maritime policy could be built.

Inherent in the divisions of the maritime industry are the divisions among maritime labor, which have resulted in several serious and prolonged work stoppages. These have caused great losses to the maritime and other industries, and have had the further unfortunate effect of alienating shippers on whose goodwill and patronage the merchant marine depends.

I know something about labor problems, having spent a good part of my life in jobs concerned with labor relations. I must admit that when it comes to complexity, it would be hard to equal the maritime labor situation in any other industry.

Means must be established by which labor and management can communicate with each other on a continuing basis, so that serious problems could be discussed and worked out before both sides became frozen into immutable positions.

Obviously, everything will not be smooth sailing. There will be many disagreements, some disappointments and failures. In order for maritime labor to cooperate with management, there must be mutually satisfactory goals—that is, labor will share in rewards as well as in sacrifices.

Not long after I joined the Pacific Maritime Association in 1965, PMA undertook an extensive—and expensive—permanent training program for longshore and maritime workers designed to meet the needs of increasingly mechanized methods in cargo handling and ship design. This attempt to foresee and to meet intelligently the changes that were coming was, I believe, a badly needed development in an industry which too often reacts to change only after it has taken place.

West Coast companies were among the first to develop containership service and to work out practical agreements with other modes of transportation in an effort to establish a land-bridge across the United States for containerized cargoes. We tried to foresee and to ride the wave of the future, rather than to let it catch us unaware and drag us down.

There must be flexibility in the development of the labor-management agreements if shipping is to successfully meet the challenge of rapidly expanding population and trade in the area, as well as cope with the upsurge of cargo shipments caused by the Vietnam war and reactivation of reserve fleet ships to carry military cargoes.

I am pointing out that it is not an inevitable fact of life that no rational means of settling maritime disputes can be found. In contemplating the collective bargaining sessions now under way with seamen's unions, I am hopeful over the statement by several major East Coast seamen's unions giving assurance that they will not strike at expiration of their contract in mid-June if progress is being made in working out new agreements. I am also encouraged by assurances given on the West Coast that in spite of the serious problems that have arisen over contaner handling, differences will be worked out through bargaining processes without a work stoppage.

I have addressed myself to some comber areas of the merchant marine on what should be a festive occasion because I am convinced that we hold here the key to the future of the U.S. merchant marine.

The Nixon Administration is hard at work preparing a long-range maritime program. Secretary of Commerce Stans has placed the prestige of his office behind the effort to encourage U.S. shippers to use American ships. Maritime Administrator Gibson has been hard at work to put new maritime proposals into practical working form. Once devised and thereafter approved by the Congress, the plans must be then implemented. And this final implementation—in order to be successful—must be achieved by the industry itself.

How well they will work in the years ahead will be largely dependent on the officials who head up the major management of the steamship lines and the maritime unions. Between them, they must insure that there will be no serious disruptions of U.S.-flag service, for a merchant marine consisting of idle ships is no merchant marine at all.

The Nixon Administration intends to provide the leadership in attempting to solve the problems of the Merchant Marine on a basis that will provide the means for rebuilding our merchant fleet. But in the final analysis, the future of U.S. shipping will be what you—the management and labor that comprise the industry—make it.

I must view the future with optimism. When you are as far down as you can go, there is nowhere left to go but up!

In the short time I have been back in Washington, I detect a similar note of optimism within all segments of the industry.

I want to emphasize one point—it is that, as long as the Department of Commerce has the responsibility for the Maritime Administration and for contributing to the formulation of merchant marine policy, we will be giving these matters the high priority they demand. Maritime policy will not be a poor stepchild at the Department of Commerce.

We have other-related activities concerned with the development of the merchant marine and the exploration and utilization of the ocean's resources.

Some of you may not know that more than half of the total budget and personnel at Commerce is devoted to science programs in one form or another. The Environmental Science Services Administration—ESSA— is combining science and technology to make the oceans of the world an expanding frontier. We now have the support of the Marine Resources and Engineering Development Act of 1966 and the National Sea Grant College and Program Act of 1966, both of which are designed to improve our capabilities and performance for training and research in marine sciences and engineering.

Through the use of the Weather Bureau's satellites, we have vastly improved our ability to determine the state of the seas and the conditions of weather. The activities of the Coast and Geodetic Survey contribute information on tides and navigation, charts and maps, and other forms of data of use to shippers. The Bureau of Standards is working in the area of containerization; the Bureau is also the second largest governmental producer of technical publications affecting the sea and commerce. The Maritime Administration, of course, is involved in wide-ranging engineering operations calculated to increase our use of ocean resources.

Thus, we at Commerce recognize that if we are to prepare for the future, we must turn our attention seaward in the quest for food, fuels, and minerals—while, at the same time, protecting the natural beauty of the seashore and the waterways. We, in the Department of Commerce, have the coordinated resources to lead this effort.

There is no question in the White House, the Commerce Department, the Maritime Administration, or elsewhere as to the need to halt the deterioration of past years, and to revive our merchant fleet. There is full recognition of the immediacy of the need to do so. The difficulties of years past have taught us that if are to err, we would prefer to err on the side of action and initiative instead of on the side of indecision and reaction. Nor will there be lengthy delay in coming forward with a program to achieve this. Such a program will be presented to the Congress for its consideration this summer—not, we hope, during the Indian summer.

My hope is that all elements of the industry will then join us in pulling on the anchor chain.

TIME BOMB TICKING

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. COHELAN. Mr. Speaker, I have in the last several years developed a keen interest in the problems of Japan and Japanese-American relations. Over this period I have had the opportunity to discuss with Japanese officials and elected politicians their concerns. With few exceptions these conversations included reference to the Japanese-American Mutual Security Treaty and the future status of Okinawa.

Unfortunately, Americans are much too ill-informed of moods and events in Japan. This ignorance of Japanese concerns has allowed the question of Okinawa to be largely overlooked by Americans. However, from time to time there do appear in the press insightful articles on the troubles surrounding our retention of Okinawa. One such article appears in today's New York Times under the byline of columnist and Washington Bureau Chief Tom Wicker.

Mr. Wicker quite correctly points out that continued obstinance by the United States with regard to the reversion of Okinawa could well lead to the loss of our strongest Asian ally.

There are of course military advantages to both Japan and the United States from the operation of Okinawa. But whether the United States must store nuclear weapons there and must retain the right to conduct military operations from Okinawa without prior consultation is open to serious question.

I commend Mr. Wicker's article to the readers of the RECORD, and insert at this point:

[From the New York Times, May 27, 1969]

GENERAL'S DREAM, POLITICIAN'S NIGHTMARE

(By Tom Wicker)

TOKYO, May 26.—Okinawa is a general's dream; it could not be better if Curt LeMay himself had selected the site and arranged the conditions. Within a radius of 1,700 miles, existing American aircraft can reach any Asian nation with which the United States has a security agreement, including Thailand, and could also cover every important area of mainland China; yet, unlike Taiwan, Okinawa is far enough out to sea to give its defenders sufficient "reaction time" against attack from China or Korea.

With no mountains, industrial smoke or snow, and almost never any fog, Okinawa also affords the best flying conditions in the Pacific. It has even better deep-water ports than the home islands of Japan, and because the United States took administrative control of Okinawa after World War II, there are no legal restrictions on the military operations that can be launched from this remarkable base.

No wonder, then, that the American military think Okinawa is the greatest thing since Hannibal discovered the elephant. American control of the island is, nevertheless, a political time bomb ticking away at the heart of the Japanese-American security arrangement, which in turn is the central pillar of the United States position in the Pacific and East Asia.

THE HEART OF THE MATTER

For that reason, the military may well have to relinquish what many prize most about the Okinawa bases—American freedom of action. It is that freedom which allows B-52's to take off unimpeded for bombing attacks in Indochina, and which permits the United States—though the fact is never conceded—to stockpile nuclear weapons on the island.

This freedom of action is at the heart of the trouble. Actually, the reversion of Okinawa to Japanese administration is conceded, in principle, by everyone; the real problem is whether the Okinawan military bases will have a special status or whether they will be governed by the same conditions that now apply to American bases in Japan proper—including prohibition of nuclear weapons and of offensive military operations, without the prior consent of the Japanese Government.

So heated is Japanese and Okinawan nationalist and pacifist sentiment that when Foreign Minister Kiichi Aichi leaves this week for talks in Washington he is expected to be picketed by firebrands who do not even want to negotiate on the issue. Okinawa's militant Reversion Council, which demands "immediate, total and unconditional reversion" (political jargon for the actual removal of the bases) has passed a formal resolution against the Aichi visit, and the one planned for next fall by Premier Sato.

In this kind of climate, Japanese political analysts insist that Sato must come home from Washington with both a specific date for reversion (sometime in 1972 or 1973 apparently would suffice) and "homeland conditions"—that is, the same rules for the Okinawan bases as for those in Japan.

U.S. PRESENCE IN JEOPARDY

Anything less might topple the Sato Government; and whether or not the Premier fell, his Liberal Democratic party would be greatly weakened for the 1970 elections. If those elections then brought a coalition of leftist parties into power, which is regarded here as a live possibility, the Japanese-American security treaty and the American presence in Japan would be placed in great jeopardy.

Even if the Liberal Democrats, who generally support the security treaty, remained in power, once Okinawa became fully Japanese the Sato Government would have no legal power to agree to military conditions for that particular island that the treaty would not permit elsewhere in Japan. Hence, if Washington will not agree to "homeland conditions," Sato would have no choice but to ask the Diet to approve amendments to the treaty for Okinawa—and that, too, would open the treaty itself to abrogation or more radical amendment.

That would be a far higher price to pay than yielding some degree of military flexibility on Okinawa. After all, as one important Japanese official put it, control of the island is proposed to be returned not to an enemy but to an ally; and since the bases are there in large measure to protect that ally, it would make little sense to cling to freedom of operations on Okinawa at the cost of the alliance itself.

PAST, PRESENT, AND FUTURE OF THE AMERICAN MERCHANT MARINE

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. GARMATZ. Mr. Speaker, the observance of Maritime Day in May of each year provides an excellent opportunity to take an overall view of our maritime policies and to lay plans for future ac-

tion. Propeller Clubs all over the country usually take the lead in arranging special affairs to observe the occasion and much is said about the progress, or lack of it, being made by our merchant marine.

The Propeller Club, port of Washington, was extremely fortunate in having as its speaker, at their dinner on May 21, the Honorable Rocco C. Siciliano, the Under Secretary of Commerce. In his message he presented the administration's views on our maritime problems and some directions for the future. Since this is a matter which concerns the entire country, I know all of you will be most interested in learning what Mr. Siciliano had to say and therefore I am including his remarks in the RECORD for your information:

REMARKS BY THE HONORABLE ROCCO C. SICILIANO

I am delighted to be here on this Maritime Day among so many friends and colleagues of the maritime industry.

President Nixon in his Maritime Day proclamation said, "A strong and profitable merchant fleet is vital to America's economic welfare and defense capability. The American flag on merchant vessels on the high seas and in foreign ports is a symbol of the Nation's dedication to peaceful trade throughout the world." I assure you that these are not just words. They are a statement of policy on the part of this Administration.

Traditionally, Maritime Day provides opportunity for the shipping industry to pause for a moment in the daily routine of meeting and solving individual problems, to take a look at the overall condition of the American Merchant Marine. There has certainly been far more "viewing with alarm" than "pointing with pride" on the part of industry and government commentators alike over the past several years. I agree that the alarm has been justified.

It would be hard to be proud of the fact that over two-thirds of the merchant ships of the richest and most powerful nation in the world are over 20 years old.

We can hardly boast of the fact that the world's greatest trading nation carries less than 7 percent of its own foreign trade—or about as much as, say, Belgium and New Zealand carry of their own trade.

It is no great cause for self-congratulation that a nation with a Gross National Product of over $887 billion spent only about $285 million—or 3 hundredths of 1 percent—of its total GNP on new merchant ships last year. This amount was equal to about fourtenths of 1 percent of our total foreign trade.

It would seem that the protection of $67 billion worth of trade would warrant the expenditure of sufficient funds to provide a merchant marine that would meet the requirements of our long-standing national policy—a fleet adequate to carry out domestic and a substantial portion of our foreign waterborne commerce and to serve as a military and naval auxiliary in case of war or national emergency.

As Under Secretary of Commerce, I have a prime responsibility for the promotion of U.S. trade and the support of our commerce. From personal work experience, I know that the American Merchant Marine is vital to our foreign trade, and makes an important contribution to our domestic prosperity. I have mentioned the very small proportion of our trade carried in U.S. flag ships. The share carried by our ships in every category—liner, non-liner and tanker—has been steadily decreasing over the past ten years, and the number of privately owned ships in service has also decreased.

The share of our liner cargo carried by such U.S. ships dropped from 32.3% in 1958 to an estimated 23.6% in 1968. U.S. nonliners, which carried 8.4% of such cargo in 1958, transported only 3.2% in 1968. U.S. tankers carried 7.6% of tanker tonnage in 1958 and only 5.4% in 1968.

Had our ships carried only the total of 12.2% of U.S. cargoes that was theirs 10 years ago, they would today be handling 70% more cargo, for in that ten-year period, our total waterborne trade has increased by that much. Had they carried 30% of our foreign trade, a figure which President Nixon has suggested as a reasonable goal, they would be carrying more than 4½ times as much cargo as at present. Think what this would mean to the future of our seamen, our longshoremen, our ship operators, our shipbuilders—the entire industry!

Is this impossible? I do not believe so. There are many indications it could be achieved. The advent of big, fast, efficient containerships in U.S. service, both subsidized and unsubsidized, is capturing for U.S. ships a good beginning of this high value cargo.

The ability of some unsubsidized lines to share in this trade through use of converted vessels without government operating aid is clear indication that U.S. flag ships can compete when they can use their advantages effectively—low-cost capital, American know-how, organizational efficiency, a highly advanced inland transportation complex.

The enormous increase in bulk trade, indicated by the doubling of non-liner cargoes in the past ten years, offers an opportunity to U.S. flag shipping that it would be negligent to miss. Bulk trade lends itself to efficient transportation, as witnesses the development of water transport of bulk cargo on the Great Lakes, with its low cost and fast turnaround. Bulk ships are being designed that will be at the same time specially adapted to certain bulk cargoes and will also have enough flexibility to carry more than one type of cargo, in order to avoid empty backhauls. Such ships lend themselves to standardization of construction, which should also decrease building costs.

The outlook for tankers is suddenly bright, with the discovery and exploitation of oil reserves in Alaska. If the Northwest Passage over the top of the world is found to be feasible, there will undoubtedly be an upsurge of tanker building for U.S. flag operation. Tankers, too, lend themselves to standardization, and to economies of scale in size and numbers.

I know that President Nixon is determined to restore our merchant fleet to the preeminence it once held among maritime nations. Yet we all know, also, that the difficulty experienced in the past in developing a new maritime policy has been only partly due to lack of available funds. Partly it has been due to past administrative restrictions on the use of appropriated funds. A serious drawback, too, has been the turmoil within the industry itself, its inability to agree on at least a few basic principles on which a maritime policy could be built.

Inherent in the divisions of the maritime industry are the divisions among maritime labor, which have resulted in several serious and prolonged work stoppages. These have caused great losses to the maritime and other industries, and have had the further unfortunate effect of alienating shippers on whose goodwill and patronage the merchant marine depends.

I know something about labor problems, having spent a good part of my life in jobs concerned with labor relations. I must admit that when it comes to complexity, it would be hard to equal the maritime labor situation in any other industry.

Means must be established by which labor and management can communicate with each other on a continuing basis, so that serious problems could be discussed and worked out before both sides became frozen into immutable positions.

Obviously, everything will not be smooth sailing. There will be many disagreements, some disappointments and failures. In order for maritime labor to cooperate with management, there must be mutually satisfactory goals—that is, labor will share in rewards as well as in sacrifices.

Not long after I joined the Pacific Maritime Association in 1965, PMA undertook an extensive—and expensive—permanent training program for longshore and maritime workers designed to meet the needs of increasingly mechanized methods in cargo handling and ship design. This attempt to foresee and to meet intelligently the changes that were coming was, I believe, a badly needed development in an industry which too often reacts to change only after it has taken place.

West Coast companies were among the first to develop containership service and to work out practical agreements with other modes of transportation in an effort to establish a land-bridge across the United States for containerized cargoes. We tried to foresee and to ride the wave of the future, rather than to let it catch us unaware and drag us down.

There must be flexibility in the development of the labor-management agreements if shipping is to successfully meet the challenge of rapidly expanding population and trade in the area, as well as cope with the upsurge of cargo shipments caused by the Vietnam war and reactivation of reserve fleet ships to carry military cargoes.

I am pointing out that it is not an inevitable fact of life that no rational means of settling maritime disputes can be found. In contemplating the collective bargaining sessions now under way with seamen's unions, I am hopeful over the statement by several major East Coast seamen's unions giving assurance that they will not strike at expiration of their contract in mid-June if progress is being made in working out new agreements. I am also encouraged by assurances given on the West Coast that in spite of the serious problems that have arisen over container handling, differences will be worked out through bargaining processes without a work stoppage.

I have addressed myself to some somber areas of the merchant marine on what should be a festive occasion because I am convinced that we hold here the key to the future of the U.S. merchant marine.

The Nixon Administration is hard at work preparing a long-range maritime program. Secretary of Commerce Stans has placed the prestige of his office behind the effort to encourage U.S. shippers to use American ships. Maritime Administrator Gibson has been hard at work to put new maritime proposals into practical working form. Once devised and thereafter approved by Congress, the plans must be then implemented. And this final implementation—in order to be successful—must be achieved by the industry itself.

How well they will work in the years ahead will be largely dependent on the officials who head up the major management of the steamship lines and the maritime unions. Between them, they must insure that there will be no serious disruptions of U.S.-flag service, for a merchant marine consisting of idle ships is no merchant marine at all.

The Nixon Administration intends to provide the leadership in attempting to solve the problems of the Merchant Marine on a basis that will provide the means for rebuilding our merchant fleet. But in the final analysis, the future U.S. shipping will be what you—the management and labor that comprise the industry—make it.

I must view the future with optimism.

When you are as far down as you can go, there is nowhere left to go but up!

In the short time I have been back in Washington, I detect a similar note of optimism within all segments of the industry.

I want to emphasize one point—it is that, as long as the Department of Commerce has the responsibility for the Maritime Administration and for contributing to the formulation of merchant marine policy, we will be giving these matters the high priority they demand. Maritime policy will not be a poor stepchild at the Department of Commerce.

We have other-related activities concerned with the development of the merchant marine and the exploration and utilization of the ocean's resources.

Some of you may not know that more than half of the total budget and personnel at Commerce is devoted to science programs in one form or another. The Environmental Science Services Administration—ESSA—is combining science and technology to make the oceans of the world an expanding frontier. We now have the support of the Marine Resources and Engineering Development Act of 1966 and the National Sea Grant College and Program Act of 1966, both of which are designed to improve our capabilities and performance for training and research in marine sciences and engineering.

Through the use of the Weather Bureau's satellites, we have vastly improved our ability to determine the state of the seas and the conditions of weather. The acivities of the Coast and Geodetic Survey contribute information on tides and navigation, charts and maps, and other forms of data of use to shippers. The Bureau of Standards is working in the area of containerization; the Bureau is also the second largest governmental producer of technical publications affecting the sea and commerce. The Maritime Administration, of course, is involved in wide-ranging engineering operations calculated to increase our use of ocean resources.

Thus, we at Commerce recognize that if we are to prepare for the future, we must turn our attention seaward in the quest for food, fuels, and minerals—while, at the same time, protecting the natural beauty of the seashore and the waterways. We, in the Department of Commerce, have the coordinated resources to lead this effort.

There is no question in the White House, the Commerce Department, the Maritime Administration, or elsewhere as to the need to halt the deterioration of past years, and to revive our merchant fleet. There is full recognition of the immediacy of the need to do so. The difficulties of years past have taught us that if we are to err, we would prefer to err on the side of action and initiative instead of on the side of indecision and reaction. Nor will there be lengthy delay in coming forward with a program to achieve this. Such a program will be presented to the Congress for its consideration this summer—not, we hope, during the Indian summer.

My hope is that all elements of the industry will then join us in pulling on the anchor chain.

HARVARD'S TRAGEDY: TOO ARROGANT—THEN TOO COWARDLY

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. SNYDER. Mr. Speaker, the following is the text of the commencement address of Mr. Al Capp, the author of the cartoon strip "Li'l Abner," delivered to the graduating class at Franklin Pierce College in Rindge, N.H., on April 27.

I commend it to the attention of the Members and the readers of the CONGRESSIONAL RECORD:

HARVARD'S TRAGEDY: TOO ARROGANT—THEN TOO COWARDLY

(By Al Capp)

(The following is the text of the commencement address Mr. Capp, the author of the cartoon strip "Li'l Abner," delivered to the graduating class at Franklin Pierce College in Rindge, N.H., April 27)

I live in Cambridge, Mass., a stone's throw from Harvard—but if you duck you aren't hurt much—and I know you'll believe me when I tell you I'd rather be speaking here today. It's safer, and it's at your sort of college that I can use the commencement speaker's traditional phrase.

I can say you're the hope of the future without bursting out laughing, as I would if I said it at a Harvard commencement—assuming, of course, that there will be a commencement there this year. They haven't heard from the Afros or the SDS yet.

Three or four of the Afros may decide that commencements are racist institutions, and then five or six SDSers may decide that commencements are a CIA plot, and then of course the entire faculty, administration and student body of Harvard, with the courage that has made them a legend, will replace its commencement by some sort of ceremony more acceptable—something they know the boys will approve of—say, a book burning; they loved that at Columbia, or a dean killing; they never quite accomplished that at University Hall. Dean Ford let them down by having recuperative powers they didn't count on.

But the fact that you can have a commencement here without getting down on your knees to a student wrecking crew, or without calling up the riot squad, is mainly luck. You enjoy advantages Harvard doesn't.

For one thing, you have the advantage of not being so revered for the wisdom and courage of past generations of administrators that you haven't noticed the moral flabbiness and intellectual flatulence of the majority of your present generation of administrators and faculty. You show me any institution with such a glorious past that anyone presently employed by it is regarded as retroactively infallible, and I'll show you a collection of sanctimonious fatheads.

But the greatest advantage Franklin Pierce has over Harvard is that you are not rich enough to hire three such famous professors as Rosovsky, Galbraith and Handlin and not extravagant enough to waste the wisdom of the only one of them with guts and sense—Handlin. All three were world-renowned historians. All three this week have helped make history.

Prof. Henry Rosovsky was born in Danzig. When the young Nazis invaded the University of Danzig in the '30s and beat up its professors and disrupted its classes, Rosovsky's family gave up their citizenship and fled to the United States. In the '60s, Rosovsky was teaching at Berkeley. When the young Nazis invaded there, Rosovsky gave up his professorship and fled to Harvard. When the young Nazis invaded there the other day, Rosovsky gave up the chairmanship of his department and started packing.

Prof. Galbraith, as national chairman of the Americans for Democratic Action, was the intellectual leader of the Democratic party in the last election and one of the nation's few political thinkers over 19 who mistook Sen. McCarthy's menopausal capriciousness for high-principled statesmanship.

Prof. Handlin has won the Pulitzer Prize and other honors for his histories of those groups who, so far, have risen from their ghettos by sweating blood instead of shedding it, by shaping up instead of burning down.

Although Harvard is the home of these three wise men and hundreds more, it was the only bunch in town that was dumfounded at what happened there. Everybody else in the community expected it. We had all watched Harvard for the last few years educate its young in the rewards of criminality. We had watched Harvard become an ivy-covered Fagin.

We saw it begin a couple of years ago when Secretary of Defense McNamara was invited to speak at Harvard. Now, it is true that McNamara was a member of a despised minority group, the President's Cabinet, but under the law, he had the same rights as Mark Rudd. Harvard's Students for a Democratic Society howled obscenities at McNamara until he could not be heard.

He attempted to leave the campus. The SDS stopped his car, milled around it, tried to tip it over. McNamara left the car. The SDS began to club him on the head with the poles on which their peace posters were nailed. If it hadn't been for the arrival of the Cambridge police, who formed a protective cordon around McNamara and escorted him through a series of interconnecting cellars of university buildings to safety, he might have been killed.

The next morning Dean Monroe was asked if he would punish the SDS. And he said—and if you want to know where the malignancy started that has made a basket case of Harvard, it started with this—Dean Monroe said that he saw no reason to punish students for what was purely a political activity.

Now, if depriving a man of his freedom to speak, if depriving him of his freedom to move, if damn nearly depriving him of his life—if that's political activity, then rape is a social event and sticking up a gas station is a financial transaction.

Now there's nothing unusual about a pack of young criminals ganging up on a stranger on their turf as the SDS ganged up on McNamara; it's called mugging. And there's nothing unusual about a respected citizen, even a dean, babbling imbecilities in an emotional crisis; it's called a breakdown.

Both are curable by the proper treatment, but there was something unusual, and chilling, too, about seeing the responsible authority, Harvard, treat a plain case of mugging as democracy in action and a plain case of hysterics as a dean in his right mind.

Well, after Harvard taught its young that the way to settle a difference of opinion is to mug anyone who differed with them, it was no surprise that they'd soon learn that shoving a banana into an instructor's mouth is the way to win a debate and bringing a meat cleaver to a conference is the way to win a concession. Because that's what's happened at Harvard in the last month.

When its militants stormed into the opening class in a new course on the causes of urban unrest and stopped it because they found it ideologically offensive, the instructor attempted to discuss it with them. So one of the militants shoved a banana into his mouth. This stopped the instructor, of course; he stopped the class and then Harvard dropped the entire course.

This week the *Crimson* published a photograph of a black militant leaving a historic conference with the administration—historic because it was here that the administration granted black students, and only black students, hiring, firing and tenure powers equal to that of any dean. The militant was holding a meat cleaver. The next day, President Pusey said that Harvard would never yield to threats. Shows how silly a man can look when he doesn't read his local paper.

President Pusey said that, by the way, at a televised mass meeting advertised as one in which all sides of the question would be fairly represented. The Harvard student body was represented by a member of the SDS (numerically, they are less than 1 per cent). The average resident of the Cambridge community was represented by a black militant graduate student who lives in Roxbury and

commutes in a new Cadillac. And anyone who'd call that unfair representation would have been mean enough to say the same think about the Chief Rabbi of Berlin being represented by Adolf Eichmann.

And so when Harvard was raped last week, it had as much cause to be surprised as any tart who continued to flounce around the fellas after they'd unbuttoned her bodice and pulled down her panties.

What surprised the world was Harvard's response. Nowhere in the world was Mayor Daley's response to precisely the same sort of attack by precisely the same sort of mob more loftly denounced than at Harvard. Yet in its moment of truth, Harvard responded in precisely the same way Daley did.

Pusey called for the cops just as Daley did, and the cops treated the criminals at Harvard just as firmly as they treated the criminals in Chicago. The Harvard administration applauded President Pusey's action to a man. There is no record that they ever applauded Daley.

That either proves that the Harvard administration believes in the divine right of kings to act in a fashion that, in a peasant, is considered pushy. Or it may prove that President Pusey is just as Neanderthal as Mayor Daley. Or it may prove that President Pusey learned how to handle Neanderthals from Mayor Daley. At any rate, if they're looking for a new president of Harvard, I suggest they teach Mayor Daley to read and write and offer him the job.

Let's forgive the president of Harvard for not having the grace to thank the mayor of Chicago for teaching him how to protect his turf; they aren't strong on graciousness at Harvard this year. But as a member of the Cambridge community, what alarms me is that Harvard doesn't have the brains to protect itself, and the community, from further, more savage and inevitably wider-ranging attacks. And I feel that I have the right to speak for some in the Cambridge community, possibly equal to that of any resident of Roxbury who parks his car there for a few hours a few days a week.

I've lived in Cambridge over 30 years. My children and grandchildren were born and raised in Cambridge. I help pay the taxes that support Harvard. I help provide Harvard with the police that it will increasingly need to protect it from the once-decent kids it has corrupted into thugs and thieves, and the worst kind of thugs and thieves—the sanctimonious kind.

I ask, and my neighbors in the Cambridge community are asking: If a horde of howling, half-educated, half-grown and totally dependent half-humans can attack visitors in their cars, and deans in their offices, and get away with it, how long before they'll widen their horizons a block or two and attack us in our homes?

If they can use clubs and meat cleavers on the Harvard community today and get away with it, who stops them from using clubs and meat cleavers on the Cambridge community tomorrow? Certainly not the Harvard community.

If it was necessary last week for Harvard to organize a round-the-clock guard to prevent the untoilet-trained pups they've made into mad dogs from blowing up the Widener Library and the Fogg Museum, must we of the Cambridge community prepare to defend ourselves from the pack Harvard has loosed among us? Or should we all pull a Rosovsky and take off to safe, sane Saigon where it's legal to shoot back at your enemy?

When the president of Harvard proved that, in a crisis, he was the intellectual equal of the mayor of Chicago and called the cops, it was his finest hour. Although it was true that he had presided over the experimental laboratory that created the Frankenstein's monster that stomped mindlessly into University Hall, fouling everything in its path, he did, at long last, recognize what he had wrought and took the steps to rid his university and our community of the filthy thing.

After throwing the SDS out physically, the next sane move was obviously to keep them out officially, and expel them. And leave them to the criminal courts to educate, or to the Army, or to the gutters of Toronto, or to the rehabilitation centers and public charity of Stockholm. Their few score places at Harvard, and those of their sympathizers, could have been instantly filled by any of the tens of thousands of fine youngsters, black and white, they had been chosen instead of.

And Harvard could have gone on with pride and strength as an institution of learning, as an example of the vigor of the democratic process to other universities, instead of degenerating into the pigpen and playpen it is today. But after the president of Harvard made the one move that might have saved Harvard, the Harvard faculty, in the words of San Francisco State President Hayakawa, betrayed him.

And that brings us back to Rosovsky and Galbraith. And to Handlin.

Rosovsky, whose family had given up and fled when the German Nazis invaded the University of Danzig, who gave up and fled when the California Nazis invaded Berkeley, gave up the chairmanship of his course and started packing when the Cambridge Nazis invaded University Hall. And all over this country—at Cornell, in New York—other professors are using the Rosovsky solution: giving up and running away. The only trouble with it is that, sooner or later, you run out of places to run away to.

Now, the Galbraith solution is one that is bound to be popular with his fellow puberty-worshippers: those who have just achieved puberty, and those who worship those who have just achieved it as sources of infinite wisdom and quite a few votes. But I'm not criticizing Galbraith's religious convictions. What I say is, in this country, any professor who is panting to get back into public life is free to worship the SDS chapter of his choice.

Galbraith's solution is to promptly restructure our universities—and Harvard more promptly than any other, because, in Galbraith's opinion, those who administer Harvard have "little comprehension of the vast and complex scientific and scholarly life they presume to govern." Well, now, who does Galbraith presume to replace them with?

If those who created Harvard, and made it into the vast and complex scientific and scholarly structure it became, must be restructured out of it because they have too little comprehension, who has enough? The only ones who claim they have, and who will shove a banana into the mouth of anyone who denies it, are the student militants.

And so the Galbraith solution is a forthright one: Let the lunatics run the asylum.

Well, I'm going to tell Galbraith the news: they've already tried your sort of restructuring, Ken. They tried it at Berkeley; they tried it at Cornell; they tried it at Harward all last week, and the result was that, on Friday, a mob of militant students, of a Harvard frenziedly restructured to suit their wildest whims, marched into the Harvard planning offices.

They shouted obscene charges at Planner Goyette. When he attempted to answer, they shouted him down with obscenities. They demolished the architectural model of Harvard's building plans, they kicked over files, they hurled telephones to the floor. And while Goyette cowered and his secretaries screamed, they marched out, uninterfered with by the six policemen who were summoned there presumably to see that they remained uninterfered with, unrebuked and, of course, unsatisfied.

And they won't be satisfied until Harvard is restructured the way they restructured Hiroshima. They'll be back, on another day, to another office. Possibly Galbraith's.

Well, those were the voices that prevailed at Harvard, the resigners like Rosovsky, the restructurers like Galbraith. (Prof. Galbraith, it seems, has decided on the Rosovsky method for himself. He has announced that he is taking off for Trinity College at Cambridge University for one year while the restructuring goes on.)

There was another voice, however, the voice of Oscar Handlin.

Prof. Handlin said he was appalled at the argument that the students' takeover of University Hall, their attack on the deans, their destruction of private property and their thefts from personal files were unwise but not criminal. It *was* criminal, said Handlin, by every decent standard.

If Harvard had not chickened out, said Handlin, if it had had the courage to recognize the criminality on its campus over the last few years, beginning with the beating up and silencing of McNamara and continuing through innumerable other incidents of the brutal deprivation by its mad-dog students of the rights of those who dared to dissent with them, it "would not be in the position it is in today—following the road that Berkeley has followed, following the road that has destroyed other universities."

Oscar Handlin urged Harvard not to go down that road. That was last week. This week Harvard has gone so far down the road that it can never turn back. In this last frantic, fatal, foolish week, Harvard has reversed the civil rights advances of the last 20 years.

Today at Harvard, any student with the currently fashionable color of skin is given rights denied to students of the currently unfashionable color. Harvard, which educated the President who brought America into the war that defeated fascism, today honors and encourages and rewards its fascists. Harvard, which once turned out scholars and gentlemen, now turns out thugs and thieves—or let me put it this way: now, if you are a thug and thief, Harvard won't turn you out.

Once people were attracted to the Cambridge community because Harvard was there. Today, because Harvard is there, people are fleeing the Cambridge community, even Harvard's own.

Harvard's tragedy was that it was too arrogant to consider that it too might be vulnerable to the cancer that is killing other universities. And when Oscar Handlin diagnosed it as malignant, Harvard was too cowardly to endure the radical surgery that could save its life.

And that's why I can say that colleges like yours, as yet too unproven to have become arrogant, and too determined to prove yourself to be anything but courageous, are the hope of the future. Because I believe that America has a future.

It has become unfashionable to say this; it may be embarrassing to hear it; but I believe that America is the most lovely and livable of all nations. I believe that Americans are the kindest and most generous of all people.

I believe that there are no underprivileged Americans; that even the humblest of us are born with a privilege that places us ahead of anyone else, anywhere else: the privilege of living and working in America, of repairing and renewing America; and one more privilege that no one seems to get much fun out of lately—the privilege of loving America.

ANNUAL QUESTIONNAIRE

HON. JOHN DELLENBACK

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. DELLENBACK. Mr. Speaker, once again I am asking the citizens of Ore-

gon's Fourth Congressional District for their views on major issues facing the Congress. My annual questionnaire is being distributed to 162,000 households in the district.

The questions cover direct election of the President and Vice President, volunteer Armed Forces, the ABM system, lower voting age, and restrictions on wage earnings for persons on social security. I also ask constituents to number in order the six areas—out of 20 named areas—which they consider the highest priority areas of national concern.

This list of 20 areas encompasses a great many of the important and complex problems which confront our Nation. Each day the Congress and the administration must make critical decisions as to which of many important issues will receive initial emphasis. I hope that this questionnaire will not only give me the help of the thinking of the district, but will also help citizens realize the tremendous difficulty of setting national priorities.

The questions follow:

	Husband		Wife	
	Yes 1	No 2	Yes 1	No 2
Do you favor—				
1. The direct popular election of the President and Vice President?	☐	☐	☐	☐
2. Placing the Armed Forces on an all-volunteer basis?	☐	☐	☐	☐
3. The President's recommendations concerning an antiballistic-missile system?	☐	☐	☐	☐
4. Lowering the voting age to 18?	☐	☐	☐	☐
5. Eliminating all restrictions on wage earning for a beneficiary drawing social security benefits?	☐	☐	☐	☐

Please number in order the 6 of the following which you consider the highest priority areas of national concern:

	Husband	Wife
1. ABM system	___	___
2. Agriculture	___	___
3. Conservation	___	___
4. Crime	___	___
5. Defense budget	___	___
6. Draft reform	___	___
7. Education	___	___
8. 18-year-old vote	___	___
9. Electoral reform	___	___
10. Exploring space	___	___
11. Housing	___	___
12. Inflation	___	___
13. Pollution	___	___
14. Poverty	___	___
15. Race relations	___	___
16. Social security	___	___
17. Student unrest	___	___
18. Tax reduction	___	___
19. Tax reform	___	___
20. Vietnam	___	___
Other	___	___

	Husband			Wife		
	1	2	3	1	2	3
Personal data (optional):						
Age: (1) 21 to 45; (2) 46 to 65; (3) over 65	☐	☐	☐	☐	☐	☐
Political affiliation: (1) Republican; (2) Democratic; (3) independent	☐	☐	☐	☐	☐	☐
Graduate of (1) grade school; (2) high school; (3) college	☐	☐	☐	☐	☐	☐

Husband's occupation:	1	2	3	4	5
(1) businessman; (2) farmer; (3) professional; (4) hourly; (5) other	☐	☐	☐	☐	☐

CAMPUS DISORDER

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. HULL. Mr. Speaker, it has been my pleasure today to read two addresses delivered May 22 and May 24 in Missouri by my able and distinguished colleague, the Honorable RICHARD H. ICHORD, chairman of the Committee on Internal Security.

I was most impressed by his May 24 speech at Waynesville in which he discussed the priorities facing this Nation, including problems of the war in Vietnam, the problems of the cities, and the problems of rural America. He spoke with concern about our educational system—high school and college—and its struggle with the big issue of campus disorders.

For Missouri, he cited the question of disorders, riots, and dissent as the greatest problem since the battle for the school foundation program.

I commend to your reading a most interesting portion of his comments at Waynesville and the entirety of his comments made before the 1969 graduating class May 22 at Dixon High School, Dixon, Mo.:

EXCERPTS FROM MAY 24 ADDRESS AT WAYNESVILLE, MO.

Where once our colleges and universities were the gateway to success, our colleges and universities are fast becoming the gateway to revolution and violence, intolerance and totalitarianism. The hinges on the gates are beginning to creak and sag?

Why?

Many rationales are offered. Proponents of college opportunities for all those who are capable point that the 11 per cent of our black population get only 2 per cent of the jobs at the top, 4 per cent in the middle and are forced into 16 per cent at the bottom—indeed, into as much as 40 per cent of the jobs at the very bottom. In a recent study of 80 integrated state universities, less than 2 per cent of the students were black. Even at Harvard, less than 3 per cent of the undergraduates are black. But, is it a question of blackness?

Another rationale. The public is becoming increasingly critical of military spending and defense proposals, including the research for the programs and the training of men in work connected with the spending and defense. But, is this the issue?

A third rationale, one which I feel is stronger than ever in this country: We know the most technologically advanced are the leading nations of the modern world. We know we are leading the world in our orbiting of the moon. It may be that space accomplishments may replace defense capability as the international symbol of prestige and power—but there are many who object when the replacement is accomplished at the expense of the poor, the hungry, and the poorly educated.

A fourth rationale. One close to the hearts of every American, every Missourian, who knows what death means, who knows what war means, who knows what honor and dishonor mean: Americans doing their fair share whether in peace or in war. American colleges and universities are becoming not a symbol of advancement to superior jobs and a superior way of life. Instead, our campuses are becoming a symbol as a haven for the guilt-ridden, the guilt-obsessed, the young man dodging the draft, dodging his responsibility to his country, regardless of the real role he is playing or the real reason for his being in college.

It is this factor, beyond almost all others, which is making our colleges and our universities creak, which are turning our high schools into prep schools—for what?

I am firmly convinced our state colleges are provided by the people of this State for educational purposes and any activity which is in conflict with this purpose has no place on any of our campuses.

I am as firmly convinced our public schools, our high schools and classrooms, are for the same purpose. They should be kept open and students, faculty or outsiders should not be permitted to interfere with the orderly conduct of the educational process.

I am similarly convinced the laws of this state and this country should be observed on the campus and in the schools in the same manner they are observed in the community. The campus should not, and I repeat, should not be a sanctuary against the law.

In the violence, on our campuses, those shouting the loudest are those most authoritarian and most destructive of cooperative efforts to solve problems of education. They have distorted the image of education, especially their college attendance, bending it to serve their purposes of intensifying frustrations, undermining authority and escalating violence.

A few days ago, Dr. Glenn S. Dumke, chancellor of the California state colleges, speaking to a Congressional subcommittee on educational environment, made the comment:

"There is much that is good in current student movements. They perform a valuable service in shaking us out of our complacency. Who can say that we aren't outmoded in our teaching, that we don't have racial injustice in our schools and in our communities, that poverty and war have to always be with us. The bulk of our young activists are challenging us to re-examine our attitudes, our values and our goals. They say that our existing institutions, whether they be education, government, religion, business or politics must be made relevant to the solution of today's problems and the social needs of our times."

I cannot disagree with this evaluation. I would agree with him that the nature of our response to this challenge is crucial. If we ignore the social problems underlying much of today's student activism and instead pass nothing but punitive legislation, the ferment will either grow to a point where we are running little more than armed camps, or that this generation of young people, among the brightest, most promising we have ever known, will simply continue to withdraw from society and tune us out.

As Dr. Dumke said, "We badly need their fervor, their idealism and their energy in these troubled times. It would be a tragedy if we allowed the actions of a few revolutionaries or nihilists to destroy our social perspective."

It is in this latter category that I as chairman of the House Committee on Internal Security have been especially concerned. It is this concern which has propelled the Committee into an intense investigation of the Students for a Democratic Society (SDS), a militant New Left organization that is considered the sire of the atmosphere of crisis now sweeping the campuses of the United States.

We are scheduling a hearing into the operation of this organization in the next few days; indeed, we will get preliminary hearings underway the first week in June. As you know, SDS was considered the leader of last year's disastrous riot at Columbia University and supposedly has played a major role in disturbances at Harvard, Cornell,

Princeton, Georgetown, Kent State and Lincoln.

At its national council meeting this March in Austin, it was reported that SDS reaffirmed its announced goal that universities should continue to be its primary targets on grounds they are "instruments of repression" and "tools of the ruling class."

It also agreed SDS should seek recruits among blue-collar classes and urged its communicants to join "work-in" programs in industrial cities this summer. But, George Meany, president of the AFL–CIO, has been quick to inform them: "If they try to interfere with the livelihood of workers in the plant, something is likely to happen."

It remains to be seen if SDS will find the same fertile ground among the labor unions as it has found among the colleges and universities and is now seeking among our public high schools and their students.

And it is here I worry—will our high schools become the arena for future battles? The answer may be, "Yes." Tom Hussey, head of the SDS chapter at Suffolk Community College on Long Island, was quoted by *Newsday* as recently as January 4 as saying: "High schools are our big area where the next confrontation will be."

This public announcement by an officer of the SDS followed a regional SDS meeting at which plans were laid for "organizing" in the high schools in the suburbs of a large Eastern city.

Then, we must realize this regional organization was only carrying out a national SDS policy first spelled out in October 1968 at an SDS National Council meeting in Boulder, Colorado, where those in session adopted a special "High School Resolution" calling upon all college and non-student chapters of SDS, as well as all SDS regional offices, to "make high school organizing a large part of their programs."

And what was to be the purpose of the "high school movements" which SDS sought to create?

Not for reform of our educational system! Any idea that SDS efforts might be directed toward overdue reform is quickly dispelled by reading the resolution by the National Council. High schools only prepare students for life in a "sick society," the resolution declared, and "the school cannot change to the extent we want unless we change the system which uses it." Therefore, "We will organize in the high school to move students to overthrow that system . . .." SDS announced.

The "Yes" is now becoming commonplace. A recent survey conducted by the National Association of Secondary School Principals shows three out of five principals reporting some form of active protest in their schools, with most protests, both disruptive and peaceful, appearing to be nonracial.

In a four-month period, November through February, Dr. Alan F. Westin, diretcor of the Center for Research and Education in American Liberties at Columbia University, counted 239 "serious episodes" of disorders—strikes, sit-ins, demonstrations, riots or other violence—in high schools. During the same period, 348 high schools in 38 states underwent some form of disruption that was reported in the newspapers studied.

All these were not in the cities. In fact, in suburban schools across the country, students organized protests against everything from the food in the cafeterias to lack of toilet paper in the rest rooms. Nor was the protest confined to the high schools, whether urban or suburban. One of the surprises of the survey was the fact that protest is almost as likely to occur in junior high schools as in senior high schools. Among junior high schools, 56 per cent reported protest activities.

The politics of education are changing. In black neighborhoods in our cities, blacks are clamoring for black control of black schools. Why? In a large part, because they feel the curricula are not responsive to the needs of the children and the community. In nonblack neighborhoods, students are clamoring for changes in curricula and teaching and learning atmosphere, for the same reason: The curricula are not responsive to their needs and the needs of the community.

Objecting parents who seek to intervene on their children's behalf, by and large, receive sharp, persuasive rebukes which force them to double back upon themselves. Much of our educational system today is a series of archaic arrangements in the educational establishments that educate teachers and pupils alike, raising the very serious question: Are our schools providing real opportunities for learning or have they ceased?

It is this question which has set the stage for the unrest on our campuses, both college and high school. And, as the bright and promising student rebels—unconsciously, rarely really knowing why—the radical revolutionary moves in, garnering the benefits of his discontent, leaving him to reap the whirlwind of the rebellion and the permanent mark against him in the annals of society.

A kind of vicious circle is developing, the denial of the humanity of the student which can only result in a dehumanized teacher, a dehumanized school, and a dehumanized community. . . . Unless something is done!

SDS has a proposal, a blueprint which sets radicalization of the high school student as its goal. Distributed in Chicago in March, 1968, under the title, "High School Reform: Toward a student movement," the pamphlet says:

"Our first task, then, is to show the students that we *are* on their side, and have many of the same concerns they do. One method is to begin agitation around issues students are already concerned about. We should be in the forefront of any student protest against administrative action."

It concludes with advice to its readers: ". . . we must build a community; a community of resistance. If we really wish to change people, and not institutions, we shall have to struggle, for conflict radicalizes us, and through it we may establish our own identities as human beings, and not numbers. The most radical demand we can make is the demand to be taken seriously."

Hence, I must argue, SDS has a plan. If we are to prevent that plan from being effected, we must solve the problems of our educational system and separate the revolutionaries from our campuses.

Then I must argue, then I must offer to you: What has the present Administration proposed? Very little has been presented to the public for consideration. Very little priority has been given to the solution of the problems giving birth to the conflict. Even less to the would-be combatants. I agree that our schools cannot be run by the Federal Government. This is a local responsibility. Yet, if the problem goes unsolved, the progeny of it will be as numerous as the fleas on a blue tick hound in hunting season—and the shape as deformed as some of the scrub blackjack which covers these hills.

For I am firmly convinced, unles we solve the problems of our schools and colleges, all the handy things which have been predicted for the year 2001 will be of little avail:

We will have no need for the nice square tomatoes which will be easier for housewives to store.

We will have little need for rain-on-demand.

We will have little need for pipelines to ship our farm goods to the big city markets and even less need for the markets.

All these advantages will be of little use, if we let go by default the kind of society we want, because we dare not to take the steps on the local and national levels to solve our educational problems.

Today's Student in America

(Address of Congressman Richard H. Ichord before the 1969 graduating class, Dixon High School, Dixon, Mo., May 22, 1969)

It is always a pleasure to be back home in Missouri.

And for me it is a deep honor to address this graduating class, their teachers, their parents, their friends.

For you, it is a time of mixed emotions. Some see it as the end of the most wonderful years of their life. Some see graduation as the door of the future, when tomorrow you begin the role you have planned for a life's work.

Others of you, I know, are planning to go on to college, perhaps Stephens and Christian and the University of Missouri at Columbia, or Westminster and William Woods at Fulton, Lincoln at Jefferson City or the University at Rolla—a variety of colleges and universities awaits you. Now is the moment of decision—where will you go?

You will consider many factors, not the least of which will be costs and nearness to home, to family, to friends. In the minds of parents and students today there are other questions—campus disorder, the opportunity for study and research in an atmosphere of peace and quiet, the right to study and live without fear of injury or destruction of property—all involving the question of dissent, whether peaceful or violent, legal or illegal.

Most of you, I feel, are not opposed to dissent legitimately employed, for it was the factor that gave birth to this country and which has inspired us to build a country second to none.

All of you know George Washington was a dissenter. He disagreed with the colonial government of the British. And he didn't like war, either, or killing or violence. But, he knew if you didn't like one rule of law, you had to set up another rule of law to replace it. He had a goal, a plan. He knew that the law is the rule, and out of rules come order, and out of order—peace and tranquility, the atmosphere in which great colleges and universities flourish and in which great minds are developed which form the leadership of our country.

Our country has grown much from the days of Washington. From a predominantly agricultural nation, we have become the most highly industrialized country in the world. Our population, only 76 million in 1900, now exceeds 200 million.

As this population expands, the land available for production or recreation remains relatively static. For this reason, our public lands must be used prudently and wisely. And they must be used to meet the needs of a country decidedly different from what it was in 1860, 1900, 1950, even 1960.

This nation is a far different nation than when Horace Greeley said, "Go West, young man, and grow up with the country." In the 19th century there were fanciful tales of American land so fertile that the turnips grew to the size of tree stumps and each pumpkin had to be hauled out of the field in its own cart. Corn was so high the stalks could be used for firewood or building logs and cucumber seeds sprouted so fast the vines sometimes strangled a farmer while he slept.

Those were good stories, but I know they weren't talking about Texas County where I grew up and I don't think they were talking about much of the land around here except perhaps in the river bottoms. But, now, if they were talking about the people—I'd have to agree they really weren't stretching the story much, for those are the kind of people this country has been producing. Those are the kind of people that settled and have made Missouri the great state that it is.

This is the real definition of the pioneer. Men and women who moved out and dared

to conquer the land . . . the mountain men, the soldiers, the farmers, the miners, the ranchers, the lumbermen, men and women who dared to dream of the land, tame it, and cultivate it.

No doubt, many of our earlier settlers were broken by the land, gave up and died poor. But others endured; they were strengthened by their trials and tribulations and they became the backbone of this nation—building a nation renowned throughout the world for its accomplishments in government, in education, in peace, but, most of all, for its respect of the dignity of the individual human being.

Today, most of the great lands of America have been parceled out, to various individuals and institutions, from railroads to educational institutions. For example, the Homestead Act of 1862 offered 160 acres to any man who was willing to live on his grant and improve it. Many of our great educational institutions, including the University of Missouri, got their start through land grants from the U.S. Government.

What did this mean? It meant that our country believed that public land should belong to any man who was willing to give it enough time and sweat to make it productive. It means this nation believes the best people to use the land are educated people and government has a responsibility to provide that education.

Today, only about one-third of the original public domain still remains—most of it in Alaska and the Far West—some 425 million acres administered by the Bureau of Land Management plus some 160 million acres of public land reserved within our national forests and administered by the Forest Service. Not much land, when you realize how rapidly the population of this country is growing and how few of these acres will be available for use for such an expanding nation.

The needs of society today are changing and changing rapidly. Pioneering is no longer the hunters and trappers moving through icy creeks and streams for beaver skins, fighting the Indians in the winter and the insects in the summer. Pioneering is no longer the rush for land as bounty for wartime service as followed the War of 1812 and the Mexican War. For the veterans of World War II, the Korean conflict and the War in Vietnam, the bounty of public land was replaced with the gift of training and education.

Today, there is a new pioneer—the pioneer who looks beyond the physical touch of the soil, to find new ways to develop our sons and daughters to find new ways for them to continue to build the kind of country our forefathers dreamed for their families.

Today's pioneer, either as a student learning or the teacher teaching, needs to seek new ways to insure the avenues of change are kept open without resorting to the techniques of the criminal—to keep reform, not reformatories, as our goal.

As to the need for reform, I would be the first to admit some of the policies used to run our schools and colleges need reform. And I realize many of our administrators and our faculties may be proscrastinating—delaying, perhaps unduly, some changes sorely needed. But, in the main, efforts—real efforts—are being instituted to effect reform.

But, even if this were not so, can one really believe the best way to reform a college, a university or a high school is to tear it down, stick by stick, stone by stone? Can one really believe lawlessness is the best way to further educational goals.

I don't. I am sure you don't. But these are some of the issues facing students, parents, educators and administrators today, who must decide which instrument will be used to effect change—naked force and lawlessness or reason and scholarly achievement.

To me, attack by our students from within the high school, college and university structure is, for the large part, a fleeting thing as measured in the life of our educational system. For, in the main, our educational system has within itself, the means of self-adjustment, of self-correction, of self-analysis and improvement. In only the rarest of cases, will the system be unable to right itself and carry on the purposes for which the institutions of education were founded.

It is in these "rarest" of occasions that government, in committees such as my own House Committee on Internal Security, should and does stand ready to give assistance to the educational system.

The community, the educational system and government working together can keep the winds of dissent and the storms of riots from blowing our institutions off course. We can separate the mass of our students from Pied Piper leaders who would lead them down the criminal trail to oblivion.

How can we? Let us look at some of the things we can do. We can establish speakers bureaus on campuses to bring leaders to debate the issues of our times. We can establish training institutes for our educators and administrators to help equip them to meet their problems.

We can keep the people informed with relevant materials on issues and problems. We can seek effective ways of communicating with students. We can investigate radical movements on campuses to separate those who would use the brilliance and capabilities of our students for their own purposes.

Most of all, we can return to the ideals of fairness that have marked our country—to insure that the classrooms and services of our schools and colleges belong to all the students and do not become the private preserve of a disruptive minority. We can go a step further—we can exert our influence to see that administrators establish a policy of firmness in dealing with those in our schools who flout the law and invoke violence, all under the guise of dissent.

In this regard, I do not think our schools should be run by students any more than I think they should be run by politicians. Educational institutions, whether public secondary schools or colleges, should be run by experts—expert educators, who are charged with the responsibility of developing the most important resource of this nation or any nation—our youth.

Too long this country has suffered from the results of permissiveness. Rules should be fair but the enforcement of those rules must be firm and administrators must have the intestinal fortitude to act decisively. Suspension and expulsion are still effective tools of discipline if they are wisely and timely used. And, I might observe, timely discipline in nearly all cases requires action long before a campus explodes into firebombings, the seizure of buildings, and other forms of violence.

In the case of Congress, we must reevaluate our draft laws. Personally, I have come to believe our draft laws are one of the primary underlying causes of campus disorder. The draft should be changed so that those who have not fulfilled their military obligation and fall within the prescribed age group will take their chances by lottery. I believe we committed a grave error when we allowed college deferments in a time of armed conflict. The lottery method, I recognize, is not the best way to muster our manpower requirements, but it should be employed at a time we are faced with the problem of answering the question: Who is to serve when all are not required to serve?

Such a law would not mean that more of our boys will be drafted than are presently drafted. The numbers drafted would not change. It would mean that all who attend college would be primarily motivated by the desire to receive an education and no student will have a guilt complex brought about by his present preferred status.

This, of course, is a change of position for me but not a change to incur political popularity for I am quite certain there is no political mileage to be gained from such a position. Nor am I motivated in the least by the desire to punish the small minority who have torn our campuses apart, as so foolishly suggested by one of my critics. I do firmly believe that every effort must be made to bring the Vietnam war to a conclusion and until a conclusion is reached this is a policy that should be pursued to remove one of the underlying causes of our campus disorders. The hour is too late; our problems too serious for me in good conscience to pursue any other course.

Another and very significant thing we can do—we can achieve balance and perspective in the coverage of news events on campus. There is a direct relationship between the intensity of violence in a campus confrontation and the number of TV cameras and the number of reporters on the scene.

And, most of all, we must cease to confuse legitimate dissent with criminal action. I am firmly convinced we need to improve our enforcement of existing laws much more than we need new laws.

These are some of the steps we should take so that our graduates tonight can go on and upward. In an atmosphere marked by order and a climate for study and research, you can learn and develop and become the kind of leaders the pioneer world of tomorrow will demand.

But this, we must not forget: Freedom is not just a privilege. It is a test and those who cannot pass the test will be denied it. Welcome, then, to the proving grounds. Bring with you courage, vitality and determination. Bring all you can muster.

You are going to need the full measure, just as your State and your Country are going to need the full measure from you. Be proud of yourselves. You are Dixon's finest products.

COLLEGE VIOLENCE

HON. MARTIN B. McKNEALLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. McKNEALLY. Mr. Speaker, because of the great concern that the Members of this body have about violence on our college campuses, I am taking the liberty of bringing to your attention the following excellent editorial which appeared in the Evening News of Newburgh, N.Y., on Wednesday, April 23, 1969:

COLLEGE VIOLENCE

Acts of violence which administrators fail to deal with, in colleges or other schools, have stirred law-abiding citizens and students to the point where it is likely that the schools and colleges will suffer themselves, instead of the handful of responsible militants.

This may shock some of our liberal leaders who cry for tolerance of all demonstrators, regardless of their tactics.

The protest, this time of the majority of students and other citizens, was accelerated this week with circulation of pictures of armed dissidents striding triumphantly from a Cornell building they had seized. This happend after capitulation of Cornell officials to demands of the militants.

The capitulation was reversed soon thereafter as other students and faculty members condemned the surrender and there was an opportunity for alumni and other "outsiders" to react to the news pictures.

There had to be a point at which the outraged majority would be heard and respected.

Hopefully, this point is being reached before voters and legislators (the ultimate power in a representative democracy) start denying public funds to the educational centers.

That this will be limited to colleges is unlikely. High schools which fail to meet the problem lawfully and effectively, may be expected to have the same problem.

The violence, whether carried out with fire bombs and weapons or done by forceful occupation of public property, will have to be dealt with soon, or it may be expected to spread like wildfire. Already the timidity and indecision which marked Columbia's reaction a year ago have caused the violence to spread into other institutions, often under the leadership of the same non-students who participated at Columbia.

Only a few college officials have taken the firm stand needed, among them Father Hesburgh of Notre Dame and Dr. Hayakawa of San Francisco State.

The time has come for school administrators to start protecting the rights of all their students instead of a small group which uses force to intimidate teachers and other students. Else the ultimate loss which the educational institutions must suffer will be out of proportion to what should be imposed on the few students, faculty members and outsiders really responsible.

FEDERAL CONTRACT SCRUTINY

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ANDERSON of Illinois. Mr. Speaker, today I wish to join the growing bipartisan list of cosponsors of H.R. 11576 as introduced by Congressman PODELL. This measure would provide for an annual review by GAO of all Federal contracts and would require the GAO to report to the Congress at the close of each fiscal year any failures to meet contract completion dates and any cost overruns exceeding 110 percent of the contracted price.

I have noted with increasing concern and alarm the number of instances which have come to light involving such contractual failures and I am especially dismayed by the fact that the Congress apparently has no systematic way of periodically identifying these failures. How can we responsibly fulfill our oversight function if all we have to rely on are occasional agency leaks and journalistic disclosures?

The most glaring abuses of contract agreements are in the area of defense procurement. The most recent example of this is the costly $2 billion overrun on the $3 billion C–5A transport contract. A recent Brookings study traces the long history of such overruns and reveals that initial costs estimates for major weapons systems in the 1950's and early 1960's were exceeded by amounts ranging from 200 to 700 percent. I would suggest that this is no way to run a business, much less a government.

I do not hold with those who suggest that all this is a result of some sinister conspiracy by the so-called "military-industrial complex." I do not view these abuses as justification for an all-out attack on the military which is providing this Nation with the best security possible. I do think that the current mood of questioning, probing, and criticizing is both healthy and long overdue. But at the same time, I am most concerned that in our frustration over Vietnam, inflation, and high taxes we do not carry this mood to an excess that would jeopardize our national defense and security.

I think a fair analysis of the problem would reveal that we all share in the blame for the mismanagement that has resulted in such costly mistakes. We in the Congress must accept our fair share of the guilt for not exercising a closer scrutiny over the Government contracts we have authorized under various pieces of legislation.

That is why I am joining in the support of H.R. 11576 which I consider an important first step in regaining proper control over the purse strings we have been entrusted with.

I would like to draw to the attention of my colleagues an article which appeared in the May 26 Washington Post. In this article, columnist George Wilson explodes the myth of a military-industrial conspiracy and assesses some of the root causes for the procurement problems we are experiencing today:

NATION'S TOP SOLDIER PUTS IN A WORD FOR HIS MEN

(By George C. Wilson)

The Nation's top soldier stood up the other day to assure the people that "there is no malignant, semi-autonomous, conspiratorial grouping dedicated to foisting off unneeded weapons on our fellow countrymen."

The fact that Gen. Earle G. Wheeler, Chairman of the Joint Chiefs of Staff, felt compelled to speak out that way evidences his deep concern about the overkill in current attacks against the "military-industrial complex."

To General "Buss" Wheeler—a man who has won the admiration of civilian bosses as different as Presidents Kennedy and Johnson and Defense Secretaries McNamara and Laird—there is "a necessary relationship" between those who make weapons and those who use them.

But, as Wheeler said in his plea for fair play, such a relationship should not be regarded as an evil conspiracy. "If I'm in a conspiracy," the General said, "I have yet to meet my fellow conspirators." And since Wheeler is no bomb-thrower, but an honest soldier Presidents have listened to, perhaps it would be worth taking a hard look at some of the anti-military criticism in such high fashion these days.

Sen. Charles E. Goodell (R-N.Y.) got into the swing early this year by flying out to the Air Force museum, so he could attack the ABM in the very shadow of the XB–70 bomber—a project which was cancelled after $1.3 billion went into it. The Senator failed to mention, however, that it was Congress—not the Pentagon—which tried the hardest to keep the B–70 flying.

So insistent, in fact, was former Chairman Carl Vinson (D-Ga.) of the House Armed Services Committee that President Kennedy had to cool him off on the B–70 issue by walking him around the White House rose garden. Goodell himself, a Congressman in 1962 when Vinson made the B–70 fight, voted for the bill which specified extra money for the bomber.

Not that the Air Force was necessarily right and Goodell wrong on the B–70 issue. The point is that it is a little too much for a member of Congress to shake a finger at the military in 1969 for supporting the same bomber he backed in 1962—a bad year for denouncing the military.

Then there is the TFX. Here was a case where the military wanted the lowest bidder, Boeing, but its civilian bosses decreed the lush contract would go to General Dynamics which had a nearly idle plant in Fort Worth, Tex. For speaking out against the award, Adm. George W. Anderson, Chief of Naval Operations at the time the contract was under fire by the McClellan Committee, was exiled to Portugal as our Ambassador. Robert S. McNamara, who made the decision as Secretary of Defense, stayed on the job.

As it turns out, however, Anderson was probably a lot closer to being right about the matter than McNamara. The Navy has since cancelled the TFX. Any day now there will be gasps as the cost overrun on the TFX—an unbelievable $5 billion according to some calculations—is at last disclosed. It will look to many as if the military is running wild again.

Chairman John L. McClellan (D-Ark.) of the Senate Permanent Investigating Subcommittee may be able to claim he was right in 1963 when he challenged the TFX contract. But his failure to do much about it in the six years since then hardly speaks well for Congress. His subcommittee has not even filed its TFX report.

The Air Force—to cite another example—is taking the rap in the case of the C–5A transport. But who was in charge of that contract? Answer: Secretary McNamara and other civilians who prided themselves at the time on having come up with a "total package procurement" approval which they believed would help discourage the very overruns now getting so much publicity.

Is it fair, then, to charge such problems—and there are lots more of them—off to the "military industrial complex?" It may be comfortable, politically safe and even refreshing to do so—but it is hardly fair.

A strength of the American political system is its checks and balances. The generals and admirals indeed ask for horrendous amounts of money. But Congress, with its power of the purse, determines how much they actually get. The generals and admirals indeed have made their presence felt all over the world—often with costly bases that blight the host country physically and morally. But the White House and State Department, in making foreign policy, are responsible for America's overwhelming—and sometimes overbearing—military presence in the world.

If there is a lot wrong with today's "military"—as almost everybody says there is—then we are all in it together. It is too easy to blame it all on the "military."

The term "military" covers 3.5 million men and women in the services. Most of them are in the have-not category compared to the rest of American society. They eat off tin trays in godforsaken places; live in cramped houses or trailers, and die on ground much less well known than Hamburger Hill. They too, want to send their children to college. General Wheeler on Armed Forces Day was trying to speak for them. His speech did not get much play.

". . . People in the armed forces own little—perhaps even far too little—in this world," the General said. "We serve as the custodian operators of the armed power of the American people. I do not suggest we stop wearing our uniforms, however visible."

WISCONSIN CONGRESSMAN DAVID OBEY SAYS LIBERALS MUST REDEDICATE THEMSELVES TO CAUSE OF PEACEFUL SOCIAL REFORM

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1969

Mr. REUSS. Mr. Speaker, Congressman DAVID OBEY, in a recent thoughtful

address, went to the heart of the matter when he warned that violence and intimidation practiced by the few could well lead to a backlash on the part of the many that would jeopardize basic freedoms and set back the cause of social reform for years. He urged a much greater commitment by liberals to needed change brought about by peaceful means—in our universities and our society—lest the Nation reap the tragic consequences of continuing unreasoned extremism by the few. I commend his timely remarks to my colleagues:

ADDRESS OF THE HONORABLE DAVID R. OBEY, MAY 18, 1968

Civil liberties have been under attack in the past in this country by radical right-wing movements intolerant of dissent and minority opinion, but few people have seriously doubted our ability to preserve basic American freedoms. Even in the McCarthy era of the 50's most people were not really pessimistic about the preservation of Bill of Rights freedoms.

But today it seems to me that the violence and the intolerance being exhibited by a small minority of campus militants is creating such a blacklash of public frustration and disgust that even the traditional American freedoms of thought, speech and dissent guaranteed to us by the Bill of Rights and the United States Constitution are in serious danger—and so I might add—is the crucial tradition of academic freedom.

That danger comes from the fact that the violence and intimidation being practiced by a small—and I emphasize the word small—group of militants is causing such an emotional and psychological backlash that the American public is losing its ability—and its willingness—to distinguish peaceful protest from violent protest, honorable dissent from anarchy. In short, all dissent and all protest is being tarred by the same brush, and that is a tragic development.

No thoughtful citizen can ignore the need for change—not just change on our campuses—but change in many other of our institutions, both public and private. And that is why responsible Americans in touch with the needs of our time must resist the temptation to use frustration about the violence of some reform elements as an excuse for inaction or as an excuse for an attack upon all protest.

Public anger, no matter how justified, is no effective substitute in the long run for an active public conscience.

All groups, right and left, angered or satisfied, must remember that one of the great attributes of the democratic system is the implicit commitment not to push other people around. Any would-be reformer who seriously believes that he can gather public support in this country for human rights, academic freedom, an attack upon poverty and hunger, a more intelligent foreign policy, and even for campus reform by throwing bricks or carrying guns on campus is engaging in a tragic misreading of both history and the American character, and we may all pay the consequences for that error. And any person who seriously believes he can eliminate violent dissent by ignoring its root causes or by attributing it solely to "communist conspirators" is committing an error just as tragic.

It is terribly important for Congress, state legislators and the American people to avoid a massive, thoughtless repression of legitimate, honorable and peaceful dissent, but disregard of the traditions of fair play and tolerance on the part of extremists on either side of the political or social spectrum are, I am afraid, making that repression more nearly an inevitability.

If this repression is to be avoided and if the public clamor for it is to be diminished and if we are to successfully preserve the principles of freedom of thought, speech and dissent which have made this country something special, we must avoid the emotional and psychological polarization of our people. And that can be accomplished only if we can, to a much greater degree than has been the case up until now, involved constructive liberals in the struggle not only to reform our campuses, but also to reform public habits which have allowed the poor to go hungry, the ill untreated, and the deprived uneducated.

Liberals must re-dedicate themselves to the opposition of violence wherever they find it—whether it be the violence practiced by the campus revolutionary or the more subtle violence practiced by society against the deprived and the under-privileged.

Each is equally corrosive of the values which unite a democratic and humane people.

Unless constructive liberals re-dedicate their time and re-double their efforts to achieve the reforms needed in our society itself we will condemn the liberal movement to the stagnation of pious comfort and we will abandon reform to the embittered few. And the resulting polarization of our people will paralyze the nation with tragic consequences for Bill of Rights freedoms as we know them.

CAMPUS RIOTS AND U.S. GOVERNMENT

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. BRAY. Mr. Speaker, when the Reporter magazine ceased publishing, I was most disturbed by the thought that Mr. Max Ascoli's views and observations would no longer appear in print. Mr. Ascoli, in his role of editor and publisher of the Reporter, gave it stature and authority far beyond many of those which still survive today.

I was very pleased to see him appear in print, again, in the Wall Street Journal for May 27, 1969, writing on a topic that concerns us all. Mr. Ascoli, in his usual solid reasoning and impeccable style, has done a superb job. The article follows:

[From the Wall Street Journal, May 27, 1969]

CAMPUS RIOTS AND THE U.S. GOVERNMENT

(By Max Ascoli)

Why could it happen, and why did it happen here? a number of eminent people, the President first of all, have asked. The key word is *it:* A succession of conflagrations and racial disruptions centered or converging on the campuses of the nation that only too recently had found itself playing the role of example to the world. There is little sense in comparing our turbulent four and a half years from Berkeley on to the uprising at the Sorbonne.

Among the whys it could happen here, one is this nation's inexperience with revolution. The revolution to which the United States owes its birth is something else again, for it secured the centuries-old freedoms of the Mother Country that the Founding Fathers codified according to the needs of the newborn nation. France and England have repeatedly gone through chaos, and then emerged from it. In the Old World—Russia, Italy or Spain—they have had their troubles with anarchic uprisings. America had to deal with individual anarchists either of the bucolic Thoreau type or with showy mimics of overseas nihilism.

MAINTAINING AN IMMUNITY

The principle became ingrained here that vastity and complexity had immunized our country from the sweep of ideological revolution or totalitarian dictatorship. In the universities the social sciences and allied disciplines did their best to maintain this immunity by neglecting ideologies and practicing birth control of ideas. Only facts counted, as if they had all been born free and equal, and the dusty leftovers of happenings called facts were assiduously piled up by scholars.

No wonder many college students were bored, and enterprising professors who had obtained tenure went after remunerative government or foundation assignments. No wonder also that in a large number of academic institutions there was a lack of contact between students and teachers. By and large, there was a superabundance of students and only infrequently could the leavening influence of teachers be effective. The substance of culture prepared for mass consumption in the multiversities and universities turned thinner and thinner, and ideas, or even their ersatz, were carefully pasteurized.

In 1964, on the largest campus of the largest multiversity, a substitute for ideas was accidentally discovered: *Loquor ergo sum* (I talk, therefore I exist). It is strange that it had not happened before or on some other campuses. At Berkeley, there was a group of students who during the summer had trained themselves to take chances by going South. The new chance they took proved immensely rewarding. They practiced participatory democracy before rediscovering the old notion. The *loquor ego sum* principle took the name of Free Speech Movement. The meaning was that the more one talks, the more of a man he is; the more people yell in unison without letting anyone utter a single antagonistic word, the more power they get. The Berkeley rebels celebrated in their own way their freedom from thinking, and gained notoriety in intellectual communities all over the world. Thinking is not easy, while anybody can talk and yell. From those 1964 days on, the exaltation of dissent started. Dissent you must. It's no longer a right, it's a duty.

Mario Savio, leader of the Berkeley movement delivered at Sproul Hall an address that later was used in an article entitled "An End to History." He did not appear to find much satisfaction in his success. "This free speech fight points up a fascinating aspect of contemporary campus life. Students are permitted to talk all they want so long as their speech has no consequences." This statement is echoed by Professor Herbert Marcuse, of the University of California at San Diego. In his Political Preface, 1966, to Eros and Civilization, he wrote: "In and against the deadly efficient organization of the affluent society, not only radical protest, but even the attempt to formulate, to articulate, to give word to protest, assume a childlike, ridiculous immaturity. Thus it is ridiculous and perhaps 'logical' that the Free Speech Movement at Berkeley terminated in the row caused by the appearance of a sign with the four-letter word."

Unbridled, massive loquacity having been authoritatively hailed as identical to freedom of speech, it could be turned against other targets. And so it was: In 1965, the teach-ins started. There on the campuses, antiwar students were joined and supported by many a youngster emeritus from the faculties. Even those who held qualified opinions against the Vietnam war had an exceedingly hard time trying to argue against the mobs who wanted the war stopped—right now. This unreflective quality is characteristic of the movements a la Berkeley. Just as "free speech" came to mean four-letter speech, so the peace advocated at the teach-ins was not related to our times and to our opponent: It meant just peace at any price—now. Yet it is remarkable how many people, worthy of their high repute, for quite some time have not been able to mention the war in Viet-

nam without calling it immoral or criminal—a war that, for our own good, should end in our defeat.

A DISCONCERTING PHENOMENON

The exaltation of youth for its own sake, the disdain for anybody over 30, is disconcerting for a man like this writer who had to leave his native country at the time of "Giovinezza, Giovinezza." The Negroes, too, follow the same self-seeking trend: Superior education or at least a diploma must be provided for all the young black just because they are black. The place in society black power wants must be granted, and this demand is not negotiable. All these extreme aims have one thing in common: Each is to be reached for the hell of it.

In the universities the drives for student power, youth power, black power, meet and, as far as one can see, do not collide. Rather they pretend to have separate but equal status, and only occasionally do they give a hand to each other as, for instance the SDS and the Negroes in favor of negritude.

American culture, like America itself, is part of the western world and, until now, a fantastically successful outgrowth of it. One of the characteristics of western culture has been the ease with which it has given cultural citizenship to men from every part of the world, while becoming enriched in the process. The universities in this country cannot become centers of cultural fragmentation on a racial basis without becoming responsible for the ultimate fragmentation of the country. They do not belong to the trustees or to the faculties or to the students. They belong to history—a history that this country has in largest part inherited—and are entrusted in various degrees to different groups of pro tem curators and beneficiaries. Each fragment of this historical heritage can be irretrievably wasted away.

The answer, it has been said, is academic self-government. Within limits this is true, provided we are clear that academic self-government does not mean sovereignty or, as Attorney General Mitchell once put it, extra territoriality. The inner strength of a university and the position it establishes for itself in the cultural community are a large-scale reproduction of man's destiny: A balance between inner and outer world reflecting the role man plays in the various collective entities he comes to belong to. Man's freedom does not exempt him from spiritual or economic bankruptcy. And of course not from death. The same is true for the universities. President Nixon said it: ". . . violence or the threat of violence may never be permitted to influence the actions or judgments of the university community. Once it does the community, almost by definition, ceases to be a university."

Our government cannot force the universities to be free, but from the universities has started the eradication of freedom in our country. Academic self-government can sustain the inner and outer life of an academic community: In a microcosmic way each entity moves according to its own laws as part of a finite system that is exposed to extinction. The system and each of its components have a margin of freedom but, as has happened in a number of academic communities, when freedom is extinguished then the resulting condition is one of national emergency.

"The Federal Government," the President said, "cannot, should not—must not—enforce" the principle of intellectual freedom, which, he had already stated, "is in danger in America. . . . Violence—physical violence, physical intimidation—is seemingly on its way to becoming an accepted, or at all events a normal and not to be avoided element in the clash of opinion within university confines. . . . Anyone with the least understanding of the history of freedom will know that this has invariably meant not only political disaster to those nations that have submitted to such forces of obfuscation and repression, but cultural calamity as well. It is not too strong a statement to declare that this is the way civilizations begin to die." But the Federal Government, according to the President, can do nothing. Yet he knows that he is not the Federal Government but only its Chief Executive.

Congress is not patient and is constantly exposed to the dangers of hasty or wrong legislation. For the right conduct of government, the President cannot disassociate himself from Congress. Indeed, one should hope that he is exerting a wise, harmonizing influence on the several Senate or House committees engaged in preparing legislation on campus or racial disorders.

He or his office can also urge the local or state authorities to act. We all remember the picture of James A. Perkins, president of Cornell, beaming with the leaders of the SDS and the Afro-American Society, after the faculty voted to support black students' demands, as if all were saying, "cheese, cheese." The Harvard students who threw the nine deans out of University Hall have not been suspended or expelled. Can Cornell and Harvard be called free institutions? Of the faculties the least said the better for the time being. When a community ceases to be a university, then the Attorney General should find a way to put it into receivership. Let's not forget that, whether Governor Faubus liked it or not, Dwight Eisenhower sent detachments of the 101st Airborne Division to Little Rock.

MR. TRUMAN'S MOTTO

Harry Truman kept a motto on his desk: THE BUCK STOPS HERE. Even the buck of a university headed by a weak man may end on that desk in the Oval Room.

The New York Times, the most authoritative organ of woolly thinking in our country, has adopted the position that to appease the students and the other riotous groups we need to settle the war in Vietnam.

Yet the President can be sure that the domestic Viet Cong will never make peace, even after Ho Chi Minh enters Saigon, and every single GI is back from Vietnam. President Nixon should keep the example of Abraham Lincoln constantly in mind. No one of Mr. Nixon's predecessors ever took such liberties with the laws of the land as did Abe Lincoln, but he saved the Union. President Nixon faces an even harder task, for he must save the Union not from a civil but a guerrilla war.

THE CLOCK IS RUNNING OUT IN GREECE

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. FRASER. Mr. Speaker, now living in Washington is an exiled Greek political editor, Elias P. Demetracopoulos. Mr. Demetracopoulos has access to considerable information about what is happening in his native country. A few days after the second anniversary of the April 21, 1967, military coup in Greece, Mr. Demetracopoulos sounded a pertinent warning and offered some sound advice to the United States in a speech at the George Washington University. The text of his remarks follows:

GREECE—A NEW VIETNAM?

Tonight I would like to discuss the situation in Greece; a situation which I believe not only denies the Greek people basic democratic rights but is also harmful to the national interests of the United States and contains the seeds of another "Vietnam." The element of time is terribly important in this connection. An attempt will be made to show that the dangers posed by the current Greek situation leave little time for constructive action by the United States. In other words, I believe the clock is running out in Greece, and unless some major changes are forthcoming in American policy, both the U.S. and NATO are apt to be faced with the reality rather than the potential of explosive political, military, and economic developments on NATO's Southern Flank.

U.S. foreign policy in Greece, inherited by the Nixon Administration, is based on the hypothesis that the present dictatorial regime provides sufficient military, political and economic stability to satisfy America's strategic interests in the area—the kind of stability, supposedly, which could not be guaranteed by any realistic alternative. In support of this hypothesis ex-Defense Secretary Clark M. Clifford, in testimony before the Senate Foreign Relations Committee last May said, "I believe that the obligation upon us as a member of NATO is such that I place that as a more important consideration than I do the present government of Greece. I believe that we deal with a highly imperfect world, and if we were to confine our help to our Allies on the basis of our approving completely the different types of governments that existed then, I believe that NATO would disintegrate, and I believe that would be a calamity."

If that were true—if indeed the regime offered the only reasonable hope of stability in Greece—it would be possible for me to understand Mr. Clifford's position, even though both as a Greek and as a supporter of free democratic systems of government as a matter of moral and political principle, I am strongly opposed to dictatorship in any form. In my opinion, however, the premise that the Junta has or can bring stability to Greece is false. On the contrary, not only has the current junta failed to provide stability in spite of dictatorial and ruthlessly repressive tactics; it has actually created instability, uncertainty and the very real risk of civil war in Greece.

First, let us begin with the premise that the junta has brought military stability. Both the Pentagon and other senior U.S. officials claim that the Greek armed forces and terrain, as well as the U.S. and NATO bases in Greece, are necessary to maintain control of the Eastern Mediterranean, to deter direct communist aggression from the North, and to provide a vital link with Turkey which would otherwise not be a viable military ally. In addition they cite increased Soviet Naval strength in the Mediterranean to strengthen their argument. I agree with their assessment as to the importance of a strong and stable Greece as far as NATO is concerned. The key question then is: Have the colonels indeed provided this stability?

The Greek armed forces today are far less effective than they were prior to the coup. They are mainly an internal security force in which the Junta-controlled elements watch not only potential civilian opponents but also the very real latent opposition in the armed forces themselves. To this effect the continuing purges of the Greek military establishment two whole years after the April 21, 1967 coup are a key indicator.

The Junta has systematically removed from the armed forces an alarming number of the officers they consider unreliable. These hundreds of officers were trained at enormous American expense in the U.S., other NATO countries and Greece, since the Truman Doctrine of 1947. The officers purged were not and could not possibly be Communist, considering the nature of the recruiting process and the close ties between the Greek Armed Forces and the U.S. military and intelligence apparatuses. Indeed many of these officers fought against the communists in the Greek guerrilla war. On the contrary, the officers purged by the junta were generally

considered by Washington, the NATO authorities and the Joint U.S. Military Aid Group to Greece to represent the elite of the Greet officer corps. Their only sin was to have opposed the illegal seizure of power by a relatively small group of officers. These usurpers who seized power two years ago are reliably reported to number no more than 300, with a good percentage of them having intelligence and security training and background.

The purging of the cream of the Greek officer corps and a preoccupation with the internal security duties make the combat effectiveness of the Greek armed forces in time of full mobilization of the reserves an agonizingly open question mark for NATO planners. Thus the illegal seizure of power by the Junta and its subsequent actions have not only seriously weakened the combat capabilities of Greek armed forces; they have also undermined Greece's political and moral ability to fulfill its NATO commitments. For any crisis which required full mobilization would in all probability lead to the speedy overthrow of the Junta. This really explains why the Junta thought it wise to "defuse" the Cyprus crisis in November 1967. The armed forces have become mostly a police force which, under the new constitution, are also charged with preserving the "existing Social Order." The same reasoning applies to the U.S., NATO bases and other American listening posts and propaganda machinery operating on Greek territory. These bases are important. Yet in view of the climate in which they exist today it is a real question how much long-range strategy in the area can be built around them.

In view of the Soviet naval build-up in the Mediterranean, the Middle East crisis, the events in Czechoslovakia and the outflanking of Greece and Turkay by the Soviet Union's rapid strategic deployment along North Africa's coastline and the Middle East, it is indeed tragic that the Johnson administration should have used these events as reasons for supporting the Junta whose action has weakened the military capabilities and stability of the Greek armed forces.

Let us now turn to the key question of political stability which many supporters of the 1967 coup—including the Junta itself—cite as one of the prime benefits of the current Greek dictatorship. Measuring political stability is not easy when there is martial law and press censorship, when no opposition is permitted, and when violence, although on the increase, is still sporadic. The Junta alleges that they stepped in to save the country from the danger of Communism—yet even Greek Conservative leaders emphasize the fact that the danger of Communism was non-existent in Greece. They overthrew a Conservative Government.

Those who place too great an emphasis on the confused political situation in Greece as a justification for the Colonel's coup must remember that Greece fought a hard and dirty war against a foreign dominated and supported Communist aggression at the peak of the "Cold War" in Europe. The victory, although assisted greatly by U.S. material help and advice, was finally wrested with Greek, and only Greek, blood. If Greece was able to win this victory under a parliamentary government with basic democratic institutions functioning it is inconceivable that the current military dictatorship is necessary to correct alleged political instability.

There are some who argue that there was no political stability prior to the Junta and that the present arrangement is at least an improvement. This argument is superficial and needs a detailed recording of the events and the overall background that preceded the coup.

The fact is that political stability was damaged in the 1965–67 period by the intervention of the Greek Monarchy and its military establishment in the political process, thus perverting the institution of parliament and the mechanism of achieving political stability which had worked well until then. This was done by repeatedly denying the use of the best safety valve available to real democracies—Free elections.

In 1963 and early 1964, the eight years of conservative (ERE) rule under Prime Minister C. Caramanlis, ended at the polls with the largest majority in modern times for the Center Union Party led by the late George Papandreou. The peaceful transfer of power was accomplished in the middle of the Cyprus crisis involving the threat of a shooting war with Turkey, following years of impressive aggressive aggregate growth and financial stability. It was, to be sure, a growth in which many did not share; few reforms in education had been accomplished and not enough employment opportunities had been opened up, as indicated by the thousands who had to seek work abroad.

As Richard Westebbe of the World Bank, formerly senior foreign economic adviser to the Greek government said in 1963 in a penetrating report, "Greece's long-run structural problems concern deficiencies in the structure of production, in public administration, in education, in financial institutions, and in the distribution of income."

The victors promised a better distribution of income, a more rapid modernization of Greece to enable it to enter the Common Market, and a reform of Greece's institutions which, amongst other things, implied the paying of fair taxes by certain privileged classes and a reduced role of the Crown in controlling the Armed Forces and the political processes. In short, a return to the intent of the constitution which would have the King "reign, not rule." In foreign policy, Greece was to become a fully equal member of the NATO Alliance, with a real voice in determining its own destiny. In pursuing these goals there is no question that the Papandreou Government committed a number of mistakes and lost many opportunities.

The Center Union Party was soon faced with the violent and growing opposition of the Crown, the Armed Forces leadership, and the economic oligarchy—an opposition which was enjoying the support of a large part of the official American establishment in Athens. The story can be picked up with the elections of 1961 in which the Army, through the so-called "Pericles Plan," unnecessarily rigged the result to ensure a Caramanlis victory, when the real unadulterated result would have given his party a narrower victory or, at the very worst, would have forced it into a coalition with the Center. The election-rigging gave the liberal forces their cause and they exploited it until their ultimate victory at the next elections. When it was decided to bring down the Papandreou Government, a "treason plot" called "Aspida" was concocted and ascribed to the Prime Minister's son. The charge has never been proven and even the junta, four years later, has been unable to produce any evidence. The Papandreou Government retaliated by resurrecting the Pericles charges and conducting a formal investigation. The Generals panicked and persuaded the King of an imminent plot to seize power by unnamed leftist groups tolerated or led by Prime Minister Papandreou. The result was the overthrow of the elected government and a series of almost comic opera attempts to make parliamentary rump-governments from mid-1965 through Christmas 1966.

The agreement of the conservative and Center Union Parties to hold elections in 1967 in order to restore real parliamentary government, and thus political stability led directly to the Colonels' coup, only a few weeks before the elections were to be held under the Conservative Government of Mr. P. Canellopoulos. By the way he has spent a good part of the last two years under strict house arrest. The Athens colonels have since persecuted the leaders of all of Greece's major political groupings, i.e., the conservatives, the royalists, the Center Union—among whom were several of America's best friends—as well as the left and the extreme left. They have resorted to systematic torture of opponents, as was shown at the recent Strasbourg hearings of the European Human Rights Commission and as has been publicly condemned by leaders of the British, Danish, Swedish, Norwegian, Dutch and Italian governments, among others.

On March 27, 1969, Secretary of State William P. Rogers, in his first major presentation to the Senate Foreign Relations Committee, said he shared the "concern" of Senator Claiborne Pell (D-R.I.), "not only for the torture phase" of Greece's new military regime, "but for other civil liberty" infringements. The Nixon Administration has made an encouraging start on the explosive issue of Greece's military dictatorship, through this statement of Secretary Rogers, who went well beyond any comments of his predecessor.

Senator Pell, speaking in the Senate on October 3, 1968, and January 31, 1969, said: "Over the past months I have become increasingly concerned with one of the more heinous characteristics of the Greek dictatorship. I refer to the brutal behavior of this regime in the treatment of its own citizens." . . . "I said in a speech to this body in May 1967 that I deplored the illegal military seizure and that I deplored, moreover, the lack of any kind of strong, public reaction or expression of disapproval from the United States." . . . "It seems to me that the inescapable conclusion can only be that the revitalization of democracy in Greece is as much in our own interest as it is in the interests of the people of Greece. We should, therefore, do everything we can to encourage its prompt evolution."

Many senior U.S. government officials, at the time of the colonels' coup, argued that there was little the U.S. could have done because the coup took the U.S. by surprise and once it was successfully carried out the U.S. was faced with a fait accompli. This is untrue as the threat of dictatorship in Greece was spotted early and this threat greatly disturbed politically prominent Americans well before the actual coup took place.

As early as September 4, 1962, and again on October 13, 1963, Senator Barry Goldwater (R-Ariz.) in published interviews with this speaker stated: "I am particularly concerned about the political developments in that country (Greece) and I do believe that careful investigation should be carried out on those accusations against our U.S. Embassy role in Athens in the last Greek elections." And in 1963 he said: "I am against the establishment of a dictator any place. That is why I strongly attacked the suggestion made that the establishment of dictatorship in Greece would be an effective solution to Greece's problems. Oh, Lord, No. Greece is the most sophisticated, civilized country in the world. Our democratic way of government came from Greece. It would be tragic if Greece, where democracy itself was first founded, were to go back to a dictatorship. I can't even imagine the Greeks thinking about it."

And in the summer of 1966 a galaxy of highly placed and influential U.S. personalities, covering the spectrum of the American political life, condemned publicly, very strongly and in no uncertain terms, the possibility of a military dictatorship of any kind in Greece, under whatever pretext. They also urged the Johnson Administration to take all necessary steps to ensure that such a catastrophic development for the American interests will not occur.

Their names are: The Speaker of the House of Representatives J. McCormack, Senators V. Hartke, S. Thurmond, E. McCarthy, J. Javits, W. Morse and E. Kennedy. The Chairmen of the House Judiciary, Armed Services and Agriculture Committees, Congressmen E. Celler, M. Rivers and H.

Cooley. The former Chief of Naval Operations, Admiral A. Burke and the former Supreme NATO Commander in Europe, General L. Norstad. And the then Governor of California E. Brown.

They spelled out their views to me in question-answer format, taped, typed and unofficially signed press interviews, which received wide coverage both in Europe and America. In short, there were numerous, early and authoritative warnings given to Washington, but to no avail.

Since 1947, America has played a decisive role in Greece, and, beginning in 1959 with Ambassador Ellis Briggs—now a strong advocate of the Athens' colonels—America has pursued disastrous, contradictory and vacillating policies—policies largely influenced by inter-service and personality rivalries. Should these policies be continued the communists will have an opportunity to organize and lead a liberation movement in Greece, for the first time since the late 1940's, with wide support and backing from non-communist elements in both Greece and Western Europe. Such a movement, even if led by communists, would ironically be formed under the banner of returning democracy to Greece. Thus, the tragic makings of a new Vietnam in Greece are all there.

It is very important for Americans to understand that there is widespread belief in non-communist Europe that Washington was involved, either by commission or omission, in the April 21, 1967 coup and is responsible for keeping the Athens colonels in power. While the substance of the more extreme forms of these theories has not been proven yet, the U.S. should realize that these beliefs have done much more than the criticism of the Vietnam War or the DeGaulle policies to undermine basic U.S. positions and interests in this vital area. This point, in many ways the most telling, is supported by such a personality as Mrs. Helen Vlachou-Loundras, well known publisher of the most influential conservative Greek newspapers, who was forced into exile in London, when, after the Junta seized power, she bravely refused to publish under censorship. (Her husband—wartime hero conservative Navy Captain Costas Loundras—was sentenced to eighteen months imprisonment after he was kept by the Junta in solitary confinement for fifty days). Mrs. Vlachou-Loundras spoke about the Greek regime in London on October 17, 1968:

"So the moment of truth is approaching, and the first brand new European dictatorship since the war is about to emerge, born of The Pentagon by the CIA, reared by NATO, surrounded by doting businessmen. It is no use criticizing the Americans, divided as they are between those who would like to chase the junta but can not do it, and those who can, and will not."

The European reaction to the Greek coup can be gleaned in the following statements: West German Socialist Deputy, Klaus Schultz, said recently, "It was 36 years ago that Hitler took power in my country. And he did it under conditions far more democratic than those imposed by the Greek colonels." British Laborite Bob Edwards, during the debate whether to expel Greece from the Council of Europe for violating the 18-nation organization's statutes on human rights, said: "I am amazed at some of these speeches. We heard them between the wars—Franco was going to hold elections. Hitler was no dictator and Mussolini made the trains run on time."

In a futile attempt to improve their international image, to buy desperately needed time and to overcome the stubborn refusal of Greeks of prestige and ability to work for the regime, the junta announced a referendum on a new constitution in September 1968. This document, which received the private blessing of some American officials, in fact, makes the Armed Forces the sole final source of power, the guardian of the status quo and the dispenser of civil liberties in Greece. Thus the constitution in effect gives the wolves the responsibility for guarding the lamb by giving the Athens Junta full power to "protect" the liberties they had already seized from the Greek people. The subsequent referendum on the colonel's constitution resulted in a Soviet style vote of 92.2% and was carried out under conditions of martial law. The really free sentiments of the Greeks became manifest a few weeks later when over 300,000 people in Athens spontaneously demonstrated against the regime and for democracy on the occasion of the funeral for George Papandreou, the last elected Prime Minister. On March 29, 1969, the influential London Economist wrote: "Mr. Papadopoulos (the head of the junta) has clearly reconsidered his views about a regrouping of political forces, which would eventually produce a satisfactory alternative to the present regime. He now argues that the constitution cannot be brought fully into force, and normal parliamentary democracy allowed to function, until the Greeks have acquired the necessary political maturity."

"The slowness with which the authorities are completing some of the legal formalities needed to make the provisions of the constitution operative, suggests that Mr. Papadopoulos is trying to keep all his options open. About a quarter of the constitution is still not even theoretically in force, including the provision for the creation of a constitutional tribunal, which the regime considers essential for the proper functioning of democracy. Nor has the prime minister yet fulfilled his pledge to introduce a law to allow the regime to ease or tighten martial law as it thinks fit, so that the Greeks can show how well they can behave under conditions of relative, or disciplined, freedom. All this deliberate slow motion is justified by the argument that the Greeks need time to acquire enough political maturity to decide who should govern them—although last September they were apparently sufficiently mature to decide in a plebiscite how they should be governed."

On the eve of the NATO Ministerial meeting in Washington, earlier this month, the Junta feeling the weakness of its position—both domestically and internationally—announced a series of supposed "liberalization" measures, under the new constitution. These measures, however, would be applied only after appropriate legislation is drafted and promulgated. According to Mr. Papadopoulos, this will take at least six months. But he did not explain how these two constitutional freedoms of assembly and of association could be reinstated under martial law, even if the legislation required to make them operative were to be enacted. What a mockery! Thus, the aim of his move is quite transparent; a typically flatfooted gesture on his part to forestall several NATO countries pressure for an early restoration of democracy in Greece.

Finally, let us turn to the alleged economic stability which the Junta pledged to bring to Greece. I believe that as a result of the coup, Greece is far more likely to be faced with a serious economic crisis, instead of stable growth.

The rate of growth of the Greek economy which averaged close to 8% a year in the period of 1960–66 was reduced to about half this figure in 1967, when good crops and an illusory increase in services offset a sharp fall in industrial investment leading to stagnation in manufacturing output. In 1968 manufacturing recovered somewhat but low crops held the growth rate to about 4%. Admittedly, the building boom had already leveled off by April 1967. However, the collapse of confidence following the coup led to a sharp fall in business investment and consumer purchasing. Imports into Greece stopped rising, and people hoarded money. The reaction of the Government was to stimulate demand and buy popularity. A massive give-away took place when all farm debts amounting to some $280 million to the U.S. financed Agricultural Bank were written off. This not only penalized farmers who had paid their debts but probably convinced all farmers, who constitute some 45% of the total population, that there is no point in paying future loans, What is perhaps worse is that the immense resources distributed in this way have not been directed towards raising farm productivity and bringing about the long needed structural reform of Greek Agriculture.

Bank credit and Government spending programs were greatly expanded. The money supply increased at an annual rate of 20% in 1967, and although the growth in money has decelerated since, it has not been matched by comparable increases in output. The recovery of consumer demand in 1968 has already led to a renewed import growth and some pressure on prices. Exports barely rose in 1968 and tourist earnings declined for the second year in a row, since the Junta took over. Another mainstay, emigrants' remittances, are stagnant. The result is a worsening balance of payments position. This has been partly shielded by drawings on the secret gold sovereign reserve and partly by a number of short term loans concluded with U.S. and European banks which are reliably reported to be secured by the nation's gold and hard currency reserves.

In the past, Greece's basic current trade imbalances were offset by rapidly growing tourist, emigrants and shipping remittances. These were increasingly augmented by capital inflow, mainly on private account from abroad. The prospect of maintaining balance of payments equilibrium at the present exchange rate and with free imports lay in a hoped for rapid rise in industrial and agricultural productivity. Unfortunately, with low growth rates and a sharp fall in private investments the outlook is for controls and/or devaluation, including rescheduling of all recently contracted short term foreign debt.

Further the mammoth spending programs have created a large inflationary potential which could lead to crisis conditions in a short time.

A confidential 12-page report prepared in March 1968 on Greece's Economic and Financial Developments by the Morgan Guaranty Trust Company of New York, states that:

"The regime has, however, displayed an increasing number of signs that it intends pursuing a 130-style authoritarian course. On the one hand, it has been intensely, nationalistic, having called repeatedly for a regeneration of Greek life. On the other, it has taken a number of steps designed to appeal to the lowest socio-economic groups: freezing prices; raising some incomes; and providing working girls with dowries. All this has taken place against a background of increasingly restrictive measures. Nevertheless, the combination has thus far been successful. Some of the reform introduced by the Papadopoulos government—especially those relating to the bureaucracy—have been to an extent necessary and desirable. The constitution, which the government was supposed to introduce in response to pressures from Western Europe, and has to be made public. However, any constitution which the drafters might develop would be meaningless because the regime does not intend that there be any return to democracy.

"Since the coup, Greek economic activity has slowed down; GNP growth rate is officially estimated to have been 5% in 1967—and privately put nearer to 3%—compared with 7.4% in 1966. Much of this has been due to a slowdown in investment, especially of the private sector. However, in 1967 the trend toward more rapid growth of industrial than agricultural production was reversed—agricultural production grew faster than industrial, largely due to the rapid growth of the latter in 1966. Prices have been stable due to a price freeze. Wages, on the other hand, have been allowed to rise rather rapidly. The overall government

budget deficit for 1968 will again be large—mostly due to the rising government investment budget."

At the end of March 1969, in a series of speeches to merchants, industrialists and others, Mr. Papadopoulos tried to undo the damage caused to the economy by the crippling uncertainty over the regime's intentions. He was not particularly successful. He insisted that the regime had achieved the political stability needed to expand economic activity. But his claim that it was not a dictatorship, but only a "parenthesis . . ., that was necessary to put things straight," was contradicted by his further assertion that "whether you like it or not, the revolution is a reality and you cannot get rid of us."

The Government made numerous appeals to attract foreign capital. Its most publicized achievement for political, propaganda and lobbying reasons, was the signing of a lucrative contract with Litton Industries (a few weeks after coming to power) which guarantees the latter a handsome annual fee as well as a commission on all investments it induces to come to Crete and the Western Peloponnesus. It is of interest to note that Litton withdrew its proposals prior to the coup, due to overwhelming parliamentary opposition. To date Litton has produced some studies and very small-sized investments coming mainly from the Litton group companies. It would seem that even their corporate name has not been sufficient to overcome the doubts of those who might have put their money in Greece. That's why, according to reliable information, both the Junta and Litton, at this very moment, are mutually dissatisfied with each other's performance. In addition, Litton was unhappy when last year the U.S. Department of Justice disclosed that it had launched an inquiry to determine whether Litton has engaged in activities which require it to register as a foreign agent. Although most foreign investors found pre-Junta Greece a favorable spot for private enterprise, a difficulty did arise in the case of the Esso-Pappas refining, petrochemical and steel complex. This contract was strongly criticized by the Center Union before it came to power and was renegotiated to Greece's advantage while they were in power. Oddly enough, Pappas has since then managed to avoid, with Junta approval most of the less profitable investments he was supposed to undertake and he has emerged as one of the most influential and vocal backers of the Junta in the U.S.

Finally, much has been made of a recent agreement of the Junta with Onassis to establish a new refinery, aluminum plant and tourist investments totaling some $400 million over fifteen years. Specific features, according to reports from Athens, include his right to supply crude oil, in this case Russian, shipped in his own tankers, as well as guaranteed employment for part of his tanker fleet. Further, the prospect of another aluminum plant is far from an unmixed blessing. There is no cheap power left in Greece. Onassis proposed to produce high cost power with his oil in his own thermal plants. He would charge himself an artificially low power rate in order to produce aluminum and would force all other Greek consumers of power to pay a much higher rate for the excess power he would produce. It is significant that the Onassis effort to build the alumina-aluminum plant in partnership with the U.S. Reynolds Metals Company has fallen through and on March 17, 1969, the latter announced that it had ended talks with Onassis.

In summary, instead of bringing about stable economic growth the Junta has presided over a tragic misuse and waste of national resources, in an attempt to buy acceptance and some semblance of legitimacy. The resulting "gold rush" to extract favorable concessions from the Athens Colonels in return for supporting their dictatorship has resulted in the sacrifice of important Greek economic resources and interests which no parliamentary government could have undertaken and remain in office.

Alfred Friendly writes in the Washington Post of April 5, 1969, from Athens:

"The battle of the Greek tycoons, the former brothers-in-law, Aristotle Onassis and Stavros Niarchos, over which one will operate the proposed new $400 to $500 million investment program for a new oil refinery, aluminum plants and several tourist projects raised for the first time the suspicion of corruption with the junta.

"The government's off-again, on-again, handling of the intricate affair may have been merely clumsy or shabby, testifying only to its administrative incompetence. But on its face, the Niarchos proposal, which was ultimately rejected, seemed so much more advantageous to the country than that of Onassis as to suggest bad faith by the regime.

"One would have supposed that, once the suspicion arose, the government would have taken elaborate pains to demonstrate clean hands. After all, one of the Junta's most loudly proclaimed justifications for its coup two years ago was the promise that it would end the notorious corruption of previous governments. If it is subject to the same failing, it loses a principal excuse for its existence.

"Suspected of sticky fingers, the regime's logical response would have been to lay out the proposals in detail, argue them and supply a complete explanation of its final choice. Instead, after a few weeks of pulling and hauling, the junta clamped complete censorship over the whole matter. Nothing more may be printed about it in the Greek press. The consequence was obvious; what was once a smoldering rumor is now a wildfire scandal."

The political anomaly of a banana republic dictatorship in present day non-Communist Europe has led to a suspension of some $55 million of European Bank loans to Greece under the Treaty of Association with the Common Market. The long run future of Greece's association with the Common Market, the first of its kind, is in fact in doubt. As Greece's chief Common Market negotiator John Pezmatzoglu, then Deputy Governor of the Central Bank, said in a 1966 Bank of Greece message, the economic union of Greece with the EEC was based, on the mutually agreed, basic objective of an ultimate political union of Greece with its European partners.

Since then the Governor of the Central Bank, Professor X. Zolotas, an internationally respected central banker, and the equally prominent Professor J. Pezmatzoglu have resigned in protest over the Junta and its policies. In fact, the great bulk of Greece's trained professionals have refused to participate in the Government, a phenomenon which has seriously hindered efforts at rational economic policy formulation and implementation. Last year, during a Congressional investigation conducted by the House Subcommittee on International Finance, on the proposed first World Bank loan to Greece, its influential Chairman, Congressman Henry S. Reuss of Wisconsin, criticized strongly the World Bank and the Johnson Administration for the proposed loan. He even criticized some of the new so-called "non-corrupt" leadership of Greece's economy when he identified the new Deputy Governor of the Bank of Greece, a Mr. Constantine A. Thanos, as having plagiarized his doctoral dissertation and other works and whose proposed appointment to the faculty of the University of Athens, in 1963, was vetoed because of these affairs. Reuss also questioned whether Greece, governed by such people and under these conditions, could be considered creditworthy for international public lending.

In conclusion I believe that it is imperative for the Nixon Administration, which is in the advantageous position of having no responsibility for the events and policies of the last few years, to conduct a basic and urgent review of US policy towards Greece on the following grounds:

A. The assumption that the current military regime in Athens has or can bring stability is incorrect.

B. The Junta has greatly weakened Greece's military capability and political ability to fulfill its NATO commitments.

C. The situation in Greece is potentially dangerous.

If present policies are continued, a new Vietnam could result.

D. The widespread belief in Europe that the U.S. is responsible for the coup and for keeping the colonels in power is seriously damaging to America's position in Europe.

E. The existence of a military dictatorship in Greece is morally and politically repugnant especially to the extent that it appears that the United States is supporting this regime.

In considering U.S. policy towards Greece I would like to here make several points directed primarily to American conservatives. It has been a tragedy that many American opinions and actions concerning Greece have been viewed as a political issue between conservatives and liberals. As a result of the opposition to the Greek junta by many prominent American liberals, all too many American conservatives have not realized the true nature and intent of the current Greek regime. While Greek political liberals have suffered as a result of the coup, as many Greek conservatives with well-known anti-communist credentials have been suppressed, imprisoned, and driven into exile by the junta. In fact, many of the most severe critics of the coup and the current regime could be described as conservatives. In the light of the Athens colonels' past and continued repression of anti-communist Greek conservatives and the often-forgotten fact that the colonels seized power from a conservative government, I would ask some American conservatives who have either largely remained neutral or have supported the current Greek regime to reconsider their positions. For the situation in Greece cannot be described or understood along American political lines. In this case both American liberals and conservatives, perhaps for different but compatiable reasons, should oppose the authoritarian dictatorship imposed on the people of Greece by a small group of colonels in Athens.

Thus, in reviewing U.S. policy towards Greece I would suggest that the following specific changes in the policies inherited by the Nixon Administration would be both in the interest of the United States and the Greek people.

ACTION

1. A Clear-cut public condemnation of the Greek Junta by the new administration and real efforts of disassociation from the Johnson Administration policies, attitudes and methods used in dealing with Greece.

2. Delay the appointment or appoint, but do not dispatch, to Athens a new U.S. Ambassador and make clear to the junta and the NATO Allies the real reasons for such a delay.

3. Terminate immediately and completely all U.S. military aid to the Athens regime and reverse the disastrous decision taken on October 21, 1968, during the dying gasps of the previous Administration, to resume delivery of major U.S. military equipment to the Athens Colonels. Such a decision, under those circumstances, gave in effect official public U.S. government approval to the Athens military dictatorship.

With the U.S. presidential elections only two weeks away, the Congress adjourned, and three weeks after a rigged "referendum," conducted by the Greek Junta under martial law, the Johnson Administration felt that it was safe and advisable to go ahead with a decision that was strongly debated and

shelved repeatedly by the same Administration in the past.

4. Take the initiative for joint NATO action against the Junta by exercising maximum diplomatic, economic and military aid pressure, on a well coordinated basis, in behalf of the Atlantic Alliance. Such an American initiative will take options away from Moscow policy-makers and will build up U.S. influence in NATO and among the European liberals, intellectuals and youth. Such a U.S. initiative would have worldwide favorable repercussions and Washington will be in a better position to exploit existing turmoil among Moscow's Eastern European Communist satellites, non-satellites and the Communist parties in non-Communist Europe.

5. Give full U.S. support to the efforts of the Common Market and the Council of Europe to isolate morally, politically and economically the Athens Colonels.

6. Find other appropriate ways and means to support actively and effectively all anti-junta, anti-communist elements who represent the vast majority of the Greek people.

7. Strong efforts should be made to dispel the belief of U.S. involvement and support of the Greek Junta in Greece and the rest of Europe, including the use of the Voice of America. Such efforts are essential to forestall violent anti-American backlash in Greece, which otherwise is a virtual certainty.

8. As a last resort, taking up a line already gaining ground in NATO, particularly in Denmark, Norway, The Netherlands and Italy, and moving to expel Greece from the Alliance.

POINTS

A. All the above peaceful measures are sufficient if used effectively, in my opinion, to overthrow the Greek dictatorship without bloodshed, and without risking American lives, as you do in Vietnam today, or you did in Korea, Lebanon and in the Dominican Republic. The Nixon Administration must have learned some very valuable lessons recently with the events in Pakistan, the crisis in Peru and the negotiations over the Spanish bases. These events proved the grave risks inherent in dealing with anti-Communist military dictatorships and should help dispel the myth that such regimes serve effectively the U.S. interests.

B. If the Junta is overthrown by these peaceful measures proposed to the Nixon Administration, Washington will be in a much better position to deal also with the Middle East crisis, having the full support and cooperation of the liberated (with American support) Greek people, and the U.S. and NATO bases presently in Greece will not any longer be surrounded, as is the case today, by an increasingly hostile population, which makes their value presently, in case of emergency, at least doubtful.

C. More than 100,000 hard-core Greek Communists live in various parts of the Eastern European communist world, including the thousands of young children abducted by the retreating Greek Communist guerilla forces in 1949. These children are now completely trained militarily and indoctrinated. Greece has very extended and rugged mountain frontiers with her northern Communist neighbors. These facts may represent, at a given moment, an ace in the hands of Moscow and Peking.

D. Greece's unique geographical position places her athwart the crossroads of Europe, Asia, the Middle East, and Africa. The Middle East and Africa are two areas where the Greeks for centuries have maintained the closest ties and interests. On the northern borders of Greece is a kaleidoscope of three different kinds of communism: The Peking style in Albania (where more than 2,000 Chinese advisors are stationed in this first Chinese beachhead in Europe), the Moscow style in Bulgaria, and the Tito style in Yugoslavia. This fact itself makes Greece a very good western "window", and ideal listening and influence post for the Southeastern European area. But it also makes Greece far more exposed to external communist and Slavic chauvinistic pressures now greatly complicated by the current Sino-Soviet confrontation.

E. The U.S. record over the last decade clearly shows a very benign attitude toward right-wing military coups while registering great alarm over left-wing ones. The so-called Schwartz doctrine (former State Department policy planner and top Pentagon authority on international security affairs) makes clear the U.S. will not interfere with extra-constitutional, totalitarian rule by anti-Communist governments. This double standard justified accusations all over the world and naturally Greece.

We were all dismayed at the ruthless crushing with Soviet military power of the modest liberal reforms which were taking place in Czechoslovakia. No satellite could be allowed to sway that far from orthodoxy and control in the minds of Warsaw Pact hard liners. Moscow paid a heavy price in terms of world condemnation and the discrediting of hard core Czech Communists. To many, the parallel of the U.S. position in Greece is disquieting. And Moscow's diplomats and propagandists are counter-attacking criticism aimed at their Czechoslovakian action by pointing to the U.S. role in Greece since April 1967. For the coup against the prospect of a liberal, but pro-NATO government was carried out by people closely connected with the U.S. military, intelligence and financial complex, with U.S. weapons and using a top-secret emergency NATO plan. All in the name of anti-Communism, the preservation of the orthodoxy of Greece in the Western Alliance and protecting the Monarchy, which the Junta forced into exile eight months later. Moscow intervened with Soviet troops to crush what she considered dangerous Czechoslovak liberation tendencies. While I do not believe that the use of U.S. troops to protect the freedom of the Greek people was or is necessary, it is a tragedy that the Johnson Administration played the role of Pontius Pilatus while U.S.-supplied tanks were used to crush Greek democracy even though ample warnings about the impending coup existed. That the Johnson Administration, on many occasions, has given the impression of supporting the dictatorship of the Athens Colonels, is doubly disquieting, considering that the freedom of the Greek people was guaranteed by NATO which Greece freely joined as a free nation in 1952.

In the process the U.S.'s best friends were systematically destroyed. In the end the Greeks will force their oppressors out of power. The process could be bloody and might well involve the U.S. in another Vietnam type situation. It is, therefore, legitimate to ask why long-term U.S. interests are being sacrificed in Greece for the sake of a ephemeral appearance of security and stability and whether it is wise to continue along this road to disaster much longer.

ANATOMY OF A ROAD

HON. JACK H. McDONALD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. McDONALD of Michigan. Mr. Speaker, on Monday I was privileged to join with highway officials and representatives of industries deeply involved in highway safety in previewing a film, "Anatomy of a Road."

This is a 27-minute, 16-millimeter color film produced by CBS Productions in Detroit. It will be distributed through General Motors film libraries and Modern Nation.

Its aim is to foster public appreciation of the value of good roads by helping the layman to understand what is involved in roadbuilding.

As "Anatomy of a Road" makes abundantly clear, roadbuilding is a complex, difficult process requiring substantial capital investment, legislative action, legal due process, engineering skill and hard work. It is easy to see why roadbuilding takes time.

Many people today are appalled at the cost of modern highways and many have even wondered whether they are worth that cost. "Anatomy of a Road" endeavors to set that record straight by showing the public where its tax dollars go.

The film also covers such controversial areas as funding, land acquisition and beautification.

"Anatomy of a Road" explains and illustrates each of the major steps in highway construction from preliminary planning through completion and maintenance.

Mr. Speaker, this is a most informative and important film. I am hopeful every Member of this body will have the opportunity of viewing it. I am also hopeful each Member will advise schools, service clubs, and television stations in his district of its availability.

THE NATIONAL DEFENDER

HON. PATSY T. MINK

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mrs. MINK. Mr. Speaker, one of society's greatest concerns is the crime rate, which has been increasing in recent years to an unprecedented level. All of us are looking for solutions, and among many aspects worthy of attention is improvement in the judicial system.

I have long felt that we should provide a Defender General to rank equally with the Attorney General in our judicial systems. At the various judicial levels, the Defender General would help insure that each defendant received his full legal rights.

Such a system was acted on by the Hawaii Legislature this year, with prospects that it could become a model for public defender systems in other States. Significantly, Gen. Charles L. Decker, director of the National Defender Project, predicted that Hawaii's plan could "reduce the crime rate 15 percent in the first year."

General Decker's remarks, "A Look Ahead," were made before the National Legal Aid and Defender Association in Washington, D.C., on May 16, 1969. Because of their timely application to today's crime problem, I insert them at this point in the RECORD:

A LOOK AHEAD

(Remarks of Charles L. Decker, director, National Defender Project)

After over five years of lending assistance throughout the country to States, counties

and cities in striving to provide equal justice in criminal trials we can take stock of the lessons learned from the National Defender Project. Then we can look ahead.

When this project started, we kept an open mind as to the best kind of organization to provide defender services in the communities throughout the country, one conclusion was definite before we had been in operation a year—providing defense to those who cannot afford a lawyer is not a job to be accomplished at the last minute by the random assignment of counsel. In every State there should be an organization worked out so that counsel are provided efficiently, so that court calendars are not delayed, so that defense counsel is competent in representation.

We suggest to you that the proceedings at this conference have made it clear that every State should have an organization at the State level—and the Nation at the national level as well—which would be headed by a man whose title would be that of defender general or director of defense. The old statement that a rose would smell as sweet by any other name may be true. However, in governmental organization, names and titles do have significance. The title given to the man who is responsible for the representation of defendants should be equivalent to the title given to the man who is responsible for prosecutions. The title public defender is associated with defense of the poor individual cases. The title defender general would mark the man responsible for criminal defense generally—proper representation of all defendants. He would be responsible for policy as well as law.

You have heard from State public defenders at this conference and you have been able to question them—and you can question them further—as to the efficiency of their organizations. Wherever such an organized system exists, we submit that many of the deficiencies discovered in the operation of the criminal process can be corrected by conference and mutual agreement between the State public defender (and from now on I will refer to him as the defender general) and the attorney general of the State. Where improvements can not be made in the criminal process without legislation, the defender general and the attorney general can consult. They can recommend improvements to the judicial conference. With the judiciary, the prosecution and the defense in agreement, they may present a fair case for any legislative reforms that are needed. Such support for legislation would go far in removing the frequent lags in legislative reform.

Where the bench, prosecution and defense do not agree, each can present the views pertaining to his activities to the appropriate committees of the legislature, and we can rely on the American process to resolve disputed problems better when the three parties to the criminal process are all represented—not just the judiciary and the prosecution.

By achieving improvement among State officials where legislative change is not required we cut down appeals and post-conviction proceedings. By more efficient accomplishment of needed legislative changes, we cut down still further the probability of appeals and post-conviction proceedings. In sum, we come closer to our goal. When we are able to try cases correctly in the first instance, gentlemen, we give to the citizens of the city, the county and the State a feeling of confidence in the fair and equitable administration of justice. That makes for a better society and a stronger government.

Many of you who are here today are working in your own communities to establish State defense organizations that will fulfill the purposes of which we have spoken. I suggest to you that, when the leaders of the bench, the bar and the community have worked out a plan which fits a community, they still have the job of public education. We must bring the administration of criminal justice home to every neighborhood if it is to have full support. I suggest that there is one ingredient that must be added to an intelligent and workable plan. That ingredient is grim, dogged persistence on the part of leaders in continuing education and re-education of the community—and let all the community join in the great work.

These observations on the need for organization and on the need for a State Defender General and a Federal Defender General apply to the present and the very near future. They are not long range. They are coming to pass—in fact, they have passed and are passing—you have heard at this conference of two State legislatures which have passed bills providing for organized defender systems headed by a State Public Defender within the past two weeks. Currently, the legislature of Hawaii is considering the best plan to date. If the bill passes as written, and if carried fully into effect, I am of the opinion that it will reduce the crime rate 15% in the first year.

Before I move a little further into the future, I want to say once again what you have heard from many others already at this meeting. For nearly two centuries the lawyers of America have been donating free services to defendants in criminal cases who could not afford lawyers. I submit to you that we have been trying too long in vain to prove the falsity of the old adage: "You get what you pay for." The only way to provide competent representation is to pay for it, and I suggest that the principal source of these funds should be the governmental source. The Government has the primary interest in the proper administration of criminal justice. It should pay the charges for both the prosecutors and the defenders. I would also like to observe in passing that, in my opinion, both prosecutors and defenders are underpaid and that we will have a better administration of criminal justice when the compensation of the lawyers on both sides of the table in a criminal trial comes closer to the compensation realized by attorneys of like training and experience who practice in other areas of the law.

Now I would like to pass to a look that goes somewhat further into the future.

About half the business of our courts is now related to the administration of criminal justice. I suggest to you that the time has come to have a department of criminal justice—or it should take whatever name seems most appropriate to the government concerned. But it should be a department at the cabinet level of government. It could be headed by a director of criminal justice who might be appointed by the duly elected chief executive officer of the government. I further propose to you that under the director of criminal justice should be gathered all of the activities pertaining to the administration of criminal justice other than the judiciary. I believe that the best way to provide competence and continuity would probably arise out of a system which would give to all members of the department of criminal justice a professional career status or a status providing similar continuity and security. I believe that all of the heads of departments under the director of criminal justice should be career lawyers and that there should be, within the department, a career management division to see to it that the lawyers were so assigned that they reached high stages of competence in the whole area of criminal justice as they progressed in their careers.

Under the Director of Criminal Justice, at the very least, should be a Director of Prosecutions, a Director of Defense, a Director of Police and Investigations, a Director of Legal Research and Planning (who would be responsible for preparing the positions of the department to be presented to the legislature) and, above all, a comptroller who would be charged with continuous study to provide efficiency and proper compensation and to insure against the waste of Government funds. Of course, the Department of Corrections and Rehabilitation would be under the Director of the Administration of Criminal Justice. Under a career plan it would be expected that the career lawyers would be moved through the various activities so that, at the end of 15 or 20 years, they would have a thorough comprehension.

Ultimately, we suggest to you that the Director of Prosecutions and the Director of Defense would not supervise or interfere in the trial of individual cases. They would be policy makers and would direct the flow of case assignments. Further, there should come a day when lawyers will no longer be designated defense attorneys or prosecution attorneys. They should be lawyers who could objectively do a full and fair job of representation on either side at any time. Thereby we would avoid any tendency to assign the more outstanding career counsel to either prosecution or defense.

We suggest to you that there should come a time when every individual, rich or poor, would be assigned a defense counsel by the Government. If the individual then wished to retain his own counsel, the Government counsel could be excused and the individual could retain and, of course, pay his own counsel.

To those who would say that this would destroy the criminal bar, I suggest to you that nearly all of our prominent defense lawyers had their original defense training in prosecutors' offices and stepped from Government employment into private practice. I suggest further that career lawyers would continue to step into private practice so as to provide a good supply of private practitioners who would be, of course, in the higher pay bracket. Correspondingly, qualified private practitioners could be admitted at appropriate levels into the career system, thus providing appropriate infusions of new ideas and cementing the Department of Criminal Justice more closely to their brothers in other areas of practice.

Not a single one of the ideas that I have placed before you in these past few minutes is less than a thousand years old. Good men are born, flourish briefly here on earth and then they die. Good ideas are born, flourish briefly or for a long time, then they are lost or isolated in other countries in a time of social upheaval—but they never die. As we look to the future, let us find and reassemble some of the best ideas, organize and implement them, so that the idea of equal justice will become a mature reality that will never die.

A SALUTE TO A NEW PUBLICATION

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. LEGGETT. Mr. Speaker, the problem of urban blight, both physical and psychological, has consumed an enormous amount of time in the Halls of Congress and the corridors of Government agencies and special commissions. Many of us are beginning to feel that the decaying structure of the inner city is irreversible. It is heartening to learn therefore that a group of Washington inner city residents are attacking one segment of this problem on their own.

I refer to the publishers of the upcoming magazine the People on the Streets. These three young men, Peter A. Noterman, a noted corporation lawyer, Richard Margolies, a member of the Institute for Policy Studies, and Vernerd Gray, a photographer, have already entered the prepublication stage of this venture.

Mr. Noterman, the spearhead of the group, has stated that there is a striking need for communication among inner city residents, but this need is not fulfilled through the existing channels. People seldom write letters to their friends or to those they can expect to see from time to time in their neighborhoods.

If a man has an idea he generally speaks it to his wife, or friend, or bar companion, smuggling it into general conversation, and watching it drift away with the usual vague smoke of talk.

If the person with the complaint or concept is possessed of an itch to write, he composes a poem or story or formal essay, perhaps manages to have it accepted for publication, and addresses it to distant readers whose names and circumstances he cannot know.

The theory behind the People on the Streets is striking in its simplicity and accessibility. Beginning in July, the magazine will be published and distributed to the people who live in the Adams-Morgan and Dupont Circle areas of Northwest Washington. It is open to all who wish to write for it. It is to serve as an instrument whereby people can write about what they know and think for their friends and enemies; parents and teachers; fellow writers and workers.

This is to be a self-supporting venture, not dependant on public or foundation funds.

I am sure all the Members of the House will applaud this venture which will attempt to solve a local problem on the local level with local participation.

APOLLO 10 TO CREDIT OF MILITARY, INDUSTRY

HON. BENJAMIN B. BLACKBURN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. BLACKBURN. Mr. Speaker, I am sure most Members of Congress have received numerous letters berating the military-industrial complex, containing a quote, taken out of context, from the farewell address of former President Eisenhower.

It was, therefore, very gratifying to me to read a letter written to the editor of the Atlanta Journal upholding the work of the complex. The letter is in regard to one of the more outstanding accomplishments of the so-called complex.

I might add, Mr. Speaker, that the accomplishment makes me proud to be an American.

The letter follows:

LETTERS TO THE EDITORS: APOLLO 10 TO CREDIT OF MILITARY, INDUSTRY

The EDITORS: As I watched in awe the beginning of the Apollo 10 flight, I was so deeply impressed, as I am sure many other millions of Americans were, with the incredible bravery of the crew and with the fantastic technological achievement it represented. There are few Americans, I think, who did not feel a deep sense of pride in the accomplishment of our fellow Americans who brought this to realization.

And then my train of thought went on to ponder that these men who rode Apollo 10 and the men who designed and built it were members of the so-called "military-industrial complex." The latter term has somehow been subtly used as a dirty word by the left wingers and even by some of our national legislators, who at best should know better and at worst bring their patriotism into doubt. Most charitably perhaps, they should be viewed as dupes of the people who seek to make of the United States a second rate power. The "military-industrial complex" is not a monolithic, faceless, inorganic mass. It is composed of individuals whose sons fight, bleed and die in Vietnam just as the inhabitants of the ghetto do and just as many other American sons are doing. I am sure that there are none in this "complex" who would not want the war over tomorrow and their sons back in the States regardless of the consequence it might have on their business or on their career.

The same companies that made the spacecraft, the fuel that powered it, the instrumentation that directed it, are almost without exception manufacturers of goods for civilian and peace time use to a much greater percentage than their war business represents.

One final word. The military is being assailed in some quarters for the Vietnam war, when any thinking person knows that the decisions which brought on our involvement in the war and even in the pursuit and conduct of the war itself, are almost entirely political. So let's get off the back of the military and industrial complex and give them the honors which they deserve for their amazing achievements and for making our country strong and keeping it that way.

FREDERICK J. WALTERS.

ATLANTA.

THE ECONOMICS OF MILITARY PROCUREMENT

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. HARSHA. Mr. Speaker, it was with great interest that I noted today's publication of the report, "The Economics of Military Procurement," by the Economy in Government Subcommittee of the Joint Economic Committee.

To say the least, this excellent and perceptive report does much to pinpoint the too long endured squanderbund of multibillions of taxpayers' dollars by the obviously grossly mismanaged area of military procurement within the Department of Defense.

Certainly, among other things, this report does much to underscore the propriety of my presentation, before this body, of two rather typically routine cases of the great morass of competition restriction and dollar waste too long permitted within the U.S. Army Electronics Command.

My first presentation, on May 15, concerned that which, with pointed conservatism, I estimated to have cost $835.125 in sheer waste. Though, admittedly, this was the smallest such case that I could find in my file, my second presentation, on May 26, concerned that which, again with pointed conservatism, I estimated to have cost at least $30,000,000 in waste out of a total sum of about $75,000,000 spent on one project.

It is, therefore, quite understandable that I found abundant documentation of my own discoveries and my own effort to expose and remedy this incredible condition in such statements as these within the subcommittee's incisive indictment of Department of Defense procurement practices and procedures:

There is evidence that literally billions of dollars are being wasted in defense spending each year.

Huge cost overruns, slipshod management of multi-billion dollar weapons programs and concealment of information from Congress and the public have become common practices at the highest levels of the Pentagon.

In my concern and efforts regarding this strange, even suspect, disdain by the military procurement people for the American tradition of free competition and sound, dollar-conscious business practices, it is understandable that I also found documentation and support for my position in the fact that, among the subcommittee's specific criticisms were:

Lack of competition in procurement practices producing high costs, poor performance and late delivery of items being purchased.

Some experts believe that in the absence of effective competition procurement costs are 25 percent to 50 percent higher than what they would be under competitive conditions.

All of these elements of complaint and criticism lay shockingly at the heart of both of the Army Electronics Command cases which I have placed before the House. Although these cases are tragic enough, the greater tragedy is found in the fact that they are neither new nor different from a bizarre pattern of performance which, dating back to the urgency of World War II, has proved the backbone of the ever-expanding, already monstrously hulking phenomenon which the late President Eisenhower defined as the "military-industrial complex," and against which, with both wisdom and concern, he attempted to warn us.

As I told this body yesterday, the kindest thing that can be said for those responsible for this condition would be "incredible indifference," or "inordinate stupidity"; for to brand it more severely—and perhaps we should—would tend to suggest the possible propriety of the indictment and prosecution of someone, somewhere.

Meanwhile, as I also noted, it is in consideration of this problem which, obviously, the military procurement people will not rectify by themselves, that I am currently drafting legislation designed for remedy.

HOUSE OF REPRESENTATIVES—*Wednesday, May 28, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Let us follow after the things which make for peace.—Romans 14: 19.

Eternal God, our Father, in whom our fathers trusted and were never let down, bless us this day as we bow before Thee in loving memory of those who laid down their lives for our country.

We thank Thee for men and women in time past who gave themselves that freedom may have fresh air in our Nation, and we are grateful for those in time present who are giving themselves that liberty may continue to live in our land.

That these may not have lived and died in vain we pray Thee to unite our people in one great purpose to preserve the principles of freedom, justice, and good will, and by Thy grace may we learn to live together in the spirit of true brotherhood.

Pour out Thy spirit upon us in such measure that we may turn from war to peace, from poverty to plenty, and from hate to love, through Jesus Christ our Lord. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Leonard, one of his secretaries, who also informed the House that on May 23, 1969, the President approved and signed bills of the House of the following titles:

H.R. 33. An act to provide for increased participation by the United States in the International Development Association, and for other purposes; and

H.R. 8794. An act to amend the Marine Resources and Engineering Development Act of 1966 to continue the National Council on Marine Resources and Engineering Development, and for other purposes.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the amendment of the House to a bill of the Senate of the following title:

S. 278. An act to consent to the New Hampshire-Vermont interstate school compact.

The message also announced that the Senate had passed a joint resolution of the following title, in which the concurrence of the House is requested:

S.J. Res. 60. Joint resolution to establish a Commission on Balanced Economic Development.

FLAG DAY CEREMONIES

(Mr. ALBERT asked and was given permission to address the House for 1 minute.)

Mr. ALBERT. Mr. Speaker, the 192d anniversary of Flag Day will be celebrated on Saturday, June 14, 1969. It was on Saturday, June 14, 1777, that the Continental Congress adopted a resolution which provided "that the flag of the 13 United States be 13 stripes, alternate red and white: That the Union be 13 stars, white in a blue field, representing a new constellation."

During the ensuing 191 years, 37 stars have been added to that blue field, and the American flag has continually flown as a symbol of true liberty.

In 1917, during the First World War, President Woodrow Wilson issued the first Presidential proclamation calling upon the entire Nation to hold appropriate ceremonies on June 14 to honor our flag. For the past 2 years the House of Representatives has reinstituted dignified and appropriate Flag Day ceremonies in this Chamber.

Mr. Speaker, because I believe it important that the House of Representatives continue this tradition, to again give honor to our Stars and Stripes and to the principles which our flag symbolizes, I ask unanimous consent that it may be in order at any time on Thursday, June 12, 1969, for the Speaker to declare a recess for the purpose of observing and commemorating Flag Day in such manner as the Speaker may deem appropriate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

The SPEAKER. The Chair may state for the information of the Members of the House that after consultation with the distinguished minority leader the Chair has informally designated the following Members to constitute a committee to make the necessary arrangements for appropriate ceremonies in accordance with the unanimous-consent agreement just adopted: The gentleman from Texas, Mr. BROOKS; the gentleman from Alabama, Mr. NICHOLS; the gentleman from Indiana, Mr. ROUDEBUSH; and the gentleman from Missouri, Mr. HALL.

POSTAL REFORM

(Mr. KLEPPE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. KLEPPE. Mr. Speaker, through the years, the U.S. postal system has been something like the weather. Everybody talks about it but nobody does anything about it.

Now President Nixon and Postmaster General Blount have come forward with innovative ideas for reforming the postal system, for bringing it into the 20th century, so to speak. The Pony Express had a place in its time but that time has long passed.

Certainly there must be improvement in the general management of the Post Office Department. There must be better service at reasonable rates.

The fact that the Nixon administration clearly recognizes the need for reform of the postal system is a proposed long step toward the achievement of this goal.

POST OFFICE DEPARTMENT

(Mr. HAYS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAYS. Mr. Speaker, I have been reading here a little about a new bill to turn the Post Office Department into some kind of corporation—a la big business.

If they are going to turn it over to a corporation, for example, like the automobile companies that cannot even build automobiles that will not fall apart, I am not so sure that they are going to improve the Post Office Department at all. In fact, possibly they could make it worse.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I am glad to yield to the gentleman.

Mr. GROSS. We are hearing a great deal about this noble enterprise of establishing in the Federal Government probably the biggest monopoly, at least one of the biggest monopolies, in the history of this country—a monopoly that would involve a $7 billion annual business and 740,000 employees.

There are any number of questions—scores of unanswered questions concerning this proposal. I hope this proposal will be fully explained to the public and I hope those who now so enthusiastically support this proposition will be prepared to answer all of the vital questions.

Mr. HAYS. I do not know that they will be prepared to answer. There is one thing wrong with the proposition, it will not get enough votes.

The SPEAKER. The time of the gentleman from Ohio has expired.

ANNUAL REPORT OF RAILROAD RETIREMENT BOARD, FISCAL YEAR 1968—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91–27)

The SPEAKER laid before the House the following message from the President of the United States; which was read, and, together with the accompanying papers, referred to the Committee on Interstate and Foreign Commerce and ordered to be printed with illustrations.

To the Congress of the United States:

I am pleased to transmit to you the Annual Report of the Railroad Retirement Board for fiscal year 1968. During that year, retirement and survivor benefit payments totaled $1,403,000,000 and were paid to over one million beneficiaries. Unemployment and sickness benefits provided by the Railroad Unemployment Insurance Act amounted to $76,000,000 and were paid to almost 300,000 beneficiaries. I commend this report to your attention.

RICHARD NIXON.

THE WHITE HOUSE, *May 28, 1969.*

FOURTH ANNUAL REPORT OF OFFICE OF ECONOMIC OPPORTUNITY, FISCAL YEAR 1968—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91–123)

The SPEAKER laid before the House the following message from the President of the United States, which was read, and, together with the accompanying papers, referred to the Committee on Education and Labor and ordered to be printed with illustrations.

To the Congress of the United States:

I am transmitting herewith the fourth annual report of the Office of Economic Opportunity, covering that office's activities during fiscal year 1968.

RICHARD NIXON.

THE WHITE HOUSE, *May 28, 1969.*

FOREIGN AID—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91–122)

The SPEAKER laid before the House the following message from the President of the United States; which was read and referred to the Committee on Foreign Affairs and ordered to be printed:

To the Congress of the United States:

Americans have for many years debated the issues of foreign aid largely in terms of our own national self-interest.

Certainly our efforts to help nations feed millions of their poor help avert violence and upheaval that would be dangerous to peace.

Certainly our military assistance to allies helps maintain a world in which we ourselves are more secure.

Certainly our economic aid to developing nations helps develop our own potential markets overseas.

And certainly our technical assistance puts down roots of respect and friendship for the United States in the court of world opinion.

These are all sound, practical reasons for our foreign aid programs.

But they do not do justice to our fundamental character and purpose. There is a moral quality in this nation that will not permit us to close our eyes to the want in this world, or to remain indifferent when the freedom and security of others are in danger.

We should not be self-conscious about this. Our record of generosity and concern for our fellow men, expressed in concrete terms unparalleled in the world's history, has helped make the American experience unique. We have shown the world that a great nation must also be a good nation. We are doing what is right to do.

A FRESH APPROACH

This Administration has intensively examined our programs of foreign aid. We have measured them against the goals of our policy and the good of our conscience. Our review is continuing, but we have come to this central conclusion:

U.S. assistance is essential to express and achieve our national goals in the international community—a world order of peace and justice.

But no single government, no matter how wealthy or well-intentioned, can by itself hope to cope with the challenge of raising the standard of living of two-thirds of the world's people. This reality must not cause us to retreat into helpless, sullen isolation. On the contrary, this reality must cause us to redirect our efforts in four main ways:

We must enlist the energies of private enterprise, here and abroad, in the cause of economic development. We must do so by stimulating additional investment through businesslike channels, rather than offering ringing exhortations.

We must emphasize innovative technical assistance, to ensure that our dollars for all forms of aid go further, and to plant the seeds that will enable other nations to grow their own capabilities for the future.

We must induce other advanced nations to join in bearing their fair share—by contributing jointly to multilateral banks and the United Nations, by consultation and by the force of our example, and by effective coordination of national and multilateral programs in individual countries.

We must build on recent successes in furthering food production and family planning.

To accomplish these goals, this Administration's foreign aid proposals will be submitted to the Congress today. In essence, these are the new approaches:

1. ENLISTING PRIVATE ENTERPRISE

I propose the establishment of the Overseas Private Investment Corporation.

The purpose of the Corporation is to provide businesslike management of investment incentives now in our laws so as to contribute to the economic and social progress of developing nations.

The majority of the Board of Directors, including its President, will be drawn from private life and have business experience.

Venture capital seeks profit, not adventure. To guide this capital to higher-risk areas, the Federal government presently offers a system of insurance and guaranties. Like the Federal Housing Administration in the housing field here at home, the Overseas Private Investment Corporation will be able to place the credit of the United States Government behind the insurance and guaranties which the Corporation would sell to U.S. private investors.

The Corporation will also have a small direct lending program for private developmental projects. It will carry out investment survey and development activities. And it will undertake for A.I.D. some of the technical assistance required to strengthen private enterprise abroad. The financial performance of OPIC will be measurable: It is expected to break even or to show a small profit.

The Overseas Private Investment Corporation will give new direction to U.S. private investment abroad. As such, it will provide new focus to our foreign assistance effort.

Simultaneously, I propose a mandate for the Agency for International Development to direct a growing part of its capital, technical and advisory assistance to improving opportunities for local private enterprise in developing countries—on farms as well as in commerce and industry.

We do not insist that developing countries imitate the American system. Each nation must fashion its own institutions to its own needs. But progress has been greatest where governments have encouraged private enterprise, released bureaucratic controls, stimulated competition and allowed maximum opportunity for individual initiative. A.I.D.'s mandate will be directed to this end.

2. EXPANDING TECHNICAL ASSISTANCE

I propose a strong new emphasis on technical assistance.

Over one-fifth of the funds requested for fiscal year 1970 are for technical assistance activities. Imaginative use of these funds at the points where change is beginning can have a gradual but pervasive impact on the economic growth of developing nations. It can make our dollars for all forms of aid go further.

Technical assistance takes many forms. It includes the adaptation of U.S. technical knowledge to the special needs of poor countries, the training of their people in modern skills, and the strengthening of institutions which will have lives and influence of their own. The main emphases of technical assistance must be in agriculture, education and in family planning. But needs must also be met in health, public administration, community action, public safety and other areas. In all of these fields, our aim must be to raise the quality of our advisory, training and research services.

Technical assistance is an important way for private U.S. organizations to participate in development. U.S. technical assistance personnel serving abroad must increasingly come from private firms, universities and colleges and nonprofit service groups. We will seek to expand this broad use of the best of our American talent.

A.I.D. is preparing plans to reorganize and revitalize U.S. technical assistance activities. A new Technical Assistance Bureau headed by an Assistant Administrator will be created within A.I.D. to focus on technical assistance needs and ensure effective administration of these activities. The bureau will devise new techniques, evaluate effectiveness of programs, and seek out the best qualified people in our universities and other private groups.

To make it possible to carry through these plans most effectively, I am requesting a two-year funding authorization for this part of the A.I.D. program.

3. SHARING THE ASSISTANCE EFFORT

I propose that we channel more of our assistance in ways that encourage other advanced nations to fairly share the burden of international development.

This can be done by:

—Increasing jointly our contributions to international development banks.

—Increasing jointly our contributions to the United Nations technical assistance program.

—Acting in concert with other advanced countries to share the cost of aid to individual developing countries.

Most development assistance—from other advanced nations as well as the United States—is provided directly from one country to another. That is under-

standable. Such bilateral programs provide assistance in accordance with each country's own standards, make the source more visible to the recipient's people and can reflect historical political ties.

But assistance through international development banks and the United Nations is approaching a fifth of total world-wide aid for development and should be expanded. Multilateral programs cushion political frictions between donors and recipients and bring the experience of many nations to bear on the development problem. Moreover, they explicitly require shared contributions among the advanced nations. This calls for funds in addition to those which I am proposing today.

I appreciate the prompt response by the Congress to my earlier proposal authorizing the United States to join with others in the second replenishment of the International Development Association. I urge early passage of appropriations for this contribution so that we may meet our pledge.

I reaffirm my request for appropriations in Fiscal 1970 of $20 million for the ordinary capital of the Asian Development Bank, and $300 million for our scheduled contribution to the Fund for Special Operations of the Inter-American Development Bank.

In separate legislation I will submit a new proposal for a U.S. contribution of $25 million to the Special Fund of the Asian Development Bank in FY 1970. I am convinced that a fairly-shared Special Fund, to enable the Bank to provide concessional financing for priority needs, is a necessary supplement to the Bank's ordinary lending facilities. The United States should join with other donor countries in establishing this Special Fund, and strengthen the Bank so that it can better deal with Asia's current development problems and future needs.

The United States will consult with the management of the African Development Bank and with other potential donors, to identify the most appropriate way we can support the objectives of African development and assist in meeting the needs of that continent.

Today's proposed legislation includes a 43 per cent increase in the U.S. contribution to multilateral technical assistance through the United Nations Development Program. Our contribution will be on the same sharing basis as in the past.

4. FURTHERING FOOD PRODUCTION AND FAMILY PLANNING

This Administration, while moving in the new directions I have outlined, will apply the lessons of experience in our foreign aid programs.

One basic lesson is the critical importance of releasing the brakes on development caused by low agricultural productivity. A few years ago, mass starvation within a decade seemed clearly possible in many poor nations. Today they stand at least on the threshold of a dramatic breakthrough in food production. The combination of the new "miracle" seeds for wheat and rice, aid-financed fertilizer, improved cultivation practices, and constructive agriculture policies shows what is possible. They also demonstrate the potential for success when foreign aid, foreign private investment and domestic resources in developing countries join together in a concerted attack on poverty.

The experience of this decade has also shown that lower rates of population growth can be critical for speeding up economic development and social progress. An increasing number of countries have adopted national family planning programs to attack the problem. At least another decade of sustained hard work will be needed if we are to win the battle between economic development and population. But our assistance to voluntary family planning programs and support for the work of the United Nations and other international organizations in this field must continue to have high priority, as will our support of efforts to increase food production.

Another important lesson is that our aid programs need better means of continuous management inspection. We are creating a new position of Auditor-General in the Agency for International Development. His job will be to make sure that A.I.D.'s funds are used for their intended purpose and that A.I.D.'s operations are managed as tightly and efficiently as possible. He will report directly to the A.I.D. Administrator.

LEGISLATIVE AND BUDGET REQUESTS

The proposed legislation revises that part of the present Foreign Assistance Act which deals with economic aid, to reflect the priorities of this Administration. The proposals are designed to accomplish the following:

—Create the Overseas Private Investment Corporation and authorize its programs for an initial five years.
—Strengthen A.I.D.'s mandate to use official aid to stimulate private initiative in development.
—Expand the role of technical assistance under consolidated legislation and a two-year authorization.

The proposed budget includes new appropriation of $2,210 million for A.I.D., $138 million below the January budget request of the previous Administration. In addition, the budget includes $75 million to augment existing reserves for guaranties to be issued by the proposed Overseas Private Investment Corporation.

The appropriation request for economic assistance will support these regional programs:

—For Latin America, $605 million.
—For the Near East and South Asia, $625 million.
—For Africa, $186 million.
—For East Asia, $234 million.
—And for Vietnam, $440 million.

In order to protect the U.S. balance of payments at the same time we are providing assistance abroad, goods and services will be purchased in the United States wherever practicable. Over 90 percent of all A.I.D. expenditures and virtually all purchases of goods will be made in the United States. The remaining funds that are spent abroad are mainly for living expenses of U.S. personnel and for other local expenditures in support of technical assistance programs.

For military assistance, the proposed budget includes $375 million, the same as in the January budget. Maintenance of a climate of international security still calls for military strength sufficient to deter aggression. Seventy-seven percent of the total amount available for the military assistance program will be allocated to four of our long-standing allies—Korea, the Republic of China, Turkey and Greece. The balance of the request will be used to provide modest amounts of training and equipment to 44 other countries where our security and foreign policy interests are partially met by this form of assistance. We are negotiating a renewal of our base agreement with Spain. If these negotiations succeed, we shall then need to request an amendment to this authorization asking for additional funds to cover our year's needs for Spain.

The United States will continue to provide military assistance from the U.S. Armed Services budget to Vietnam, Laos, and Thailand.

I am also asking in separate legislation for $275 million for credit necessary to facilitate the purchase of essential military equipment by countries now able to buy all or a growing part of their defense requirements. These funds will be returned to the United States during the next few years as the purchasing countries meet their repayment obligations.

PLANNING FOR THE SEVENTIES

I believe these proposals for fiscal year 1970 are sound—and necessary to make clearly desirable improvements in our foreign aid program.

But we need to learn more about the role which foreign assistance can play in the development process and the relationship between development and overall U.S. foreign policy.

I am therefore establishing a task force of private citizens to make a comprehensive review of the entire range of U.S. aid activities, to consider proposals of the United Nations bodies and international commissions, and to help me determine what our national policies should be toward the developing countries in the decade of the 1970s. I will look to the task force's report in developing the program next year, in my response to the Javits Amendment to the Foreign Assistance Act, and in considering the recommendations of the internationally-sponsored Pearson Commission report to be published in the fall.

TOWARD A WORLD OF ORDER

Foreign aid cannot be viewed in isolation. That is a statement with a double meaning, each side of which is true.

If we turn inward, if we adopt an attitude of letting the underdeveloped nations shift for themselves, we would soon see them shift away from the values so necessary to international stability. Moreover, we would lose the traditional concern for humanity which is so vital a part of the American spirit.

In another sense, foreign aid must be viewed as an integral part of our overall effort to achieve a world order of peace and justice. That order combines our sense of responsibility for helping those determined to defend their freedom; our sensible understanding of the mutual benefits that flow from cooperation between nations; and our sensitivity to the desires of our fellow men to improve their lot in the world.

In this time of stringent budgetary restraint, we must stimulate private investment and the cooperation of other governments to share with us in meeting the most urgent needs of those just beginning to climb the economic ladder. And we must continue to minimize the immediate impact on our balance of payments.

This request for foreign economic and military assistance is the lowest proposed since the program began. But it is about 900 million dollars more than was appropriated last year. I consider it necessary to meet essential requirements now, and to maintain a base for future action.

The support by the Congress of these programs will help enable us to press forward in new ways toward the building of respect for the United States, security for our people and dignity for human beings in every corner of the globe.

RICHARD NIXON.

THE WHITE HOUSE, *May 28, 1969.*

PRESIDENT'S MESSAGE ON FOREIGN AID

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, I have always supported the foreign aid program in principle because I believe it helps to further one of America's national goals—that of promoting peace and order in the world. However, I have become increasingly critical of the manner in which our foreign aid program has been administered, the repeated instances of waste, stupidity, and corruption, and the appalling lack of results in relation to tremendous U.S. investments.

Against this backdrop of comment, I would like to say that I am pleased by the thrust of President Nixon's foreign aid message. It appears to signal a new direction in our foreign aid program, focusing as it does on a fresh approach to private enterprise involvement in the program and on multination assistance programs rather than unilateral U.S. aid to the third world.

On the face of it, the President's proposed Overseas Private Investment Corporation appears to be an excellent idea. Assuming its approval by the Congress, the proof will be in the implementation of the proposal. I also heartily approve the President's declared intention to place a mandate upon the Agency for International Development to help improve opportunities for local private enterprise in the developing countries.

I particularly commend the President for his proposal to create a position of Auditor General in AID, assuming that the new Auditor General will be a man of great determination and the courage to ride herd on his own people. I am hopeful that President Nixon can greatly strengthen the AID program by establishing the new position of AID Auditor General. I base that hope in part on the fact that the Auditor General will be reporting directly to an excellent administrator, former Michigan State University President John Hannah.

In essence I endorse the Nixon foreign aid program. But I take no position on the dollar amount. The Congress will scrutinize the dollar requests and then work its will. We can make a judgment on the fund requests only on the basis of supporting data.

Mr. ARENDS. Mr. Speaker, in the area of foreign aid, as in so many other areas of Government action, the Nixon administration has demonstrated a capacity to think anew and act anew. The President's message on foreign aid makes clear his belief that the important thing is not the amount of money you spend but the way in which you spend it. The most important question is "how?" and now "how much?"

This ability to distinguish quantitative and qualitative questions is a heartening development. In a society as huge and complex as ours, political discussion and debate too often degenerate into mere comparisons of quantity. It is easy, after all, to write a headline which says that the budget for a certain program is up so many dollars or down so many dollars. It is much harder to measure quickly and to communicate concisely the skills and strategies with which those dollars are administered. But the Nixon administration has nonetheless put its emphasis on quality, on getting better results for each dollar we spend. Though the headlines may not fully express that emphasis, I believe that the Congress will fully appreciate the point.

The President's strategy for foreign aid reflects the advice of those who have examined our programs most closely over the last few years. It places greater emphasis on private investment abroad, going beyond mere exhortation and actually creating new means for action toward that end. It puts a great emphasis, too, on technical assistance which will help other countries do more for themselves. Third, it significantly increases our efforts to encourage multilateral forms of foreign assistance and greater contributions by other developed countries. Fourth, it meets squarely the issue which is rapidly becoming the most important one of our time after the question of war and peace. I refer to the critical matter of food production and population control. In addition, through the provision of an Auditor General for AID, the new approach will improve the level of performance in existing programs.

In all of these ways, the Nixon strategy breaks through the conceptual stagnation of the past and offers a refreshing approach to a very important area of foreign policy.

Mr. FRELINGHUYSEN. Mr. Speaker, President Nixon, in his foreign assistance message to Congress, struck directly at the basic aim of our entire assistance program when he described our efforts as "essential to express and achieve our national goals in the international community—a world order of peace and justice."

President Nixon's emphasis on technical assistance and on greater participation by private enterprise is to be commended. These are two areas which should be strengthened.

I was pleased to see the President firmly state the continuing importance of foreign assistance, while at the same time proposing a comprehensive review of the entire range of these activities. This review could lead to further recommendations to improve and strengthen our assistance to developing nations.

As a longtime supporter of foreign assistance, it is my hope that Congress will act quickly along the lines recommended by the President for our aid program.

Mr. MACGREGOR. Mr. Speaker, the President has asked that we redirect our foreign aid efforts in four major ways:

First. We must enlist the energies of private enterprise.

Second. We must emphasize innovative technical assistance.

Third. We must induce other advanced nations to join in bearing their fair share.

Fourth. We must build on recent successes in furthering food production and population control.

The key word here is "redirection." The President has wisely shown that although the ultimate goal of foreign aid is the same, we must strike out on new paths to better reach that goal.

These, then, are the four new paths: of private initiative, of technological genius of burden sharing among advanced nations, and of direct human aid in needy areas.

The four new paths will, I am certain, be seen as new directions in a journey toward a better world.

Mr. RHODES. Mr. Speaker, last year the Congress directed the President to undertake a study of all U.S. foreign assistance programs, economic and military, to make interim recommendations by June 30, 1969, and to submit a final report by March 31, 1970.

The interim recommendations are contained in the President's foreign aid message, in the provisions of the proposed Foreign Assistance Act of 1969, and in the foreign aid program presentations to the Congress.

The major conclusions and recommendations are these: foreign assistance remains an essential function of U.S. foreign policy and must be continued for reasons of national self-interest and collective good conscience; private enterprise and individual initiative must play an even greater role in development; technical assistance must be more imaginatively used, more effectively managed and more generously funded; our highest priorities must continue to be increasing food production and reducing soaring population growth rates.

This year's foreign aid bill replaces substantial parts of the Foreign Assistance Act of 1961, which authorizes the AID program, to reflect new priorities and new directions—primarily the increased use of private enterprise in development and the greater focus on technical assistance.

The bill creates a new Overseas Private Investment Corporation to take over most of AID's present U.S. investment incentive programs and carry out other activities in cooperation with developing nations to increase the contribution of U.S. investment to development. The bill lays new stress on AID's role as a stimulant to private enterprise abroad. The legislation emphasizes the impor-

tant role of technical assistance in the development process by grouping in one place the provisions relating to bilateral and multilateral technical assistance and providing a 2-year funding authorization.

Mr. TAFT. Mr. Speaker, during the presidential campaign last year. President Nixon pointed out that the world was very much like a city, and that in the world city, as in our own American cities, "we can preserve our hard-won abundance only by bringing the have-nots within the affluent society." He echoed that affirmation of the mutual interdependence of mankind when he said in his inaugural address that we are all "riders on the earth together, brothers in that bright loveliness in the eternal cold."

The Presidential message to the Congress on foreign aid, provides another manifestation of his commitment to these truths. At a time when some say the whole idea of international aid is obsolete, the President has reaffirmed the place of such programs in our foreign policy. What is obsolete is not the notion that nations should help one another, but rather the particular ways in which we have tried to put that notion into practice in the past. By emphasizing new kinds of aid and new ways of providing help, he has given us reason to believe that these programs will work more effectively in the future.

The President has asked for less in quantitative terms. The dollar amount of his request for foreign economic and military assistance is the lowest that any President has proposed since the program began. But the advantage possible per dollar spent promises to be much greater than it was previously. The new administrative procedures, along with new emphasis on private investment, technical aid, multilateral programs, and food and population control, should make for much wiser spending strategies.

I am confident that the more we study the Nixon proposals, the greater will be our confidence in the way the money will be used. For this is not a President who spends money recklessly, nor does he ask for authorizations which are greater than the need. We must take him at his word when he says that he considers this request barely sufficient to meet essential requirements.

I applaud the President's message on foreign aid and hope that other Members of the Congress will do the same. Our foreign aid programs need a new infusion of energy, creativity, and support. This program can provide all three.

Mr. ANDERSON of Illinois. Mr. Speaker, we have heard so long of the evils of the march of technology that we have begun to believe it.

I commend the President for reminding us in his message that technology is only as inhuman as we choose to make it. We are not fated to become victims of computer morality or mechanized joy or dehumanizing automation.

Technology can be—and our moon voyages have demonstrated that it already is—not an enemy of our spirit but its best friend.

The President's request for increased technical assistance in foreign aid is proof that he is not afraid of the future, that he will not criticize man's technological genius for political ends, that he knows that it is in our power to use technology to protect and enhance human values.

There are those who say we spend too much in dollars and time on technological progress. They say we should be doing other things in other areas.

They are like the men in England led by the man they called King Lud, who chose to break the machines that were building a new world. We say instead: direct the machines with human concern and the new technology can build a better world. In foreign aid technological progress can restore the spirit of a people and help to give each individual his chance in the world.

Mr. BROCK. Mr. Speaker, there is much to be pleased about in the President's foreign aid message. I am especially impressed with his emphasis on food production and population growth.

There is historic good news from the less developed world: gains in grain production in the developing nations are outrunning the rate of population growth. Furthermore, in an increasing number of developing nations, the threats of runaway population growth is generating official family planning and other programs. In the face of these twin developments, the recent predictions of widespread famine by 1980 are giving way to cautious optimism.

In South and East Asia and parts of the Near East, yields of new varieties of wheat, rice and other grains are doubling and tripling traditional output. In India and Pakistan between 1961 and 1968, the combined population grew by 18.7 percent—while the two countries' production of wheat and rice rose by 21.3 percent. In 1961, with a population of 1.4 billion, all of the developing nations of the free world together produced 268 million tons of grain. In 1968, with a population more than 20 percent larger—1.7 billion—the same countries harvested over 24 percent more grain—335 million tons.

Today, accelerated progress is possible on the farmlands of the developing world. But whether the poor countries make this progress will depend largely on the availability of adequate aid from advanced nations, particularly development loans.

Good weather helped—but by no means explained—the gains in food production of the last few years. A case in point is India which expects this year's food grain harvest to be close to last year's record, even though this year their weather has not nearly matched last year's outstanding monsoon.

The larger harvests in the poor countries are the result of innovations in economic policies, as well as in science and technology. The United States has helped introduce and encourage both types of innovation—by furnishing critical extra resources and skills, and by helping to influence development policies.

GENERAL LEAVE TO EXTEND

Mr. GERALD R. FORD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of the President's message and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

TRANSFER OF FUNDS WITHIN OFFICES OF CLERK AND SERGEANT AT ARMS OF HOUSE OF REPRESENTATIVES

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I call up the resolution (H. Res. 425) and ask unanimous consent for its immediate consideration.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Clerk read the resolution, as follows:

H. RES. 425

Resolved, That the Clerk of the House and Sergeant at Arms be and is hereby directed to pay such sum as may be necessary, from the balance available of the 1968 appropriation and the various funds of the 1969 appropriation, where balances may be available, for the House of Representatives to meet the May and June payroll of Members, officers of the House, and employees of the House. Moneys expended from these funds and/or appropriations by the Sergeant at Arms and the Clerk will be repaid to the funds and/or appropriations from the Sergeant at Arms and Clerk's supplemental appropriation upon its approval.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. FRIEDEL. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Speaker, I wanted to intercede before action is taken on this resolution. I would like to have some points of information. I appreciate the gentleman yielding and the Speaker protecting the Member.

Mr. Speaker, I gather from this resolution—and I had hoped there would be a complete explanation of it—that maybe somebody is running out of money and wants to get his hand in a pocket where there is a little money, in order to pay the "troops" between now and the time the supplemental appropriation that was passed here the other day goes into effect, or a new fiscal year rolls around and all the pay increases are in—or something to that effect.

My first question is: Just who is out of money?

Mr. FRIEDEL. The Sergeant at Arms is out of money. He cannot pay salaries of Members on June 1 unless we transfer funds from the Clerk of the House to the Sergeant at Arms. Next month the Members, their staffs, and other employees of the House will not be able to be paid unless we pass this resolution.

Mr. HALL. Mr. Speaker, if the gentleman will yield further, House Resolution 425 says: "That the Clerk of the House and Sergeant-at-Arms"—presumably of the House also—"be and is hereby directed to pay such sum as may be necessary."

How can the Sergeant at Arms pay this money and who is putting whose

hand into whose pocket? That is what I want to know, and it is not clear from the way the resolution is written.

Mr. FRIEDEL. The Clerk of the House has some funds left over and unexpended in his accounts—such as the furniture account. Also, the Members have not used all their allowances and we have some amount of money left in the contingency fund in the Clerk's office. This will be transferred to the Sergeant at Arms to pay Members for this month. If we do not pass this resolution, we cannot pay the Members. It is just a bookkeeping transaction.

In other words, we have already passed the supplemental appropriations bill, and we are awaiting action by the Senate. Once that bill becomes law, the funds will be available.

Mr. HALL. Mr. Speaker, the gentleman is very kind. I must say he talked to me ahead of time about this resolution. "This is a nice clean, sweet, little resolution," he said. I appreciate what the gentleman believes and has said. But is it the intent of the committee or whoever is knowledgeable as to the contents of the resolution to take a little time to explain to the Members where these funds are? I cannot imagine getting enough money out of the "furniture account" to pay the Members' salaries pending the passage of the supplemental appropriation. I hope the distinguished gentleman will yield or will take time to give us in the House a little bit of accounting about whose hand is going into whose pocket. From the way this is written, it looks like the Clerk of the House and Sergeant at Arms can have their hands in each other's pocket. It still is not clear where the money is coming from.

Mr. LIPSCOMB. Mr. Speaker, will the gentleman yield?

Mr. FRIEDEL. I yield to the gentleman from California.

Mr. LIPSCOMB. I thank the gentleman for yielding.

The reason for this resolution is because on July 1 of last year there was an increase which went into effect for our clerk hire. Then last month there was an increase which went into effect which pertained to the Members of the House.

Last week a supplemental appropriation bill was passed by the House, which included the funds for these increases for fiscal year 1969. That bill has not been passed by the Senate yet.

Inasmuch as we have a payday for the month of May coming up tomorrow, and a payday for the month of June coming up later, it is necessary to acquire the necessary funds in the accounts of the House of Representatives to keep current on our pay.

This resolution was introduced to give the opportunity to the Clerk of the House and to the Sergeant at Arms to meet the payroll by transferring funds from accounts which have enough funds left at this time to in effect loan the money.

Now, there could well be a deficit by the end of June in these accounts for pay, in the amount of over $5 million. The idea is to borrow from various accounts where funds are available, such as court reporting and telephone and telegraph and others, and to spend that money for salaries now; and, then, when the supplemental is passed by the Senate, we will put the money back in the various accounts and balance the books. This is strictly a bookkeeping entry proposition. The money will be put back into the various accounts and used for the proper purposes. It is strictly a transaction on the books.

Since this resolution was introduced a day ago, some members of the Committee on House Administration have had the opportunity to look at the records of the Clerk of the House to see what accounts they are going to use and the balances available, and we feel that this resolution will do the necessary job to meet the payrolls that are coming up in May and June.

Mr. HALL. Mr. Speaker, will the gentleman yield further?

Mr. FRIEDEL. I yield to the gentleman from Missouri for a question.

Mr. HALL. Do I correctly understand from the gentleman's statement, along with that of the chairman, that there are various funds available which would "bail out" the Sergeant at Arms until such time as the supplemental is passed; and that in the interim, since this House resolution was introduced so quickly and so recently, the accounts have been seen and audited, so to speak, by the gentleman and the Committee on House Administration; and that they are in order; and, finally, that this resolution simply other fund's pocket on a pro tem basis and provides for restoration after the makes it legal for the hands to be in the supplemental is passed? Are those all statements that can be answered "Yes."

Mr. FRIEDEL. Absolutely.

Mr. LIPSCOMB. If the gentleman will yield further, I can answer the statement "Yes" with one qualification. We had a chance to look at the balances that were available in the various accounts, including the leftover funds from fiscal year 1968 which are still available, but I want to specifically say we did not have a chance to audit the funds. We saw the balances which were available.

Mr. HALL. Of course, a question arises as to why funds not used in 1968 did not revert to the General Treasury. I shall not raise that question at this time, in view of the assurances the gentlemen has given me. I appreciate the gentleman's yielding.

Mr. LIPSCOMB. If the gentleman will yield further, I would be pleased to answer that on the record, because I think it is an important point.

Funds that are 1-year funds are returnable to the Treasury, but they remain in the hands of the authorized person to handle those funds for 2 years afterward to pay bills that may be outstanding, and then the funds revert to the Treasury.

Mr. FRIEDEL. That is correct.

Mr. LIPSCOMB. At this moment it is not known whether there are telephone bills or furniture bills or other bills outstanding which may have to be paid out of the fiscal year 1968 funds.

At the required legal time the Clerk and the Sergeant at Arms will return unused funds to the Treasury.

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. FRIEDEL. I yield to the gentleman.

Mr. HAYS. There is one other point that ought to be made. The Clerk has the money to pay part of these salaries but just not enough to pay them all. So he is asking in this resolution to borrow a small amount, in the sum of $210,000, from these other funds. It is not as though he does not have any money to pay any of the salaries, but it is just that he does not have enough to pay them all.

Mr. FRIEDEL. That is correct.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FRIEDEL. I yield to the gentleman from Iowa.

Mr. GROSS. Is it common or uncommon practice to juggle funds in this fashion?

Mr. FRIEDEL. There have been precedents.

Mr. GROSS. And it is possible to step in and get funds out of the woodwork as easy as this?

Mr. FRIEDEL. It is only a question of bookkeeping.

Mr. GROSS. When did the Committee on House Administration meet on this subject and approve this resolution?

Mr. FRIEDEL. We were notified the other day that the Clerk and Sergeant at Arms will be out of funds, and the resolution is for this funding.

Mr. GROSS. Did the full committee ever meet on it?

Mr. FRIEDEL. We polled the committee and got a majority vote.

Mr. GROSS. You did what?

Mr. FRIEDEL. We polled the committee.

Mr. GROSS. You did not have a session?

Mr. FRIEDEL. No, sir. But we looked into all of these figures to verify what has been said on the floor here today.

Mr. GROSS. This whole pay increase business has been a juggling process. This is the clincher.

Mr. LIPSCOMB. Mr. Speaker, will the gentleman yield?

Mr. FRIEDEL. I yield to the gentleman.

Mr. LIPSCOMB. In view of the inquiry which has been made by the distinguished gentleman from Iowa, I would like to point out that after the introduction of this resolution and its being called to the attention of the committee the minority at least expressed their view that this should have come before us in due course; that is, before the subcommittee and full committee, but it was explained to us that there was not enough time to get this through in order to be meaningful so as to take care of the payroll which is due now. We have been given every assurance by the chairman of the committee that in the future we will go through the regular course of business and items will not be sprung on us in the fashion that this resolution was. I know from previous experience with the chairman of the Committee on House Administration that he will see to it it is done.

Mr. FRIEDEL. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present.

The SPEAKER. The Chair has not put the question yet.

CALL OF THE HOUSE

Mr. UDALL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

[Roll No. 70]

The Clerk called the roll, and the following Members failed to answer to their names:

Abbitt	Evins, Tenn.	Moss
Anderson, Calif.	Fallon	Murphy, N.Y.
Anderson, Tenn.	Findley	Ottinger
Bates	Ford, William D.	Pirnie
Beall, Md.	Foreman	Pollock
Bell, Calif.	Fulton, Tenn.	Powell
Berry	Gallagher	Randall
Bevill	Gettys	Rees
Blatnik	Gibbons	Reifel
Bow	Goldwater	Reuss
Brademas	Gray	Rosenthal
Broomfield	Griffiths	Roudebush
Brown, Calif.	Hansen, Idaho	Roybal
Burleson, Tex.	Harsha	Sandman
Burton, Calif.	Hébert	Scherle
Cahill	Heckler, Mass.	Scheuer
Carey	Helstoski	Shipley
Cederberg	Hicks	Springer
Celler	Hosmer	Steed
Chisholm	Hungate	Steiger, Ariz.
Clark	Hunt	Stephens
Clausen, Don H.	Ichord	Stratton
Clawson, Del	Joelson	Stubblefield
Colmer	Jones, Ala.	Stuckey
Conyers	Karth	Teague, Tex.
Corbett	Kirwan	Thompson, Ga.
Corman	Kyl	Thomson, Wis.
Cowger	Landrum	Tiernan
Cramer	Leggett	Tunney
Daddario	Long, La.	Vander Jagt
de la Garza	Lowenstein	Watts
Diggs	Lukens	Whitten
Dulski	McClure	Wiggins
Dwyer	Macdonald, Mass.	Wilson, Bob
Edmondson	Martin	Wilson, Charles H.
Edwards, Ala.	May	Wold
Edwards, Calif.	Michel	Wydler
Edwards, La.	Mizell	Wyman
	Morton	

The SPEAKER. On this rollcall 317 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. GROSS. Mr. Speaker, I still object to the vote on the ground that a quorum is not now present and make the point of order that a quorum is not now present.

The SPEAKER. The gentleman from Iowa objects to the vote on the ground that a quorum is not present and makes the point of order that a quorum is not present. The Chair will count.

Two hundred and forty-two members are present, a quorum.

So the resolution was agreed to.

A motion to reconsider was laid on the table.

PROGRAM FOR THE BALANCE OF THIS WEEK AND FOR NEXT WEEK

(Mr. SAYLOR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SAYLOR. Mr. Speaker, I take this time to ask the majority leader to give the program for the balance of the day, for the balance of this week, and for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, in response to the inquiry of the distinguished minority leader, for today we have one more bill, H.R. 4204, and the rule relating thereto which is on the program for this week. That will conclude the business for this week.

The program for next week is as follows:

Monday is Consent Calendar day. In addition there are eight suspensions which are as follows:

H.R. 763, to provide for a study of State laws governing the operation of youth camps.

H.R. 2667, to revise the pay structure of the police force of the National Zoological Park.

H.R. 692, to extend the length of time community nursing home care may be provided for veterans.

H.R. 693, to provide that veterans 70 years of age shall be deemed unable to defray hospital expenses.

H.R. 2768, to eliminate the 6-month limitation on the furnishing of nursing home care for service-connected veterans.

H.R. 3130, to provide that the Administrator of Veterans' Affairs may furnish certain medical services.

H.R. 9334, to promote the care and treatment of veterans in State veterans' homes.

H.R. 9634, to improve the Veterans' Administration program of sharing specialized medical resources.

For Tuesday and the balance of the week the program is as follows: Tuesday is Private Calendar day. In addition there is scheduled for the consideration of the House H.R. 10946, to promote health and safety in the building trades and construction industry, under an open rule with 1 hour of general debtate. Also, H.R. 11102, Medical Facilities Construction and Modernization Amendments of 1969 under an open rule with 2 hours of general debate.

Of course, Mr. Speaker, this announcement is made subject to the usual reservation that conference reports may be brought up at any time and any further program may be announced later.

Mr. SAYLOR. Have rules already been granted on the last two bills to which the majority leader made reference?

Mr. ALBERT. If the gentleman will yield further; they have.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Iowa.

Mr. GROSS. These eight suspensions on Monday next will not in any way interfere with the junket to Paris which is about to start or may have already started?

Mr. ALBERT. Mr. Speaker, if the gentleman from Pennsylvania will yield further, insofar as I know there is no junket which will interfere with the consideration of these bills. I know of no junket, and in any event, such would not be taken into consideration in programing the business of the House.

Mr. GROSS. Well, I am just trying to think ahead on Monday when there might have to be some votes on some of these bills and if the junket is still in effect on next Monday, I think the Members ought to be on notice that there are eight suspensions scheduled for consideration.

Mr. ALBERT. Mr. Speaker, if the gentleman from Pennsylvania will yield further, that is the purpose of making the announcement, to give the Members notice of the program for next week. These are important bills and I trust that the Members will be present.

Mr. GROSS. I appreciate that. The gentleman is always kind in notifying the Members on most things.

Mr. ALBERT. I thank the gentleman.

Mr. SAYLOR. Mr. Speaker, I yield back the balance of my time.

WAR CLAIMS ACT AMENDMENTS OF 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 426 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 426

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4204) to amend section 6 of the War Claims Act of 1948 to include prisoners of war captured during the Vietnam conflict. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Interstate and Foreign Commerce now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, and all points of order against sections 2 and 3 of such substitute are hereby waived. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER. The gentleman from Massachusetts (Mr. O'NEILL) is recognized for 1 hour.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I yield myself such time as I may consume, and at the conclusion of my remarks I yield 30 minutes to the gentleman from California (Mr. SMITH).

Mr. Speaker, House Resolution 426 provides an open rule with 1 hour of general debate for consideration of H.R. 4204 to amend the War Claims Act of

1948 to include prisoners of war captured during the Vietnam conflict. Also, the resolution provides that it shall be in order to consider the committee substitute as an original bill for the purpose of amendment and all points of order against sections 2 and 3 of the substitute are waived.

Points of order are waived due to the fact that Vietnam and *Pueblo* personnel have not been covered heretofore under the War Claims Act and a question of germaneness might be raised.

The bill would authorize payments under the War Claims Act to members of the Armed Forces captured and held prisoner by the forces of North Vietnam, and to persons captured by North Korea while assigned to duty on board the U.S.S. *Pueblo*, for the period of their captivity at the same rates and under the same conditions as applied with respect to the members of the Armed Forces held prisoner during the Korean conflict.

The substitute would provide for payment to members of the Armed Forces held prisoner by the forces of North Vietnam at the rate of $1 per day for each day on which the member received an inadequate quantity or quality of food during his captivity and $1.50 per day for each day on which he was required to perform forced labor, or was subjected to inhumane treatment.

The bill also provides for payment to all civilian American citizens who are held captive by the North Vietnamese forces at the rate of $60 per month, which is in addition to any payments they may receive under the Missing Persons, Defense Base, or War Hazards Acts.

In addition, the bill provides for payment, at the same rates and under the same conditions as applied under the Korean conflict claims program, to all persons captured while serving on board the U.S.S. *Pueblo*—$1 per day for each day he received inadequate food and $1.50 per day for each day he performed forced labor.

Such amounts as may be necessary are authorized since there is no way at this time to know how many claimants there will be.

Mr. Speaker, I urge the adoption of House Resolution 426 in order that H.R. 4204 may be considered.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, House Resolution 426 does provide for an open rule with 1 hour to consider the bill, H.R. 4204, the war claims act amendments.

Points of order are waived on sections 2 and 3.

The purpose of the bill is to authorize payments to members of the Armed Forces captured by North Vietnamese forces, and also to those captured aboard the *Pueblo*.

Similar payment programs, carried out by the Foreign Claims Commission, have been undertaken with respect to captured American servicemen during World War II and the Korean war. The payment is $2.50 per day during the time one is a prisoner of war. The bill also authorizes payment to American civilians held prisoner at the rate of $60 per month, again similar to a Korean war program.

American servicemen who "voluntarily, knowingly, and without duress" collaborated with the enemy do not qualify for the payment. Under Foreign Claims Commission procedure, the Commission recognizes that prisoners are often tortured, both physically and mentally to force cooperation. Such cases are not disqualified, nor are those who have voluntarily surrendered—*Pueblo*.

The cost of the bill can only be estimated because we do not know how many American servicemen and civilians will be captured. Relying on Korean war figures, the estimated costs for the Vietnam war are about $500,000.

The Department of Defense does not support the legislation at this time, preferring that it be deferred now. The Claims Commission supports it and the Bureau of the Budget has no objection.

There are no minority views.

Mr. Speaker, I urge the adoption of the rule.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. STAGGERS. Mr. Speaker, I call up the bill (H.R. 4204) to amend section 6 of the War Claims Act of 1948 to include prisoners of war captured during the Vietnam conflict, and ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the bill as follows:

H.R. 4204

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6 of the War Claims Act of 1948 (50 United States Code, Appendix 2005) is amended by:

(1) rewording subsection (e)(1) to read:

"(e)(1) As used in this subsection the term 'prisoner of war' means any regularly appointed, enrolled, enlisted, or inducted member of the Armed Forces of the United States who was held as a prisoner of war for any period of time, by any hostile force with which the Armed Forces of the United States were actually engaged in armed conflict, between June 25, 1950, and August 21, 1954, or August 5, 1964, and the date ending the Vietnam conflict as shall hereafter be determined by Presidential proclamation or concurrent resolution of Congress except any such member who, at any time, voluntarily, knowingly, and without duress, gave aid to or collaborated with or in any manner served any such hostile force"; and

(2) by rewording sub subsection (5)(A) to read:

"(A) August 21, 1954, for those with service during the Korean conflict"; and

(3) by redesignating sub subsection (5)(B) as sub subsection (5)(C); and

(4) by redesignating sub subsection (5)(C) as sub subsection (5)(D); and

(5) by inserting immediately after sub subsection (5)(A) the following new sub subsection:

"(5)(B) effective date of this amendments for those with service in the Vietnam conflict."

With the following committee amendment:

Strike out all after the enacting clause and insert:

"That section 6 of the War Claims Act of 1948 (50 App. U.S.C. 2005) is amended as follows:

"(1) by redesignating subsection (f) as subsection (g); and

"(2) by inserting immediately after subsection (e) the following new subsection:

"'(f)(1) As used in this subsection—

"'(A) the term "Vietnam conflict" relates to the period beginning February 28, 1961, and ending on such date as shall thereafter be determined by Presidential proclamation or concurrent resolution of the Congress; and

"'(B) the term "prisoner of war" means any regularly appointed, enrolled, enlisted, or inducted member of the Armed Forces of the United States who was held as a prisoner of war for any period of time during the Vietnam conflict by any force hostile to the United States, except any such member who, at any time, voluntarily, knowingly, and without duress, gave aid to or collaborated with, or in any manner served, such hostile force.

"'(2) The Commission is authorized to receive and to determine, according to law, the amount and validity, and provide for the payment of any claim filed by any prisoner of war for compensation for the failure of the hostile force by which he was held as a prisoner of war, or its agents, to furnish him the quantity or quality of food prescribed for prisoners of war under the terms of the Geneva Convention of August 12, 1949. The compensation allowed to any prisoner of war under the provisions of this paragraph shall be at the rate of $1 for each day on which he was held as a prisoner of war and on which such hostile force, or its agents, failed to furnish him such quantity or quality of food.

"'(3) The Commission is authorized to receive and to determine, according to law, the amount and validity and provide for the payment of any claim filed by any prisoner of war for compensation—

"'(A) for the failure of the hostile force by which he was held as a prisoner of war, or its agents, to meet the conditions and requirements prescribed under chapter VIII, section III, of the Geneva Convention of August 12, 1949, relating to labor of prisoners of war; or

"'(B) for inhumane treatment by the hostile force by which he was held, or its agents. The term "inhumane treatment" as used in this subparagraph shall include, but not be limited to, failure of such hostile force, or its agents, to meet the conditions and requirements of one or more of the provisions of article 3, 12, 13, 14, 17, 19, 22, 23, 24, 25, 27, 29, 43, 44, 45, 46, 47, 48, 84, 85, 86, 87, 88, 89, 90, 97, or 98 of the Geneva Convention of August 12, 1949.

"Compensation shall be allowed to any prisoner of war under this paragraph at the rate of $1.50 per day for each day on which he was held as a prisoner of war and with respect to which he alleges and proves in a manner acceptable to the Commission the failure to meet the conditions and requirements described in subparagraph (A) of this paragraph or the inhumane treatment described in subparagraph (B) of this paragraph. In no event shall the compensation allowed to any prisoner of war under this paragraph exceed the sum of $1.50 with respect to any one day.

"'(4) Any claim allowed by the Commission under this subsection shall be certified to the Secretary of the Treasury for payment out of funds appropriated pursuant to this subsection and shall be paid by the Secretary of the Treasury to the person entitled thereto, and shall, in the case of death or determination of death of the persons who are entitled, be paid only to or for the benefit of the persons specified, and in the order established, by subsection (d)(4) of this section.

"'(5) Each claim filed under this subsection must be filed not later than three years from whichever of the following dates last occurs:

"'(A) the date of enactment of this subsection;

"'(B) the date the prisoner of war by whom the claim is filed returned to the jurisdiction of the Armed Forces of the United States; or

"'(C) the date upon which the Department of Defense makes a determination that the prisoner of war has actually died or is presumed to be dead, in the case of any prisoner of war who has not returned to the jurisdiction of the Armed Forces of the United States.

"The Commission shall complete its determinations with respect to each claim filed under this subsection at the earliest practicable date, but in no event later than one year after the date on which such claim was filed.

"'(6) Any claim allowed under the provisions of this subsection shall be paid from funds appropriated pursuant to paragraph (7) of this subsection.

"'(7) There are authorized to be appropriated such amounts as may be necessary to carry out the purposes of this subsection, including necessary administrative expenses.'

"SEC. 2. Section 6(e) of the War Claims Act of 1948 (50 App. U.S.C. 2005(e)) is amended as follows:

"(1) In paragraph (1), strike out 'except any such member' and insert in lieu thereof 'or any person (military or civilian) assigned to duty in the U.S.S. *Pueblo* who was captured by the military forces of North Korea on January 23, 1968, and thereafter held prisoner by the Government of North Korea for any period of time ending on or before December 23, 1968, except any person'.

"(2) At the end of paragraph (5), add the following new subparagraph:

"'(D) In the case of any person assigned to duty in the U.S.S. Pueblo referred to in paragraph (1) of this subsection, one year after the date of enactment of this subparagraph.'

"SEC. 3. Section 5 of the War Claims Act of 1948 (50 App. U.S.C. 2004) is amended—

"(1) by striking out in subsection (e) 'subsection (g)' and inserting in lieu thereof 'subsections (g) and (i)'; and

"(2) by adding at the end thereof the following new subsection:

"'(i) (1) As used in this subsection—

"'(A) the term "Vietnam conflict" relates to the period beginning on February 28, 1961, and ending on such date as shall thereafter be determined by Presidential proclamation or concurrent resolution of the Congress; and

"'(B) the term "civilian American citizen" means any person who, being then a citizen of the United States, was captured in Southeast Asia during the Vietnam conflict by any force hostile to the United States, or who went into hiding in Southeast Asia in order to avoid capture or internment by any such hostile force, except (i) a person who voluntarily, knowingly, and without duress, gave aid to or collaborated with or in any manner served any such hostile force, or (ii) a regularly appointed, enrolled, enlisted, or inducted member of the Armed Forces of the United States.

"'(2) The Commission is authorized to receive and to determine, according to law, the amount and validity, and provide for the payment of any claim filed by, or on behalf of, any civilian American citizen for detention benefits for any period of time subsequent to February 27, 1961, during which he was held by any such hostile force as a prisoner, internee, hostage, or in any other capacity, or remained in hiding to avoid capture or internment by any such hostile force.

"'(3) The detention benefits allowed under paragraph (2) of this subsection shall be at the rate of $60 for each calendar month.

"'(4) The detention benefits allowed under paragraph (2) of this subsection shall be allowed to the civilian American citizen entitled thereto, or, in the event of his death, only to the following persons:

"'(A) the widow or husband if there is no child or children of the deceased;

"'(B) the widow or dependent husband and child or children of the deceased, one-half to the widow or dependent husband and the other half to the child or children in equal shares;

"'(C) the child or children of the deceased in equal shares if there is no widow or dependent husband.

"'(5) Any claim allowed by the Commission under this subsection shall be certified to the Secretary of the Treasury for payment out of funds appropriated pursuant to this subsection, and shall be paid to the person entitled thereto, except that if a person entitled to payment under this section is under any legal disability, payment shall be made in accordance with the provisions of subsection (e) of this section.

"'(6) Each claim filed under this section must be filed not later than three years from whichever of the following dates last occurs:

"'(A) the date of enactment of this subsection;

"'(B) the date the civilian American citizen by whom the claim is filed returned to the jurisdiction of the United States; or

"'(C) the date upon which the Commission, at the request of a potentially eligible survivor, makes a determination that the civilian American citizen has actually died or may be presumed to be dead, in the case of any civilian American citizen who has not returned to the jurisdiction of the United States.

The Commission shall complete its determinations for each claim filed under this subsection at the earliest practicable date, but not later than one year after the date on which such claim was filed.

"'(7) There are authorized to be appropriated such amounts as may be necessary to carry out the purposes of this subsection, including necessary administrative expenses.'"

Mr. STAGGERS. Mr. Speaker, this bill was reported out of the committee unanimously, and we recommend its passage. It would authorize payments under the War Claims Act of 1948 of $2.50 per day to all members of the Armed Forces held as prisoners of war by the North Vietnamese since February 28, 1961, and would provide for a similar payment to persons serving on board the U.S.S. *Pueblo* for the period of their captivity by the forces of North Korea. These payments, which would be in addition to regular pay and allowances are the same amounts as were provided under the War Claims Act for persons who were held as prisoners of war during World War II, and persons who were held as prisoners of war during the Korean conflict.

It is estimated that the bill will not cost more than one-half million dollars. We recognize that the amounts provided are certainly inadequate compensation for the hardships suffered by these men; however, the committee feels that this symbolic payment provides some recognition to these men for the added hardships they have suffered. It is clear from information received through escaped prisoners, and former prisoners, that the treatment of our servicemen after their capture by the North Vietnamese has been in flagrant violation of the Geneva Convention, and a similar pattern of mistreatment applied to members of the Armed Forces captured on the *Pueblo*.

In addition, there have been a very small number of civilians who have been captured in North Vietnam and the bill provides for payment of benefits to these persons in the same amounts as were provided for civilians who were captured and detained during World War II and during the Korean conflict.

We urge adoption of the bill by the House.

Mr. KEITH. Mr. Speaker, after World War II it was considered appropriate to compensate members of the armed services and civilians who had been interned for hardships and indignities suffered while in the hands of the enemy. At that time the United States held in its possession millions in assets belonging to nationals of the enemy nations. It was considered only just and proper that such assets be used for such compensation.

The amounts provided for internees and prisoners of war were minimal even by the standards of the immediate postwar period. Military personnel received $1 a day where inadequate food was provided and an additional $1.50 a day if mistreatment occurred. Civilians were allowed $60 per month plus medical care. Because of the number of people involved in World War II the payments totaled $123 million.

When the Korean conflict came along, a fairly similar situation obtained, but obviously it affected a smaller number of individuals both military and civilian. Also, at the time of the Korean conflict there were no appreciable assets of Korean nationals in the hands of our Government. In fairness to those who would be considered entitled to such compensation, the Congress appropriated the necessary funds to make payments which were in the same amount and for the same purposes as those in World War II. These payments amounted to slightly less than $9 million.

The purpose of the bill before us today is to extend the War Claims Act to provide identical compensation for both military and civilian personnel held by the North Vietnamese. Compensation at the same rate as that provided in the original act is obviously a token payment. It is, however, a recognition of the fact that the North Vietnamese are depriving our prisoners of adequate accommodations and subjecting them to mistreatment.

It is difficult at this time to say how much such a program will cost, but based upon the number of prisoners we know about, it would seem to be a safe projection that the funds required would be in the neighborhood of $500,000. As in the Korean conflict payments, reimbursement will not be approved for individuals who voluntarily collaborate with the enemy.

The bill before us goes one step beyond extending the legislation to the Vietnamese conflict and makes a special provision to include the crew of the *Pueblo*. There are 81 members of the armed services included in this provision and two civilians. Total cost of the claim arising out of this incident should be slightly over $68,000. In my opinion it is only just and reasonable that these victims of this North Korean aggression should be compensated.

This expression by the Congress and by the Government of the United States recognizing the plight of our prisoners whether already released or still in the hands of the enemy should properly be made at this time, and I recommend this legislation to the House.

The SPEAKER. The question is on the committee amendment.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to amend section 6 of the War Claims Act of 1948 to include prisoners of war captured during the Vietnam conflict, and for other purposes."

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks on the bill just passed.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

POSTAL SERVICE ACT OF 1969

(Mr. UDALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. UDALL. Mr. Speaker, I take pleasure in introducing today the "Postal Service Act of 1969." I introduce this bill in the belief that it meets the major questions we have been asking about the Post Office Department. There will be many questions asked about this particular bill, and the long-range effects of such a major transformation. While I am not irrevocably bound to every detail of this bill, I strongly support its major features. We will have to study it carefully, making whatever changes are necessary, and making sure that all persons involved in this procedure are given an opportunity to be heard.

This is the administration-sponsored postal reform bill, carefully drawn to permit the Post Office to be run in an efficient, responsible, business-like manner in the public interest.

We are all well aware of the problems confronting the Post Office as it enters the last third of the 20th century. We are familiar with the vast annual postal deficit, the complaints of poor and deteriorating service, the aging physical facilities, the unsatisfactory working conditions for its employees, and the ever-present menace of collapse under a constantly increasing volume of mail. At the same time, we are told, and justly so, that it is not the fault of the postal managers, or of the postal employees or their organizations, or of the Congress. All of these groups are working loyally and competently to provide the best and most efficient service possible. The fault lies with the outmoded "system," the organizational structure that keeps the best efforts of honorable, conscientious men and women from being good enough.

It is to go to the heart of the faults in "the system" that a basic and far-reaching change is proposed by the bill which I introduce.

It would create a Postal Service Corporation, wholly owned by the Federal Government and operated by professional management that would not be replaced automatically with each change in administration. It would remove the Post Office from the Cabinet and would remove politics from the Post Office. It would provide, by statute, for true collective bargaining between postal management and labor. It would permit the postal service to raise its own capital to meet its needs, to employ modern management techniques and personnel policies for the benefit of all who use and all who work for the postal service. It would permit the postal service through fair, orderly and public procedures, to maintain the best possible rate structure, subject to congressional review. And it would give to the postal service sufficient control of its own affairs so that its management could fairly be held accountable for the quality and efficiency of its performance.

The need for postal reform is evident. It is not a partisan issue. Both Republican and Democratic administrations have called for far-reaching changes. Members of Congress from both sides of the aisle agree that major reform is urgent. Let us then carry out a reform which addresses all of the critical problems of the Post Office at one time and gives relief to all of our people, whether as users of the mail, as postal workers, or as taxpayers. All have a stake in postal reform and all stand to benefit from the total reform that is contained in the bill which I introduce.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I am glad to yield to the distinguished minority leader.

Mr. GERALD R. FORD. I congratulate the gentleman from Arizona. I am honored to be a consponsor with him upon this legislation.

Mr. HECHLER of West Virginia. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I am glad to yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. I would like to join in congratulating the gentleman from Arizona and am very pleased that I can also consponsor this legislation. Today, our postal system is bogged down in a maze of impossible rules and regulations, is drowning in a sea of politics, and handcuffed by special interest groups who enjoy the privilege of having their mailing costs subsidized by the taxpayers. The reason I did not support the amendment of the gentleman from Iowa (Mr. SMITH) yesterday was that it was confined to second-class rates, and I believe that third-class mail is not only a greater deficit producer, but also there is a clear difference between the way the two classes of mail is generated. You ask for second-class mail through a subscription; you get third-class mail forced on you, and it floods your mail box, unwanted, unasked for, unread, and unpaid for except through a subsidy which runs to $324 million annually.

I certainly hope that favorable action will be taken to establish a Government corporation to run our postal system. The American people deserve better postal service, and I firmly believe they will only get it through the mechanism recommended in this bill.

UNIVERSITY OF CALIFORNIA AT DAVIS

(Mr. LEGGETT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, it was with considerable dismay that I noted the remarks of my distinguished colleague from Louisiana (Mr. RARICK) who on Monday implied that the naming of the new law school building at the University of California at Davis for the late Dr. Martin Luther King, Jr., was a part of the so-called Communist conspiracy.

In his inimitable fashion, the distinguished Member of Congress has given credence to the libelous and ridiculous charges that Dr. King was a Communist.

I have already remarked on the naming of the law school for Dr. King. My remarks may be found in the March 19, 1969, issue of the CONGRESSIONAL RECORD at page 6882.

I stated that—

> As we approach the anniversary of the assassination of Dr. Martin Luther King, Jr., one is reminded of the unique contribution of his life and of his sensitive understanding of the times in which he lived.
>
> The University of California at Davis is in my Congressional District, and it is with a deep sense of pride and satisfaction that I point out to my colleagues that the new Law School Building on the USC campus has been named after Dr. King.

I still feel that same sense of pride and satisfaction, and for this reason consider the slanderous remarks of Mr. RARICK an insult to myself, the people of California and all other citizens who value the rule of law.

My office periodically receives newsletters which purvey the most insidious garbage attacking almost every prominent American, Dr. King among them, as a member of the Communist conspiracy. The fact that this verbal manure is spread is due to the American concept of the free press and certainly not because there is the slightest bit of truth contained in them.

I dispose of this material. Apparently one Member of this body accepts this filth as the gospel and uses the prestige of office as well as the CONGRESSIONAL RECORD to further distribute this nonsense.

I can assure the gentleman from Louisiana that the people of California are proud to have a building at one of their leading universities named after a man who exemplifies the tradition of the rule of law and rule of reason. It was Dr. Martin Luther King who was in the forefront of the movement for justice under the law for all peoples. In this time of turmoil, we need a multitude of Kings who can see that it is through the law that progress is made.

Fortunately, the people of California and the board of regents recognize this fact.

The University of California at Davis—site of the law school in question—is in my congressional district. I am proud to represent an intelligent group of constituents who see the world for what it is and what it could be. Fortunately, I do not consider that I represent a group of neanderthals and mental midgets who must be fed a continuing line of tripe

from a Congressman whose view of the world borders on the absurd at best.

I am confident that the law school at Davis will train leaders of the bar who will exemplify the traditions of Dr. King and put reason ahead of violence and law above revolution.

COAL DUST STANDARDS

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, the following WTOP editorial, which was broadcast on May 27 and 28, speaks for itself:

COAL DUST

(Eitorial broadcast May 27 and 28, 1969, over WTOP radio and television)

This is a WTOP editorial.

The nation's coal miners have been kicked again.

This time it has to do with the amount of poison they're permitted to inhale. The Labor Department has just installed a watered-down standard for coal dust per cubic meter which applies to coal mines benefitting from federal contracts.

Coal dust is a crippler and a killer. It contributes heavily to various kinds of lung disease, and especially to the dreaded pneumoconiosis or "black lung." Tens of thousands of miners have gone through the closing years of their lives wheezing and gasping because of irreversible damage inflicted by dust.

Several months ago, the Secretary of Labor, who then was Willard Wirtz, posted in the federal register a tough rule setting a limit on coal dust of 3 milligrams per cubic meter. Soon after George Shultz succeeded Wirtz as Secretary, he had the rule frozen for "further study."

One week ago, a new standard went into effect, permitting up to 4.5 milligrams of dust. It represents a shocking capitulation by Secretary Shultz to the coal operators. The U.S. Surgeon-General has testified before Congress that the higher dust level will contribute very materially to the incidence of lung disease among miners.

Almost nobody stood up for the miners on this one. An advisory committee named by Shultz for the re-study didn't hold a single public hearing. In order to obtain minutes of the proceedings of the committee, one Congressman had to threaten legal action. The five labor representatives on the committee failed to signal a loud protest over the impending change. In predictable fashion, the United Mine Workers union sat on its hands.

The last hope appears to rest with Congress, where a broad bill governing health standards in *all* mines is being drafted. The 3-milligram ceiling must not be compromised there.

Meanwhile, workers in about 800 coal mines can thank the Secretary of Labor for personally intervening to insure that the air they breathe continues to be foul and dangerous.

This is a WTOP editorial . . . Norman Davis speaking for WTOP.

ROGERS INTRODUCES BILL TO EXTEND SEA-GRANT COLLEGE PROGRAM

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, I am today introducing, along with 17 of my colleagues from the Subcommittee on Oceanography, a bill to extend the national sea-grant college program.

The intent of the original legislation, when enacted into law in 1966, was to produce manpower for the many areas of marine-related work and to further develop our Nation's marine resources.

Despite limited funding, we have seen the intent of the sea-grant program carried out during these first formative years.

Colleges and universities from all over the Nation have applied for the grants offered by this program and I would add that the response has been amazing. There have been hundreds of inquiries and applications from every State in the Union.

This legislation is geared to develop our marine resources and the intent of the law was not to limit participation by geography, and again this goal is being accomplished.

The administration of this program, under the guidance of Mr. Robert Abel, has been outstanding.

Indeed, this single program has been one of the most significant programs yet enacted to launch this Nation into its adventure with the oceans and lakes and environment around us.

We have an excellent blueprint to guide our future development in the report of the Commission on Marine Science, Engineering, and Resources. In this report we have been given the outline of a program which will eventually bring all the Government's marine-related departments and agencies together into a single agency. This report points out the work which has been done thus far by the national sea-grant college program and the importance of having it included in the overall marine program and marine agency once it is developed and in operation. But in the interim it is very important that we continue the work which is being done by the national sea-grant college program.

The sea-grant college program was broadly based in legislation so as to call upon all facets of talent throughout the Nation, including colleges, universities, junior colleges, and industry.

To date, approximately 25 grants have been awarded to outstanding colleges and universities. And the Nation has already benefited from these grants.

In Wisconsin, a load of manganese granules was found by the University of Wisconsin after that school had been awarded a grant to do work in Lake Michigan.

I would also add that the American Association of Junior Colleges has also applied for a grant, indicating that the program has also considered the advantages of tapping this source of talent.

I believe, and I think I speak for my colleagues, that this Nation has a great potential in the oceans, yet we have done very little to realize these benefits. Our manpower supply in this area has been woefully inadequate.

The National Sea Grant College program is the surest and most direct way to eliminate this shortage. It is vital to this Nation's interests that we continue this very worthy program.

I am pleased to have the following of my colleagues join with me in sponsoring this legislation: Mr. LENNON, Mr. MOSHER, Mr. DOWNING, Mr. KARTH, Mr. HATHAWAY, Mr. CLARK, Mr. ST. ONGE, Mr. JONES of North Carolina, Mr. HANNA, Mr. LEGGETT, Mr. PELLY, Mr. KEITH, Mr. SCHADEBERG, Mr. DELLENBACK, Mr. RUPPE, Mr. GOODLING, and Mr. BRAY.

I understand that the Honorable CLAIBORNE PELL is introducing an identical bill in the Senate along with some of his colleagues and would commend the Senator for the leadership he has shown in the field of oceanography.

STUDENT UNREST

(Mr. SMITH of Iowa was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SMITH of Iowa. Mr. Speaker, the president of the State University of Iowa, Howard R. Bowen, recently made a speech on student unrest at the honors convocation held in Iowa City, Iowa, on Saturday, May 3, 1969, which I commend to the attention of my colleagues. It is as follows:

Ladies and Gentlemen, I am pleased to greet you this morning, honor students, parents, friends, and teachers. The accomplishments of the honor students speak for themselves and need no embellishment from me. I do congratulate you on your dedicated hard work, on your superb talent and on your bright future prospects. The world belongs, as never before, to intellectual ability. And that fact obviously places upon bright, energetic, and well-educated people like you a heavy responsibility to use talents and opportunities in socially useful ways.

The past four years, during which you have been in college, have been some of the most adventurous and rewarding years in the history of higher education, and they have been splendid years at the University of Iowa as well. The University has grown prodigiously in enrollment, buildings, faculty, library books, and equipment. Students have come to the University better prepared and with more experience and sophistication than ever before. Scholarship has been highly respected, and students have been highly motivated.

The campus has come alive with discussions about the way of life of a university community, about the war in Viet Nam, about racial injustice, about the desecration of our air and water, and about moral and aesthetic values. New art forms have been explored and interest in the arts has reached a new high. All of this activity and discussion has been healthy, but some of it has been accompanied by a new element which is totally alien to the spirit of a university—namely, disorderly protest, boycotts, incivility, intolerance for differing opinions, intimidation, and lack of consideration for the rights of others. Very few students have been guilty of this kind of behavior, and untoward incidents have been rare at Iowa. But the virus of lawlessness and violence has intruded into many campuses and has even been found on rare occasions at the University of Iowa.

We have by now had enough experience with this kind of behavior to know that it bodes ill for the university as a center of learning. As the daily list of institutions with violence, threats, disorders, and armed hostility increases, the public is becoming less tolerant of the ancient and indispensable tradition of university self-government. The people of this country feel they have had about enough of this mode of behavior. But,

the disorder and bigotry is evil not only because it threatens the university with outside control. It is intolerable because it is incompatible with the university's own central function as a place of learning. Learning can thrive only in an atmosphere of careful observation, judicious weighing of pros and cons, objective analysis, free exchange of ideas and openness to new concepts. This atmosphere is destroyed by noisy and intolerant pressure tactics.

I bring this matter to the attention of this audience, which is gathered to honor scholarship, because I know you will appreciate the dangers to the intellectual integrity, freedom, and excellence of the university that are inherent in these new modes of behavior. I call upon you, in the rest of your time here, and throughout your lives, to work toward the preservation of the university as a center of lively discussion—as a theater where new ideas are examined open-mindedly—as a place where people are civil to one another even when there are differences of opinion—as a place where the democratic processes are respected and followed—as a center of enlightenment and an enemy of bigotry and coercion.

The Universities of this country are in great danger. The scholarly values to which you and I have given much of our lives are in jeopardy. I ask you to be among the staunch defenders who will help to restore the balance.

INDIA CONSORTIUM

(Mr. TAFT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. TAFT. Mr. Speaker, on May 22 and 23, the consortium of governments and institutions concerned with assistance to India met in Paris to review progress in Indian economic developments. A concise summary of this meeting was issued May 23 by the World Bank. In the very near future, the House Foreign Affairs Committee, of which I am a member, is scheduled to hold hearings on foreign aid, a sizable portion of which is programed to India. So that other Members may share the contents of the summary of the Paris meeting, I include as follows:

INDIA CONSORTIUM, MAY 23, 1969

The following announcement was issued today at the World Bank's European Office in Paris:

"The Consortium of governments and institutions interested in development assistance to India met in Paris on May 22 and 23, 1969 under the chairmanship of the World Bank. The meeting was attended by representatives of the Governments of Austria, Belgium, Canada, Denmark, France, Germany, Italy, Japan, the Netherlands, Sweden, the United Kingdom and the United States. The presence of Sweden as a member of the Consortium for the first time was welcomed. The International Monetary Fund and the Organization for Economic Cooperation and Development sent observers.

"The purpose of the meeting was to review the progress of economic development in India and to consider India's aid requirements for the fiscal year beginning April 1, 1969 and the terms on which aid should be made available.

"A delegation representing the Government of India, led by Dr. I. G. Patel, Special Secretary to the Government of India, Ministry of Finance, was present to describe recent economic developments and aid requirements.

"The meeting commended the considerable improvements in India's economic situation in 1968/69. All Consortium members welcomed the continuation of the momentum of growth in agricultural production, the substantial recovery in industrial production, the restoration of a stable price level and the efforts made in the last budget to mobilize additional resources for development. Particularly noteworthy was the very good export performance, especially with regard to such items as engineering goods; exports as a whole were 12.5 per cent above those of 1967/68. Members also commended steps India was taking to extend the family planning program, for which budgetary appropriations during the next five years are planned at a level 12 times the amount spent during the Third Plan period.

"It was agreed that India needed substantial new commitments of non-project as well as project aid if the general recovery of the economy was to be maintained and consolidated. Members agreed that, for the year which began April 1, 1969, India required non-project assistance of about $700 million, including approximately $100 million in the form of debt relief. Toward this total of $700 million most members indicated the contributions they would be able to make, subject to necessary approvals, and others expected to be able to do so later in the year.

"India's need for increased project assistance as an essential complement to non-project aid was also recognized, and Consortium members agreed that India's request for $400 million was reasonable and that efforts would be made to meet it.

"It was generally agreed that a further improvement in the terms of aid was desirable and several members in fact announced such improvements."

CONGRESSMAN CULVER PROPOSES INCREASE IN SOCIAL SECURITY BENEFITS

(Mr. CULVER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CULVER. Mr. Speaker, I am pleased today to join several colleagues in the House in introducing legislation which would increase social security benefits by 15 percent, increase the minimum monthly benefit from $55 to $80 per month, and provide for periodic, automatic increases in social security benefits to meet increases in the cost of living.

The abundance of our Nation continues to bless the vast majority of Americans. But that abundance still continues to be denied to the very generation which has labored long, hard years to bring our country to its present fullness and richness. Justice as well as reason requires that we in the Congress renew our concern over the kind of life our society forces upon its senior citizens.

We are today a younger Nation than at any time in our history. Nearly half of our population is under 25 years of age, and about a third is under 15. But our preoccupation with the problems of the young should not be allowed to mask the fact that 19 million persons, or nearly 10 percent of the population, are 65 years of age or older. The choice which must be open to this 10 percent is a life of dignity and productivity—not a disheartening period of dependency or deprivation.

Problems such as health and housing, employment and recreation, are dealt with in a routine way by most individuals. But, because of their precarious economic existence, these same problems present formidable challenges to many older Americans. As the strongest and richest Nation in the world, we cannot in the exercise of responsible judgment afford to overlook these critical concerns.

I believe we can act immediately to relieve the hardships under which many now suffer. By increasing social security benefits and tying future benefits to the cost-of-living index, we can provide for a greater measure of economic security in the lives of America's elderly.

Higher income levels are obviously not the total answer; but they will serve to blunt the forces of poverty which now threaten too many of the country's senior citizens.

Mr. Speaker, by the beginning of 1970, inflation will have eliminated the effect of past social security increases in 1965 and 1967. I can think of no better way for the Congress to honor the month of May, which has been proclaimed Senior Citizens Month, than to begin immediate consideration of this legislation.

THE FOREIGN AID PROGRAM

(Mr. COLLIER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. COLLIER. Mr. Speaker, during the last full session of Congress we have heard a great deal about how much less is being spent on foreign aid. One would be led to believe that the so-called mutual security program is being gradually reduced to nothing and that the taxpayers of America could look forward to the day when they would no longer have to bear this burden.

What are the facts?

Mutual security will require appropriations totaling approximately two billion seven hundred million dollars for fiscal 1970, which the proponents of the program consider a barebones amount This, however, is only about one-quarter of the total amount of assistance that the United States will provide for foreign countries next year. Mutual securities is but one of the many foreign aid activities.

A perusal of the budget that Lyndon B. Johnson submitted to the Congress just before turning over the reins of Government to Richard M. Nixon shows that obligations for foreign aid for fiscal 1970 will total $9,572,268,000, not counting the amounts that will be obligated by the Department of Defense. If such sums were added, the total would be substantially in excess of $10 billion. A table that I will submit for the RECORD under leave to extend my remarks breaks down this enormous sum by the various departments and agencies of the executive branch and also gives comparative figures for the fiscal years 1968 and 1969.

There are numerous reasons why we must drastically curtail this huge outflow of funds, but I will list only a few of them.

The Committee on Appropriations of this body has proposed a spending limitation of $192,900 million for the year that will begin less than 6 weeks from today. The chairman of the Committee on Ways and Means, on which I am privileged to serve, believes that this gargantuan sum can be reduced by $5 billion. What better place can we start than the foreign aid programs?

The public debt at the end of fiscal 1970 will reach the astronomical figure of $371,482 million, unless measures are taken to sharply cut spending. In order

to show my colleagues just how great our indebtedness is, let us compare our burden of debt with that of all the other nations of the world, almost all of which have received handouts from the United States during the period 1946 to 1969. The last date for which a meaningful comparison can be made is December 31, 1967, when the public debt of the United States was $345,947,345,000, as compared with the combined public debts of all the other nations of the world, which came to $302,128,345,000. The latter figure would of course have been much higher had it not been for foreign aid. As it was, however, it was $43,819 million less than our own national debt figure. One half of our indebtedness represented total foreign aid from 1946 to 1968 plus the interest we had to pay to borrow the money before we could give it away.

The interest on the public debt of the United States for fiscal 1970 will be $15,958 million. One half of this amount became necessary because of our past foreign aid expenditures plus interest.

According to the Taxpayers Committee To End Foreign Aid:

> Various foreign aid agencies and programs have (since 1946) provided foreign countries with our most modern machinery and equipment. . . . Foreign industrialists and technicians have (with foreign aid dollars) been brought to the United States to study and take home our latest industrial technology With low cost foreign labor, foreign tax concessions, free ultra-modern U.S. machinery and technology, foreign industry has been able to undersell much of our domestic production. . . . Foreign aid, in many instances, has promoted the export of American industry. With indirect foreign aid and private finances, U.S. industries have established foreign branches in order to take advantage of low cost labor, favorable taxes, and local markets. This industrial exodus has taken jobs from American labor and given them to foreigners.

The following tabulation shows where the bulk of our foreign aid has gone:

United Kingdom	$7,394,000,000
France	7,021,200,000
Korea	6,986,800,000
India	6,585,200,000
Italy	5,329,100,000
Turkey	5,126,400,000
Vietnam	5,042,800,000
China (Nationalist)	4,873,500,000
West Germany and Berlin	$3,668,700,000
Greece	3,605,100,000
Japan	3,528,300,000
Pakistan	3,126,500,000
Yugoslavia	2,633,100,000
Brazil	2,476,400,000
Netherlands	2,052,700,000
Spain	1,952,700,000
Iran	1,848,400,000
Philippines	1,761,400,000
Belgium and Luxembourg	1,757,200,000
Indo-China	1,535,200,000
Chile	1,221,600,000
Norway	1,132,400,000
Austria	1,122,900,000
Thailand	1,063,900,000
Total	82,845,500,000

As my colleagues study these figures, I hope they will ask themselves, "Just what has all this spending on foreign aid accomplished?" I would not go so far as to say that no good has been achieved, but as a general proposition I must say that the statistics for the 24 nations that have received at least $1 billion each are rather disillusioning.

Foreign aid has been sold to the American people under many different labels during the quarter century since the end of World War II. We were told that it was needed to stop communism. Among the nations that have received a tremendous amount of assistance is Communist Yugoslavia, which has benefiited to the extent of $2,633,100,000.

We were told that it was better to use foreign soldiers against the Communists than American young men. How many foreign soldiers are fighting alongside the several hundred thousand young Americans in Southeast Asia? France, the very nation that abandoned Indochina, received $7,021,200,000 in help from America.

The only country to receive more assistance from us is the United Kingdom, to which we contributed $7,394,000,000; that nation carries on trade with Communist North Vietnam and Communist Cuba, our enemies.

Other nations that trade with our enemies are Italy, the recipient of $5,329,100,000 in aid from us; West Germany and Japan, each of which received over $3,500,000,000; the Netherlands, which got $2,052,700,000; Belgium, to which we gave approximately $1,750,000,000; and Norway, which received $1,132,400,000.

Many of our colleagues are disturbed because Greece and Spain are governed by regimes of which they do not approve. Spain has received $1,952,700,000 in assistance from the United States, while Greece has done much better, getting $3,605,100,000. An even greater amount, $5,126,400,000, has gone to Turkey, which, along with Greece, was one of the earliest beneficiaries from American aid. Undoubtedly aid to Greece and Turkey stopped communism two decades ago, but these two nations have in the meantime become bitter enemies of each other.

India and Pakistan are two other countries that have often been at swords' points during the years since both achieved independence, not only from the British Empire but from each other. These two nations have received $6,585,200,000 and $3,126,500,000, respectively, from the taxpayers and bond purchasers of the United States.

A great deal of the more than $10 billion that we will be asked to provide for the various foreign aid programs for fiscal 1970 will be distributed among the more than 60 nations that have achieved independence during the last quarter century. The great majority of these new nations were formerly colonies of Great Britain, France, the Netherlands, and Belgium.

Since the British, French, Dutch, and Belgian Empires disappeared, the United States has been asked to finance the one-time colonies in many of their activities, just as we assumed the burden of fighting the war in Southeast Asia when France resigned from that responsibility. Although it was Great Britain, France, the Netherlands, and Belgium that exploited the colonial populations, it is Uncle Sam who is expected to help solve the problems of the new nations with huge outpourings of borrowed money.

Mr. Speaker, I have given but a few of the many reasons for ending foreign aid. Suffice it to say that if we are going to balance the budget, cut spending, reduce the debt, and end the surtax, we ought to start with the foreign aid programs.

The table to which I referred at the beginning of my remarks follows:

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
FUNDS APPROPRIATED TO THE PRESIDENT			
International financial institutions:			
Investment in Inter-American Development Bank, obligations	300,000	300,000	300,000
Subscription to the International Development Association, obligations	104,000	160,000	160,000

NATIONAL SPACE PROGRAM

(Mr. MILLER of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MILLER of California. Mr. Speaker, it is especially heartening to the supporters of our national space program to read an editorial in the Evening Star on Friday, May 23, by Mr. Carl T. Rowan, which has enumerated only a very, very few of the benefits from our space program Americans are now enjoying and have been for many years. As a newsman and editorialist, Mr. Rowan deserves to be complimented in the succinct way he has illustrated how space research is providing answers through technology for many of our social ills. I think it is very evident that the fulfillment of the promises made in 1958 to the American people when Congress enacted the national space program is being carried out. At this point, I would like to include Mr. Rowan's editorial for the benefit of all Members of the House and for the edification of the relatively few, but highly vocal, critics of space research and development:

SPACE PROGRAM SPINNING OFF EARTHLY BENEFITS

(By Carl T. Rowan)

Millions of Americans watch in pride and astonishment as those intrepid astronauts, Tom Stafford, John Young, and Eugene Cernan, move us ever closer to touchdown on the moon.

But millions of Americans also ask some nagging questions about the wisdom of spending at least $24 billion to plant Old Glory on the moon before the Russians' hammer and sickle is anchored there.

Is it all just a woefully costly gambit in a never-ending ideological contest? In terms of ultimate value to mankind, is the moon program about the equivalent of giving America's poor people roundtrip tickets to the Sahara Desert?

The late John F. Kennedy said, in giving the go-ahead for this costly space program, that men want to go to the moon for the same reason they want to climb a mountain: "because it is there."

Perhaps the search for the unknown, a yearning that has pushed man to new continents and new knowledge down through the ages, is justification enough for some. But fortunately for the National Aeronautics and Space Administration (NASA), there are some more tangible and substantial arguments.

Though not designed primarily to solve "earthly" problems, "spinoffs" and "transfers" from the space program have indeed produced some remarkable benefits at home. And more dramatic side benefits are certain to come.

Thousands of Mexicans in the twin towns of Gomez Palacios and Torreon can vouch for this. Their cities were saved from possible disastrous flooding in the wake of Hurricane Naomi last year, thanks to photos and data from a weather satellite launched by NASA.

Hospital patients are discovering the benefits, too. A tiny temperature sensor and FM radio transmitter, developed for space research, is now being used as an alarm to warn if tracheotomy patients have trouble breathing. And crippled persons are learning to walk with a training device that evolved from one the astronauts originally used to practice for low-gravity walks on the moon.

In overcrowded, poverty-riddled India, plans are being discussed to teach improved agricultural techniques and family planning methods to millions of persons by television beamed into villages via satellite.

Traveling in the United States will be safer this Memorial Day, as a result of NASA research. Studies of landing accidents on wet runways have led to the use of grooved designs for runways and highways. Fifteen major airports have modified their runways and 25 states are experimenting with grooving treacherous stretches of highway. Some of these experiments show a 90 percent reduction in rainy-day accidents.

Scores of other benefits from the space program are helping, or soon will be, in every field from medicine to agriculture, industry to education.

A computer technique used to improve the clarity of pictures televised from spacecraft is now being used to make medical X-rays clearer and more detailed. One NASA official says brain X-rays are now 200 percent better.

To make the Apollo spacecraft fireproof, tests were conducted on hundreds of materials. These are now available to make safer clothing, upholstery, drapes, and other goods.

As a result of the cleanliness requirements for space components, giant "clean rooms" were developed which now are being copied in hospitals.

An especially tough coating developed for spacecraft is the basis of long-wearing paint now being developed for consumer use.

Out of an attempt to develop a heated glass canopy for research airplanes has come a cradle cover for newborn children—especially valuable for premature babies whose temperature must be closely controlled.

Electrocardiogram data on a heart-attack patient can be flashed ahead from the ambulance to the hospital, thanks to technology developed at NASA's flight research center.

A battery-operated television camera not much bigger than a pack of king-sized cigarettes, which photographs the separation of Saturn V rocket stages in flight, is on sale in a commercial version for monitoring industrial processes.

Is even all this worth the cost? Who at this early day in the history of space travel can say yea or nay?

BETTER POSTAL SERVICE AND REMOVAL OF POST OFFICE DEPARTMENT FROM PARTISAN POLITICS

(Mr. RUPPE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RUPPE. Mr. Speaker, when I was first a candidate for Congress in 1966, one of my major pledges was to work for better postal service and to support efforts to separate the Post Office from partisan politics. Consistent with those promises, and because it is right, I am today cosponsoring the Postal Service Act of 1969.

There are many reasons for supporting this legislation. As a former member of the House Post Office Committee I can testify without reservation that our postal system is running a headlong race with disaster. This is not legislation to improve the postal system; this is legislation to bring a halt to the increasing inefficiency tied to a rapidly rising volume of mail strangling our postal system. Furthermore, partisan politics and postal excellence do not mix, yet, for 200 years have hindered the entire postal operation. Persident Nixon and our outstanding Postmaster General, Winton Blount, have taken great forward strides toward the goal of removing the Post Office from politics. Abolition of the old "political advisor system" for filling postmasterships and rural carrier vacancies was a remarkable action. Now, with legislation I am introducing today, we can bring about the final divorce between the postal system and partisan politics.

The Postal Service Act of 1969 removes the Post Office from direct relations with necessarily politically partisan Government officials. The postal service will no longer be headed by a Postmaster General. In place of this historically political figure, there will be a board of seven directors, chosen by the President and confirmed by the Senate to be sure, but selected from private life and without regard for political affiliation. These seven directors will in turn appoint two other members who will be the chief full-time managers of the postal service. They will be selected for their ability as managers and will be accountable to the board for their management of the service.

The Postal Service Act specifically prohibits the use of any political consideration in the selection or promotion of the managing officers and the employees of the service and requires that

all such personnel action be based on merit and fitness.

Prohibitions on political influence within the postal system are valuable. They are needed. A distinct virtue of the present bill is that it not only contains such prohibitions but also creates an organizational structure which fosters their effectiveness. The service is removed from the center of the political stage by the creation of a nonpolitical board of directors. It is twice removed by making its active day-to-day managers immediately responsible to this nonpolitical board.

LEONARD RATNER RECEIVES THE GOLDEN DOOR AWARD

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FEIGHAN. Mr. Speaker, this evening the Golden Door Award of the Cleveland Nationalities Services Center will be presented to Mr. Leonard Ratner, founder and chairman of the board of directors of Forest City Enterprises, Inc., and nationally known Cleveland philanthropist.

Mr. Ratner is a unique man whose life's philosophy of looking back to where he has been so he can know where he is going, has put service to others in the forefront of his life.

Arriving with his family from Russia over 50 years ago, he has never forgotten the pain and suffering that he left; and has since then, by helping others with financial aid, and even more important, jobs and a place to work, has truly followed his own motto: "Service is our room rent on earth."

The Cleveland Nationalities Services Center is a nonprofit, voluntary agency, member of the Cleveland Welfare Federation and affiliated with the American Council for Nationalities Services in New York City. It is dedicated to aid in community absorption of the foreign born, to prevent isolation of and conflicts between the groups, and to facilitate the enrichment of American culture by their contributions.

Leonard Ratner has made a major contribution to international understanding and to the cultural life of our city and our Nation and is most deserving of this outstanding award.

AGRICULTURAL ADJUSTMENT ACT OF 1969

(Mr. ST GERMAIN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ST GERMAIN. Mr. Speaker, for several years I have opposed the kind of farm programs which are costing the taxpayers of this Nation more than $3 billion in payments to a small group of producers. The Government farm program has never lived up to its promises. It has meant lower income for farmers, less-efficient production, continuing surpluses, and little or no benefit to consumers.

The American consumer has to pay more for food than the supermarket price; through taxes, he has to hand over his share of the $3.3 billion that last year went to subsidize farmers—some farmers to the tune of over a million dollars. What a spectacle we offer when we have the Federal Government lavishing payments on wealthy farmers in some of the very counties which have not lifted a finger to set up for their malnourished poor the Federal food-aid programs so easily available to them. The present costly and ineffective farm program is scheduled to end at the close of 1970. I believe that the concept of expensive direct payments to farmowners should end with the program.

Starting in January 1971, the legislation which I am introducing today would regulate an orderly phaseout of farm payments and Government controls. By 1975, it will have eliminated acreage allotments, base acreages, marketing quotas, processing taxes, and direct payments for wheat, feed grains, and cotton. During the 5-year phaseout, a land retirement program would be put into effect to provide a transition period.

The supply management needed to balance production and demand should be worked out by the farmers themselves through their associations, and not imposed by the Government. I am convinced that the farm operators are quite capable of developing whatever policies and programs are called for in adjusting supply to market demand. They will certainly not do any worse than the current program.

The bill also contains—and this is an important point—a special voluntary provision for Government assistance to those noncommercial farmers who have no hope at all of transforming their farms into paying propositions. Here, for the first time, legislation separates the commercial farmer from the noncommercial farmer. We all know that there is a vast difference between the two, and that difference, I think, calls for an appropriate distinction in Government policy.

If we do away with Government controls and make the effort to increase our exports, I believe that we will once again have a healthy agricultural industry.

POSTAL SERVICE ACT OF 1969

(Mr. CUNNINGHAM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CUNNINGHAM. Mr. Speaker, I have today introduced the Postal Service Act of 1969. This is the bill sent up by the President for total reform of the Post Office to meet the needs of today's United States. It is one of the most important steps toward good government that the first session of the 91st Congress can take.

The Post Office today is in deep trouble. If it is not totally reformed—and quickly—the mail system may simply break down and cease functioning.

The Post Office is in trouble because it is trying to meet 20th century needs with a 19th-century organization. It is in trouble because its equipment is inadequate, its buildings are obsolete, its operating practices are outmoded, and its working conditions are archaic. It is chronically ridden with deficits measured in hunderds of millions of dollars. Unless there is basic reform, we can expect postal deficits of more than $15 billion in the next 10 years—$15 billion of tribute to a system whose hallmark is inefficiency.

The Post Office is in trouble because we have not demanded of it the modern managment techniques and modern labor-relations techniques that virtually every other major enterprise in the country has employed for decades. We should tolerate no less for the Nations most basic communications system—the U.S. mails. But the mails cannot keep pace with the needs of our expanding population and the demands of our ever-burgeoning economy unless there is thoroughgoing legislative reform.

The Post Office is starved for capital. It cannot fully avail itself of the enormously productive fruits of modern American technology. Postal needs, in a very real sense, are competing with other national needs for congressional appropriations. They have proved unequal to the competition. Alternate means must be provided for meeting the Post Office's requirements for investment capital with which to provide the modern buildings and high-speed equipment needed to move the growing mountain of mail efficiently and economically.

Relations between postal management and the three-quarters of a million dedicated postal workers have been less than satisfactory. The pallid substitute for collective bargaining that now exists in the Post Office gives postal employees no real voice in determining their conditions of employment. Labor and management have no authority to bargain collectively over issues like wages and working conditions—issues on which most employees in the service industries of this country have long enjoyed a right to be heard. As a consequence, there is only frustration and dissatisfaction for all concerned. As the President said yesterday, postal workers should have a stake in the quality of the service that they provide for the public and a reason for pride in themselves and in the job they do.

In the area of postal rates, needed changes and adjustments are too often caught up in a legislative process that is far better suited to deliberating and resolving great issues of national policy than to managing the detailed cost controls and price-adjustment needs of a public service enterprise like the Post Office. Postal rates have not been as responsive as they should be to changing market forces or to the needs of postal users. Changes in postal rates need the public scrutiny of expert, professional rate analysts.

To remedy these ills the bill which I introduce proposes the creation of a separate postal service authority—the U.S. Postal Service—wholly owned by the Federal Government, to be operated in the public interest using the best and most efficient of management methods and techniques to provide up-to-date

postal service for the needs of all Americans.

Responsibility for the management of the postal service will be in a board of directors, seven members to be appointed by the President, subject to Senate confirmation, and two, the top full-time managers of the service, to be selected by the remainder of the board. The board will have the authority to go with its responsibility for providing efficient postal service at reasonable rates. The postal service will be able to hire and promote employees solely on the basis of merit. It will be able to borrow on the open market for necessary capital investments. It will be able to bargain collectively with employee representatives on wages and working conditions. And the board will be responsible to the Congress and to the American people for the exercise of this authority.

In the discharge of its duties the postal service will at all times be bound by policies established by the Congress. In addition, in the important area of maintaining the best possible rate structure, postal rates will be subject to examination by a panel of expert rate commissioners acting on a public record to insure compliance with the policies which the Congress has established by statute. And before any change in rates becomes final it must be reported to the Congress, which may disapprove the change by concurrent resolution. At every step the public interest will be protected

The bill that I introduce represents major change; but major change is needed—and needed now—if the Post Office is to give the American people the postal service they deserve. The postal service bill has been designed to keep what is best in the Post Office: The honest, devoted work of thousands of loyal men and women at all levels of postal operations, men and women whose lot will be improved as efficiencies and modernization bring the service into line with other enterprises; the historic tradition of integrity of the mails; and the universality of service which makes the mails the most important of our communications networks.

The bill has also been designed to improve the Post Office where improvement is needed: There will be continuity of professional management; badly needed capital resources will be available; postal rates and postal services will be responsive to the needs and demands of postal users; and postal employees will have a real voice in determining their wages and conditions of employment.

Mr. Speaker, I endorse the President's recommendations that this legislation be promptly considered and promptly enacted.

My friend from Arizona (Mr. UDALL) spoke a moment ago about the introduction of a bill to reform the Post Office Department. We have been working on this legislation for a long time. The Post Office Department is in one big mess, and it is not due to any particular administration, and it is not due to any particular Postmaster General. I have served under six of the Postmasters General, and one goes off in one direction and one goes off in another, and there are all kinds of new people who come in every time a new Postmaster General is selected.

Something has to be done about reforming the Post Office Department or we are going to have a complete breakdown—as a matter of fact, it is almost broken down now.

Mr. Speaker, I am introducing today two bills identical—but because we can only have a certain number of Members gathered together on one bill, and we have so much interest in this legislation—the bills will be the same, but the names will be different.

Mr. Speaker, I believe that the American people are very much concerned about the postal system and the mess that it is in. I again repeat that this is not due to any one administration, it has just not been taken care of by continuity of management. It has been political, but it should be operated like any other private business, and that is all we hope to accomplish with the bill that I am introducing today.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman from Nebraska yield?

Mr. CUNNINGHAM. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Mr. Speaker, I thank the gentleman from Nebraska for yielding.

I believe that the gentleman from Nebraska has succinctly laid on the table the critical problem we face with the present situation in the Post Office Department. I am glad to have joined with the gentleman in sponsoring the legislation the gentleman is introducing today.

Mr. CUNNINGHAM. I thank the minority leader.

THE ARAB STATES AND THE "DECLARATION FOR PEACE"

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 30 minutes.

Mr. FARBSTEIN. Mr. Speaker, on April 28 the names of 226 Members of Congress appeared on the "Declaration for Peace in the Middle East on the Occasion of Israel's 21st Birthday."

That document expressed the sincere desire of the signers that a peaceful settlement of the Middle East conflict could take place. It urged Israel and the Arab States to meet face to face to discuss their differences with the hope of ending the conflict which has led to suffering by Israelis and Arabs alike.

The declaration said in part:

We believe that the issues which divide Israel and the Arab states can be resolved in the spirit and service of peace, if the leaders of the Arab states would agree to meet with Israelis in face-to-face negotiations. There is no effective substitute for the procedure. The parties to the conflict must be parties to the settlement. We oppose any attempts by outside powers to impose halfway measures not conducive to a permanent peace. Achieving peace, Israel and the Arab states will be in a position to settle the problems which confront them.

I regret that this appeal by many of the most distinguished Members of the House and Senate of the United States has fallen on deaf ears. It has unfortunately evoked from the Arab States neither reason nor an attempt at understanding of the issues that divide them from Israel. It has only evoked antagonism and dogma.

The following exchange of correspondence between Mr. Rashad Mourad, permanent observer of the League of Arab States to the United Nations, and myself, documents this:

MAY 27, 1969.

MR. RASHAD MOURAD,
Permanent Observer of the League of Arab States to the United Nations, Arab States Delegations Office, New York, N.Y.

DEAR MR. MOURAD: I regret that you have rejected the call to peace embodied in our Congressional Declaration, just as the Arab states have rejected all calls to peace for the past 21 years.

I regret that, as Israel celebrates her 21st anniversary, the Arabs are marking the 21st anniversary of their war against Israel. Twenty-one years ago, in defiance of the UN partition resolution and the UN Charter, the armies of the Arab states invaded Palestine/ and seized East Jerusalem and what was to have been the Palestinian Arab state. The world community, through the United Nations, had offered self-determination to both the Arabs and the Jews in the area. It was the Arab states which deprived the Palestinian Arabs of their right to self-determination then, and it is the Arab states which still refuse to recognize the right of Israel—a member state of the United Nations—to self-determination.

I regret the plight of the Arab refugees, who left their homes at the behest of the Arab states with the understanding that their departure would be temporary and intended only to facilities the onslaught of the Arab armies against Israel. I regret, too, that the Arab states, after failing to make good their promise, have refused to take the refugees into their own homes and permit them to lead productive lives, but have instead used their Arab brothers as just one more weapon in their war against Israel.

I regret, finally, that you imply that I, the Congress of the United States, and the American people are shirking our responsibility regarding the achievement of an Arab-Israel peace.

We believe, however, that an Arab-Israel peace should be just that—an *Arab-Israel* peace. I feel that by trying to bring about Arab-Israel peace negotiations, we are living up to our responsibilities. I look forward to the day when the Arab states will do the same.

Sincerely yours,

LEONARD FARBSTEIN,
Member of Congress.

ARAB STATES DELEGATIONS OFFICE,
New York, N.Y., May 15, 1969.

HON. LEONARD FARBSTEIN,
House Office Building,
Washington, D.C.

DEAR SIR: The declaration bearing your signature and published in the form of an advertisement in the New York Times on Sunday, May 11, has prompted me to write you in an effort to present the under publicized version of the tragic Arab-Israeli dispute which is daily assuming alarming proportions.

Sir, while Israel is celebrating her 21st anniversary, allow me to draw your attention to part of the cost resulting from the establishment of this state: the creation of over 1,350,000 Arab refugees; the deprivation of the Arab people of their property rights in Palestine; the reduction to a state of poverty

and misery of the indigenous population; the eradication from the area of Arab culture and civilization and the substitution of a garrison state ruthlessly bent on exploiting her friends and foes alike.

On this 21st anniversary marking the eviction of the Palestinian Arabs, we express our concern at the fact that the Arabs of Palestine are still being denied their fundamental right of self-determination enshrined in the Charter of the United Nations and the Universal Declaration of Human Rights. Likewise, we regret that after waging three futile and costly wars, the Israelis have not realized that the only path to peace lies in the restoration of Arab rights.

We sincerely believe that the issue which divides Jews and Arabs can be resolved if the Israeli leaders are willing to forgo their annexationist and expansionist designs. There is no substitute for a just and lasting peace other than Israel's withdrawal from occupied Arab territories. Peace, dear sir, cannot be achieved by the imposition of the will of the conqueror on that of the conquered.

The condemnation by the United Nations peace-keeping bodies of Israeli acts of aggression is a contribution by the United Nations to the establishment of an international order based on the rule of law in the area; Israel has not abided by any United Nations resolution.

Finally, I would like to emphasize that Israel, which presently occupies territories three times its original size, owes whatever progress she has achieved to the billions of tax-free American dollars which continue to pour into this state. We appeal to you in the name of justice and peace to approach the Arab-Israeli dispute in an even-handed manner bearing in mind the true interests of the American people.

Respectfully yours,

RASHAD MOURAD,
Permanent Observer of the League of Arab States to the United Nations.

AMERICA'S MILLIONS OF LEARNING DISABLED YOUNGSTERS WOULD BE HELPED BY H.R. 8660

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. PUCINSKI) is recognized for 30 minutes.

Mr. PUCINSKI. Mr. Speaker, a very long time ago, a wise man observed:

> We cannot stand pointing our finger to the heights we want our children to scale. We must start climbing and they will follow.

I recall that advice as I stand here urging passage of legislation which I have introduced to help millions of American children with learning disabilities.

Less than 100 years ago, children were considered of little value.

Youngsters without parents were allowed to wander homeless in the streets.

Nine and 10-year-olds could be executed for crimes as minor as stealing food.

Children of 7 and 8 were sent to work in mills, mines, and factories—places which stunted their growth, destroyed their health, and killed them off anonymously, in tens of thousands.

To poor families, a child's birth was often a calamity. He became merely another mouth to feed. Unless that child could find means to support himself from a very early age, he was often cast out or allowed to die.

In this brutalized world, sheer survival consumed the energy, the health, and the lives of millions.

Late in the 19th century and in the early decades of the 20th century, this horror and cruelty began to end.

Through the efforts of writers, humanists, and missionaries from all walks of life, the conscience of the western world was moved to change the old order of things.

Gradually, the individual child became the focal point of man's hopes for a better future. The terror and disease that had blunted the lives of so many began to recede through legislation and through medicine, and, perhaps most important—through education.

Now we approach the end of the 20th century. Increasingly, man is concerned with unlocking the secrets of his uniqueness and his humanity.

The study of man as a special being—and the development of his potential for intellectual growth—are engaging the interest of people in dozens of interrelated professions—from economics to psycho-pathology.

We know, all of us, that a large measure of cognitive human development takes place in the classroom.

Children are taught to learn and, through learning, are impelled to carve a unique place for themselves in our complex and competitive society.

Significantly, in the sheer weight of numbers of students added to our classrooms each fall, we have encountered a phenomenon that multiplies more rapidly than we have thus far been able to prevent it—the phenomenon of the learning-disabled child.

There was a time when children who had difficulty learning were swept aside or described as "incorrigible" by teachers and parents.

Teachers devoted their time to good students. Anyone not classified as "good"—which usually meant submissive and capable of rote memorization—was dismissed as mentally defective or a discipline problem. We will never know the devastation these ignorant judgments made on the lives of children who were unable to defend themselves.

Nowadays, with our evolving sensitivity to the countless factors which determine human growth, the child who is having difficulty learning is no longer often written off as lazy, stupid, or merely defiant.

We now know that his inability to learn may be related to a variety of perplexing maladies.

His brain may have been slightly injured at birth, causing real—but often minimal—interference with his ability to perceive letters, colors, and figures as other children do.

He may have impediments to speech and to sight—impediments so slight they may go undetected for years, but which nevertheless prevent his participating to the full extent or his actual intellectual ability.

These handicapping disabilities have a variety of names. Names like dyslexia, a term used to describe any or all forms of reading disorders. Names like aphasia, which describes the impairment of the power to use or understand speech. Names like minimal brain dysfunction or MBD, as it is commonly used, which means a slight irregularity of the brain's ability to function.

These, and other terms, describe the plight of the children affected, but techniques and solutions to combat the disabilities successfully have not yet been put into nation-wide use.

More and more, however, educators, physicians, psychologists, therapists, social workers—and parents—are becoming involved in discovering ways of helping the learning-disabled child.

And it is because legislators are also now involved in bringing this national problem into the light of public discussion and providing funds to help solve it that I am privileged to speak to you tonight.

The Federal Government, to state the obvious, exists for the people of the United States. All of them.

In recent years it has not been fashionable to hear the Government referred to as either relevant or responsive, but it can be—and usually is—both of these.

When I was first elected to Congress in 1958, the annual education budget of the United States—covering all forms of education—was $1,081,000,000.

In 1969, the figure was $7,165,000,000—an increase of more than 600 percent.

Money for elementary and secondary education has increased from $259 million in 1959 to $2,182,000,000 this year.

This assistance has provided increased funds for construction, for special materials, for teacher training, for library books and technical facilities, for grants and projects, and demonstrations and programs; all of them designed in cooperation with the individual States to reach as many children as possible with as much talent and technology as could be made available.

I believe most of us are familiar with title VI of the Elementary and Secondary Education Act. This title provides special assistance to the 50 States for the education of handicapped and exceptional children.

These are children who may be mentally retarded; children who are deaf or hard of hearing; those with speech impairments and visual handicaps; those who are seriously emotionally disturbed, crippled, or afflicted with health problems that require exceptional facilities.

When we were writing this title into the Elementary and Secondary Education Act, we had hoped to reach most students with special problems and to assist their teachers, not only to recognize the unique needs of their pupils, but to help the children to develop and to learn.

Recent studies now being published and evaluated indicate there is an even greater need today—the need to reach children with learning disabilities.

Their needs are not being met to any significant extent. Not on a national level, and surely not on a local level.

Learning disabilities may be slight or overwhelming, but they can no longer be merely consigned to the skill, temperament, or the time of the individual teacher in a classroom.

The statistics on the extent of the problem, although incomplete, are nonetheless startling.

It is estimated that one child in seven in above average school districts has serious reading disorders, traceable to learning disabilities, emotional problems, or instructional deficiencies.

Reading disorders among the poor or disadvantaged youngsters range as high as one child in four, and may be even higher in specific school districts.

A study of 36,000 schoolchildren in Michigan revealed that 24 percent of children from low-income families have defective vision, attributable to a variety of causes, which prevent them from learning to capacity.

Of the handicapping conditions listed by the Children's Bureau, visual impairments affect approximately 12.5 million school age children between the ages of 5 and 17 at the present time. Many youngsters suffer multiple learning disabilities.

The bureau estimates that there are 5,400,000 emotionally disturbed schoolchildren; 3,270,000 children have speech impediments; and 2,720,000 are mentally retarded.

In all the definitions of what constitutes impediments to learning, there is a single, consistent element.

This element is that the learning disabilities are usually characterized by a significant discrepancy—usually 2 or more years—between the level where a child is expected to be functioning and the level where he is actually functioning in one learning situation or another.

In general, learning disabilities fall into three main categories: perceptual motor problems, language and communication disorders, and academic subject disabilities such as arithmetic or spelling.

These problems may be seen as a child's inability to transfer single letters into whole words.

He may be unable to reverse letters and numbers. He may be quick in math, but severely handicapped in coordination.

He may excel in spelling, and stumble in recitation. He may be unable to judge distances well or perceive distinctions in shapes and sizes.

The learning disabled child may have one or a combination of these disabilities affecting his memory in some way, his ability to think, his span of attention, his muscular coordination, his sight, his hearing, and his speech.

School districts across the Nation are only just beginning to feel the impact of the need to provide services for this uniquely disabled child.

There are three prevalent educational programs operating in a limited fashion in selected school districts at the present time to deal with learning disabilities.

They are: resource classrooms, self-contained classrooms, and itinerant teacher programs.

To explain further: A resource teacher would be employed by a school district or by a county board of education, for example. She might be assigned to a specific group of children in a particular schoolbuilding.

Those children in need of special assistance would be assigned various periods with this teacher during the day, the periods often coinciding with the area of study that the children find most difficult.

If a child is experiencing difficulty in reading, then during the regularly scheduled reading period, he would go to the resource classroom and receive intensive work in reading or language.

This type of program has provided measurable success in working with the learning disabled child. It has the advantage that the child spends most of his schoolday with his fellow students in a regular classroom environment.

In the self-contained classroom, children associate almost entirely with other handicapped or other learning-disabled children.

This program is of most help for children who are experiencing problems of such magnitude that they cannot be handled in a regular classroom setting.

Under this program, the children spend the entire day in this special class and have no contact with so-called "normal" children in a school environment.

The third program currently in use in some school districts—primarily rural ones—is the itinerant teacher.

This program operates in a manner similar to the resource program except that, instead of the children coming to the teacher, the teacher travels from school to school with the children.

This provides opportunities for the teacher to work with selected children during a specific period of time.

Which brings us to the consideration of, perhaps, the most crucial problem of all when discussing the implications of learning disabilities for the children themselves, for their parents, and for their communities.

We need trained teachers, a lot more of them than we have now.

We need the brightness and enthusiasm of young teachers. We need the maturity and patience of teachers with long experience.

We need men and women who love to teach and who love children.

That I should spend time emphasizing this point may cause some to question my judgment, for most of us are used to hearing of the teacher shortage. It has been dinned into us for years.

We have heard it so often, in fact, it has lost a lot of its importance. Most of us tend to dismiss it as just another factor in our lives.

I have served on the House Committee on Education and Labor for more than 10½ years and each year I read more in-depth studies and listen to the well-documented testimony of countless witnesses—parents and educators—literally begging for qualified men and women to enter the classrooms of this country.

Several of our colleges and teacher training institutions have independently established programs to prepare teachers and other workers for careers in the field of learning disabilities.

These people are trained to spot the potentially disabled child and to get him to respond to a learning experience.

Up to now, it has been impossible to train people as fast and as quantitatively as the demands are made by State departments of education.

With the most recent estimates setting a figure of learning disabled children as high as 3 million in classrooms in cities and towns across America, we can no longer expect to wish the problem away.

Outside the pages of romantic literature, wishing has proved little good for anything except an alternative to action.

I have introduced a bill in the House of Representatives, H.R. 8660, to provide special programs for children with learning disabilities.

Basically, this bill would amend title VI of the Elementary and Secondary Education Act which I referred to earlier—the title dealing with assistance to handicapped children.

My legislation would authorize the Commissioner of Education to make grants and to enter into contracts with colleges, universities, State and local education agencies, and public and private education and research agencies to enable them to tackle this problem with every resource they can muster.

The bill would permit funding of surveys and research activities and would encourage pilot and demonstration projects in the field of learning disabilities.

It would provide for professional or advanced training for teachers of children with these special disabilities, as well as training for the supervisors and people who will be responsible for training the teachers themselves.

In particular, I want to emphasize that the bill does provide for special refresher courses for experienced teachers in order to keep them current on new techniques in teaching and ever-alert to the special needs of the children they influence so directly every day.

H.R. 8660 would provide for the establishment and operation of model centers designed not only to improve the learning experience, but to improve the education of the learning disabled child.

These model centers would test and evaluate children referred to them.

The centers would develop and conduct model programs to reach the children and encourage them to respond to a learning experience that emphasizes their genuine abilities.

Further, the centers would offer assistance and advice to agencies and schools interested in setting up model programs of their own. These programs and this assistance would be available to all children with learning disabilities, whether or not they are enrolled in private or public schools.

There have been many exciting experiments that have been undertaken by private laboratories and learning institutions in this field.

Most notably, I refer to the success of Robert Hamblin and David Buckholdt of the Central Midwestern Regional Educational Laboratory in St. Ann, Mo.

They have developed an exciting and vastly encouraging system of counteracting the disruptiveness of hyperaggressive children in a classroom by conspicuously rewarding cooperative behavior, thus benefiting all the children and encouraging them to help one another as well as themselves.

By working with teachers who were floundering in dealing with a group of

totally disruptive children, Mr. Hamblin and Mr. Buckholdt managed to give the teachers effective suggestions for reaching all of their students.

The purpose of my legislation is to recognize the extent of our national problem and to devise methods and means of treating it.

Our aim is to provide a systematic approach to encourage potential teachers and veteran teachers to obtain the training they can undoubtedly use to reach these unfortunate youngsters who need so much help.

Thousands of schoolchildren are failing because they are trapped in the cocoon of their special learning disabilities.

Years ago such children were "dunces," alternately hounded, ignored, teased, and shunned by their classmates and, sadly, by their teachers and parents in far too many instances.

With today's emphasis on achievement, with information doubling every 10 years, the child with a learning disability is all the more noticeable.

Once upon a time he would drop out of school after a year or two of failure and perhaps find employment in a trade requiring little skill.

Nowadays multiple skills are essential for people to support themselves decently.

With your help, with the help of organizations and agencies sharing your concern, with the assistance of therapists, teachers, doctors, and technicians of all kinds, the Federal Government hopes to provide a full measure of assistance to eliminate the tragedy of learning disabilities from the lives of millions of children.

As never before, we need the enriching culture of our people; the old ones and the young ones.

There is a place for everyone here. We need their individuality—in this technocratic age—to reinforce our belief in a future that is compassionate enough to revere all human life and safe enough to preserve it.

I am reminded, as I look out upon all of you, of the children we were once, and I recall the words of the man who said, in gazing at the adults of his own generation:

I believe in children—little ones, big ones, chubby and thin ones. There is faith in their eyes, love in their touch, hope in their attitude. I thrill with them at life's happiness, run with them in celebration, bow with them in prayer, and hold them close in tragedy.

I believe in children—the fragile dream of yesterday, life's radiant reality today, and the vibrant force of tomorrow.

For wherever I go I find yesterday's children, who were nurtured in faith and love and learning, at work in building the Kingdom of God.

I am pleased to announce the Subcommittee on General Education which I serve as chairman has agreed today to hold hearings on this important problem.

I am today including with my remarks a copy of H.R. 8660 which I hope will help stimulate discussion on this subject. The bill follows:

H.R. 8660

A bill to provide for special programs for children with learning disabilities

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Children With Learning Disabilities Act of 1969".

SEC. 2. Title VI of the Elementary and Secondary Education Act of 1965 be amended—

(1) by redesignating part "E" of such title as part "F" and redesignating sections "611" through "615" as sections "612" through "617" respectively; and

(2) by inserting after part D of such title the following new part:

"PART E—SPECIAL PROGRAMS FOR CHILDREN WITH LEARNING DISABILITIES

"RESEARCH, TRAINING, AND MODEL CENTERS

"SEC. 611. (a) The Commissioner is authorized to make grants to, and contracts with, institutions of higher education, State and local educational agencies, and other public and private educational and research agencies and organizations (except that no grant shall be made other than to a nonprofit agency or organization) in order to carry out a program of—

"(1) research and related activites, surveys, and demonstrations relating to the education of children with learning disabilities.

"(2) professional or advanced training for educational personnel who are teaching, or preparing to be teachers of, children with learning disabilities, or such training for persons who are, or preparing to be, supervisors and teachers of such personnel; and

"(3) establishing and operating model centers for the improvement of education of children with learning disabilities, which centers shall (A) provide testing and educational evaluation to identify children with learning disabilities who have been referred to such centers, (B) develop and conduct model programs designed to meet the special education needs of such children, and (C) assist appropriate educational agencies, organizations, and institutions in making such model programs available to other children with learning disabilities.

In making grants and contracts under this section the Commissioner shall give special consideration to applications which propose innovative and creative approaches to meeting the educational needs of children with learning disabilities, and those which emphasize the prevention and early identification of learning disabilities.

"(b) In making grants and contracts under this title, the Commissioner shall require that—

"(1) to the extent consistent with the number of students enrolled in nonprofit private schools in the area to be served, whose educational needs are of the type which the program or project involved is to meet, provision has been made for the participation of such students; and

"(2) Federal funds made available under this title will not be commingled with State and local funds.

"(c) Payments pursuant to grants and contracts under this section shall be made in accordance with regulations promulgated by the Commissioner.

"(d) For the purposes of this section the term 'children with learning disabilities' means those children who have a disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, which disorder may manifest itself in imperfect ability to listen, think, speak, read, write, spell, or do mathematical calculations. Such disorders include such conditions as perceptual handicaps, brain injury, minimal brain dysfunction, dyslexia, and developmental aphasia. Such term does not include children who have learning problems which are primarily the result of visual, hearing, or motor handicaps, of mental retardation, of emotional disturbance, or of environmental disadvantage.

"(e) For the purpose of making grants and contracts under this section there are hereby authorized to be appropriated $12,000,000 for the fiscal year ending June 30, 1971, $20,000,000 for the fiscal year ending June 30, 1972, and $31,000,000 for each of the succeeding fiscal years ending prior to July 1, 1975."

WHY I OPPOSE AN ALL-VOLUNTEER ARMY

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. SAYLOR) is recognized for 30 minutes.

Mr. SAYLOR. Mr. Speaker, the question of whether or not the United States should continue its system of military conscription has received a great deal of public attention in recent years. Considerable agitation, both vocal and violent, has been directed against the military draft. What had virtually come to be accepted as the normal way of life in post-World War II America has now been called into question. This stems primarily from the discontent of many of our youth with the Vietnamese war. It is due also to the increasingly apparent discrepancy between the burden which is placed on a relatively few young men and the freedom enjoyed by the majority who escape military service. A great deal of disenchantment with the administration of the Selective Service System and opposition to the whole concept of a military draft have been widely expressed by many segments of American society. Discontent with the draft has led to proposals that it be abolished altogether. As a result, the feasibility of eliminating conscription in favor of a completely voluntary military force is now receiving serious consideration at both the presidential and congressional levels of Government.

I consider the subject of the draft's continuation to be one of the most important issues facing this Nation today. I have given a good deal of thought and study to this matter. After careful consideration of both the pro's and con's of the issue, I have concluded that, as long as the United States needs to maintain large armed forces-in-being to protect its security, the wiser course of action at the present time is to retain the draft.

My primary reason for advocating retention of the draft is a philosophic one which is related to the preservation of our democratic freedoms. I refer to the importance of the maintenance of civilian control of the military. This is a fundamental principle of American government. I feel that civilian control over the Armed Forces would be seriously undermined and weakened by an all-voluntary professional military force.

The record of large professional armies throughout history is not a commendable one. I think it might be well to refresh our memories of the bitter experience of the American colonists with a large standing army composed entirely of professional mercenary soldiers. An army so constituted was the instrument by which British tyranny was imposed upon the Colonies. Based upon its record and conduct, the colonials developed a well-founded suspicion and distrust of professional armies. Many of the colonists and their ancestors had come to America to escape military tyranny. Many had sought freedom from feudal lords and kings who possessed mercenary

armies to which they were forced to supply food, shelter, and money. Quite naturally, the early settlers were alarmed to find the hated trappings of militarism transplanted by agents of the British Crown to American soil.

The American colonists' resentment of the abuses of military power and their strong belief in the necessity of civilian control of the military found expression in their catalog of grievances against the British Crown. In the Declaration of Independence, King George III was charged with having "kept among us, in times of peace, standing armies without the consent of our legislatures," and having rendered "the military independent of, and superior to, the civil power."

James Madison, writing in the Federalist Papers, expressed a common American fear of the potential dangers to a free people from a large military force. He reminded the men who were drafting the Constitution "that the liberties of Rome proved the final victim to her military triumphs; and that the liberties of Europe, as far as they ever existed, have, with few exceptions, been the price of her military establishment."

The wise Mr. Madison further pointed out that "on an extensive scale," the consequences of a large standing army could be "fatal."

Some States, in ratifying the Constitution, went so far as to suggest that the Constitution should contain a clause enunciating the principle "that standing armies in time of peace are dangerous to liberty, and therefore ought to be avoided, as far as circumstances and protection of the community will admit; and that in all cases, the military should be under strict subordination to, and governed by the civil power."

So distasteful was the memory of British rule that many men proposed that the United States keep no army in peacetime at all.

Nevertheless, the greatest majority of the Founding Fathers fully recognized the necessity of the army and navy to the self-preservation of the newly-formed Nation. However, to guard against the possibility that the Armed Forces might attain overwhelming military power, they included appropriate civilian controls in the Constitution. For example, the Congress was given power over the purse strings and a 2-year limitation was placed on appropriations that could be made at any one time for military expenditures. To further safeguard against the possibility of the abuse of military power, civilian authority over the military was divided between the President and the Congress. This division of responsibility was considered by the Constitution-makers to be the best way to prevent the concentration of armed might in the hands of the Federal Government. In part, it reflected the States' lingering fears of an overly powerful central government and of the possibility that a future President might entertain kingly ambitions.

Furthermore, by deciding to place their major reliance for defense on the States' militias, or citizen-soldiers, the framers of the Constitution took another step in the direction of preventing the evolution of a distinct military entity in the United States. The Minutemen of Lexington and Concord were considered to be the prototypes of the soldiers whom the populace could trust with the responsibility of arms. The Nation would rely primarily upon such men for protection in an emergency. In fact, throughout the greater part of our history, the citizen-soldiers of Massachusetts who left their plows and workbenches to defeat a column of British regulars in 1775, were the American soldier-ideal.

The militia principle was given very explicit expression by the second amendment to the Constitution which states that:

> A well-regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

It may be argued by proponents of a voluntary Army, that the volunteer tradition is also a strong component of the American military heritage. They may further object that the fears of the Founding Fathers with respect to potential military tyranny have never been even remotely realized although the United States has maintained a completely voluntary or professional army during the greater portion of its existence. At no time did it constitute a threat to our liberties.

I should like to point out that, during the periods of time when a totally voluntary army was maintained by the United States, it was a comparatively small force in proportion to the total population. In all of our wars which have involved mass mobilization—that is, the employment of millions of men by the military service—conscription has been adopted. Thus, conscript armies were used in the Civil War, the First World War, the Second World War, and the Korean war. Only in relatively minor conflicts, such as the Mexican War and the Spanish-American War, have purely volunteer armies been employed.

To further illustrate, the peak strength of the Armed Forces employed during World War I was 4,560,000; during World War II, 12,276,000; in the Korean war, 3,500,000. Since the Second World War, we have been obliged to maintain a standing army of between 2 and 3 million men. We will probably continue to do so until world tension subsides enough to allow substantial reductions in force.

By contrast, the peak strength of men employed in the Mexican War was 133,500; and in the Spanish-American War, 307,000.

Thus, since colonial times, the United States has never had experience with what Madison termed an army "on an extensive scale" in which the draftee, or nonprofessional, was not utilized. We have, in other words, no historical basis for optimism that a large voluntary army would not prove a threat to civilian control over the military. I, for one, do not wish to risk the possibility of such a threat developing as long as we are compelled to maintain massive Armed Forces. I believe that the draftee in the ranks is our best insurance against its potential occurrence.

A totally professional army would be largely composed of men whose habits, goals, and attitudes would tend to be predominantly military. A professional military force is potentially dangerous because it tends to become devoted to its own self-interest and perpetuation. Removed as he is from other sectors of society, there is the danger that the military man may become too parochial in his interests.

It is in the nature of military life that the individual owes primary allegiance to the service with which he is associated. The individual is subordinated to the group to a greater degree than in any other occupation or association in civilian life. The military assumes control over all areas of an individual's life to an extent unknown in the remainder of society. The man who chooses to make his future in the Armed Forces accepts the fact that the interest of his particular service will come foremost in his life.

I do not mean to sound critical of the military services per se. My remarks are merely statements of the facts of life. Individual subordination and dedication to duty are absolutely essential if the Armed Forces are to perform their assigned mission.

However, when the military services number in the millions, as they do today, the draftee can act as an essential counterbalance to any excessive professionalization. The conscript system guarantees the constant introduction into the Military Establishment of persons who are primarily oriented to civilian life. The draftee, although he receives training in military habits and attitudes, is generally a man who intends to spend only the prescribed amount of time in service before resuming his civilian pursuits. The influx of draftees into the services means that a healthy civilian influence is maintained. Furthermore, as draftees are drawn from all socioeconomic levels of society, they are more broadly representative of American society than a purely voluntary force would probably prove to be in practice.

The draft is often legitimately criticized on grounds that, despite its egalitarian principles, it is discriminatory in practice. Although the draft draws men from all social strata, it nevertheless favors the more affluent young men who can afford to go to college and obtain student deferments. It is true that men from our less privileged citizenry bear a disproportionate share of the Nation's military burden. However, I believe that an all-voluntary Army, whose recruitment depended upon monetary incentives, would inevitably contain an even greater proportion of the disadvantaged. They would be obliged to carry an even greater share of the weight of the Nation's defense than they do at present. The affluent could escape military service altogether and be free to attend to their own careers while their less fortunate contemporaries protected the welfare of all. The man who joins the service because he has little economic choice may feel considerably more discriminated against under a totally voluntary system than he does with the draft, however imperfect its operation.

Without doubt, an army recruited through the use of incentives such as increased pay would tend to become an army of the poor and underprivileged. In all probability it would also contain a large element of young men who cannot compete successfully in civilian life. To many, the wearing of a uniform provides symbolic status which they cannot attain elsewhere.

In support of the foregoing contention, is the fact that the highest military retention rates are among men who are derived from our lower economic classes. The greatest number of volunteers for the Armed Forces already come from lower income groups and from the poorer regions of the Nation in which the chances of obtaining a high paying job are scarce. Furthermore, during times past, when the United States had an all-volunteer force, the Army historically provided a haven from economic insecurity.

The disadvantaged or disposers who would become the mainstay of an all-volunteer force will be strongly inclined to identify with the services which give them status, material security, and a steady income. This, in turn, would serve to reinforce natural tendencies among such men to place primary emphasis on the perpetuation and advancement of the Armed Forces in which they acquire a vested interest.

Another dimension to the problem of the poor and their relation to military service is the fact that many of our underprivileged citizens are Negroes. An all-volunteer force might well contain a disproportionate segment, or even preponderance, of blacks. This could lead to further inflammation of racial tensions in the United States because it might easily result in charges that black men were being used to fight white men's wars or to defend white institutions. The explosive content of such an issue cannot be overstated.

My opposition to an all-volunteer army rests also on more pragmatic grounds. A voluntary army would lack the flexibility to adjust to changing manpower requirements. With its reliance on personal choice, there is no guarantee that a voluntary system could provide large quantities of manpower that might be needed in a hurry.

The circumstances of modern warfare no longer allow us a long time to prepare for combat after the instigation of a conflict. Forces have to be moved on short notice and large reservoirs of trained men often must be available immediately. The days are over when the United States will have a safe margin of time in which to mobilize and train its manpower while its allies carry on the initial fighting as they did in two world wars. In today's world, and for the foreseeable future, trained forces in-being count a great deal more than potential forces. I do not believe we should gamble our national security on a purely voluntary system that might or might not meet our manpower requirements.

If we are to follow the scheme of those who advocate complete recruitment of servicemen through the aid of monetary incentives, we would find ourselves in a rather untenable position if a sudden expansion of our Armed Forces should prove necessary. In order to make upward adjustments in military force levels, the Congress would presumably have to make corresponding adjustments in military pay levels and bonuses. This would be awkward, impractical, and time-consuming.

In addition, in time of hostilities, I believe that increased pay would surely prove futile as a means of recruiting sufficient manpower. The United States has always suffered difficulty in raising armies by voluntary means in wartime. Volunteers for service in Vietnam, for example, have not been sufficient to preclude resort to the draft. Moreover, recruitment difficulties are undoubtedly increased by the fact that civilian employment is generally high during periods of armed conflict.

Even in the absence of conflict, I seriously doubt that the services could obtain enough volunteers to supply their anticipated manpower needs. Added enlistment incentives would probably not close the gap between actual military requirements and the force levels obtainable by purely voluntary means.

Some significant relevant statistics were produced as a result of a career motivation survey conducted by the Bureau of the Census for the Department of Defense in 1966. This study revealed that, among nonveterans, aged 16 to 34, fringe benefits ranked eighth in a list of nine factors which might influence an individual's choice of career or job. In fact, less than 3 percent of those interviewed placed fringe benefits first in their considerations. In the matter of increased pay, it was found that only 4 percent of the 16 to 19-year olds interviewed regarded equalizing military with civilian pay scales to be a significant inducement to enlistment. It is also interesting to note that, of the same group, only 17 percent thought that raising military pay levels above those of civilians for comparable work would prove attractive.

The stimulus which the draft now provides to voluntary service enlistments is commonly acknowledged, even by the draft's opponents. On the basis of an internal survey of military personnel, the Department of Defense came to the conclusion that only about 50 to 60 percent of the present number of volunteers might be procured in the future if there were no draft. The anticipated drop in officer and reserve enlistments would be especially sharp. On an overall basis the Department of Defense estimated that, in the absence of conscription, it could meet only about two-thirds of its anticipated military requirements in the 1970's.

Without the draft, the services would probably also suffer from serious qualitative deficiencies in manpower. The draft brings into the Armed Forces many well-educated, intelligent individuals who would never enter the service at all if a totally voluntary system were in effect. Above average mentality and education are required to master technical skills, handle modern weapon systems, and understand the management of large organizational units. It is highly doubtful that the men who would be most responsive to financial incentives to enlistment would be people of superior aptitudes so sorely needed by the services.

These foregoing conclusions as to quantitative and qualitative deficiencies of an all-volunteer force are supported by the studies made by the National Advisory Commission on Selective Service and the Civilian Advisory Panel of the House Armed Services Committee in 1967. Both groups concluded that a totally voluntary military establishment is not feasible at this time.

The anticipated costs of attempting to provide for a purely voluntary army are enormous. Defense Department estimates in 1966 of the amount of money required to stimulate volunteer enlistments range from about four to as high as $17 billion annually, depending upon the employment levels prevailing in the civilian economy. Therefore, adoption of an all-volunteer army does not seem prudent at a time when we are trying to find ways in which to reduce inflationary Federal expenditures.

In conclusion, I would like to say that military manpower problems will continue to be complex and difficult. It is always easier to point out the inadequacies of procurement systems than to provide feasible solutions. No perfect or completely satisfactory answers will be found to the problems which the military draft presents to this country as long as world conditions remain unstable. I do believe, however, that we can improve the administration of the Selective Service System and find ways to make the draft more acceptable to all sectors of society, I shall continue to make every possible endeavor to attain those goals.

POSTAL SERVICE ACT OF 1969

The SPEAKER. Under a previous order of the House, the gentleman from Nebraska (Mr. CUNNINGHAM) is recognized for 60 minutes.

Mr. CUNNINGHAM. Mr. Speaker, the first section provides a short title for the act: the "Postal Service Act of 1969."

OUTLINE OF THE POSTAL SERVICE ACT OF 1969

Section 2 is the bulk of the bill. It completely revises title 39 of the United States Code. Provisions in the present title 39 which are not included in the sections set out in the bill are repealed or superseded. A summary analysis of the revised title 39 follows my remarks.

Section 3 is a usual provision in legislative modifications precluding an inference of legislative construction of sections by their captions or by the chapters in which they are placed.

Section 4 provides that cross references apearing in other titles in the United States Code to existing sections of title 39 shall be deemed to refer to the corresponding sections, if any, in the revised title 39 and that references made in law to the "Postmaster General" and "Post Office Department" shall be deemed to be references to the "U.S. Postal Service" established in the revised title 39.

Section 5 provides that the repealed provisions of title 39 automatically became regulations of the Postal Service to the extent these provisions are within the power of the Postal Service to make, until changed by the Postal Service.

Section 6 similarly continues in effect the outstanding orders, rules, and regulations issued by the Postmaster General and the Post Office Department until they are repealed or revised by the Postal Service.

Section 7 directs the Postal Service to prepare proposals for modification of the so-called Private Express Statutes which confer a limited monopoly of the business of carrying letters for hire on the Post Office Department, and, under the bill, on the Postal Service. The Postal Service is directed to submit its recommendations to the Congress within 2 years after enactment of the act.

Section 8 makes changes in title 18 of the United States Code to conform the provisions of the criminal laws to the changes made in the revision of title 39.

Section 9 makes conforming changes in laws not modified in titles 18 or 39.

Section 10 is the usual separability provision in legislation.

Section 11 provides for the payment of expenses of the Postal Service until commencement of Postal Service operation out of appropriations available to the Post Office Department.

Section 12 provides effective dates for the legislation.

The summary referred to follows:

CHAPTER-BY-CHAPTER SUMMARY ANALYSIS OF REVISED TITLE 39

CHAPTER 1—GENERAL PROVISIONS

This chapter includes Congressional findings that change is needed in the postal establishment, that a Government-owned corporation is the most effective organization for the postal system, that the system should be self-supporting, and that working conditions and career opportunities should be improved.

CHAPTER 2—ESTABLISHMENT OF THE POSTAL SERVICE

This chapter provides the basic organization for a new corporate structure of the postal establishment under the name "United States Postal Service." A period up to one year after enactment is provided for preparation for commencement of operations. The Postal Service is to be controlled by a nine-man board of directors: seven appointed by the President (with Senate confirmation) with rotating seven-year terms; the eighth appointed as Chief Executive Officer by the seven Presidentially-appointed directors; and the ninth—the Chief Operating Officer—appointed by the eight. The Presidentially-appointed directors are to serve part time; the eighth and ninth directors serve full time and their compensation and tenure are fixed by the seven. No officer or employee of the Postal Service may be paid in excess of the compensation for Level I of the Executive Schedule.

The chapter contains customary provisions for quorums and board procedures, including power to delegate any function of the board.

The Postal Service is empowered to sue and to be sued in its corporate name, to adopt by-laws and regulations, to enter into and perform contracts, to keep its own system of accounts, to acquire and dispose of property, to settle claims, and so forth. (These corporate powers are like those of the Tennessee Valley Authority.)

This chapter also makes inapplicable to the Postal Service federal laws dealing with public contracts, property, works, employees, or funds, *except* as otherwise provided. There are, however, carried forward the provisions of the criminal code applicable to postal matters; existing laws relating to condemnation procedures; current provisions of title 5 regarding postal employees' rights to organize, anti-discrimination in employment, loyalty oaths, ban on strikes by federal employees, and "Hatch Act" ban on political activities; Title VI of the Civil Rights Act; and existing contractor labor standards statutes (e.g., Davis-Bacon Act, Walsh-Healey Act, Service Contract Act).

This chapter requires an annual report from the Postal Service to the Congress and explicitly reserves to the Congress the power to alter, amend, or repeal any or all sections of the new title 39.

CHAPTER 4—SERVICES

This chapter prescribes the general duties of the Postal Service—to develop and provide adequate and efficient postal service at fair and reasonable rates and to serve as nearly as practicable the entire population of the United States. It specifically empowers the Postal Service to provide for collection and delivery of the mails, establish necessary post offices, sell stamps, provide philatelic services, investigate postal offenses, and the like.

This chapter retains in substance existing maximum limits on the size and weight of packages that the Postal Service may handle.

This chapter provides for the continuance of APO and FPO service and service to military installations and for the continuance of existing authority to negotiate international postal arrangements.

CHAPTER 6—MAIL MATTER

This chapter substantially continues existing law in respect to "non-mailable matter" (e.g., lottery mail, mail involving false representations for obtaining money, obscene mail) and in respect to "penalty mail" and franking privileges.

CHAPTER 8—PERSONNEL

This chapter provides that the Postal Service may appoint and promote officers and employees without regard to the provisions of the Civil Service laws, with two very important exceptions. First, subject to collective bargaining procedures described below, the Postal Service must establish procedures to assure its employees of opportunities for promotion and career development and an opportunity to be heard before adverse actions are taken. Second, pending the establishment of such procedures, the "adverse action" procedures of the existing Civil Service laws will continue to apply.

No political test or qualification is permitted and all personnel actions must be taken on the basis of merit and fitness. The provisions of the Veterans Preference Act apply to the Postal Service.

This chapter provides that employees of the Post Office Department shall become employees of the Postal Service, except that any employee of the Post Office Department is eligible, at his election, to transfer to the same or a higher grade elsewhere in the Government if a position for which he is qualified is open. Compensation, benefits, and other terms and conditions of employment applicable to employees immediately before they become employees of the Postal Service will continue to apply until changed by the Postal Service.

Employees of the Postal Service will be covered by the Civil Service Retirement Program.

Labor-management relations are generally subject to the Labor-Management Relations Act of 1947, as amended, except as otherwise provided in the new title 39. Labor-management disputes arising during the life of a collective bargaining agreement will be settled in accordance with procedures agreed to by the parties. Disputes arising outside of a collective bargaining agreement will likewise be settled under any procedures that the parties may agree to; but if no procedures are agreed to, either party may cause the matter to be referred to a permanent "Postal Disputes Panel." (The Postal Disputes Panel has nine members: three named by the Federal Mediation and Conciliation Service, three named by the American Arbitration Association, and the last three named by the first six.) The Postal Disputes Panel may apply any of a wide range of settlement techniques to resolve the dispute, including mediation, fact-finding, and recommendations. In the Panel's discretion, it may refer any issue in dispute to final and binding arbitration by an impartial three-man board of arbitration which is to be set up on a "this dispute only" basis. In the alternative, the Postal Disputes Panel may decide that the status quo shall be maintained with respect to any issue in dispute. The statute specifically expresses the intent of Congress that the parties adopt their own procedures for resolving negotiating impasses; the statutory machinery would be available, however, as a last resort.

CHAPTER 10—FINANCE

This chapter provides that the initial capital of the Postal Service shall be the equity of the United States in the present Post Office Department as reflected in the President's budget; that the Postal Service and the General Services Administration will work out exactly which properties shall be transferred to the Postal Service and which will remain in the United States, subject to approval by the Bureau of the Budget; and that there shall be established in the Treasury a Postal Service fund to be credited with all revenues and receipts of the Postal Service and to be available for the payment of any and all expenses incurred by the Postal Service. Transitional appropriations are authorized.

The Postal Service is authorized to borrow money and issue obligations up to 10 billion dollars, but the net increase in obligations for capital improvements may not exceed 1.5 billion dollars in any one fiscal year. The terms and conditions of the Postal Service's obligations shall be the subject of consultation with the Secretary of the Treasury, and he may elect to purchase any or all Postal Service obligations. However, the maximum mandatory exposure of the Treasury is limited to 2 billion dollars. Obligations sold to the public would not be guaranteed by the United States.

The Comptroller General is required to audit the transactions of the Postal Service, but the Postal Service is authorized to allow credit for any expenditure which its Board determines to have been necessary.

CHAPTER 12—RATES AND RATEMAKING

Subchapter I establishes the rate policies that the Postal Service is to follow. The Service is to become self-sufficient within five years of the commencement of operations. Rates are to be set so that each class of service pays at least its own indentifiable costs and so that the revenues of the Postal Service as a whole meet its expenses, taking into account appropriations that the Congress may choose to make to cover the loss of revenues on free and subsidized mail. Existing postal rates stay unchanged until modified pursuant to subchapter II.

The same groups that enjoy the benefits of free or reduced rate mail today will continue to enjoy these benefits until changed by law, if and to the extent that Congress appropriates to the Postal Service the revenue foregone from the free or reduced rates.

Subchapter II provides a comprehensive procedure for rate setting and service changes. Rate changes and significant serv-

ice changes are initiated by the Postal Service management but cannot become effective until after public notice and hearing before a three-man panel of Rate Commissioners, who are independent of the management and who are responsible only to the Presidentially-appointed members of the board of directors. (Minor service changes may be made only under *procedures* that have been subject to the public-notice-and-hearing process.) After making a record, the Rate Commissioners render an initial decision which the Presidentially-appointed members of the board may either reject, adopt, or modify. Except for special services (c.o.d., special delivery, etc.), decisions of the board on rate changes are transmitted to the Congress and become final unless disapproved by concurrent resolution within 60 days.

CHAPTER 14—PRIVATE CARRIAGE OF LETTERS

This chapter substantially continues existing law in respect to the so-called Private Express Statutes. Similarly, existing law is substantially carried forward in respect to searches of mailable matter apparently being transported in violation of law, seizures of letters being carried contrary to law, and disposition of seized mail.

CHAPTER 16—TRANSPORTATION OF MAIL

Subchapter I generally authorizes the Postal Service to provide for the transportation of the mails and to contract for such transportation.

Subchapter II covers transportation of mail by railroads, motor carriers, and freight forwarders. Regulated motor carriers and freight forwarders would have the same statutory obligation to transport mail and provide related services as now applies to the railroads—that is, carriers and forwarders are required to transport mail tendered by the Postal Service, subject to fair and reasonable compensation and to I.C.C. rate making. Additionally, the Postal Service may enter into contracts with carriers at rates different from those set by the I.C.C.

Subchapter III would give the Postal Service the same authority to negotiate with air carriers for mail transportation as the Post Office Department now has in regard to mail carried by railroads.

CHAPTER 18—MISCELLANEOUS

Chapter 18 substantially carries forward existing statutory provisions regarding convict labor, uniforms, special delivery messengers, collection of debts, administration of accounts for international mail, informers' fees, delivery of stolen money to the owner, substitute checks, filing of information for 2nd-class publications, and printing illustrations of stamps.

GENERAL ANALYSIS OF CHAPTER 1

Section 101, Definitions: This section defines the terms "Postal Service," "Board," and "Board of Directors."

Section 102, Findings of the Congress and Declaration of Policy. This section outlines Congressional findings and states the purposes of the bill.

Subsection (a) states the importance of the postal service to the Nation's activities in language derived largely from the existing Postal Policy Act. In addition, this subsection indicates the handicaps imposed on postal operations by outmoded policies and procedures, and states that an effective solution to these problems is establishment of a government-owned postal service corporation.

Subsection (b) states the purposes of the bill: to provide fairly-priced and dependable postal service on a self-supporting basis, and to improve the lot of the postal employee.

GENERAL ANALYSIS OF CHAPTER 2

Section 201, Definitions: This section defines the terms "Presidentially-appointed Directors" and "Chief Executive Officer."

Section 202, The United States Postal Service: This section establishes the "United States Postal Service" as a body corporate and an instrumentality of the United States, to own and operate the postal system. The Postal Service is to commence operations within one year.

Section 203, The Board of Directors: This section details the selection and voting procedures of the Board of Directors.

Subsection (a) establishes a nine-man Board.

Subsection (b) states that the President with the advice and consent of the Senate shall name seven of the nine members, to serve for rotating seven-year terms. Appointments are to be representative of the public generally, without regard to political affiliations and without regard to specific interests connected with the postal service. The President may at any time designate which of the seven shall serve as Chairman and may remove directors for cause.

Subsection (c) states that the seven Presidentially-appointed directors appoint the eighth director, to serve as Chief Executive Officer at their pleasure.

Subsection (d) states that the Presidentially-appointed directors and the Chief Executive Officer appoint the ninth director, to serve as Chief Operating Officer at their pleasure.

Subsection (e) sets the compensation of the Presidentially-appointed directors at $5,000 annually plus $300 for each meeting attended, subject to adjustment in accordance with the Executive Pay Act.

Subsection (f). Gives authority to the Presidentially-appointed directors to fix compensation of the Chief Executive Officer and the Chief Operating Officer. Section 806 of the title sets a ceiling for compensation at a salary paid for Level I of the Executive Schedule.

Subsection (g). Allows the Board to act as long as sufficient members are in office to form a quorum.

Subsection (h). Establishes the usual rule for action by a Board: majority vote of the quorum of five members. Three exceptions to this rule are specified:

(1) Appointment and removal of the Chief Executive Officer, and fixing of compensation for the Chief Executive and Chief Operating Officers, are by absolute majority of the Presidentially-appointed directors in office.

(2) Appointment and removal of the Chief Operating Officer is by absolute majority of the Chief Executive and the Presidentially-appointed directors in office.

(3) Certain other actions specified in the title, such as rate-making decisions of the Board, are exclusively by the Presidentially-appointed directors.

Subsection (i). Indicates that the Presidentially-appointed directors serve part-time—consistent with industry practice on "outside" members of boards of directors—provided that their other employment is non-federal and not inconsistent with their duties to the Postal Service. All other employees, except as otherwise provided, are appointed by the Board, subject to the succeeding section.

Section 204, Procedures of the Board of Directors: This section gives the Board general authority, consistent with the title, to delegate its powers to committees, officers, and employees. The Board retains full responsibility for operations, and retains power to revoke all delegations of powers.

Section 205, General Powers: This section grants general powers to the Postal Service:

(1) to perpetual corporate life;

(2) to sue and be sued in its own name, as provided in Section 208;

(3) to adopt a corporate seal;

(4) to adopt bylaws and regulations;

(5) to enter into contracts, execute instruments, and determine the character of, and necessity for, its expenditures. (Under section 1008, audit by the Comptroller General is retained, but the GAO may not disallow Postal Service expendtiures.)

(6) to determine its own accounting system and use its own contract forms;

(7) to have the debt priority of the United States;

(8) to acquire, use, and dispose of real and personal property;

(9) to construct, use and lease buildings, facilities and other improvements on property;

(10) to accept gifts of property or service;

(11) to settle and compromise claims;

(12) to exercise the right of eminent domain;

(13) to have all other powers incidental, necessary or appropriate to its functions.

These powers, broad and general in style, are essentially the same as the powers of TVA. They are exercised in the carrying on of the duties and specific powers of chapter 4 (sections 401, 402) and are broad enough to allow such things as programs for research, experimentation and development.

Section 206, Judicial Officer: This section carries over with conforming changes existing provisions which authorize a judicial officer for such functions as hearing appeals from hearing examiners.

Section 207, Cooperation with other Government Agencies: This section authorizes provision of property and services by the Postal Service to other Government agencies and by those agencies to the Postal Service. Terms, including reimbursement, are to be set by agreement of the Board of the Postal Service and the head of the agency involved. The kinds of services that may be furnished are not limited. Contracting services, for example, are included in this authorization.

Section 208, Suits by and against the Postal Service: This section details procedures for suits to which the Postal Service is a party.

Subsection (a) suits may be brought in state courts, federal district courts, or the Court of Claims, and may be removed from the state to the federal courts.

Subsection (b) service of process, venue, and limitations shall be as provided in title 28 for the United States, its officers or employees.

Subsection (c) the Federal Tort Claims Act applies to the Postal Service.

Subsection (d) the Department of Justice will conduct litigation for the Postal Service, but the Postal Service has authority, upon consent of the Attorney General, to hire or retain counsel of conduct litigation.

Section 209, Application of other laws: This section excludes the operation of federal laws dealing with contracts, property, works, officers, employees or funds except as provided in the title or in the bylaws of the Postal Service. The following provisions are made specifically applicable:

(1) The employee policies and suitability, security, and conduct provisions of the Civil Service laws;

(2) The provisions of the criminal laws applicable to the mails and Government employees;

(3) The Government Corporation Control Act, except as expressly provided otherwise;

(4), (5) Contractor labor standards provisions applicable to Government contracts;

(6) Equal opportunity provisions of the Civil Rights Act of 1964.

Section 210, Annual Reports: This section requires an annual report to the President and Congress.

Section 211, Reservation of Powers: This section reserves the power of Congress to alter, amend, or repeal the sections of the title, subject only to contracts made by the Postal Service pursuant to its powers.

GENERAL ANALYSIS OF CHAPTER 4

Section 401, General Duties:

Subsection (a) outlines the service policy of the Postal Service. It is to plan, develop,

promote, and provide adequate and efficient postal service at fair and reasonable rates and fees. The service is defined as the receipt, transmission, and delivery of written and printed matter, parcels, and similar materials, and services incidental thereto. The service is to be provided as nearly as practicable to the entire United States population (except for the Canal Zone, which is otherwise provided for. The service is to reach, pursuant to international arrangements, the entire world.

Subsection (b) outlines service objectives: provide an efficient sorting, collection and delivery system; provide service responsive to the needs of the mail users; and maintain facilities located to provide ready access to essential postal services.

Subsection (c) enjoins the Postal Service from unduly or unreasonably discriminating among users or granting undue or unreasonable preferences in providing services or establishing classifications, rates, or fees.

Section 402, Specific Powers: This section catalogues the specific powers of the Postal Service which, in conjunction with the general powers granted in section 205, are to be used in carrying out postal service duties. The Postal Service is to have the power to provide for the collection, handling, transportation, delivery, forwarding, returning, and holding of mail, and for the disposition of undeliverable mail; to prescribe, as provided in Chapter 12 and elsewhere, the amount of postage and the manner in which it is to be paid; to determine the need for and provide postal facilities, offices, and equipment and training facilities and equipment; to provide and sell stamps, stamped paper, cards, envelopes, and other evidences of payment of postage and fees; to provide philatelic services and special, non-postal, or similar services; and to investigate postal offenses and matters concerning the Postal Service and to pay rewards. This last power authorizes, among other things, the continuation of the Postal Inspection Service.

Section 403, Service Classification and Mailable Matter: This section authorizes the Postal Service to promulgate rules and regulations concerning mailing, subject to the provisions of Chapter 12. The Postal Service may not refuse to accept any mailable matter meeting minimum size and weight limitations, but may levy special charges for carrying such matter if it is not mailed in accordance with the rules so promulgated. Existing maximum size and weight limitations are preserved.

Section 404, Postal Services at Armed Forces Installations: This section carries over in a simplified form existing provisions of law concerning military post offices and military mail clerks.

Section 405, International Postal Arrangements: This section carries over with minor modifications existing provisions of law concerning international postal arrangements.

GENERAL ANALYSIS OF CHAPTER 6

This chapter continues substantially unchanged the existing provisions of chapter 51 of title 39 concerning nonmailable matter. It also continues the existing provisions of chapter 57 of title 39 concerning Penalty and Franked Mail. It also continues those existing provisions of that part of section 4303 which relate to air lifting of soldier mail with an improved provision for reimbursement.

Section 601, Nonmailable matter: This section continues § 4001 of the present title 39 with the addition of (d) pertaining to matters exceeding limitations and perishables.

Section 602, Nonmailable motor vehicle master keys: This section continues § 4010 of the present title 39.

Section 603, Mail bearing a fictitious name or address: This section continues § 4003 of the present title 39.

Section 604. Delivery of mail to persons not residents of the place of address: This section continues § 4004 of the present title 39.

Section 605, False representations; lotteries: This section continues § 4005 of the present title 39.

Section 606, "Unlawful" matter. This section continues § 4006 of the present title 39.

Section 607, Detention of mail for temporary periods: This section continues § 4007 of the present title 39.

Section 608, Prohibition of pandering advertisements in the mails: This section continues § 4009 of the present title 39.

Section 651, Definitions: This section continues § 4151 of the present title 39 defining terms pertinent to penalty and franked mail.

Section 652, Penalty mail: This section continues § 4152 of the present title 39.

Section 653, Endorsements on penalty covers: This section continues § 4153 of the present title 39.

Section 654, Restrictions on use of penalty mail: This section continues § 4154 of the present title 39.

Section 655, Accounting for penalty covers: This section continues § 4155 of the present title 39.

Section 656, Reimbursement for penalty mail service: This section § 4156 of the present title 39.

Section 657, Limit of weight of penalty mail; postage on overweight matter: This section continues § 4158 of the present title 39.

Section 658, Shipment by most economical means: This section continues § 4159 of the present title 39.

Section 659, Executive departments to supply information: This section continues § 4160 of the present title 39.

Section 660, Official correspondence of Vice President and Members of Congress: This section continues § 4161 of the present title 39.

Section 661, Public documents: This section continues § 4162 of the title 39.

Section 662, Congressional Record under frank of Members of Congress: This section continues § 4163 of the present title 39.

Section 663, Seeds and reports from Department of Agriculture: This section continues § 4164 of the present title 39.

Section 664, Mailing privilege of former Presidents: This section continues § 4165 of the present title 39.

Section 665, Lending or permitting use of frank unlawful: This section continues § 4166 of the present title 39.

Section 666, Reimbursement for franked mailings: This section continues § 4167 of the present title 39.

Section 667, Correspondence of members of diplomatic corps and consuls of countries of Postal Union of Americas and Spain: This section continues § 4168 of the present title 39.

Section 668, Mailing privilege of members of United States Armed Forces and of friendly foreign nations. This section continues § 4169 of the present title 39.

Section 669, Mailing privilege of members of United States Armed Forces and of friendly foreign nations in the Canal Zone: This section continues § 4170 of the present title 39.

Section 670, Franked mail for surviving spouses of Members of Congress: This section continues § 4171 of the present title 39.

Section 671, Armed forces mailing privileges: This section continues § 4303(d)(5), (6) and (f), of the present title 39, except that subsection (c) clarifies provision for reimbursement.

GENERAL ANALYSIS OF CHAPTER 8

Section 801, Appointments and Promotions:

Subsection (a) establishes a merit system of employment, promotion and adverse action outside the Civil Service System and subject to collective bargaining agreements. The adverse action provisions of the Civil Service laws continue to apply, however, until new procedures are established by the Postal Service.

Subsection (b) authorizes long-term employment contracts, necessary in many instances to obtain top executives, but leaves the Board free to remove any appointee on payment of contract damages.

Subesction (c) prohibits political tests or qualifications in personnel actions, and prescribes penalties for violation of this prohibition.

Subsection (d) makes the veterans' preference applicable to the Postal Service. Though Postal Service employees will not be within the classified Civil Service, effective personnel policies for carrying out the veterans' preference will be instituted, as in the Tennessee Valley Authority. Also applicable, in the same manner as to private employers, are the provisions governing reemployment rights of former military personnel. The Postal Service is directed to follow an enlightened policy designed to extend opportunity to the disadvantaged and the handicapped. Existing Government-wide policy to assure equal employment opportunity (Section 7151 of title 5) applies to the Postal Service by specific cross-reference in section 209 of the title.

Subsection (e) permits dual employment and dual compensation to deal with such problems as providing fourth-class postmasters in Alaska, who often serve part-time while holding positions as resident commissioners. This is a carry-forward, in substantially more general terms, of existing law.

Section 802, Oath of Office: This section requires of Postal Service employees the same oath required of all employees of the United States except the President. It is modeled on section 3331 of title 5.

Section 803, Employees of the Post Office Department: This section details transitional rules and the rights of existing employees of the Post Office Department upon commencement of operations by the Postal Service.

Subsection (a) states that Post Office Department employees except the Postmaster General, the Deputy Postmaster General, the Assistant Postmasters General, and the General Counsel of the Post Office will become employees of the Postal Service.

Subsection (b) states that obligations for sick and annual leave and compensatory time are assumed by the Postal Service.

Subsection (c) states that compensation, benefits and other terms and conditions of employment are carried over to the Postal Service, subject to change in accordance with other provisions of this chapter. Medical, health, and life insurance and unemployment compensation under existing programs continue to apply until changed; and any changed programs must be no less favorable than existing programs.

Subsection (d) states that Post Office Department employees, if they so desire, shall be eligible to transfer, at the same or higher grades, to other positions for which they are qualified in the United States Government.

Section 804, Retirement Rights: This section provides that Postal Service employees shall be covered by the Civil Service Retirement Program, and that the Postal Service shall remit to the fund as do other Government agencies. The section does not preclude bargaining for additional benefits outside the Civil Service Retirement Program, nor does it make the Postal Service liable for the unfunded liabilities of the Civil Service Retirement Program related to postal employees.

Section 805, Policy on Compensation and Benefits: This section states that compensation and benefits shall be comparable to the non-federal sectors of the economy for comparable levels of work.

Section 806, Terms of Employment:

Subsection (a) vests authority in the Board to set compensation, benefits and other terms of employment subject, where applicable, to collective bargaining. Existing collective bargaining agreements remain in effect. Compensation of any Postal Service employee may not exceed the rate for Level I of the Executive Schedule in effect at the time the compensation is paid.

Subsection (b) is a standard form of management rights clause, drawn from Executive Order 10988 and made subject to collective bargaining agreements.

Section 807, Applicability of Labor-Management Relations Act of 1947: This section makes applicable to the Postal Service the Labor-Management Relations Act of 1947, as amended, including the Landrum-Griffin Act. The prohibitions on strikes of Government employees (section 7311 of title 5) and the related affidavit requirements and penal provisions are made specifically applicable by cross references in section 209 of the title.

Section 808, Resolution of Labor-Management Disputes: This section provides comprehensive procedures for resolution of disputes.

Subsection (a) provides that disputes arising under collective bargaining agreements shall be resolved by the procedures set out in the agreements or subsequently agreed to by the parties.

Subsection (b) states the Congressional intention that the parties adopt procedures of their own for resolving disputes arising in negotiation of collective bargaining agreements; such procedures will be enforced.

Subsection (c) provides for review of disputes by the Postal Disputes Panel if procedures are not adopted under (b), or if they do not resolve a dispute. The Panel may act or refrain from acting pending further negotiation by the parties. It has at its disposal the "arsenal of weapons" advocated by authorities on public employee unionism: mediations, fact-finding, recommendations, and arbitration.

Subsection (d) provides that if the first three of these approaches do not bring agreement, the Panel may take jurisdiction to refer issues to arbitration. Refusal to take jurisdiction over an issue will preserve the practice in effect prior to negotiation.

Subsection (e) provides that on these issues over which jurisdiction is taken the Panel shall frame the issues and determine whether to arbitrate by separate issues, combination of issues, or total package.

Subsection (f) provides that the Panel refer arbitration to a three-man arbitration board, chosen one by the Postal Service, one by the bargaining agent, and one by the two thus selected. If the two cannot agree, a third member is named by the Federal Mediation and Conciliation Director. Decisions of the arbitration board are conclusive and binding upon the parties.

Section 809, Postal Disputes Panel: This section establishes the permanent Postal Disputes Panel required by Section 808.

Subsection (a) states that the Panel shall consist of nine members, three named by the Federal Mediation and Conciliation Director, three by the American Arbitration Association, and three by the six so selected.

Subsection (b) establishes rotating six-year terms for the Panel members.

Subsection (c) grants the Panel power to establish its own rules and select its own Chairman. Members of the Panel other than the Chairman may serve full- or part-time, as their rules may specify; this flexibility is afforded to allow for variations in workload not yet predictable.

Subsection (d) provides that members are paid at Level V of the Executive Schedule.

Subsection (e) provides that three members of the nine-man Panel are to be designated to act on each dispute referred under section 808. The three are to be selected in such manner as to preclude advance knowledge by the Postal Service and the bargaining agent. This procedure is designed to maintain the unpredictability to the parties of the "arsenal of weapons" approach, and thus to carry out the policy of section 808(b) to maximize dispute-settlement by the parties without resort to the Panel.

Subsection (f) grants the Panel powers to carry out its functions.

Subsection (g) grants discovery and subpoena power to the Panel.

Subsection (h) requires that all expenses of the Panel be borne by the Postal Service.

GENERAL ANALYSIS OF CHAPTER 10

Section 1001, Definitions: This section defines the term "fund" and "obligations" as used in Chapter 10.

Section 1002, Capital of the Postal Service: This section provides for the transfer of the Government's equity to the Postal Service.

Subsection (a) defines the initial capital of the Postal Service as the assets of the Post Office Department less the liabilities transferred to the Postal Service. Evaluation of assets shall be on the basis of original cost less depreciation. Liabilities of the Post Office Department shall remain in the United States to the extent that they are not chargeable to the unexpended balances of the Post Office Department appropriations transferred to the Postal Service. The Board will value the initial capital of the Postal Service subject to approval by the Comptroller General.

Subsection (b) provides that the capital of the Postal Service at any time shall consist of its assets less its liabilities.

Subsection (c) provides for the physical transfer, at a time as near as possible to the commencement of Postal Service operations, of assets from the Post Office Department to the Postal Service by the Board and the Administrator of the General Services Administration, where appropriate, subject to the approval of the Bureau of the Budget. Included in such transfer will be all properties commonly regarded as "belonging" to the Post Office Department.

Subsection (d) authorizes, after commencement of Postal Service operations, transfers of federal property to the Postal Service and transfers of Postal Service property to the United States when such transfer is in the public interest.

Section 1003, The Postal Service Fund: This section establishes the Postal Service Fund as a cash revolving fund in the Treasury.

Subsection (a) establishes the fund.

Subsection (b) provides that the fund is credited with all Postal Service revenues and receipts, moneys raised by issuance of debt, appropriations, interest, and the balance in the Post Office Department Fund upon commencement of Postal Service operations, and continues the disbursing authority of the Post Office Department in the Postal Service.

Subsection (c) authorizes the Postal Service to request the Secretary of the Treasury to invest the excess cash balances of the fund in interest-bearing obligations or securities.

Subsection (d) provides for the safe-keeping of the moneys of the fund as the Postal Service and the Secretary of the Treasury may agree.

Subsection (e) makes the fund available for the payment of Postal Service expenses and not subject to apportionment.

Section 1004, Transitional Appropriations: This section authorizes appropriations to provide for a sound transition to a self-sustaining Postal Service.

Section 1005, Obligations: This section authorizes the Postal Service to borrow money.

Subsection (a) authorizes the Postal Service to issue and sell obligations in an aggregate amount not exceeding $10 billion outstanding at any one time. The increase in outstanding obligations may not exceed $1.5 billion per year for capital improvements.

Subsection (b) authorizes the Postal Service to enter into normal commercial indentures and agreements with regard to the sale of such obligations.

Subsection (c) provides that the Postal Service shall make the initial determinations as to the rates of interest, amounts, and terms and conditions of its obligations.

Subsection (d) provides that Postal Service obligations shall be negotiable, or bearer or registered instruments as specified; presumed regular; lawful investments for "legal list" purposes; and tax-exempt.

Section 1006, The Treasury and the Postal Service's Obligations:

Subsection (a) requires the Postal Service to inform the Treasury of its proposed obligations and the terms and conditions thereof and, prior to selling such obligations to other parties, to give the Treasury the right to purchase such obligations at a yield no less than that of outstanding marketable Treasury obligations of comparable maturities.

Subsection (b) authorizes the Postal Service to require the Secretary of the Treasury to purchase Postal Service obligations in an amount not to exceed $2 billion outstanding at any one time.

Section 1007, Public Debt Character of Postal Service Obligations: This section authorizes the Secretary of the Treasury to treat the purchase and sale of Postal Service obligations as public debt transactions.

Section 1008, Audit:

Subsection (a) requires the Comptroller General to audit the Postal Service annually and to report to the President, the Board, the Congress and the public on such audit.

Subsection (b) requires the Comptroller General to give the Postal Service a reasonable opportunity to examine the exceptions and criticisms in his audit; and provides for the payment of the expenses of the audit by the Postal Service as required in the Government Corporation Control Act and for the annual rendition of Postal Service accounts for adjustment and settlement pursuant to the Budget and Accounting Act.

Subsection (c) authorizes the Postal Service to determine the character and necessity of its expenditures without disallowance by the Comptroller General.

Subsection (d) authorizes the Postal Service to obtain outside audit of its accounts in addition to the audit provided for in the foregoing subsections.

GENERAL ANALYSIS OF CHAPTER 12

Section 1201, Rate Policy:

Subsection (a) states the broad policy that postal rates should be reasonable, equitable, and sufficient to permit the Postal Service to develop postal services in accordance with public needs.

Subsection (b) states the policy for revenues as a whole. Within five years Congress intends that revenues, as a whole, plus the appropriations for free and reduced rate mail, will equal costs, as a whole. The term "costs" is taken in its broad economic sense and includes operating expenses, depreciation, debt service, and a reasonable provision for contingencies.

Subsection (c) outlines the policy for the cost coverage of individual classes except for those afforded special rates by the Congress. Each class is to bear as a minimum the costs demonstrably related to providing service to that class.

Subsection (d) outlines the policy for making rate changes to achieve the goals outlined in the previous subsections. During the transitional period mentioned in subsection (b) the Board is enjoined to take into account the financial impact of rate changes on the users of the mail. To the extent that such impact requires, in the view of the Board, less than full cost coverage

overall, the President is authorized to seek transitional appropriations under section 1004.

Section 1202, Free and Reduced Rate Mail:

Subsection (a) stresses the general policy that Congress retains the authority to determine which users, if any, are entitled to mail free or at a specified percentage below standard rates and provides a formula, the difference between such rates and standard rates, called the "revenue foregone", which measures the amount to be appropriated to cover the loss to the Postal Service from carrying such free and reduced rate mails and which determines how the specific rates are to be set.

Subsection (b) authorizes appropriations of the revenue foregone.

Subsection (c) provides for adjustment of the special rates in the light of the amount appropriated.

Subsection (d) requires a report to the Congress at least every two years showing the volumes, rates, revenues, costs, and percentage of regular rates of each category of free and reduced rate mail. The Board may include recommendations for legislation in such reports and may utilize the Rate Commissioners in preparing such reports. The first such report shall provide a vehicle for re-examination of the special rate provisions which are carried over unchanged under the succeeding subsection of this section. It is intended that there be no significant change until the first report is submitted.

Subsection (e) preserves the Postal Policy Act categories of free and reduced rate mail and the rates for such categories.

Section 1203, Parcel Post: This section provides that the Postal Service shall not compete unfairly with private parcel carriers by requiring it to charge rates for parcels which include imputed carrying charges on capital and imputed charges for federal, state and local taxes.

Section 1251, Rate Commissioners and Staff: This section charters an independent Panel of Rate Commissioners within the Postal Service.

Subsection (a) provides for appointment of three Rate Commissioners by the Presidentially-appointed members of the Board and for payment of the Commissioners' salaries on Level V of the Executive Schedule, except that the Chief Commissioner shall be paid an additional $500.

Subsection (b) establishes rotating terms of six years for the Commissioners. The Commissioners may be removed only in accord with the procedures provided for the removal of hearing examiners in section 752 of title 5.

Subsection (c) requires the Board to provide the Commissioners with reasonable and appropriate facilities and staff.

Subsection (d) authorizes the Commissioners to establish rules and regulations for the conduct of their proceedings, which rules and regulations are to provide for expeditious, fair proceedings in accordance with the Administrative Procedure Act. The Commissioners are specifically authorized to adopt rules which provide for advance written submission of testimony, prehearing conferences, discovery, limitation of testimony, and off-the-record proceedings.

Section 1252, Proposed Changes in Rates and Classifications: This section deals with the initiation of changes in rates and classification.

Subsection (a) levies upon the Postal Service the general requirement of 30 days' advance public notice of all changes in rates, classification or the rate structure and of filing such proposed changes with the Rate Commissioners. The public notice is to state briefly the nature of the proposed change and the procedures to be followed for filing objection to it.

Subsection (b) provides that if no party at interest files a timely objection, the rate change will be forwarded to the Board without opinion by the Commissioners unless the Presidentially-appointed members of the Board desire such opinion.

Subsection (c) exempts from the requirements of Chapter 12 international rates and fees which will continue to be set pursuant to international agreements.

Section 1253, Proceedings and Recommended Decisions by Commissioners: This section applies to rate change cases.

Subsection (a) provides for a hearing by the Commissioners pursuant to the Administrative Procedure Act in all rate change cases in which a party at interest files a timely notice requesting such hearing.

Subsection (b) defines the record of the rate change proceeding to include the proposed change and supporting material, all oral testimony and written submissions, and any other material the Commissioners deem appropriate.

Subsection (c) provides for an initial decision by the Commissioners to the Presidentially-appointed members of the Board.

Subsection (d) authorizes the Postal Service to put into effect, upon 30 days' notice, interim rate changes in the event that the Commissioners' proceedings take longer than 90 days. The Presidentially-appointed members of the Board must render their final decisions within 30 days of receiving the Commissioners' decision or the interim change ceases to be effective. Interim changes are also authorized in the event that judicial proceedings are instituted under section 1257, and under that section the institution of such proceedings extends the period for which such interim changes may be in effect.

Section 1254, Final Decisions: This section provides for final decisions by the Presidentially-appointed members and for review of rate change cases by the Congress.

Subsection (a) authorizes the Presidentially-appointed Board members to make final decisions and requires the publication of such decisions. The Presidentially-appointed Board members may reject the change, adopt it as initially proposed or as recommended by the Commissioners, or may modify it in the light of the record.

Subsection (b) provides that the Board shall transmit its final decision to the Congress together with the record and recommended decision of the Commissioners. In a contested case, of course, the Board would wait 15 days after publication of the decision to determine if a petition for judicial review will be filed under section 1257. Such transmittal shall not occur if the rate change involves a fee for a special or nonpostal service.

Subsection (c) authorizes the Congress to veto the Board's decision by concurrent resolution of both Houses within 60 days of transmittal with the usual extensions.

Subsection (d) authorizes the Board to make a rate change effective later than the expiration of the 60-day period if it so desires.

Subsection (e) excludes from transmittal to the Congress increases required by section 1202(c) and the fees for special and nonpostal services (which the Postmaster General is currently authorized unilaterally to set).

Section 1255, Service Changes:

Subsection (a) requires the Postal Service to give public notice of proposed service changes of nationwide or nearly nationwide effect similar to the notice required in section 1252(a) for rate changes.

Subsection (b) provides for proceedings before the Rate Commissioners generally similar to those required by the Administrative Procedure Act for proposed rule-making. The Commissioners are to compile a record similar to that provided for in section 1253(b).

Subsection (c) provides for an initial decision of the Rate Commissioners which is to become effective unless modified by the Presidentially-appointed members of the Board.

Subsection (c) provides that petitions for review, absent reasonable grounds, be filed within 15 days of notice of final decision, that the action be against the Postal Service, and that the rules concerning litigation by the Postal Service (set forth in section 208) apply.

Subsection (d) concerns suspension of proceedings pending judicial review, which review is to be expedited in every way. Rate changes are not to be submitted to the Congress pending judicial review. Temporary rate changes, emergency service changes, and final rate decisions may not otherwise be affected by the court pending review.

Subsection (e) makes judicial review under this section exclusive except for review of the Commissioners' rules under section 1251 (d) (1), which review would proceed substantially in accordance with this section.

Subsection (d) provides that service changes which substantially and adversely affect postal users on a less than nationwide basis are to be made only after the proceedings described in the foregoing subsections or in accordance with procedures adopted pursuant to the requirements of the foregoing subsections. Such procedures are to provide, as a minimum, for notice and opportunity for the affected users to present objections.

Subsection (e) authorizes the Postal Service to make emergency service changes before completion of the procedures prescribed in this section. Such changes may be in effect no longer than the length of time that it takes to complete proceedings.

Section 1256, Rate and Service Complaints: This section provides that any interested party may file a rate or service complaint. The Commissioners may hold hearings and render a public opinion to the Presidentially-appointed members of the Board if they find the complaint to be justified. If a rate matter is involved, the Postal Service must then institute proceedings under section 1252. If a service matter is involved the Presidentially-appointed Board members are to take appropriate action.

Section 1257, Judicial Review: This section provides for judicial review of Postal Service rate and service proceedings pursuant to the Administrative Procedure and Judicial Review Acts.

Subsection (a) authorizes judicial review of rate and service change and complaint proceedings. The review is confined to constitutional, statutory and procedural questions which were raised before the Postal Service, absent some reasonable ground for failure so to raise.

Subsection (b) requires that the party seeking review have fully participated in the proceedings in the Postal Service.

GENERAL ANALYSIS OF CHAPTER 14

This chapter continues without substantive change the portion of the private express statutes found in existing chapter 9 of title 39.

Section 1401, Letters Carried Out of the Mail: This section continues section 901 of the present title 39.

Section 1402, Foreign Letters Out of the Mails: This section continues section 902 of the present title 39.

Section 1403, Searches Authorized: This section continues section 903 of the present title 39.

Section 1404, Seizing and Detaining Letters: This section continues section 904 of the present title 39.

Section 1405, Searching Vessels for Letters: This section continues section 905 of the present title 39.

Section 1406, Disposition of Seized Mail: This section continues section 906 of the present title 39.

GENERAL ANALYSIS OF CHAPTER 16

Subchapter I, General: This subchapter generally authorizes the Postal Service to provide for the transportation of the mails and to contract for such transportation.

Section 1601, Provision for Carrying Mail: This section contains the basic mandate of section 6101(a) of present title 39 that the Postal Service provide for the transportation of the mails. Provisions of the present section setting forth where the mails shall be transported have been omitted as being covered in a more general fashion by new section 401.

Section 1602, Transportation of Mail of Adjoining Countries through the United States: This section continues the provisions of section 6103 of present title 39 with conforming changes.

Section 1603, Establishment of Post Roads: This section continues the provisions of section 6105 of present title 39 without change.

Section 1604, Discontinuance of Service on Post Roads: This section continues the provisions of section 6106 of present title 39 with conforming changes.

Section 1605, Authority to Contract for Mail Transportation: This section continues the authority of section 6402 of present title 39 but eliminates the existing restrictions on star route contracts.

Section 1606, Combinations to Prevent Bids for Carrying the Mails: This section continues the provision of section 6421 of present title 39 with conforming changes.

Section 1607, Lien on Compensation of Contractor: This section continues the provision of section 6432 of present title 39 with conforming changes.

Section 1608, Free Transportation of Postal Officials: This section continues the provision of section 6433 of present title 39 with conforming changes.

Section 1609, Liability of Contractor for Breach: This section continues the provisions of section 6434 of present title 39 with conforming changes.

Subchapter II, Transportation of Mail by Railroads, Motor Carriers, and Freight Forwarders: Under this subchapter regulated motor carriers and freight forwarders would have the same statutory obligation to transport mail and provide related services as now applies to the railroads—that is, carriers and forwarders are required to transport mail tendered by the Postal Service, subject to fair and reasonable compensation and to ICC rate making. Additionally, the Postal Service may enter into such contracts with carriers at rates different from those set by the ICC.

Section 1625, Definitions: This section provides definitions for subchapter II. Since this subchapter will cover freight forwarders, regulated motor carriers and express companies appropriate definitions for these carriers have been included. The definition of "railroad" in section 6201 of present title 39 has been retained.

Section 1626, Applicability: This section states the coverage of subchapter II, to cover transportation by the carriers defined in section 1625. Thus, the provisions concerning transportation of mail by railroad (chapter 95 of present title 39) are expanded to cover the other classes of carriers defined in section 1625.

Section 1627, Authorization of Service by Carrier:

Subsections (a) through (e) continue the provision of section 6203 of present title 39 modified to reflect the expanded coverage of the subchapter.

Subsection (f) authorizes the Postal Service to publish a statement of service to be required of carriers and the tentative compensation to be paid for such service. This statement is similar to the comprehensive plan of section 1633(c) in the bill (section 6209 of present title 39). It will form a predicate for proceedings under the latter section.

Section 1628, Facilities Provided by Carrier: This section continues the provision of section 6204 of present title 39 modified to reflect the expanded coverage of the subchapter.

Section 1629, Changes in Service: This section continues the provision of section 6205 of present title 39 modified to reflect the expanded coverage of the subchapter.

Section 1630, Evidence of Service: This section continues the provision of section 6206 of present title 39 modified to reflect the expanded coverage of the subchapter.

Section 1631, Fines and Deductions: This section continues the provision of section 6207 of present title 39 modified to reflect the expanded coverage of the subchapter. The maximum fine for refusal to perform mail transportation under subsection (a) is lowered from $1,000 to $500.

Section 1632, Interstate Commerce Commission to Fix Rates: This section continues the provision of section 6208 of present title 39, modified to reflect the expanded coverage of the subchapter.

Section 1633, Procedures: This section continues the provision of section 6209 of present title 39 modified to reflect the expanded coverage of the subchapter.

Section 1634, Special Rates: This section continues the provision of section 6210 of present title 39 modified to reflect the expanded coverage of the subchapter.

Section 1635, Intermodal Transportation: This section continues the provision of section 6213 of present title 39 but applies it to all classes of carriers of transportation covered by the subchapter.

Section 1636, Statistical Studies: This subsection continues the provision of section 6214 of present title 39 modified to reflect the expanded coverage of the subchapter.

Section 1637, Special Contracts: This section continues the provision of section 6215 modified to reflect the expanded coverage of the subchapter. The limitation on the terms of contractors has been omitted. In addition the section authorizes contracts to be made before the ICC has fixed rates for the carriers in question or before the ICC has fixed rates for the service in question.

Section 1638, Carrier Operation, Receipts and Expenditures: This section continues the provision of section 6216 of present title 39 modified to reflect the expanded coverage of the subchapter.

Subchapter III, Transportation of Mail by Air: This subchapter supplements the mail transportation provision of the Federal Aviation Act in a manner similar to chapter 97 of the present title 39.

Section 1651, Rules and Regulations: This section continues the provisions of section 6301 of present title 39 with conforming changes.

Section 1652, Fines on Air Carriers Transporting the Mails: This section continues the provision of section 6304 of present title 39 with conforming changes.

Section 1653, Contract for Transportation of Mail by Air: This section authorizes special arrangements with air carriers similar to those authorized for surface carriers and in lieu of the existing air star route and other special provisions of law.

Subsection (a) authorizes special arrangements with certified carriers for transportation along their routes similar to those authorized with surface carriers pursuant to section 1637 in the bill (section 6215 of present title 39).

Subsection (b) authorizes contracts for air transportation along routes over which there is no certified carrier. Such contracts are to be cancelled, in whole or in part, as appropriate, when the Civil Aeronautics Board certifies a carrier for the route in question. This subsection replaces the present star route law, section 6303 of present title 39.

Subsection (c) authorizes contracts with other than the certified carrier for routes over which certified carriers are not providing service adequate for the Postal Service. Such contracts are subject to disapproval by the Civil Aeronautics Board and, if new carriers are certified over the route in question, to cancellation by the Postal Service.

Subchapter IV, Transportation of Mail by Vessel: This subchapter continues a number of provisions of existing present law relating to water transportation.

Section 1676, Sea Post Service: This section continues the provision of section 6404 of present title 39 with conforming changes.

Section 1677, Termination of Contracts for Foreign Transportation: This section continues the provision of section 6406 of present title 39 with conforming changes.

Section 1678, Transportation of Mail as Freight or Express: This section continues the provision of section 6410 of present title 39 with conforming changes.

Section 1679, Fines on Ocean Carriers: This section continues the provision of section 6435 of present title 39 with conforming changes.

GENERAL ANALYSIS OF CHAPTER 18

This chapter continues without substantive change existing provisions of miscellaneous sections of title 39.

Section 1801, No Postal Material or Supplies Manufactured by Convict Labor: This section continues section 2010 of the present title 39.

Section 1802, Uniforms and Badges: This section continues section 3116(a) of the present title 39, but contemplates uniforms for employees in addition to letter carriers.

Section 1803, Special Delivery Messengers as Employees or Carriers: This section continues section 3115 of the present title 39.

Section 1804, Collection of Debts: This section continues section 2401 (a) and (b) of the present title 39, with structure and language changes in subsection (b) to reflect the full responsibility of the Postal Service for its own financial management.

Section 1805, Transportation of International Mail by Air Carriers of the United States: This section continues section 2402 of the present title 39.

Section 1806, Penalties and Forfeitures Imposed for Violations: This section continues section 2407 of the present title 39.

Section 1807, Delivery of Stolen Money to Owner: This section continues section 2410 of the present title 39.

Section 1808, Substitute Checks: This section continues section 2411 of the present title 39.

Section 1809, Filing of Information Relating to Publications of the Second Class: This section continues section 4369 of the present title 39.

Section 1810, Printing of Illustrations of United States Postage Stamps: This section continues section 2506 of the present title 39.

HOW MUCH CAN WE BOOST IQ AND SCHOLASTIC ACHIEVEMENT

The SPEAKER. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 30 minutes.

Mr. RARICK. Mr. Speaker, because of the significant findings of Dr. Arthur L. Jensen of the Institute for Human Learning at the University of California, Berkeley, Calif., in the field of environment, heredity, and behavior, I include his work, "How Much Can We Boost IQ and Scholastic Achievement," which appeared in the Harvard Educational Review, volume 39, No. 1, winter edition, 1969:

HOW MUCH CAN WE BOOST IQ AND SCHOLASTIC ACHIEVEMENT

(NOTE.—Arthur Jensen argues that the failure of recent compensatory education efforts to produce lasting effects on children's IQ and achievement suggests that the premises on which these efforts have been based should be reexamined.

(He begins by questioning a central notion upon which these and other educational programs have recently been based: that IQ differences are almost entirely a result of environmental differences and the cultural bias of IQ tests. After tracing the history of IQ tests, Jensen carefully defines the concept of IQ, pointing out that it appears as a common factor in all tests that have been devised thus far to tap higher mental processes.

(Having defined the concept of intelligence and related it to other forms of mental ability, Jensen employs an analysis of variance model to explain how IQ can be separated into genetic and environmental components. He then discusses the concept of "heritability," a statistical tool for assessing the degree to which individual differences in a trait like the intelligence can be accounted for by genetic factors. He analyzes several lines of evidence which suggest that the heritability of intelligence is quite high (i.e., genetic factors are much more important than environmental factors in producing IQ differences).

(After arguing that environmental factors are not nearly as important in determining IQ as are genetic factors, Jensen proceeds to analyze the environmental influences which may be most critical in determining IQ. He concludes that prenatal influences may well contribute the largest environmental influence on IQ. He then discusses evidence which suggests that social class and racial variations in intelligence cannot be accounted for by differences in environment but must be attributed partially to genetic differences.

(After he has discussed the influence of the distribution of IQ in a society on its functioning, Jensen examines in detail the results of educational programs for young children, and finds that the changes in IQ produced by these programs are generally small. A basic conclusion of Jensen's discussion of the influence of environment on IQ is that environment acts as a "threshold variable." Extreme environmental deprivation can keep the child from performing up to his genetic potential, but an enriched educational program cannot push the child above that potential.

(Finally, Jensen examines other mental abilities that might be capitalized on in an educational program, discussing recent findings on diverse patterns of mental abilities between ethnic groups and his own studies of associative learning abilities that are independent of social class. He concludes that educational attempts to boost IQ have been misdirected and that the educational process should focus on teaching much more specific skills. He argues that this will be accomplished most effectively if educational methods are developed which are based on other mental abilities besides I.Q.

(Because of the controversial nature of Dr. Jensen's article, the Spring Issue of the Review will feature a discussion of the article by five psychologists: Carl Bereiter, Lee Cronbach, James Crow, David Elkind, and J. McVicker Hunt. Readers are also invited to react.)

THE FAILURE OF COMPENSATORY EDUCATION

Compensatory education has been tried and it apparently has failed.

Compensatory education has been practiced on a massive scale for several years in many cities across the nation. It began with auspicious enthusiasm and high hopes of educators. It had unprecedented support from Federal funds. It had theoretical sanction from social scientists espousing the major underpining of its rationale; the "deprivation hypothesis," according to which academic lag is mainly the result of social, economic, and educational deprivation and discrimination—an hypothesis that has met with wide, uncritical acceptance in the atmosphere of society's growing concern about the plight of minority groups and the economically disadvantaged.

The chief goal of compensatory education—to remedy the educational lag of disadvantaged children and thereby narrow the achievement gap between "minority" and "majority" pupils—has been utterly unrealized in any of the large compensatory education programs that have been evaluated so far. On the basis of a nationwide survey and evaluation of compensatory education programs, the United States Commission on Civil Rights (1967) came to the following concluison:

"The Commission's analysis does not suggest that compensatory education is incapable of remedying the effects of poverty on the academic achievement of individual children. There is little question that school programs involving expenditures for cultural enrichment, better teaching, and other needed educational services can be helpful to disadvantaged children. The fact remains, however, that none of the programs appear to have raised significantly the achivement of participating pupils, as a group, within the period evaluated by the Commission." (p. 138)

The Commission's review gave special attention to compensatory education in majority-Negro schools whose programs "were among the most prominent and included some that have served as models for others." The Commission states: "A principal objective of each was to raise the academic achievement of disadvantaged children. Judged by this standard the programs did not show evidence of much success" (p. 138).[1]

Why has there been such uniform failure of compensatory programs wherever they have been tried? What has gone wrong? In other fields, when bridges do not stand, when aircraft do not fly, when machines do not work, when treatments do not cure, despite all conscientious efforts on the part of many persons to make them do so, one begins to question the basic assumptions, principles, theories, and hypotheses that guide one's efforts. Is it time to follow suit in education?

The theory that has guided most of these compensatory education programs, sometimes explicitly, sometimes implicitly, has two main complementary facets: one might be called the "average children concept," the other the "social deprivation hypothesis."

[1] Some of the largest and most highly publicized programs of compensatory education that have been held up as models but which produced absolutely no significant improvement in the scholastic achievement of disadvantaged students are: the *Banneker Project* in St. Louis (8 years), *Higher Horizons* in New York (5 years), More Effective Schools in New York (3 years), and large-scale programs in Syracuse, Seattle, Philadelphia, Berkeley, and a score of other cities (for detailed reports see U.S. Commission on Civil Rights, 1967, pp. 115–140).

Reports on Project Head Start indicate that initial gains of 5 to 10 points in IQ on conventional intelligence tests are a common finding, but this gain usually does not hold up through the first year of regular schooling. More positive claims for the efficacy of Head Start involve evidence of the detection and correction of medical disabilities in disadvantaged preschool children and the reportedly favorable effects of the program on children's self-confidence, motivation, and attitudes toward school.

The "average children" concept is essentially the belief that all children, except for a rare few born with severe neurological defects, are basically very much alike in their mental development and capabilities, and that their apparent differences in these characteristics as manifested in school are due to rather superficial differences in children's upbringing at home, their preschool and out-of-school experiences, motivations and interests, and the educational influences of their family background. All children are viewed as basically more or less homogeneous, but are seen to differ in school performance because when they are out of school they learn or fail to learn certain things that may either help them or hinder them in their school work. If all children could be treated more alike early enough, long before they come to school, then they could all learn from the teacher's instruction at about the same pace and would all achieve at much the same level, presumably at the "average" or above on the usual grade norms.

The "social deprivation hypothesis" is the allied belief that those children of ethnic minorities and the economically poor who achieve "below average" in school do so mainly because they begin school lacking certain crucial experiences which are prerequisites for school learning—perceptual, attentional, and verbal skills, as well as the self-confidence, self-direction, and teacher-oriented attitudes conducive to achievement in the classroom. And they lack the parental help and encouragement needed to promote academic achievement throughout their schooling. The chief aim of preschool and compensatory programs, therefore, is to make up for these environmental lacks as quickly and intensively as possible by providing the assumedly appropriate experiences, cultural enrichment, and training in basic skills of the kind presumably possessed by middle-class "majority" children of the same age.

The success of the effort is usually assessed in one or both of two ways: by gains in IQ and in scholastic achievement. The common emphasis on gains in IQ is probably attributable to the fact that it can be more efficiently "measured" than scholastic achievement, especially if there is no specific "achivement" to begin with. The IQ test can be used at the very beginning of Headstart, kindergarten, or first grade as a "pre-test" against which to assess "post-test" gains. IQ gains, if they occur at all, usually occur rapidly, while achievement is a long-term affair. And probably most important, the IQ is commonly interpreted as indicative of a more general kind of intellectual ability than is reflected by the acquisition of specific scholastic knowledge and skills. Since the IQ is known to predict scholastic performance better than any other single measurable attribute of the child, it is believed, whether rightly or wrongly, that if the child's IQ can be appreciably raised, academic achievement by and large will take care of itself, given normal motivation and standard instruction. Children with average or above-average IQs generally do well in school without much special attention. So the remedy deemed logical for children who would do poorly in school is to boost their IQs up to where they can perform like the majority—in short to make them all at least "average children." Stated so bluntly, the remedy may sound rather grim, but this is in fact essentially what we are attempting in our special programs of pre-school enrichment and compensatory education. This simple theme, with only slight embellishments, can be found repeated over and over again in the vast recent literature on the psychology and education of children called culturally disadvantaged.

So here is where our diagnosis should begin—with the concept of the IQ: how it came to be what it is; what it "really" is; what makes it vary from one individual to an-

other; what can change it, and by what amount.

THE NATURE OF INTELLIGENCE

The nature of intelligence is one of the vast topics in psychology. It would be quite impossible to attempt to review here the main theoretical issues and currents of thought in this field. Large volumes have been written on the subject (e.g., Guilford, 1967; Stoddard, 1943), to say nothing of the countless articles. An enlightening brief account of the history of the concept of intelligence has been presented by Sir Cyril Burt (1968). The term "intelligence," as used by psychologists, is itself of fairly recent origin. Having been introduced as a technical term in psychology near the turn of the century, it has since filtered down into common parlance, and therefore some restriction and clarification of the term as it will be used in the following discussion is called for.

Disagreements and arguments can perhaps be forestalled if we take an operational stance. First of all, this means that probably the most important fact about intelligence is that we can measure it. Intelligence, like electricity, is easier to measure than to define. And if the measurements bear some systematic relationships to other data, it means we can make meaningful statements about the phenomenon we are measuring. There is no point in arguing the question to which there is no answer, the question of what intelligence *really* is. The best we can do is to obtain measurements of certain kinds of behavior and look at their relationships to other phenomena and see if these relationships make any kind of sense and order. It is from these orderly relationships that we can gain some understanding of the phenomena.

But how did the instruments which we measure intelligence come about in the first place? The first really useful test of intelligence and the progenitor of nearly all present-day intelligence tests was the Metrical Scale of Intelligence devised in 1905 by Binet and Simon. A fact of great but often unrealized implications is that the Binet-Simon test was commission by the Minister of Public Instruction in Paris for the explicit purpose of identifying children who were likely to fail in school. It was decided they should be placed in special schools or classes before losing too much ground or receiving too much discouragement. To the credit of Binet and Simon, the test served this purpose quite well, and it is now regarded as one of the major "breakthroughs" in the history of psychology. Numerous earlier attempts to devise intelligence tests were much less successful from a practical standpoint, mainly because the kinds of functions tested were decided upon in terms of early theoretical notions about the basic elements of "mind" and the "brass instrument" laboratory techniques for measuring these elemental functions of consciousness, which were then thought to consist of the capacity for making fine sensory discriminations in the various sensory modalities. Although these measurements were sufficiently reliable, they bore little relationship to any "real life" or "common sense" criteria of behavior ranging along a "dull"—"bright" continuum. The psychological sagacity of Binet and Simon as test constructors derived largely from their intimate knowledge and observation of the behavior of young children and of what, precisely, teachers expected of them in school. Binet and Simon noted the characteristics distinguishing those children described by their teachers as "bright" from those described as "dull," and, from these observations and considerable trial-and-error, they were finally able to make up a graded series of test items that not only agreed with teachers' judgments of children's scholastic capabilities but could make the discriminations more finely and more accurately than any single teacher could do without prolonged observation of the child in class. The Binet-Simon scale has since undergone many revisions and improvements, and today, in the form developed by Terman, known at the Stanford-Binet Intelligence Scale, it is generally regarded as the standard for the measurement of intelligence.

But the important point I wish to emphasize here is that these Binet tests, and in effect all their descendants, had their origin in the educational setting of the Paris schools of 1900, and the various modifications and refinements they have undergone since then have been implicitly shaped by the educational traditions of Europe and North America. The content and methods of instruction represented in this tradition, it should be remembered, are a rather narrow and select sample of all the various forms of human learning and of the ways of imparting knowledge and skills. The instructional methods of the traditional classroom were not invented all in one stroke, but evolved within an upper-class segment of the European population, and thus were naturally shaped by the capacities, culture, and needs of those children whom the schools were primarily intended to serve. At least implicit in the system as it originally developed was the expectation that not all children would succeed. These methods of schooling have remained essentially unchanged for many generations. We have accepted traditional instruction so completely that it is extremely difficult even to imagine, much less to put into practice, any radically different forms that the education of children could take. Our thinking almost always takes as granted such features as beginning formal instruction at the same age for all children (universally between ages five and six), instruction of children in groups, keeping the same groups together in lock step fashion through the first several years of schooling, and an active-passive, showing-seeing, telling-listening relationship between teacher and pupils. Satisfactory learning occurs under these conditions only when children come to school with certain prerequisite abilities and skills: an attention span long enough to encompass the teacher's utterances and demonstrations, the ability voluntarily to focus one's attention where it is called for, the ability to comprehend verbal utterances and to grasp relationships between things and their symbolic representations, the ability to inhibit large-muscle activity and engage in covert "mental" activity, to repeat instruction to oneself, to persist in a task until a self-determined standard is attained—in short, the ability to engage in what might be called self-instructional activities, without which group instruction alone remains ineffectual.

The interesting fact is that, despite all the criticisms that can easily be leveled at the educational system, the traditional forms of instruction have actually worked quite well for the majority of children. And the tests that were specifically devised to distinguish those children least apt to succeed in this system have also proved to do their job quite well. The Stanford-Binet and similar intelligence tests predict various measures of scholastic achievement with an average validity coefficient of about 5 to 6, and in longitudinal data comprising intelligence test and achievement measures on the same children over a number of years, the multiple correlation between intelligence and scholastic achievement is almost as high as the reliability of the measures will permit.

The generality and limitations of intelligence

If the content and instructional techniques of education had been markedly different from what they were in the beginning and, for the most part, continue to be, it is very likely that the instruments we call intelligence tests would also have assumed a quite different character. They might have developed in such a way as to measure a quite different constellation of abilities, and our conception of the nature of intelligence, assuming we still called it by that name, would be correspondingly different. This is why I think it so important to draw attention to the origins of intelligence testing.

But in granting that the measurement and operational definitions of intelligence had their origins in a school setting and were intended primarily for scholastic purposes, one should not assume that intelligence tests measure *only* school learning or cultural advantages making for scholastic success and fail to tap anything of fundamental psychological importance. The notion is sometimes expressed that psychologists have mis-aimed with their intelligence tests. Although the tests may predict scholastic performance, it is said, they do not *really* measure intelligence—as if somehow the 'real thing" has eluded measurement and perhaps always will. But this is a misconception. We *can* measure intelligence. As the late Professor Edwin G. Boring pointed out, intelligence, by definition, is what intelligence tests measure. The trouble comes only when we attribute more to "intelligence" and to our measurements of it than do the psychologists who use the concept in its proper sense.

The idea of intelligence has justifiably grown considerably beyond its scholastic connotations. Techniques of measurement not at all resembling the tasks of the Binet scale and in no way devised with the idea of predicting scholastic performance can also measure approximately the same intelligence as measured by the Binet scale. The English psychologist Spearman devoted most of his distinguished career to studying the important finding that almost any and every test involving any kind of complex mental activity correlates positively and substantially with any and every other test involving complex mental activity, regardless of the specific content or sensory modality of the test. Spearman noted that if the tests called for the operation of "higher mental processes," as opposed to sheer sensory acuity, reflex behavior, or the execution of established habits, they showed positive intercorrelation, although the tests bore no superficial resemblance to one another. They might consist of abstract figures involving various spatial relationships, or numerical problems, or vocabulary, or verbal analogies. For example, a vocabulary test shows correlations in the range of .50 to .60 with a test that consists of copying sets of designs with colored blocks; and a test of general information correlates about .50 with a test that involves wending through a printed maze with a pencil. Countless examples of such positive correlations between seemingly quite different tests can be found in the literature on psychological tests. Spearman made them the main object of his study. To account for the intercorrelations of "mental" tests, he hypothesized the existence of a single factor common to all tests involving complex mental processes. All such tests measure this common factor to some degree, which accounts for the intercorrelations among all the tests. Spearman called the common factor "general intelligence" or simply *g*. And he invented the method known as factor analysis to determine the amount of *g* in any particular test. He and his students later developed tests, like Raven's Progressive Matrices and Cattell's Culture Fair Tests of *g*, which measure *g* in nearly pure form. We should not reify *g* as an entity, of course, since it is only a hypothetical construct intended to explain covariation among tests. It is a hypothetical source of variance (individual differences) in test scores. It can be regarded as the nuclear operational definition of intelligence, and when the term intelligence is used it should refer to *g*, the factor common to all tests of complex problem solving.

In examining those tests most heavily loaded with *g*, Spearman characterized the mental processes which they seemed to involve as "the ability to educe relations and correlates"—that is, to be able to see the general from the particular and the particular as an instance of the general. A similar definition of intelligence was expressed by Aquinas, as "the ability to combine and separate"—to see the difference between things which seem similar and to see the similarities between things which seem different. These are essentially the processes of abstraction and conceptualization. Tasks which call for problem solving requiring these processes are usually the best measures of *g*. Despite numerous theoretical attacks on Spearman's basic notion of a general factor, *g* has stood like a rock of Gibralter in psychometrics, defying any attempt to construct a test of complex problem solving which excludes it.

Standard intelligence scales such as the Binet and the Wechsler are composed of a dozen or so subtests which differ obviously in their superficial appearance: vocabulary, general information, memory span for digits, block designs, figure copying, mazes, form boards, and so on. When the intercorrelations among a dozen or more such tests are subjected to a factor analysis or principal components analysis, some 50 percent or more of the total individual differences variance in all the tests is usually found to be attributable to a general factor common to all the tests. Thus, when we speak of intelligence it is this general factor, rather than any single test, that we should keep in mind.

Attempts to assess age differences in intelligence or mental development which rely on complex techniques that bear little formal resemblance to the usual intelligence tests still manage to measure *g* more than anything else. Piaget's techniques for studying mental growth, for example, are based largely on the child's development of the concepts of invariance and conservation of certain properties—number, area, and volume. When a large variety of Piaget tasks are factor analyzed along with standard psychometric tests, including the Stanford-Binet and Raven's Progressive Matrices, is it found that the Piaget tasks are loaded on the general factor to about the same extent as the psychometric tests (Vernon, 1965). That is to say, children fall into much the same rank order of ability on all these cognitive tests. Tuddenham (1968) has developed a psychometric scale of intelligence based entirely upon Piaget's theory of cognitive development. The test makes use of ten of the techniques developed by Piaget for studying conservation, seriation, reversal of perspective, and so on. Performance on these tasks shows about the same relationship to social class and race differences as is generally found with the Stanford-Binet and Wechler scales. It seems evident that what we call general intelligence can be manifested in many different forms and thus permits measurement by a wide variety of techniques. The common feature of all such intercorrelated tests seems to be their requirement of some form of "reasoning" on the part of the subject—some active, but usually covert, transformation or manipulation of the "input" (the problem) in order to arrive at the "output" (the answer).

The conceptually most pure and simple instance of this key aspect of intelligence is displayed in the phenomenon known as cross-modal transfer. This occurs when a person to whom some particular stimulus is exposed in one sensory modality can then recognize the same stimulus (or its essential features) in a different sensory modality. For example, show a person a number of differently shaped wooden blocks, then point to one, blindfold the person, shuffle the blocks, and let the person find the indicated block by using his sense of touch, or "write" in bold strokes any letter of the alphabet between a child's shoulder blades. It will be a completely unique stimulus input for the child, never encountered before and never directly conditioned to any verbal response. Yet, most children, provided they already know the alphabet, will be able to name the letter. There are no direct neural connections between the visual and the tactile impressions of the stimulus, and, although the child's naming of the letter has been conditioned to the visual stimulus, the tactile stimulus has been associated with neither the visual stimulus nor the verbal response. How does the child manage to show the cross modal transfer? Some central symbolic or "cognitive" processing mechanism is involved, which can abstract and compare properties of "new" experiences with "old" experiences and thereby invest the "new" with meaning and relevance. Intelligence is essentially characterized by this process.

Is g unitary or divisible?

It is only when the concept of *g* is attributed meaning above and beyond that derived from the factor analytic procedures from which it gains its strict technical meaning that we run into the needless argument over whether *g* is a unitary ability or a conglomerate of many subabilities, each of which could be measured independently. We should think of *g* as a "source" of individual differences in scores which is common to a number of different tests. As the tests change, the nature of *g* will also change, and a test which is loaded, say, .50 on *g* when factor analyzed among one set of tests may have a loading of .20 or .80, or some other value, when factor analyzed among other sets of tests. Also, a test which, in one factor analysis, measures only *g* and nothing else, may show that it measures *g* and one or more other factors when factor analyzed in connection with a new set of tests. In other words, *g* gains its meaning from the tests which have it in common. Furthermore, no matter how simple or "unitary" a test may appear to be, it is almost always possible to further fractionate the individual differences variance into smaller subfactors. I have been doing this in my laboratory with respect to a very simple and seemingly "unitary" ability, namely, digit span (Jensen, 1967b). Changing the rate of digit presentation changes the rank order of subjects in their ability to recall the digits. So, too, does interposing a 10-second delay between presentation and recall, and interpolating various distractions ("retroactive inhibition") between presentation and recall, and many other procedural variations of the digit span paradigm. Many—but, significantly, not all—of these kinds of manipulations introduce new dimensions or factors of individual differences. It is likely that when we finally get down to the irreducible "atoms" of memory span ability, so to speak, if we ever do get there, the elements that make up memory span ability will not themselves even resemble what we think of as abilities in the usual sense of the term. And so probably the same would be true not only for digit span, but for any of the subtests or items that make up intelligence tests.

A simple analogy in the physical realm may help to make this clear. If we are interested in measuring general athletic ability, we can devise a test consisting of running, ball throwing, matting, jumping, weight lifting, and so on. We can obtain a "score" on each one of these and the total for any individual is his "general athletic ability" score. This score would correspond to the general intelligence score yielded by tests like the Stanford-Binet and the Wechsler scales.

Or we can go a step further in the refinement of our test procedure and intercorrelate the scores on all these physical tasks, factor analyze the intercorrelations, and examine the general factor, if indeed there is one. Assuming there is, we would call it "general athletic ability." It would mean that on all of the tasks, persons who excelled on one also tended to be superior on the others. And we would note that some tasks were more "loaded" with this general factor than others. We could then weight the subtest scores in proportion to their loading on *g* and then add them up. The total, in effect, is a "factor score," and gives us a somewhat more justifiable measure of "general athletic ability," since it represents the one source of variation that all the athletic skills in our test battery share in common.

To go still further, let us imagine that the running test has the highest loading on *g* in this analysis. To make the issue clear-cut, let us say that all its variance is attributable to the *g* factor. Does this mean that running ability is not further analyzable into other components? *No, it simply means that the components into which running can be analyzed are not separately or independently manifested in either the running test or the other tests in the battery.* But we can measure these components of running ability independently, if we wish to: total leg length, the ratio of upper to lower leg length, strength of leg muscles, physical endurance, "wind" or vital capacity, ratio of body height to weight, degree of mesomorphic body build, specific skills such as starting speed—all are positively correlated with running speed. And if we intercorrelate these measures and factor analyze the correlations, we would probably find a substantial general factor common to all these physical attributes, name it what you will. We could combine the measures on these various physical traits into a weighted composite score which would predict running ability as measured by the time the person takes to cross the finish line. The situation seems very similar to the analysis of the psychological processes that make up "general intelligence."

Fluid and crystallized intelligence

Raymond B. Cattell (1963) has made a conceptually valid distinction between two aspects of intelligence, *fluid* and *crystallized*. Standard intelligence tests generally measure both the fluid and crystallized components of *g*, and, since the two are usually highly correlated in a population whose members to a large extent share a common background of experience, culture, and education, the fluid and crystallized components may not always be clearly discernible as distinct factors. Conceptually, however, the distinction is useful and can be supported empirically under certain conditions. *Fluid* intelligence is the capacity for new conceptual learning and problem solving, a general "brightness' and adaptability, relatively independent of education and experience, which can be invested in the particular opportunities for learning encountered by the individual in accord with his motivations and interests. Tests that measure mostly fluid intelligence are those that minimize cultural and scholastic content. Cattell's Culture Fair Tests and Raven's Progressive Matrices are good examples. *Crystallized* intelligence, in contrast, is a precipitate out of experience, consisting of acquired knowledge and developed intellectual skills. Fluid and crystallized intelligence are naturally correlated in a population sharing a common culture, because the acquisition of knowledge and skills in the first place depends upon fluid intelligence. While fluid intelligence attains its maximum level in the late teens and may even begin to decline gradually shortly thereafter, crystallized intelligence continues to increase gradually with the individual's learning and experience all the way up to old age.

Occupational correlates of intelligence

Intelligence, as we are using the term, has relevance considerably beyond the scholastic setting. This is so partly because there is an

intimate relationship between a society's occupational structure and its educational system. Whether we like it or not, the educational system is one of society's most powerful mechanisms for sorting out children to assume different roles in the occupational hierarchy.

The evidence for a hierarchy of occupational prestige and desirability is unambiguous. Let us consider three sets of numbers.[2] First, the Barr scale of occupations, devised in the early 1920s, provides one set of data. Lists of 120 representative occupations, each definitely and concretely described, were given to 30 psychological judges who were asked to rate the occupations on a scale from 0 to 100 according to the grade of intelligence each occupation was believed to require for ordinary success. Second, in 1964, the National Opinion Research Center (NORC), by taking a large public opinion poll, obtained ratings of the *prestige* of a great number of occupations; these prestige ratings represent the average standing of each occupation relative to all the others in the eyes of the general public. Third, a rating of socioeconomic status (SES) is provided by the *1960 Census of Population: Classified Index of Occupations and Industries*, which assigns to each of the hundreds of listed occupations a score ranging from 0 to 96 as a composite index of the average income and educational level prevailing in the occupation.

The interesting point is the set of correlations among these three independently derived occupational ratings.

The Barr scale and the NORC ratings are correlated .91.

The Barr scale and the SES index are correlated .81.

The NORC ratings and the SES index are correlated .90.

In other words, psychologists' concept of the "intelligence demands" of an occupation (Barr scale) is very much like the general public's concept of the prestige or "social standing" of an occupation (NORC ratings), and both are closely related to an independent measure of the educational and economic status of the persons pursuing an occupation (SES index). As O. D. Duncan (1968, pp. 90–91) concludes, ". . . 'intelligence' is a socially defined quality in this social definition is not essentially different from that of achievement or status in the occupational sphere. . . . When psychologists came to propose operational counterparts to the notion of intelligence, or to devise measures thereof, they wittingly or unwittingly looked for indicators of capability to function in the system of key roles in the society." Duncan goes on to note, "Our argument tends to imply that a correlation between IQ and occupational achievement was more or less built into IQ tests, by virtue of the psychologists' implicit acceptance of the social standards of the general populace. Had the first IQ tests been devised in a hunting culture, 'general intelligence' might well have turned out to involve visual acuity and running speed, rather than vocabulary and symbol manipulation. As it was, the concept of intelligence arose in a society where high status accrued to occupations involving the latter in large measure, so that what we now *mean* by intelligence is something like the probability of acceptable performance (given the opportunity) in occupations varying in social status."

So we see that the prestige hierarchy of occupations is a reliable objective reality in our society. To this should be added the fact that there is undoubtedly some relationship between the levels of the hierarchy and the occupations' intrinsic interest, desirability, or gratification to the individuals engaged in them. Even if all occupations paid alike and received equal respect and acclaim, some occupations will still be viewed as more desirable than others, which would make for competition, selection, and, again, a kind of prestige hierarchy. Most persons would agree that painting pictures is more satisfying than painting barns, and conducting a symphony orchestra is more exciting than directing traffic. We have to face it: the assortment of persons into occupational roles simply is not "fair" in any absolute sense. The best we can ever hope for is that true merit, given equality of opportunity, act as the basis for the natural assorting process.

Correlation between intelligence and occupational achievement

Because intelligence is only one of a number of qualities making for merit in any given occupation, and since most occupations will tolerate a considerable range of abilities and criteria of passable performance, it would be surprising to find a very high correlation between occupational level and IQ. Although the rank order of the *mean* IQs of occupational groups is about as highly correlated with the occupations' standing on the three "prestige" ratings mentioned above as the ratings are correlated among themselves, there is a considerable dispersion of IQs *within* occupations. The IQ spread increases as one moves down the scale from more to less skilled occupations (Tyler, 1965, pp. 338–339). Thus, the correlation, for example, between scores on the Army General Classification Test, a kind of general intelligence test, and status ratings of the civilian occupations of 18,782 white enlisted men in World War II was only .42. Since these were mostly young men, many of whom had not yet completed their education or established their career lines, the correlation of .42 is lower than one would expect in the civilian population. Data obtained by the U.S. Employment Service in a civilian population shows a correlation of .55 between intelligence and occupational status, a value which, not surprisingly, is close to the average correlation between intelligence and scholastic achievement (Duncan, et al., 1968, pp. 98–101). Although these figures are based on the largest samples reported in the literature and are therefore probably the most reliable statistics, they are not as high as the correlations found in some other studies. Two studies found, for example, that IQs of school boys correlated .57 and .71 with their occupational status 14 and 19 years later, respectively (Tyler, 1965, p. 343). It is noteworthy that the longer interval showed the higher correlation.

Duncan's (1968) detailed analysis of the nature of the relationship between intelligence and occupational status led him to the conclusion that "the bulk of the influence of intelligence on occupation is indirect, via education." If the correlation of intelligence with education and of education with occupation is, in effect, "partialled out," the remaining "direct" correlation between intelligence and occupation is almost negligible. But Duncan points out that this same type of analysis (technically known as "path coefficients analysis") also reveals the interesting and significant finding that intelligence plays a relatively important part as a cause of differential *earnings*. Duncan concludes: ". . . men with the same schooling and in the same line of work are differentially rewarded in terms of mental ability" (1968, p. 118).

Correlations between intelligence and job performance within occupations

Intelligence, via education, has its greatest effect in the assorting of individuals into occupational roles. Once they are in those roles, the importance of intelligence per se is less marked. Ghiselli (1955) found that intelligence tests correlate on the average in the range of .20 to .25 with ratings of actual proficiency on the job. The speed and ease of training for various occupational skills, however, show correlations with intelligence averaging about .50, which is four to five times the predictive power that the same tests have in relation to work proficiency *after* training. This means that, once the training hurdle has been surmounted, many factors besides intelligence are largely involved in success on the job. This is an important fact to keep in mind at later points in this article.

Is intelligence "fixed"?

Since the publication of J. McV. Hunt's well-known and influential book, *Intelligence and Experience* (1961), the notion of "fixed intelligence" has assumed the status of a popular cliché among many speakers and writers on intelligence, mental retardation, cultural disadvantage, and the like, who state often with an evident sense of virtue and relief, that modern psychology has overthrown the "belief in fixed intelligence." This particular bugaboo seems to have loomed up largely in the imaginations of those who find such great satisfaction in the idea that "fixed intelligence" has been demolished once and for all.

Actually, there has been nothing much to demolish. When we look behind the rather misleading term "fixed intelligence," what we find are principally two real and separate issues, each calling for empirical study rather than moral philosophizing. Both issues lend themselves to empirical investigation and have long been subjects of intensive study The first issue concerns the genetic basis of individual differences in intelligence; the second concerns the stability or constancy of the IQ throughout the individual's lifetime.

Genotype and Phenotype. Geneticists have avoided confusion and polemics about the issue of whether or not a given trait is "fixed" by asking the right question in the first place: how much of the variation (i.e., individual differences) in a particular trait or characteristic that we observe or measure (i.e., the *phenotype*) in a given population can we account for in terms of variation in the genetic factors (i.e., the *genotype*) affecting the development of the characteristic?

The genetic factors are completely laid down when the parental sperm and ovum unite. Thus the individual's genotype, by definition, is "fixed" at the moment of conception. Of course, different potentials of the genotype may be expressed at different times in the course of the individual's development. But beyond conception, whatever we observe or measure of the organism is a phenotype, and this, by definition, is *not* "fixed." The phenotype is a result of the organism's internal genetic mechanisms established at conception and all the physical and social influences that impinge on the organism throughout the course of its development. Intelligence is a phenotype, not a genotype, so the argument about whether or not intelligence is "fixed" is seen to be spurious.

The really interesting and important question, which can be empirically answered by the methods of quantitative genetics, is: what is the correlation between genotypes and phenotypes at any given point in development? For continuous or metrical characteristics such as height and intelligence, the correlation, of course, can assume any value between 0 and 1. The square of the correlation between genotype and phenotype is technically known as the *heritability* of the characteristic, a concept which is discussed more fully in a later section.

The Stability of Intelligence Measures. The second aspect of the issue of "fixed intelligence" concerns the stability of intelligence measurements throughout the course of the individual's development. Since intelligence test scores are not points on an absolute scale of measurement like height and weight, but

[2] I am indebted to Professor Otis Dudley Duncan (1968, pp. 80–100) for providing this information.

only indicate the individual's relative standing with reference to a normative population, the question we must ask is: To what extent do individuals maintain their standing relative to one another in measured intelligence over the course of time? The answer is to be found in the correlation between intelligence test scores on a group of persons at two points in time. Bloom (1964) has reviewed the major studies of this question and the evidence shows considerable consistency.

In surveying all the correlations reported in the literature between intelligence measured on the same individuals at two points in time, I have worked out a simple formula that gives a "best fit" to all these data. The formula has the virtue of a simple mnemonic, being much easier to remember than all the tables of correlations reported in the literature and yet being capable of reproducing the correlations with a fair degree of accuracy.

$$\hat{r}_{12}=r_{tt}\sqrt{\frac{CA_1}{CA_2}}$$

where $\hat{r}_{12}$ = the estimated correlation between tests given at times 1 and 2.
r_{tt} = the equivalent-forms or immediate test-retest reliability of the test.
CA_1 = the subject's chronological age at the time of the first test.
CA_2 = the subject's chronological age at the time of the second test.

Limitation: The formula holds only up to the point where CA_2 is age 10, at which time the empirical value of r_{12} approaches an asymptote, showing no appreciable increase thereafter. Beyond age 10, regardless of the interval between tests, the obtained test-retest correlations fall in the range between the test's reliability and the square of the reliability (i.e., $r_{tt}>r_{12}>r^2_{tt}$). These simple generalizations are intended simply as a means of summarizing the mass of empirical findings. They accord with Bloom's conclusion, based on his thorough survey of the published evidence, that beyond age 8, correlations between repeated tests of general intelligence, corrected for unreliability of measurement, are between +.90 and unity (Bloom, 1964, p. 61).

What these findings mean is that the IQ is not constant, but, like all other developmental characteristics, is quite variable early in life and becomes increasingly stable throughout childhood. By age 4 or 5, the IQ correlates about .70 with IQ at age 17, which means that approximately half (i.e., the square of the correlation) of the variance in adult intelligence can be predicted as early as age 4 or 5. This fact that half the variance in adult intelligence can be accounted for by age 4 has led to the amazing and widespread, but unwarranted and fallacious, conclusion that persons develop 50 percent of their mature intelligence by age 4! This conclusion, of course, does not at all logically follow from just knowing the magnitude of the correlation. The correlation between *height* at age 4 and at age 17 is also about .70, but who would claim that the square of the correlation indicated the proportion of adult height attained by age 4? The absurdity of this non sequitur is displayed in the prediction it yields: the average 4 years old boy should grow up to be 6 ft. 7 in. tall by age 17!

Intelligence has about the same degree of stability as other developmental characteristics. For example, up to age 5 or 6, height is somewhat more stable than intelligence, and thereafter the development rates of height and intelligence are about equally stable, except for a period of 3 or 4 years immediately after the onset of puberty, during which height is markedly less stable than intelligence. Intelligence is somewhat more stable than total body weight over the age range from 2 to 18 years. Intelligence has a considerably more stable growth rate than measures of physical strength (Bloom, 1964, pp. 46–47). Thus, although the IQ is certainly not "constant," it seems safe to say that under normal environmental conditions it is at least as stable as developmental characteristics of a strictly physical nature.

Intelligence as a component of mental ability

The term "intelligence" should be reserved for the rather specific meaning I have assigned to it, namely, the general factor common to standard tests of intelligence. Any one verbal definition of this factor is really inadequate, but, if we must define it in so many words, it is probably best thought of as a capacity for abstract reasoning and problem solving.

What I want to emphasize most, however, is that *intelligence* should not be regarded as completely synonymous with what I shall call *mental ability*, a term which refers to the totality of a person's mental capabilities. Psychologists know full well that what they mean by intelligence in the technical sense is only a part of the whole spectrum of human abilities. The notion that a person's intelligence, or some test measurement thereof, reflects the totality of all that he can possibly do with his "brains" has long caused much misunderstanding and needless dispute. As I have already indicated, the particular constellation of abilities we now call "intelligence," and which we can measure by means of "intelligence" tests, has been singled out from the total galaxy of mental abilities as being especially important in our society mainly because of the nature of our traditional system of formal education and the occupational structure with which it is coordinated. Thus, the predominant importance of intelligence is derived, not from any absolute criteria or God-given desiderata, but from societal demands. But neither does this mean, as some persons would like to believe, that intelligence exists only "by definition" or is merely an insubstantial figment of psychological theory and test construction. Intelligence fully meets the usual scientific criteria for being regarded as an aspect of objective reality, just as much as do atoms, genes, and electromagnetic fields. Intelligence has indeed been singled out as especially important by the educational and occupational demands prevailing in all industrial societies, but it is nevertheless a biological reality and not just a figment of social convention. Where educators and society in general are most apt to go wrong is in failing fully to recognize and fully to utilize a broader spectrum of abilities than just that portion which psychologists have technically designated as "intelligence." But keep in mind that it is this technical meaning of "intelligence" to which the term specifically refers throughout the present article.

The distribution of intelligence

Intelligence tests yield numerical scores or IQs (intelligence quotients) which are assumed to be, and in fact nearly are, "normally" distributed in the population. That is, the distribution of IQs conforms to the normal or so-called Gaussian distribution, the familiar "bell-shaped curve." The IQ, which is now the most universal "unit" in the measurement of intelligence, was originally defined as the ratio of the individual's mental age (MA) to his chronological age (CA): $IQ=(MA/CA)\times 100$. (Beyond about 16 years of age, the formula ceases to make sense.) Mental age was simply defined as the typical or average score obtained on a test by children of a given age, and thus the average child by definition has an IQ of 100. Because of certain difficulties with the mental age concept, which we need not go into here, modern test constructors no longer attempt to measure mental age but instead convert raw scores (i.e., the number of test items gotten "right") directly into IQs for each chronologcial age group. The average IQ at each age is arbitrarily set at 100, and the IQ is defined as a normally distributed variable with a mean of 100 and a standard diviation of 15 points. (The standard deviation is an index of the amount of dispersion of scores; in the normal distribution 99.7 percent of the scores fall within ±3 standard deviations [i.e., ± 45 IQ points] of the mean.)

There is really nothing mysterious about the fact that IQs are "normally" distributed, but it is not quite sufficient, either, to say that the normality of the distribution is just an artifact of test construction. There is a bit more to it than that.

Toss a hundred or so pennies into the air and record the number of heads that come "up" when they fall. Do this several thousand times and plot a frequency distribution of the number of heads that come up on each of the thousands of throws. You will have a distribution that very closely approximates the normal curve, and the more times you toss the hundred pennies the closer you will approximate the normal distribution.

Now, a psychological test made up of 100 or so items would behave in the same manner as the pennies, and produce a perfectly normal distribution of scores, if (*a*) the items have an average difficulty level of ½ [i.e., exactly half of the number of persons taking the test would get the item "right"], and (*b*) the items are independent, that is, all the interim correlations are zero. Needless to say, no psychological test that has ever been constructed meets these "ideal" criteria, and is just as well, for if we succeeded in devising such a test it would "measure" absolutely nothing but chance variation. If the test is intended to measure some trait, such as general intelligence, it will be impossible for all the test items to be completely uncorrelated. They will necessarily have some degree of positive correlation among them. Then, if the items are correlated, and if we still want the test to spread people out over a considerable range of scores, we can achieve this only if the items vary in level of difficulty; they cannot all have a difficulty level of ½. (Imagine the extreme case in which all item intercorrelations were perfect and the difficulty level of all items was ½. Then the "distribution" of scores would have only two points: half the testees would obtain a score of zero and half would obtain a perfect score.) So we need to have test items which have an *average* difficulty level of ½ in the test overall, but which cover a considerable range of difficulty levels, say, from .1 to .9. Thus, test constructors make up their tests of items which have rather low overage intercorrelations (usually between .1 and .2) and a considerable range of difficulty levels. These two sets of conditions working together, then, yield a distribution of test scores in the population which is very close to "normal." So far it appears as though we have simply made our tests in such a way as to *force* the scores to assume a normal distribution. And that is exactly true.

But the important question still remains to be answered: is intelligence itself—not just our measurements of it—really normally distributed? In this form the question is operationally meaningless, since, in order to find the form of the distribution of intelligence, we first have to measure it, and we have constructed our measuring instruments in such a way as to yield a normal distribution. The argument about the distribution of intelligence thus appears to be circular, is there any way out? The only way I know of is to look for evidence that our intelligence scales or IQs behave like an "interval scale." On an interval scale, the interval between any two points is equal to the interval between any other two points the same numerical distance apart. Thus, intervals on the scale are equal and additive. If we *assume* that intelligence is "really" normally distributed in the population, and then measure it in

such a way that we obtain a normal distribution of scores, our measurements (IQs) can be regarded as constituting an interval scale. If, then, the scale in fact behaves like an interval scale, there is some justification for saying that intelligence itself (not just IQ) is normally distributed. What evidence is there of the IQ's behaving like an interval scale? The most compelling evidence, I believe, comes from studies of the inheritance of intelligence, in which we examine the pattern of intercorrelations among relatives of varying degrees of kinship.

But, first, to understand what is meant by "behaving" like an interval scale, let us look at two well-known interval scales, the Fahrenheit and centigrade thermometers. We can prove that these are true interval scales by showing that they "behave" like interval scales in the following manner: Mix a pint of ice water at 0° C with a pint of boiling water at 100° C. The resultant temperature of the mixture will be 50° C. Mix 3 pints of ice water with 1 pint of boiling water and the temperature of the mix will be 25° C. And we can continue in this way, mixing various proportions of water at different temperatures and predicting the resultant temperatures on the assumption of an interval scale. To the extent that the thermometer readings fit the predictions, they can be considered an interval scale.

Physical stature (height) is measured on an interval scale (more than that, it is also a ratio scale) in units which are independent of height, so the normal distribution of height in the population is clearly a fact of nature and not an artifact of the scale of measurement. A rather simple genetic model "explains" the distribution of height by hypothesizing that individual variations in height are the result of a large number of independent factors each having a small effect in determining stature. (Recall the penny-tossing analogy.) This model predicts quite precisely the amount of "regression to the population mean" of the children's average height from the parent's average height, a phenomenon first noted by Sir Francis Galton in 1885. The amount of "regression to the mean" from grandparent to grandchild is exactly double that from parent to child. These regression lines for various degrees of kinship are perfectly rectilinear throughout the entire range, except at the very lower end of the scale of height, where one finds midgets and dwarfs. The slope of the regression line changes in discrete jumps according to the remoteness of kinship of the groups being compared. All this could happen only if height were measured on an interval scale. The regression lines would not be rectilinear if the trait (height) were not measured in equal intervals.

Now, it is interesting that intelligence measurements show about the same degree of "filial regression," as Galton called it, that we find for height. The simple polygenic model for the inheritance of height fits the kinship correlations obtained for intelligence almost as precisely as it does for height. And the kinship regression lines are as rectilinear for intelligence as for height, throughout the IQ scale, except at the very lower end, where we find pathological types of mental deficiency analogous to midgets and dwarfs on the scale of physical stature. In brief; IQs behave just about as much like an interval scale as do measurements of height, which we know for sure is an interval scale. Therefore, it is not unreasonable to treat the IQ as an interval scale.

Although standardized tests such as the Stanford-Binet and the Wechsler Scales were each constructed by somewhat different approaches to achieving interval scales, they both agree in revealing certain systematic discrepancies from a perfectly normal distribution of IQs when the tests are administered to a very large and truly random sample of the population. These slight deviations of the distribution of IQs from perfect normality have shown up in many studies using a variety of tests. The most thorough studies and sophisticated discussions of their significance can be found in articles by Sir Cyril Burt (1957, 1963). The evidence, in short, indicates that intelligence is *not* distributed quite normally in the population. The distribution of IQs approximates normality quite closely in the IQ range from about 70 to 130. But outside this range there are slight, although very significant, departures from normality. From a scientific standpoint, these discrepancies are of considerable interest as genuine phenomena needing explanation.

Figure I shows an idealized distribution of IQs if they were distributed perfectly normally. Between IQ 70 and IQ 130, the percentage of cases falling between different IQ intervals, as indicated in Figure 1, are very close to the actual percentages estimated from large samples of the population and the departures are hardly enough to matter from any practical standpoint.

Examination of this normal curve can be instructive if one notes the consequences of shifting the total distribution curve up or down the IQ scale. The consequences of a given shift become more extreme out toward the "tails" of the distribution. For example, shifting the mean of the distribution from 100 down to 90 would put 50 percent instead of only 25 percent of the population below IQ 90; and it would put 9 percent instead of 2 percent below IQ 70. And in the upper tail of the distribution, of course, the consequences would be the reverse; instead of 25 percent above IQ 110, there would be only 9 percent, and so on. The point is that relatively small shifts in the mean of the IQ distribution can result in very large differences in the proportions of the population that fall into the very low or the very high ranges of intelligence. A 10 point downward shift in the mean, for example, would more than triple the percentage of mentally retarded (IQs below 70) in the population and would reduce the percentage of intellectually "gifted" (IQs above 130) to less than one-sixth of their present number. It is in these tails of the normal distribution that differences become most conspicuous between various groups in the population that show mean IQ differences, for whatever reason, of only a few IQ points. From a knowledge of relatively slight mean differences between various social class and ethnic groups, for example, one can estimate quite closely the relatively large differences in their proportions in special classes for the educationally retarded and for the "gifted" and in the percentages of different groups receiving scholastic honors at graduation. It is simply a property of the normal distribution that the effects of group differences in the mean are greatly magnified in the different proportions of each group that we find as we move further out toward the upper or lower extremes of the distribution.

I indicated previously that the distribution of intelligence is really not quite "normal," but shows certain systematic departures from "normality." These departures from the normal distribution are shown in Figure 2 in a slightly exaggerated form to make them clear. The shaded area is the normal distribution, and also there is an exthe actual distribution of IQs in the population. We note that there are more very low IQs than would be expected in a truly normal distribution, and also there is an excess of IQs at the upper end of the scale. Note, too, the slight excess in the IQ range between about 70 and 90.

The very lowest IQs, below 55 or 60, we now know, really represent a different distribution from that of the rest of the intelligence distribution (Roberts, 1952; Zigler, 1967). Whatever factors are responsible for individual differences in the IQ range above 60 are not sufficient to account for IQs below this level, and especially below IQ 50. Practically all IQs below this level represent severe mental deficiency due to pathological conditions, massive brain damage, or rare genetic and chromosomal abnormalities. Only about ½ to ¾ of 1 percent of the total population falls into the IQ range below 50; this is fewer than ⅓ of all individuals classed as mentally retarded (IQs below 70). These severe grades of mental defect are not just the lower extreme of normal variation. Often they are due to a single recessive or mutant gene whose effects completely override all the other genetic factors involved in intelligence; thus they have been called "major gene" defects. In this respect, the distribution of intelligence is directly analogous to the distribution of stature. Short persons are no more abnormal than are average or tall persons; all are instances of normal variation. But extremely short persons at the very lower end of the distribution are really part of another, abnormal distribution, generally consisting of midgets and dwarfs. They are clearly not a part of normal variation. One of the commonest types of dwarfism, for example, is known to be caused by a single recessive gene.

Persons with low IQs caused by major gene defects or chromosomal abnormalities, like mongolism, are also usually abnormal in physical appearance. Persons with moderately low IQs that represent a part of normal variation, the so-called "familial mentally retarded," on the other hand, are physically indistinguishable from persons in the higher ranges of IQ. But probably the strongest evidence we have that IQs below 50 are a group apart from the mildly retarded, who represent the lower end of normal variation, comes from comparisons of the siblings of the severely retarded with siblings of the mildly retarded. In England, where this has been studied intensively, these two retardate groups are called imbecile (IQs below 50) and feebleminded (IQs 50 to 75). Figure 3 shows the IQ distributions of the *siblings* of imbecile and feebleminded children (Roberts, 1952). Note that the siblings of imbeciles have a much higher average level of intelligence than the siblings of the feebleminded. The latter group, furthermore, shows a distribution of IQs that would be predicted from a genetic model intended to account for the normal variation of IQ in the population. This model does not at all predict the IQ distribution for the imbecile sibships. To explain the results shown in Figure 3 one must postulate some additional factors (gene or chromosome defects, pathological conditions, etc.) that cause imbecile and idiot grades of mental deficiency.

Another interesting point of contrast between severe mental deficiency and mild retardation is the fact noted by Kushlick (1966, p. 130), in surveying numerous studies, that "The parents of severely subnormal children are evenly distributed among all the social strata of industrial society, while those of mildly subnormal subjects come predominantly from the lower social classes. There is now evidence which suggests that mild subnormality in the absence of abnormal neurological signs (epilepsy, electroencephalographic abnormalities, biochemical abnormalities, chromosomal abnormalities or sensory defects) is virtually confined to the lower social classes. Indeed, there is evidence that almost no children of higher social class parents have IQ scores of less than 80, unless they have one of the pathological processes mentioned above."

In the remainder of this article we shall not be further concerned with these exceptionally low IQs below 50 or 60, which largely constitute a distribution of abnormal conditions superimposed on the factors that make for normal variation in intelligence. We shall be mainly concerned with the factors involved in the normal distribution.

Returning to Figure 2, the best explanation we have for the "bulge" between 70 and 90 is the combined effects of severe environmental disadvantages and of emotional disturbances that depress test scores. Burt (1963) has found that when, independent of the subjects' test performance there is evidence for the existence of factors that depress performance, and these exceptional subjects' scores are removed from the distribution, this "bulge" in the 70–90 range is diminished or erased. Also, on retest under more favorable conditions, the IQs of many of these exceptional subjects are redistributed at various higher points on the scale, thereby making the IQ distribution more normal.

The "excess" of IQs at the high end of the scale is certainly a substantial phenomenon, but it has not yet been adequately accounted for. In his multifactorial theory of the inheritance of intelligence, Burt (1958) has postulated major gene effects that make for exceptional intellectual abilities represented at the upper end of the scale, just as other major gene effects make for the subnormality found at the extreme lower end of the scale. One might also hypothesize that superior genotypes for intellectual development are pushed to still greater superiority in their phenotypic expression through interaction with the environment. Early recognition of superiority leads to its greater cultivation and encouragement by the individual's social environment. This influence is keenly evident in the developmental histories of persons who have achieved exceptional eminence (Goertzel & Goertzel, 1962). Still another possible explanation of the upper-end "excess" lies in the effects of assortative mating in the population, meaning the tendency for "like to marry like." If the degree of resemblance in intelligence between parents in the upper half of the IQ distribution were significantly greater than the degree of resemblance of parents in the below average range, genetic theory would predict the relative elongation of the upper tail of the distribution. This explanation, however, must remain speculative until we have more definite evidence of whether there is differential assortative mating in different regions of the IQ distribution.

The Concept of Variance. Before going on to discuss the factors that account for normal variation in intelligence among individuals in the population, a word of explanation is in order concerning the quantification of variation. The amount of dispersion of scores depicted by the distributions in Figures 1 and 2 is technically expressed as the *variance*, which is the square of the standard deviation of the scores in the distribution. (Since the standard deviation of IQs in the population is 15, the total variance is 225.) *Variance* is a basic concept in all discussions of individual differences and population genetics. If you take the difference between every score and the mean of that total distribution, square each of these differences, sum them up, and divide the sum by the total number of scores, you have a quantity called the *variance*. It is an index of the total amount of variation among scores. Since variance represents variation on an additive scale, the total variance of a distribution of scores can be partitioned into a number of components, each one due to some factor which contributes a certain specifiable proportion of the variance, and all these variance components add up to the total variance. The mathematical technique for doing this, called "the analysis of variance," was invented by Sir Ronald Fisher, the British geneticist and statistician. It is one of the great achievements in the development of statistical methodology.

THE INHERITANCE OF INTELLIGENCE

"In the actual race of life, which is not to get ahead, but to get ahead of somebody, the chief determining factor is heredity." So said Edward L. Thorndike in 1905. Since then, the preponderance of evidence has proved him right, certainly as concerns those aspects of life in which intelligence plays an important part.

But one would get a quite different impression from reading most of the recent popular textbooks of psychology and education. Genetic factors in individual differences have usually been belittled, obscured, or denigrated, probably for reasons of interest mainly on historical, political, and ideological grounds which we need not go into here. Some of the following quotations, each from different widely used texts in our field, give some indication of the basis for my complaint. "We can attribute no particular portion of intelligence to heredity and no particular portion to the environment." "The relative influence of heredity and environment upon intelligence has been the topic of considerable investigations over the last half century. Actually the problem is incapable of solution since studies do not touch upon the problem of heredity and environment but simply upon the susceptibility of the content of a particular test to environmental influences." "Among people considered normal, the range of genetic variations is not very great." "Although at the present time practically all responsible workers in the field recognize that conclusive proof of the heritability of mental ability (where no organic or metabolic pathology is involved) is still lacking, the assumption that subnormality has a genetic basis continues to crop up in scientific studies." "There is no evidence that nature is more important than nurture. The two forces always operate together to determine the course of intellectual development." The import of such statements apparently filters up to high levels of policy-making, for we find a Commissioner of the U.S. Office of Education stating in a published speech that children ". . . all have similar potential at birth. The differences occur shortly thereafter." These quotations typify much of the current attitude toward heredity and environment that has prevailed in education in recent years. The belief in the almost infinite plasticity of intellect, the ostrich-like denial of biological factors in individual differences, and the slighting of the role of genetics in the study of intelligence can only hinder investigation and understanding of the conditions, processes, and limits through which the social environment influences human behavior.

But fortunately we are beginning to see some definite signs that this mistreatment of the genetic basis of intelligence by social scientists may be on the wane, and that a biosocial view of intellectual development more in accord with the evidence is gaining greater recognition. As Yale psychologist Edward Zigler (1968) has so well stated:

"Not only do I insist that we take the biological integrity of the organism seriously, but it is also my considered opinion that our nation has more to fear from unbridled environmentalists than they do from those who point to such integrity as one factor in the determination of development. It is the environmentalists who have been writing review after review in which genetics are ignored and the concept of capacity is treated as a dirty word. It is the environmentalists who have placed on the defensive any thinker who, perhaps impressed by the revolution in biological thought stemming from discoveries involving RNA–DNA phenomena, has had the temerity to suggest that certain behaviors may be in part the product of readout mechanisms residing within the programmed organism. It is the unbridled environmentalist who emphasizes the plasticity of the intellect, that tells us one can change both the general rate of development and the configuration of inellecual processes which can be referred to as the intellect, if we could only subject human beings to the proper technologies. In the educational realm, this has spelled itself out in the use of panaceas, gadgets, and gimmicks of the most questionable sort. It is the environmentalist who suggests to parents how easy it is to raise the child's IQ and who has prematurely led many to believe that the retarded could be made normal, and the normal made geniuses. It is the environmentalist who has argued for pressure-cooker schools, at what psychological cost, we do not yet know."

Most geneticists and students of human evolution have fully recognized the role of culture in shaping "human nature," but also they do not minimize the biological basis of diversity in human behavioral characteristics. Geneticist Theodosius Dobzhansky (1968, p. 554) has expressed this viewpoint in the broadest terms: "The trend of cultural evolution has been not toward making everybody have identical occupations but toward a more and more differentiated occupational structure. What would be the most adaptive response to this trend? Certainly nothing that would encourage genetic uniformity. . . . To argue that only environmental circumstances and training determine a person's behavior makes a travesty of democratic notions of individual choice, responsibility, and freedom."

EVIDENCE FROM STUDIES OF SELECTIVE BREEDING

The many studies of selective breeding in various species of mammals provide conclusive evidence that many behavioral characteristics, just as most physical charactertistics, can be manipulated by genetic selection (see Fuller & Thompson, 1962; Scott and Fuller, 1965). Rats, for example, have been bred for maze learning ability in many different laboratories. It makes little difference whether one refers to this ability as rat "intelligence," "learning ability" or some other term—we know that it is possible to breed selectively for whatever the factors are that make for speed of maze learning. To be sure, individual variation in this complex ability may be due to any combination of a number of characteristics involving sensory acuity, drive level, emotional stability, strength of innate turning preferences, brain chemistry, brain size, structure of neural connections, speed of synaptic transmission, or whatever. The point is that the molar behavior of learning to get through a maze efficiently without making errors (i.e., going up blind alleys) can be markedly influenced in later generations by selective breeding of the parent generations of rats who are either fast or slow ("maze bright" or "maze dull," to use the prevailing terminology in this research) in learning to get through the maze. Figure 4 shows the results of one such genetic selection experiment. They are quite typical; within only six generations of selection the offspring of the "dull" strain make 100 percent more errors in learning the maze than do the offspring of the "bright" strain (Thompson, 1954). In most experiments of this type, of course, the behaviors that respond so dramatically to selection are relatively simple as compared with human intelligence, and the experimental selection pressure is severe, so the implications of such findings for the study of human variation should not be overdrawn. Yet geneticists seem to express little doubt that many behavioral traits in humans would respond similarly to genetic selection. Three eminent geneticists (James F. Crow, James V. Neel, and Curt Stern) of the National Academy of Sciences recently prepared a "position statement," which was generally hedged by extreme caution and understatement, that asserted: "Animal experiments have shown that almost any trait can be changed by selection. . . . A selection program to increase human intelligence (or whatever is measured by various kinds of 'intelligence'

tests) would almost certainly be successful in some measure. The same is probably true for other behavioral traits. The *rate* of increase would be somewhat unpredictable, but there is little doubt that there would be progress" (National Academy of Sciences, 1967, p. 893).

Direct evidence of genetic influences on human abilities

One of the most striking pieces of evidence for the genetic control of mental abilities is a chromosomal anomaly called Turner's syndrome. Normal persons have 46 chromosomes. Persons with Turner's syndrome have only 45. When their chromosomes are stained and viewed under the microscope, it is seen that the sex-chromatin is missing from one of the two chromosomes that determine the individual's sex. In normal persons this pair of chromosomes is conventionally designated XY for males and XX for females. The anomaly of Turner's syndrome is characterized as XO. These persons always have the morphologic appearance of females but are always sterile, and they show certain physical characteristics such as diminutive stature, averaging about five feet tall as adults. The interesting point about Turner's cases from our standpoint is that although their IQs on most verbal tests of intelligence show a perfectly normal distribution, their performance on tests involving spatial ability or perceptual organization is abnormally low (Money, 1964). Their peculiar deficiency in spatial-perceptual ability is sometimes so severe as to be popularly characterized as "space-form blindness." It is also interesting that Turner's cases seem to be more or less uniformly low on spatial ability regardless of their level of performance on other tests of mental ability. These rare persons also report unusual difficulty with arithmetic and mathematics in school despite otherwise normal or superior intelligence. So here is a genetic aberration, clearly identifiable under the microscope, which has quite specific consequences on cognitive processes. Such specific intellectual deficiencies are thus entirely possible without there being any specific environmental deprivations needed to account for them.

There are probably other more subtle cognitive effects associated with the sex chromosomes in normal persons. It has long been suspected that males have greater environmental vulnerability than females, and Nancy Bayley's important longitudinal research on children's mental development clearly shows both a higher degree and a greater variety of environmental and personality correlates of mental abilities in boys than in girls (Bayley, 1965b, 1966, 1968).

Polygenic inheritance

Since intelligence is basically dependent on the structural and biochemical properties of the brain, it should not be surprising that differences in intellectual capacity are partly the result of genetic factors which conform to the same principles involved in the inheritance of physical characteristics. The general model that geneticists have devised to account for the facts of inheritance of continuous or metrical physical traits, such as stature, cephalic index, and fingerprint ridges, also applies to intelligence. *The mechanism of inheritance for such traits is called polygenic, since normal variation in the characteristic is the result of multiple genes whose effects are small, similar, and cumulative.* The genes can be thought of as the pennies in the coin-tossing analogy described previously. Some genes add a positive increment to the metric value of the characteristic ("heads") and some genes add nothing ("tails"). The random segregation of the parental genes in the process of gametogenesis (formation of the sex cells) and their chance combination in the zygote (fertilized egg) may be likened to the tossing of a large number of pennies, with each "head" adding a positive increment to the trait, thereby producing the normal bell-shaped distribution of trait values in a large number of tosses. The actual number of genes involved in intelligence is not known. In fact, the total number of genes in the human chromosomes is unknown. The simplest possible model would require between ten and twenty gene pairs (alleles) to account for the normal distribution of intelligence, but many more genes than this are most likely involved (Gottesman, 1963, pp. 290–291).

The concept of heritability

The study of the genetic basis of individual differences in intelligence in humans has evolved in the traditions and methods of that branch of genetics called quantitative genetics or population genetics, the foundations of which were laid down by British geneticists and statisticians such as Galton, Pearson, Fisher, Haldane, and Mather, and, in the United States, by J. L. Lush and Sewall Wright. Probably the most distinguished exponent of the application of these methods to the study of intelligence is Sir Cyril Burt, whose major writings on this subject are a "must" for students of individual differences (Burt, 1955, 1958, 1959, 1961, 1966; Burt & Howard, 1956, 1957).

One aim of this approach to the study of individual differences in intelligence is to account for the total variance in the population (excluding pathological cases at the bottom of the distribution) in terms of the proportions of the variance attributable to various genetic and environmental components. It will pay to be quite explicit about just what this actually means.

Individual differences in such measurements of intelligence as the IQ are represented as population variance in a phenotype V_P, and are distributed approximately as shown in Figure 1. Conceptually, this total variance of the phenotypes can be partitioned into a number of variance components, each of which represents a source of variance. The components, of course, all add up to the total variance, Thus,

$$V_P = \underbrace{\frac{(V_G + V_{AM}) + V_D + V_I}{V_H}}_{\text{Heredity}} + \underbrace{\frac{V_E + 2Cov_{HE}}{V_E}}_{\text{Environment}} + \underbrace{\frac{V_I + V_e}{\text{Error}}}_{\text{Error}} \quad (2)$$

where:

V_P = phenotypic variance in the population
V_G = genic (or additive) variance
V_{AM} = variance due to assortative mating. $V_{AM} = 0$ under random mating (panmixia).
V_D = dominance deviation variance
V_I = epistatis (interaction among genes at 2 or more loci)
V_E = environmental variance
Cov_{HE} = covariance of heredity and environment
V_I = true statistical interaction of genetic and environmental factors
V_e = error of measurement (unreliability).

Here are a few words of explanation about each of these variance components.

Phenotypic Variance. V_P is already clear; it is total variance of the trait measurements in the population.

Genic Variance. V_G, the genic (or additive) variance, is attributable to gene effects which are additive; that is, each gene adds an equal increment to the metric value of the trait. Sir Ronald Fisher referred to this component as "the essential genotypes," since it is the part of the genetic inheritance which "breeds true"—it accounts for the resemblance between parents and offspring. If trait variance involved nothing but additive genic effects, the average value of all the offspring that could theoretically be born to a pair of parents would be exactly equal to the average value of the parents (called the midparent value). It is thus the genic aspect which is most important to agriculturalists and breeders of livestock, since it is the genic component of the phenotypic variance that responds to selection according to the simple rule of "like begets like." The larger the proportion of genic variance involved in a given characteristic, the fewer is the number of generations of selective breeding required to effect a change of some specified magnitude in the characteristic.

Assortative Mating. V_{AM}, the variance due to assortative mating, is conventionally not separated from V_G, since assortative mating actually affects the proportion of V_G directly. I have separated these components here for explanatory reasons, and it is, in fact, possible to obtain independent estimates of the two components. If mating were completely random in the population with respect to a given characteristic—that is, if the correlation between parents were zero (a state of affairs known as *panmixia*)—the V_{AM} component would also be equal to zero and the population variance on the trait in question would therefore be reduced.

Assortative mating has the effect of increasing the resemblance among siblings and also of increasing the differences between families in the population. (In the terminology of analysis of variance, assortative mating decreases the *Within* Families variance and increases the *Between* Families variance.)

For some human characteristics the degree of assortative mating is effectively zero. This is true of fingerprint ridges, for example. Men and women are obviously not attracted to one another on the basis of their fingerprints. Height, however, has an assortative mating coefficient (i.e., the correlation between mates) of about 30. The IQ, interestingly enough, shows a higher degree of assortative mating in our society than any other measurable human characteristic. I have surveyed the literature on this point, based on studies in Europe and North America, and find that the correlation between spouses' intelligence test scores averages close to +.60. Thus, spouses are more alike in intelligence than brothers and sisters, who are correlated about .50.

As Eckland (1967) has pointed out, this high correlation between marriage partners does not come about solely because men and women are such excellent judges of one another's intelligence, but because mate selection is greatly aided by the highly visible selective processes of the educational system and the occupational hierarchy. Here is a striking instance of how educational and social factors can have far-reaching genetic consequences in the population. One would predict, for example, that in preliterate or preindustrial societies assortative mating with respect to intelligence would be markedly less than it is in modern industrial societies. The educational screening mechanisms and socio-economic stratification by which intelligence becomes more readily visible would not exist, and other traits of more visible importance to the society would take precedence over intelligence as a basis for assortative mating. Even in our own society, there may well be differential degrees as assortative mating in different segments of the population, probably related to their opportunities for educational and occupational selection. When any large and socially insulated group is not subject to the social and educational circumstances that lead to a high degree of assortative mating for intelligence, there should be important genetic consequences. One possible consequence is some reduction of the group's ability, not as individuals but as a group, to compete intellectually. Thus probably one of the most cogent arguments for society's promoting full equality of educational, occupational, and economic opportunity lies in the possible genetic consequences of these social institutions.

The reason is simply that assortative mating increases the genetic variance in the population. By itself this will not affect the mean of the trait in the population, but it will have a great effect on the proportion of the population falling in the upper and lower tails of the distribution. Under present

conditions, with an assortative mating coefficient of about .60, the standard deviation of IQs is 15 points. If assortative mating for intelligence were reduced to zero, the standard deviation of IQs would fall to 12.9. The consequences of this reduction in the standard deviation would be most evident at the extremes of the intelligence distribution. For example, assuming a normal distribution of IQs and the present standard deviation of 15, the frequency (per million) of persons above IQ 130 is 22,750. Without assortative mating the frequency of IQs over 130 would fall to 9,900, or only 43.5 percent of the present frequency. For IQs above 145, the frequency (per million) is 1,350 and with no assortative mating would fall to 241, or 17.9 percent of the present frequency. And there are now approximately 20 times as many persons above an IQ of 160 as we would find if there were no assortative mating for intelligence.[3] Thus differences in assortative mating can have a profound effect on a people's intellectual resources, especially at the levels of intelligence required for complex problem solving, invention, and scientific and technological innovation.

But what is the effect of assortative mating on the lower tail of the distribution? On theoretical grounds we should also expect it to increase the proportion of low IQs in the population. It probably does this to some extent, but not as much as it increases the frequency of higher IQs, because there is a longer-term consequence of assortative mating which also must be considered. A number of studies have shown that in populations practicing a high degree of assortative mating, persons below IQ 75 are much less successful in finding marriage partners and, as a group, have relatively fewer offspring than do persons of higher intelligence (Bajema, 1963, 1966; Higgins, Reed & Reed, 1962). Since assortative mating increases variance, it in effect pushes more people into the below IQ 75 group, where they fail to reproduce, thereby resulting in a net selection for genes favoring high intelligence. Thus, in the long run, assortative mating may have a eugenic effect in improving the general level of intelligence in the population.

Dominance Deviation. V_D, the dominance deviation variance, is apparent when we observe a systematic discrepancy between the average value of the parents and the average value of their offspring on a given characteristic. Genes at some of the loci in the chromosome are recessive (r) and their effects are not manifested in the phenotype unless they are paired with another recessive at the same locus. If paired with a dominant gene (D), their effect is overriden or "dominated" by the dominant gene. Thus, in terms of increments which genes add to the metric value of the phenotype, if r=o and D=1, then r+r=o, and D+D=2, but D+r will equal 2, since D dominates r. Because of the presence of some proportion of recessive genes in the genotypes for a particular trait, not all of the parents' phenotypic characteristics will show up in their offspring, and, of course, vice versa: not all of the offspring's characteristics will be seen in the parents. This makes for a less than perfect correlation between midparent and midchild values on the trait in question. V_D, the dominance variance, represents the component of variance in the population which is due to this average discrepancy between parents and offspring. The magnitude of V_D depends upon the proportions of dominant and recessive genes constituting the genotypes for the characteristic in the population.

Epistasis. V_I is the variance component attributable to epistasis, which means the interaction of the effects among genes at two or more loci. When genes "interact," their effects are not strictly additive; that is to say, their combined effect may be more or less than the sum of their separate effects. Like dominance, epistasis also accounts for some of the lack of resemblance between parents and their offspring. And it increases the population variance by a component designated as V_I.

Environmental Variance. "Environmental" really means all sources of variance not attributable to genetic effects or errors of measurement (i.e., test unreliability). In discussions of intelligence, the environment is often thought of only in terms of the social and cultural influences on the individual. While these are important, they are not the whole of "environment," which includes other more strictly biological influences, such as the prenatal environment and nutritional factors early in life. In most studies of the heritability of intelligence "environment" refers to all variance that is not accounted for by genetic factors $[(V_G+V_{AM}+V_D+V_I)]$ and measurement error (V_e).

Covariance of Heredity and Environment. This term can also be expressed as—

$$2r_{HE}\sqrt{V_H \times V_E},$$

where r_{HE} is the correlation between heredity and environment, V_H is the variance due to all genetic factors, and V_E is variance due to all environmental factors. In other words, if there is a positive correlation between genetic and environmental factors, the population variance is increased by a theoretically specifiable amount indicated by the covariance term in Equation 2.

Such covariance undoubtedly exists for intelligence in our society. Children with better than average genetic endowment for intelligence have a greater than chance likelihood of having parents of better than average intelligence who are capable of providing environmental advantages that foster intellectual development. Even among children within the same family, parents and teachers will often give special attention and opportunities to the child who displays exceptional abilities. A genotype for superior ability may cause the social environment to foster the ability, as when parents perceive unusual responsiveness to music in one of their children and therefore provide more opportunities for listening, music lessons, encouragement to practice, and so on. A bright child may also create a more intellectually stimulating environment for himself in terms of the kinds of activities that engage his interest and energy. And the social rewards that come to the individual who excells in some activity reinforce its further development. Thus the covariance term for any given trait will be affected to a significant degree by the kinds of behavioral propensities the culture rewards or punishes, encourages or discourages. For traits viewed as desirable in our culture, such as intelligence, hereditary and environmental factors will be positively correlated. But for some other traits which are generally viewed as socially undesirable, hereditary and environmental influences may be negatively correlated. This means that the social environment tends to discourage certain behavioral propensities when they are out of line with the values of the culture. Then, instead of heredity and environment acting in the same direction, they work in opposite directions, with a consequent reduction in the population variance in the trait. Overt aggressive tendencies may be a good example of behavior involving a negative correlation between genotypic propensities and environmental counter-pressures. An example of negative heredity-environment correlation in the scholastic realm would be found in the case where a child with a poor genetic endowment for learning some skill which is demanded by societal norms, such as being able to read, causes the child's parents to lavish special tutorial attention on their child in an effort to bring his performance up to par.

In making overall estimates of the proportions of variance attributable to hereditary and environmental factors, there is some question as to whether the covariance component should be included on the side of heredity or environment. But there can be no "correct" answer to this question. To the degree that the individual's genetic propensities cause him to fashion his own environment, given the opportunity, the covariance (or some part of it) can be justifiably regarded as part of the total heritability of the trait. But if one wishes to estimate what the heritability of the trait would be under artificial conditions in which there is absolutely no freedom for variation in individuals' utilization of their environment, then the covariance term should be included on the side of environment. Since most estimates of the heritability of intelligence are intended to reflect the existing state of affairs, they usually include the covariance in the proportion of variance due to heredity.

Interaction of Heredity and Environment. The *interaction* of genetic and environmental factors (V_I) must be clearly distinguished from the *covariance* of heredity and environment. There is considerable confusion concerning the meaning of interaction in much of the literature on heredity and intelligence. It is claimed, for example, that nothing can be said about the relative importance of heredity and environment because intelligence is the result of the "interaction" of these influences and therefore their independent effects cannot be estimated. This is simply false. The proportion of the population variance due to genetic × environment interaction is conceptually and empirically separable from other variance components, and its independent contribution to the total variance can be known. Those who call themselves "interactionists," with the conviction that they have thereby either solved or risen above the whole issue of the relative contributions of heredity and environment to individual differences in intelligence, are apparently unaware that the preponderance of evidence indicates that the interaction variance, V_I is the smallest component of the total phenotypic variance of intelligence.

What *interaction* really means is that different genotypes respond in different ways to the same environmental factors. For example, genetically different individuals having the same initial weight and the same activity level may gain weight at quite different rates all under exactly the same increase in caloric intake. Their genetically different constitutions cause them to metabolize exactly the same intake quite differently. An example of genotype × environmental interaction in the behavioral realm is illustrated in Figure 5. Strains of rats selectively bred for "brightness" or "dullness" in maze learning show marked differences in maze performance according to the degree of sensory stimulation in the conditions under which they are reared. For the "bright" strain, the difference between being reared in a "restricted" or in a "normal" environment makes a great difference in maze performance. But for the "dull" strain the big difference is between a "normal" and a "stimulating" environment. While the strains differ greatly when reared under "normal" conditions (presumably the conditions under which they were selectively bred for "dullness" and "brightness"), they do not differ in the least when reared in a "restricted" environment and only slightly in a "stimulating" environment. This is the meaning of the genetic × environment interaction. Criticisms of the analysis of variance model for the components of phenotypic variance (e.g., Equation 2), put forth

[3] I am grateful to University of California geneticist Dr. Jack Lester King for making these calculations, which are based on the assumption that the heritability of IQ is .80, a value which is the average of all the major studies of the heritability of intelligence.

first by Loevinger (1943) and then by Hunt (1961, p. 329), are based on the misconception that the model impiles that all effects of heredity and environment are strictly additive and there is no "non-additive" or interaction term. The presence of V_I in Equation 2 explicitly shows that the heredity × environment interaction is included in the analysis of variance model, and the contribution of V_I to the total variance may be estimated independently of the purely additive effects of heredity and environment. The magnitude of V_I for any given characteristic in any specified population is a matter for empirical study, not philosophic debate. If V_I turns out to constitute a relatively small proportion of the total variance, as the evidence shows is the case for human intelligence, this is not a fault of the analysis of variance model. It is simply a fact. If the interaction variance actually exists in any significant amount, the model will reveal it.

Several studies, reviewed by Wiseman (1964, p. 55; 1966, p. 66), provide most of the information we have concerning what may be presumed to be an heredity × environment interaction with respect to human intelligence. The general finding is that children who are more than one standard deviation (SD) above the mean IQ show greater correlations with environmental factors than do children who are more than one SD below the mean. In other words, if the heritability of IQ were determined in these two groups separately, it would be higher in the low IQ groups. Also, when siblings within the same family are grouped into above and below IQ 100, the scholastic achievement of the above 100 group shows a markedly higher correlation with environmental factors than in the below 100 group. This indicates a true interaction between intelligence and environment in determining educational attainments.

Error Variance. The variance due to errors of measurement (V_e) is, of course, unwanted but unavoidable, since all measurements fall short of perfect reliability. The proportion of test score variance due to error is equal to $1-r_{tt}$ (where r_{tt} is the reliability of the test, that is, its correlation with itself). For most intelligence tests, error accounts for between 5 and 10 percent of the variance.

Definition of heritability

Heritability is a technical term in genetics meaning specifically the proportion of phenotypic variance due to variance in genotypes. When psychologists speak of heritability they almost invariably define it as:

$$H=\frac{(V_G+V_{AM})+V_D+V_i}{V_P-V_e} \qquad (3)$$

Although this formula is technically the definition of H, heritability estimates in psychological studies may also include the covariance term of Equation 2 in the numerator of Equation 3.

Common misconceptions about heritability

Certain misconceptions about heritability have become so widespread and strongly ingrained that it is always necessary to counteract them before presenting the empirical findings on the subject, lest these findings only add to the confusion or provoke the dogmatic acceptance or rejection of notions that are not at all implied by the meaning of heritability.

Heredity versus Environment. Genetic and environmental factors are not properly viewed as being in opposition to each other. Nor are they an "all or none" affair. Any observable characteristic, physical or behavioral, is a phenotype, the very existence of which depends upon both genetic and environmental conditions. The legitimate question is not whether the characteristic is due to heredity *or* environment, but what proportion of the population variation in the characteristic is attributable to genotypic variation (which is H, the heritability) and what proportion is attributable to non-genetic or environmental variation in the population (which is $1-H$). For metric characteristics like stature and intelligence, H can have values between 0 and 1.

Individual versus Population. Heritability is a population statistic, describing the relative magnitude of the genetic component (or set of genetic components) in the population variance of the characteristic in question. It has no sensible meaning with reference to a measurement or characteristic in an individual. A single measurement, by definition, has no variance. There is no way of partitioning a given individual's IQ into hereditary and environmental components, as if the person inherited, say, 80 points of IQ and acquired 20 additional points from his environment. This is, of course, nonsense. The *square root of the heritability ($\sqrt{H}$), however, tells us the correlation between genotypes and phenotypes in the population, and this permits a probabalistic inference concerning the average amount of difference between individuals' obtained IQs and the "genotypic value" of their intelligence.* (The average correlation between phenotypes and genotypes for IQ is about .90 in European and North American Caucasian populations, as determined from summary data presented later in this paper [Table 2]. The square of this value is known as the heritability—the proportion of phenotypic variance due to genetic variation.) The principle is the same as estimating the "true" scores from obtained scores in test theory. Statements about individuals can be made only on a probabalistic basis and not with absolute certainty. Only if heritability were unity (i.e., $H=1$) would there be a perfect correlation between obtained scores and genotypic values, in which case we could say with assurance that an individual's measured IQ perfectly represented his genotype for intelligence. This still would not mean that the phenotype could have developed without an environment, for without either heredity or environment there simply is no organism and no phenotype. Thus the statement we so often hear in discussions of individual differences—that the individual's intelligence is the product of the interaction of his heredity and his environment—is rather fatuous. It really states nothing more than the fact that the individual exists.

Constancy. From what has already been said about heritability, it must be clear that it is not a constant like π and the speed of light. H is an empirically determined population statistic, and like any statistic, its value is affected by the characteristics of the population. H will be higher in a population in which environmental variation relevant to the trait in question is small, than in a population in which there is great environmental variation. Similarly, when a population is relatively homogeneous in genetic factors but not in the environmental factors relevant to the development of the characteristic, the heritability of the characteristic in question will be lower. In short, the value of H is jointly a function of genetic and environmental variability in the population. Also, like any other statistic, it is an estimate based on a sample of the population and is therefore subject to sampling error—the smaller the sample, the greater the margin of probable error. Values of H reported in the literature do not represent what the heritability might be under any environmental conditions or in all populations or even in the same population at different times. Estimates of H are specific to the population sampled, the point in time, how the measurements were made, and the particular test used to obtain the measurements.

Measurements versus Reality. It is frequently argued that since we cannot really measure intelligence we cannot possibly determine its heritability. Whether we can or cannot measure intelligence, which is a separate issue I have already discussed, let it be emphasized that it makes no difference to the question of heritability. We do not estimate the heritability of some trait that lies hidden behind our measurements. We estimate the heritability of the phenotypes and these are the measurements themselves. Regardless of what it is that our tests measure, the heritability tells us how much of the variance in these measurements is due to genetic factors. If the test scores get at nothing genetic, the result will simply be that estimates of their heritability will not differ significantly from zero. The fact that heritability estimates based on IQs differ very significantly from zero is proof that genetic factors play a part in individual differences in IQ. To the extent that a test is not "culture-free" or "culture-fair," it will result in a lower heritability measurement. It makes no more sense to say that intelligence tests do not really measure intelligence but only *developed* intelligence than to say that scales do not really measure a person's weight but only the weight he has acquired by eating. An "environment-free" test of intelligence makes as much sense as a "nutrition-free" scale for weight.

Know All versus Know Nothing. This expression describes another confused notion: the idea that unless we can know absolutely *everything* about the genetics of intelligence we can know nothing! Proponents of this view demand that we be able to spell out in detail every single link in the chain of causality from genes (or DNA molecules) to test scores if we are to say anything about the heritability of intelligence. Determining the heritability of a characterstic does not at all depend upon a knowledge of its physical, biochemical, or physiological basis or of the precise mechanisms through which the characteristic is modified by the environment. Knowledge of these factors is, of course, important in its own right, but we need not have such knowledge to establish the genetic basis of the characteristic. Selective breeding was practiced fruitfully for centuries before anything at all was known of chromosomes and genes, and the science of quantitative genetics upon which the estimation of heritability depends has proven its value independently of advances in biochemical and physiological genetics.

Acquired versus Inherited. How can a socially defined attribute such as intelligence be said to be inherited? Or something that is so obviously acquired from the social environment as vocabulary? Strictly speaking, of course, only genes are inherited. But the brain mechanisms which are involved in learning are genetically conditioned just as are other structures and functions of the organism. What the organism is capable of learning from the environment and its rate of learning thus have a biological basis. Individuals differ markedly in the amount, rate, and kinds of learning they evince even given equal opportunities. Consider the differences that show up when a Mozart and the average run of children are given music lessons! If a test of vocabulary shows high heritability, it only means that persons in the population have had fairly equal opportunity for learning all the words in the test, and the differences in their scores are due mostly to differences in capacity for learning. If members of the population had had very unequal exposures to the words in the vocabulary test, the heritability of the scores would be very low.

Immutability. High heritability by itself does not necessarily imply that the characteristic is immutable. Under greatly changed environmental conditions, the heritability may have some other value, or it may remain the same while the mean of the population changes. At one time tuberculosis had a very high heritability, the reason being that the

tuberculosis bacilli were extremely widespread throughout the population, so that the main factor determining whether an individual contracted tuberculosis was not the probability of exposure but the individual's inherited physical constitution. Now that tuberculosis bacilli are relatively rare, difference in exposure rather than in physical predisposition is a more important determinant of who contracts tuberculosis. In the absence of exposure, individual differences in predisposition are of no consequence.

Heritability also tells us something about the locus of control of a characteristic. The control of highly heritable characteristics is usually in the organism's internal biochemical mechanisms. Traits of low heritability are usually controlled by external environmental factors. No amount of psychotherapy, tutoring, or other psychological intervention will elicit normal performance from a child who is mentally retarded because of phenylketonuria (PKU), a recessive genetic defect of metabolism which results in brain damage. Yet a child who has inherited the genes for PKU can grow up normally if his diet is controlled to eliminate certain proteins which contain phenylalanine. Knowledge of the genetic and metabolic basis of this condition in recent years has saved many children from mental retardation.

Parent-Child Resemblance. The old maxim that "like begets like" is held up as an instance of the workings of heredity. The lack of parent-child resemblance, on the other hand, is often mistakenly interpreted as evidence that a characteristic is not highly heritable. But the principles of genetics also explain the fact that often "like begets unlike." A high degree of parent-offspring resemblance, in fact, is to be expected only in highly inbred (or homozygous) strains, as in certain highly selected breeds of dogs and laboratory strains of mice. The random segregation of the parental genes in the formation of the sex cells means that the child receives a random selection of only half of each parent's genes. This fact that parent and child have only 50 percent of their genes in common, along with the effects of dominance and epistasis, insures considerable genetic dissimilarity between parent and child as well as among siblings, who also have only 50 percent of their genes in common. The fact that one parent and a child have only 50 percent of their genes in common is reflected in the average parent-offspring correlation (r_{po}) of between .50 and .60 (depending on the degree of assortative mating for a given characteristic) which obtains for height, head circumference, fingerprint ridges, intelligence, and other highly heritable characteristics. (The correlation is also between .50 and .60 for siblings on these characteristics; sibling resemblance is generally much *higher* than this for traits of *low* heritability.) The genetic correlation between the average of both parents (called the "midparent") and a single offspring (r_{po}) is the square root of the correlation for a single parent (i.e., $r_{po}=\sqrt{r_{po}}$). The correlation between the average of *both* parents and the average of *all* the offspring ("midchild") that they could theoretically produce (r_{po}) is the same value as H_N, i.e., heritability in the narrow sense.[4] It is noteworthy that empirical determinations of the midparent-midchild correlation (r_{po}) in fact closely approximate the values of H as estimated by various methods, such as comparisons of twins, siblings, and unrelated children reared together.

Empirical findings on the heritability of intelligence

It is always preferable, of course, to have estimates of the proportions of variance contributed by each of the components in Equation 2 than to have merely an overall estimate of H. But to obtain reliable estimates of the separate components requires large samples of persons of different kinships, such as identical twins reared together and reared apart, fraternal twins, siblings, half-siblings, parents-children, cousins, and so on. The methods of quantitative genetics by which these variance components, as well as the heritability, can be calculated from such kinship data are technical matters beyond the scope of this article, and the reader must be referred elsewhere for expositions of the methodology of quantitative genetics (Cattell, 1960; Falconer, 1960; Huntley, 1966; Kempthorne, 1957; Loehlin, in press).

The most satisfactory attempt to estimate the separate variance components is the work of Sir Cyril Burt (1955, 1958), based on large samples of many kinships drawn mostly from the school population of London. The IQ test used by Burt was an English adaptation of the Stanford-Binet. Burt's results may be regarded as representative of variance components of intelligence in populations that are similar to the population of London in their degree of genetic heterogeneity and in their range of environmental variation. Table I shows the percentage of variance due to the various components, grouped under "genetic" and "environmental," in Burt's analysis.

TABLE 1.—ANALYSIS OF VARIANCE OF INTELLIGENCE TEST SCORES (BURT, 1958)

Source of variance	Percent [1]	Percent [1]
Genetic:		
Genic (additive)	40.5	(47.9)
Assortative mating	19.9	(17.9)
Dominance and epistasis	16.7	(21.7)
Environmental:		
Covariance of heredity and environment	10.6	(1.4)
Random environmental effects, including H×E interaction (V_I)	5.9	(5.8)
Unreliability (test error)	6.4	(5.3)
Total	100.0	(100.0)

[1] Figures in parentheses are percentages for adjusted assessments. (See text for explanation.)

When Burt submitted the test scores to the children's teachers for criticism on the basis of their impressions of the child's "brightness," a number of children were identified for whom the IQ was not a fair estimate of the child's ability in the teachers judgment. These children were retested, often on a number of tests on several occasions, and the result was an "adjusted" assessment of the child's IQ. The results of the analysis of variance after these adjusted assessments were made are shown in parentheses in Table 1. Note that the component most affected by the adjustments is the covariance of heredity and environment, which is what we should expect if the test is not perfectly "culture-fair." It means that the adjusted scores reduced systematic environmental sources of variance and thereby came closer to representing the children's innate ability, or, stated more technically, the adjusted scores increased the correlation between genotype and phenotype from .88 for unadjusted scores to .93 for adjusted scores. (Corrected for test unreliability these correlations become .90 and .96, respectively. And the heritabilities (H_B) for the two sets of scores are therefore $(.90)^2=.81$ and $(.96)^2=.93$, respectively.)

Kinship Correlations. The basic data from which variance components and heritability coefficients are estimated are correlations among individuals of different degrees of kinship. Nearly all such kinship correlations reported in the literature are summarized in Table 2. The median values of the correlations obtained in the various studies are given here. These represent the most reliable values we have for the correlations among relatives. Most of the values are taken from the survey by Erlenmeyer-Kimling and Jarvik (1963), and I have supplemented these with certain kinship correlations not included in their survey and reported in the literature since their review (e.g., Burt, 1966, p. 150). The Erlenmeyer-Kimling and Jarvik (1963) review was based on 52 independent studies of the correlations of relatives for tested intellectual abilities, involving over 30,000 correlational pairings from 8 countries in 4 continents, obtained over a period of more than two generations. The correlations were based on a wide variety of mental tests, administered under a variety of conditions by numerous investigators with contrasting views regarding the importance of heredity. The authors conclude: "Against this pronounced heterogeneity, which should have clouded the picture, and is reflected by the wide range of correlations, a clearly definite consistency emerges from the data. The composite data are compatible with the polygenic hypothesis which is generally favored in accounting for inherited differences in mental ability" (Erlenmeyer-Kimling & Jarvik, 1963, p. 1479).

The compatibility with the polygenic hypothesis to which the authors (as outlined earlier on p. 53) refer can be appreciated in Table 2 by comparing the median values of the obtained correlations with the sets of theoretical values shown in the last two columns. The first set (Theoretical Value [1]) is based on calculations by Burt (1966), using the methods devised by Fisher for estimating kinship correlations for physical characteristics involving assortative mating and some degree of dominance. The second set (Theoretical Value [2]) of theoretical values is based on the simplest possible polygenic model, assuming random mating and nothing but additive gene effects. So these are the values one would expect if genetic factors alone were operating and the trait variance reflected no environmental influences whatsoever.

TABLE 2.—CORRELATIONS FOR INTELLECTUAL ABILITY: OBTAINED AND THEORETICAL VALUES

Correlations between—	Number of studies	Obtained median [1]	Theoretical value [2]	Theoretical value [3]
Unrelated persons:				
Children reared apart	4	−0.01	0	0
Foster parent and child	3	+.20	0	0
Children reared together	5	+.24	0	0
Collaterals:				
2d cousins	1	+.16	+.14	+.063
1st cousins	3	+.26	+.18	+.125
Uncle (or aunt) and nephew (or niece)	1	+.34	+.31	+.25
Siblings, reared apart	33	+.47	+.52	+.50
Siblings, reared together	36	+.55	+.52	+.50
Dizygotic twins, different sex	9	+.49	+.50	+.50
Dizygotic twins, same sex	11	+.56	+.54	+.50
Monozygotic twins, reared apart	4	+.75	+1.00	+1.00
Monozygotic twins, reared together	14	+.87	+1.00	+1.00

Footnotes at end of table.

[4] Heritability in the narrow sense is an estimate of the proportion of genic variance without consideration of dominance and epistasis. This contrasts with equation (3), the definition of H, which includes estimates for these two factors. Signified as H_N, heritability in the narrow sense is conceptually defined as:

$$H_N=\frac{(V_G+V_{AM})}{V_p-V_e}$$

TABLE 2.—CORRELATIONS FOR INTELLECTUAL ABILITY: OBTAINED AND THEORETICAL VALUES—Continued

Correlations between—	Number of studies	Obtained median [1]	Theoretical value [2]	Theoretical value [3]
Direct line:				
Grandparent and grandchild	3	+.27	+.31	+.25
Parent (as adult) and child	13	+.50	+.49	+.50
Parent (as child) and child	1	+.56	+.49	+.50

[1] Correlations not corrected for attenuation (unreliability).
[2] Assuming assortative mating and partial dominance.
[3] Assuming random mating and only additive genes, i.e., the simplest polygenic model.

First of all, one can note certain systematic departures of the obtained correlations from the theoretical values. These departures are presumably due to nongenetic or environmental influences. The orderly nature of these environmental effects, as reflected in the Erlenmeyer-Kimling and Jarvik median correlations, can be highlighted by graphical presentation, as shown in Figure 6. Note that the condition of being reared together or reared apart has the same effect on the difference in magnitudes of the correlations for the various kinships. (The slightly greater difference for unrelated children is probably due to the fact of selective placement by adoption agencies, that is, the attempt to match the child's intelligence with that of the adopting parents.)

Heritability Estimates. By making certain comparisons among the correlations shown in Table 2 and Figure 6, one can get some insight into how heritability is estimated. For example, we see that the correlation between identical or monozygotic (MZ) twins reared apart is .75. Since MZ twins develop from a single fertilized ovum and thus have exactly the same genes, any difference between the twins must be due to nongenetic factors. And if they are reared apart in uncorrelated environments, the difference between a perfect correlation (1.00) and the obtained correlation (.75) gives an estimate of the proportion of the variance in IQs attributable to environmental differences: 1.00−0.75=0.25. Thus 75 percent of the variance can be said to be due to genetic variation (this is the heritability) and 25 percent to environmental variation. Now let us go to the other extreme and look at unrelated children reared together. They have no genetic inheritance in common, but they are reared in a common environment. Therefore the correlation between such children will reflect the environment. As seen in Table 2, this correlation is 0.24. Thus, the proportion of IQ variance due to environment is .24; and the remainder, 1.00−.24=.76 is due to heredity. There is quite good agreement between the two estimates of heritability.

Another interesting comparison is between MZ twins reared together (r=.87) and reared apart (r=.75). If 1.00−.75=.25 (from MZ twins reared apart) estimates the total environmental variance, then 1.00−.87=.13 (from MZ twins reared together) is an estimate of the environmental variance *within families* in which children are reared together. Thus the difference between .25 −.13=.12 is an estimate of the environmental variance *between families.*

The situation is relatively simple when we deal only with MZ twins, who are genetically identical, or with unrelated children, who have nothing in common genetically. But in order to estimate heritability from any of the other kinship correlations, much more complex formulas are needed which would require much more explanation than is possible in this article. I have presented elsewhere a generalized formula for estimating heritability from any two kinship correlations where one kinship is of a higher degree than the other (Jensen, 1967a). I applied this heritability formula to all the correlations for monozygotic and dizygotic (half their genes in common) twins reported in the literature and found an average heritability of .80 for intelligence test scores. (The correlations from which this heritability estimate was derived were corrected for unreliability.) Environmental differences *between* families account for .12 of the total variance, and differences *within* families account for .08. It is possible to derive an overall heritability coefficient from all the kinship correlations given in Table 2. This composite value of H is .77, which becomes .81 after correction for unreliability (assuming an average test reliability of .95). This represents probably the best single overall estimate of the heritability of measured intelligence that we can make. But, as pointed out previously, this is an average value of H about which there is some dispersion of values, depending on such variables as the particular tests used, the population sampled, and sampling error.

Identical Twins Reared Apart. The conceptually simplest estimate of heritability is, of course, the correlation between identical twins reared apart, since, if their environments are uncorrelated, all they have in common are their genes. The correlation (corrected for unreliability) in this case is the same as the heritability as defined in Equation 3. There have been only three major studies of MZ twins separated early in life and reared apart. All three used individually administered intelligence tests. The correlation between Stanford-Binet IQs of 19 pairs of MZ twins reared apart in a study by Newman, Freeman, and Holzinger (1937) was .77 (.81 corrected for unreliability). The correlation between 44 pairs of MZ twins reared apart on a composite score based on a vocabulary test and Raven's Progressive Matrices was .77 (.81 corrected) in a study by Shields (1962). The correlation between 53 pairs on the Stanford-Binet was .86 (.91 corrected) in a study by Burt (1966). Twin correlations in the same group for height and for weight were .94 and .88, respectively.

The Burt study is perhaps the most interesting, for four reasons: (*a*) it is based on the largest sample; (*b*) the IQ distribution of the sample had a mean of 97.8 and a standard deviation of 15.3—values very close to those of the general population; (*c*) all the twin pairs were separated at birth or within their first six months of life; and (*d*) most important, the separated twins were spread over the entire range of socioeconomic levels (based on classification in terms of the six socioeconomic categories of the English census), and there was a slight, though nonsignificant, negative correlation between the environmental ratings of the separated twin pairs. When the twin pairs were rated for differences in the cultural conditions of their rearing, these differences correlated .26 with the differences in their IQs. Differences between the material conditions of their homes correlated .16 with IQ differences. (The corresponding correlations for a measure of scholastic attainments were .74 and .37, respectively. The correlation between the twins in scholastic attainments was only .62, indicating a much lower heritability than for IQ.)

Foster Parents versus Natural Parents. Children separated from their true parents shortly after birth and reared in adoptive homes show almost the same degree of correlation with the intelligence of their biological parents as do children who are reared by their own parents. The correlations of children with their foster parents' intelligence range between 0 and .20 and are seldom higher than this even when the adoption agency attempts selective placement (e.g., Honzik, 1957). Parent-child correlations gradually increase from zero at 18 months of age to an asymptotic value close to .50 between ages 5 and 6 (Jones, 1954), and this is true whether the child is reared by his parents or not.

Direct Measurement of the Environment. Another method for getting at the relative contribution of environmental factors to IQ variance is simply by correlating children's IQs with ratings of their environment. This can be legitimately done only in the case of adopted children and where there is evidence that selective placement by the adoption agencies is negligible. Without these conditions, of course, some of the correlation between the children and their environmental ratings will be due to genetic factors. There are two large-scale studies in the literature which meet these criteria. Also, both studies involved adopting parents who were representative of a broad cross section of the U.S. Caucasian population with respect to education, occupation, and socioeconomic level. It is probably safe to say that not more than five percent of the U.S. Caucasian population falls outside the range of environmental variation represented in the samples in these two studies. The study by Leahy (1935) found an average correlation of .20 between the IQs of adopted children and a number of indices of the "goodness" of their environment, including the IQs and education of both adopting parents, their socioeconomic status, and the cultural amenities in the home. Leahy concluded from this that the environmental ratings accounted for 4 percent (i.e., the square of r = .20) of the variance in the adopted children's Stanford-Binet IQs, and that 96 percent of the variance remained to be accounted for by other factors. The main criticisms we can make of this study are, first, that the environmental indices were not sufficiently "fine-grained" to register the subtleties of environmental varition and of the qualities of parent-child relationship that influence intellectual development, and, second, that the study did not make use of the technique of multiple correlation, which would show the total contribution to the variance of all the separate environmental indices simultaneously. A multiple correlation is usually considerably greater than merely the average of all the correlations for the single variables.

A study by Burks (1928) meets both these objections. To the best of my knowledge no study before or since has rated environments in any more detailed and fine-grained manner than did Burks'. Each adoptive home was given 4 to 8 hours of individual investigation. As in Leahy's study, Burks included intelligence measures on the adopting parents as part of the children's environment, an environment which also included such factors as the amount of time the parents spent helping the children with their school work, the amout of time spent reading to the children, and so on. The multiple correlation (corrected for unreliability) between Burks' various environmental ratings and the adopted children's Stanford-Binet IQs was .42. The square of this correlation is .18, which represents the proportion of IQ variance accounted for by Burks' environmental measurements. This value comes very close to the environmental variance estimated in direct heritability analyses based on kinship correlations.

Burks translated her findings into the conclusion that the total effect of environmental factors one standard deviation up or down the environmental scale is only about 6 IQ points. This is an interesting figure, since it is exactly half the 12 point IQ difference found on the average between normal siblings reared together by their own parents. Siblings differ genetically, of course, having only about half their genes in com-

mon. If all the siblings in every family were divided into two groups—those above and those below the family average—the IQ distributions of the two groups would appear as shown in Figure 7. Though the average difference is only 12 IQ points, note the implications in the proportions of each group falling into the upper and lower ranges of the IQ scale. It would be most instructive to study the educational and occupational attainments of these two groups, since presumably they should have about the same environmental advantages.

Another part of Burks' study consisted of a perfectly matched control group of parents rearing their own children, for whom parent-child correlations were obtained. Sewall Wright (1931) performed a heritability analysis on these parent-child and IQ-environment correlations and obtained a heritability coefficient of .81.

Effects of inbreeding on intelligence

One of the most impressive lines of evidence for the involvement of genetic factors in intelligence comes from study of the effects of inbreeding, that is, the mating of relatives. In the case of polygenic characteristics the direction of the effect of inbreeding is predictable from purely genetic considerations. All individuals carry in their chromosomes a number of mutant or defective genes. These genes are almost always recessive, so they have no effect on the phenotype unless by rare chance they match up with another mutant gene at the same locus on a homologous chromosome; in other words, the recessive mutant gene at a given locus must be inherited from both the father and mother in order to affect the phenotype. Since such mutants are usually defective, they do not enhance the phenotypic expression of the characteristic but usually degrade it. And for polygenic characteristics we would expect such mutants to lower the metric value of the characteristics by graded amounts, depending upon the number of paired mutant recessives. If the parents are genetically related, there is a greatly increased probability that the mutant recessives at given loci will be paired in the offspring. The situation is illustrated in Figure 8, which depicts in a simplified way a pair of homologous chromosomes inherited by an individual from a mother (M) and father (F) who are related (Pair A) and a pair of chromosomes inherited from unrelated parents (Pair B). The blackened spaces represent recessive genes. Although both pairs contain equal numbers of recessives, more of them are at the same loci in Pair A than in Pair B. Only the paired genes degrade the characteristics' phenotypic value.

A most valuable study of this genetic phenomenon with respect to intelligence was carried out in Japan after World War II by Schull and Neel (1965). The study illustrates how strictly sociological factors, such as mate selection can have extremely important genetic consequences. In Japan approximately five percent of all marriages are between cousins. Schull and Neel studied the offspring of marriages of first cousins, first cousins once removed, and second cousins. The parents were statistically matched with a control group of unrelated parents for age and socioeconomic factors. Children from the cousin marriages and the control children from unrelated parents (total $N=2{,}111$) were given the Japanese version of the Wechsler Intelligence Scale for Children (WISC). The degree of consanguinity represented by the cousin marriages in this study had the effect of depressing WISC IQs by an average of 7.4 percent, making the mean of the inbred group nearly 8 IQ points lower than the mean of the control group. Assuming normal distributions of IQ, the effect is shown in Figure 9, and illustrates the point that the most drastic consequences of group mean differences are to be seen in the tails of the distributions. In the same study a similar depressing effect was found for other polygenic characteristics such as several anthropometric and dental variables.

The mating of relatives closer than cousins can produce a markedly greater reduction in offspring's IQs. Lindzey (1967) has reported that almost half of a group of children born to so-called nuclear incest matings (brother-sister or father-daughter) could not be placed for adoption because of mental retardation and other severe defects which had a relatively low incidence among the offspring of unrelated parents who were matched with the incestuous parents in intelligence, socioeconomic status, age, weight and stature. In any geographically confined population where social or legal regulations on mating are lax, where individuals' paternity is often dubious, and where the proportion of half-siblings within the same age groups is high, we would expect more inadvertent inbreeding, with its unfavorable genetic consequences, than in a population in which these conditions exist to a lesser degree.

Heritability of Special Mental Abilities. When the general factor, or *g*, is removed from a variety of mental tests, the remaining variance is attributable to a number of so-called "group factors" or "special abilities." The tests of special abilities that have been studied most thoroughly with respect to their heritability are Thurstone's Primary Mental Abilities: Verbal, Space, Number, Word Fluency, Memory, and Perceptual Speed. Vandenberg (1967) has reviewed the heritability studies of these tests and reports that the *H* values range from near zero to about .75, with most values of *H* between .50 and .70. Vandenberg devised a method for estimating the genetic components of these special abilities which are completely independent of *g*. He concluded that at least four of the Primary Mental Abilities (Number, Verbal, Space, and Word Fluency) independently have significant hereditary components.

There have been few studies of the heritability of noncognitive skills, but a study by McNemar (see Bilodeau, 1966, Ch. 3) of motor skill learning indicates that heritabilities in this sphere may be even higher than for intelligence. The motor skill learning was measured with a pursuit-rotor, a tracking task in which the subject must learn to keep a stylus on a metal disc about the size of a nickel rotating through a circumference of about 36 inches at 60 rpm. The percentage of time "on target" during the course of practice yields a learning measure of high reliability, showing marked individual differences both in rate of acquisition and final asymptote of this perceptual-motor skill. Identical twins correlated .95 and fraternal twins .51 on pursuit-rotor learning, yielding a heritability coefficient of .88, which is very close to the heritability of physical stature.

Heritability of Scholastic Achievement. The heritability of measures of scholastic achievement is much less, on the average, than the heritability of intelligence. In reviewing all the twin studies in the literature containing relevant data, I concluded that individual differences in scholastic performance are determined less than half as much by heredity as are differences in intelligence (Jensen, 1967a).[5] The analysis of all the twin studies on a variety of scholastic measures gives an average *H* of .40. The environmental variance of 60 percent can be partitioned into variance due to environmental difference *between* families, which is 54 percent, and differences *within* families of 6 percent. But it should also be noted that the heritability estimates for scholastic achievement vary over a much wider range than do *H* values for intelligence. In general, *H* for scholastic achievement increases as we go from the primary grades up to high school and it is somewhat lower for relatively simple forms of learning (e.g., spelling and arithmetic computation) than for more complex learning (e.g., reading comprehension and arithmetic problem solving). Yet large-sample twin data from the National Merit Scholarship Corporation show that the *between families* environmental component accounts for about 60 percent of the variance in students' rank in their high school graduating class. This must mean that there are strong family influences which cause children to conform to some academic standard set by the family and which reduce variance in scholastic performance among siblings reared in the same family. Unrelated children reared together are also much more alike in school performance than in intelligence. The common finding of a negative correlation between children's IQ and the amount of time parents report spending in helping their children with school work is further evidence that considerable family pressures are exerted to equalize the scholastic performance of siblings. This pressure to conform to a family standard shows up most conspicuously in the small *within families* environmental variance component on those school subjects which are most susceptible to improvement by extra coaching, such as spelling and arithmetic computation.

The fact that scholastic achievement is considerably less heritable than intelligence also means that many other traits, habits, attitudes, and values enter into a child's performance in school besides just his intelligence, and these non-cognitive factors are largely environmentally determined, mainly through influences within the child's family. This means there is potentially much more we can do to improve school performance through environmental means than we can do to change intelligence per se. Thus it seems likely that if compensatory education programs are to have a beneficial effect on achievement, it will be through their influence on motivation, values, and other environmentally conditioned habits that play

---

[5] After this article went to press I received a personal communication from Professor Lloyd G. Humphreys who pointed out some arguments that indicate I may have underestimated the heritability of scholastic achievement and that its heritability may actually be considerably closer to the heritability of intelligence. The argument involves two main points: (1) the fact that some of the achievement tests that entered into the average estimate of heritability are tests of specific achievements, rather than omnibus achievement tests, and therefore would correspond more to the separate subscales of the usual intelligence tests, which are known to have somewhat lower heritabilities than the composite scores; and (2) scores on some of the achievement tests are age-related, so that fraternal twin correlations, in relation to other kindship correlations, are unduly inflated by common factor of age. When age is partially out of the MZ and DZ twin correlations, the estimate of heritability based on MZ and DZ twin comparisons is increased. However, an omnibus achievement test (Stanford Achievement) yielding an overall Educational Age score had a heritability of only .46 (as compared with .63 for Stanford-Binet IQ and .70 for Otis IQ based on the same set of MZ and DZ twins), with age partialled out of the twin correlations (Newman, Freeman, and Holzinger, 1937, p. 97). Rank in high school graduating class, which is an overall index of scholastic performance and is little affected by age yields heritability coefficients below .40 in a nationwide sample (Nichols & Bilbro, 1966). The issue clearly needs further study, but the best conclusion that can be drawn from the existing evidence, I believe, still is that the heritability of scholastic achievement is less than for intelligence, but the amount of the difference cannot be precisely estimated at present.

an important part in scholastic performance, rather than through any marked direct influence on intelligence per se. The proper evaluation of such programs should therefore be sought in their effects on actual scholastic performance rather than in how much they raise the child's IQ.

HOW THE ENVIRONMENT WORKS

Environment as a threshold

All the reports I have found of especially large upward shifts in IQ which are explicitly associated with environmental factors have involved young children, usually under six years of age, whose initial social environment was deplorable to a greater extreme than can be found among any children who are free to interact with other persons or to run about out-of-doors. There can be no doubt that moving children from an extremely deprived environment to good average environmental circumstances can boost the IQ some 20 to 30 points and in certain extreme rare cases as much as 60 or 70 points. On the other hand, children reared in rather average circumstances do not show an appreciable IQ gain as a result of being placed in a more culturally enriched environment. While there are reports of groups of children going from below average up to average IQs as a result of environmental enrichment, I have found no report of a group of children being given permanently superior IQs by means of environmental manipulations. In brief, it is doubtful that psychologists have found consistent evidence for any social environmental influences short of extreme environmental isolation which have a marked systematic effect on intelligence. This suggests that the influence of the quality of the environment on intellectual development is not a linear function. Below a certain threshold of environmental adequacy, deprivation can have a markedly depressing effect on intelligence. But above this threshold, environmental variations cause relatively small differences in intelligence. The fact that the vast majority of the populations sampled in studies of the heritability of intelligence are above this threshold level of environmental adequacy accounts for the high values of the heritability estimates and the relatively small proportion of IQ variance attributable to environmental influences.

The environment with respect to intelligence is thus analogous to nutrition with respect to stature. If there are great nutritional lacks, growth is stunted, but above a certain level of nutritional adequacy, including minimal daily requirements of minerals, vitamins, and proteins, even great variations in eating habits will have negligible effects on persons' stature, and under such conditions most of the differences in stature among individuals will be due to heredity.

When I speak of subthreshold environmental deprivation, I do not refer to a mere lack of middle-class amenities. I refer to the extreme sensory and motor restrictions in environments such as those described by Skeels and Dye (1939) and Davis (1947), in which the subjects had little sensory stimulation of any kind and little contact with adults. These cases of extreme social isolation early in life showed great deficiencies in IQ. But removal from social deprivation to a good, average social environment resulted in large gains in IQ. The Skeels and Dye orphanage children gained in IQ from an average of 64 at 19 months of age to 96 at age 6 as a result of being given social stimulation and placement in good homes between 2 and 3 years of age. When these children were followed up as adults, they were found to be average citizens in their communities, and their own children had an average IQ of 105 and were doing satisfactorily in school. A far more extreme case was that of Isabel, a child who was confined and reared in an attic up to the age of six by a deaf-mute mother, and who had an IQ of about 30 at age 6. When Isabel was put into a good environment at that age, her IQ became normal by age 8 and she was able to perform as an average student throughout school (Davis, 1947). Extreme environmental deprivation thus need not permanently result in below average intelligence.

These observations are consistent with studies of the effects of extreme sensory deprivation on primates. Monkeys raised from birth under conditions of total social isolation, for example, show no indication when compared with normally raised controls, of any permanent impairment of ability of complex discrimination learning, delayed response learning, or learning set formation, although the isolated monkeys show severe social impairment in their relationships to normally reared monkeys (Harlow & Griffin, 1965).

Thoughtful scrutiny of all these studies of extreme environmental deprivation leads to two observations which are rarely made by psychologists who cite the studies as illustrative explanations of the low IQs and poor scholastic performance of the many children called culturally disadvantaged. In the first place, typical culturally disadvantaged children are not reared in anything like the degree of sensory and motor deprivation that characterizes, say, the children of the Skeels study. Secondly, the IQs of severely deprived children are markedly depressed even at a very early age, and when they are later exposed to normal environmental stimulation, their IQs rise rapidly, markedly, and permanently. Children called culturally disadvantaged, on the other hand, generally show no early deficit and are usually average and sometimes precocious on perceptual-motor tests administered before two years of age. The orphanage children described in Skeels' study are in striking contrast to typical culturally disadvantaged children of the same age. Also, culturally disadvantaged children usually show a slight initial gain in IQ after their first few months of exposure to the environmental enrichment afforded by school attendance, but, unlike Skeels' orphans, they soon lose this gain, and in a sizeable proportion of children the initial IQ gain is followed by a gradual decline in IQ throughout the subsequent years of schooling. We do not know how much of this decline is related to environmental or hereditary factors. We do know that with increasing age children's IQs increasingly resemble their parents' rank order in intelligence whether they are reared by them or not, and therefore with increasing age we should expect greater and more reliable differentiation among children's IQs as they gravitate toward their genotypic values (Honzik, 1957). Of course, the gravitating effect is compounded by the fact that less intelligent parents are also less apt to provide the environmental conditions conducive to intellectual development in the important period between ages 3 and 7, during which children normally gain increasing verbal control over their environment and their own behavior. (I have described some of these environmental factors in detail elsewhere [Jensen, 1968e].)

Heber, Dever, and Conry (1968) have obtained data which illustrate this phenomenon of children's gravitation toward the parental IQ with increasing age. They studied the families of 88 low economic class Negro mothers residing in Milwaukee in a set of contiguous slum census tract, an area which yields the highest known prevalence of identified retardation in the city's schools. Although these tracts contribute about 5 percent of the schools' population, they account for about one-third of the school children classed as mentally retarded (IQ below 75). The sample of 88 mothers was selected by taking 88 consecutive births in these tracts where the mother already had at least one child of age six. The 88 mothers had a total of 586 children, excluding their newborns. The percentage of mothers with IQs of 80 or above was 54.6; 45.4 percent were below IQ 80. The IQs of the children of these two groups of mothers were plotted as a function of the children's age. The results are shown in Figure 10. Note that only the children whose mothers' IQ are below 80 show a systematic decline in IQ as well as a short-lived spurt of several points at the age of entrance into school. At six years of age and older, 80.8 percent of the children with IQs below 80 were those whose mothers had IQs below 80.

It is far from certain or even likely that all such decline in IQ is due to environmental influences rather than to genetic factors involved in the growth rate of intelligence. Consistent with this interpretation is the fact that the heritability of intelligence measures increases with age. We should expect just the opposite if environmental factors alone were responsible for the increasing IQ deficit of markedly below average groups. A study by Wheeler (1942) suggests that although IQ may be raised at all age levels by improving the environment, such improvements do not counteract the decline in the IQ of certain below-average groups. In 1940 Wheeler tested over 3000 Tennessee mountain children between the ages of 6 and 16 and compared their IQs with children in the same age range who had been given the same tests in 1930, when the average IQ and standard of living in this area would characterize the majority of the inhabitants as "culturally deprived." During the intervening 10 years state and federal intervention in this area brought about great improvements in economic conditions, standards of health care, and educational and cultural opportunities, and during the same period the average IQ for the region increased 10 points, from 82 to 92. But the decline in IQ from age 6 to age 16 was about the same in 1940 (from 103 to 80) as in 1930 (from 95 to 74).

Reaction Range. Geneticists refer to the concept of reaction range (RR) in discussing the fact that similar genotypes may result in quite different phenotypes depending on the favorableness of the environment for the development of the characteristic in question. Of further interest to geneticists is the fact that different genotypes may have quite different reaction ranges; some genotypes may be much more buffered against environmental influences than others. Different genetic strains can be unequal in their susceptibility to the same range of environmental variaiton, and when this is the case, the strains will show dissimilar heritabilities on the trait in question, the dissimilarity being accentuated by increasing environmental variation. Both of these aspects of the reaction range concept are illustrated hypothetically with respect to IQ in Figure 11.

The above discussion should serve to counter a common misunderstanding about quantitative estimates of heritability. It is sometimes forgotten that such estimates actually represent *average* values in the population that has been sampled and they do not necessarily apply either to differences *within* various subpopulations or to differences between subpopulations. In a population in which an overall *H* estimate is, say, .80, we may find a certain group for which *H* is only .70 and another group for which *H* is .90. All the major heritability studies reported in the literature are based on samples of white European and North American populations, and our knowledge of the heritability of intelligence in different racial and cultural groups within these populations is nil. For example, no adequate heritability studies have been based on samples of the Negro population of the United States. Since some genetic strains may be more buffered from environmental influences than others, it is not sufficient merely to equate

the environments of various subgroups in the population to infer equal heritability of some characteristic in all of them. The question of whether heritability estimates can contribute anything to our understanding of the relative importance of genetic and environmetnal factors in accounting for average phenotypic differences between racial groups (or any other socially identifiable groups) is too complex to be considered here. I have discussed this problem in detail elsewhere and concluded that heritability estimates could be of value in testing certain specific hypotheses in this area of inquiry, provided certain conditions were met and certain other crucial items of information were also available (Jensen, 1968c).

Before continuing discussion of environmental factors we must guard against one other misunderstanding about heritability that sometimes creeps in at this point. This is the notion that because so many different environmental factors and all their interactions influence the development of intelligence, by the time the child is old enough to be tested, these influences must totally bury or obscure all traces of genetic factors—the genotype must lie hidden and inaccessible under the heavy overlay of environmental influences. If this were so, of course, the obtained values of *H* would be very close to zero. But the fact that values of *H* for intelligence are usually quite high (in the region of .70 to .90) means that current intelligence tests, can, so to speak, "read through" the environmental "overlay."

Physical versus social environment

The value 1—*H*, which for IQ generally amounts to about .20, can be called *E*, the proportion of variance due to nongenetic factors. There has been a pronounced tendency to think of *E* as being wholly associated with individuals' social and interpersonal environment, child rearing practices, and differences in educational and cultural opportunities afforded by socioeconomic status. It is certain, however, that these sociological factors are not responsible for the whole of *E* and it is not improbably that they contribute only a minor portion of the *E* variance in the bulk of our population. Certain physical and biological environmental factors may be at least as important as the social factors in determining individual differences in intelligence. If this is true, advances in medicine, nutrition, prenatal care, and obstetrics may contribute as much or more to improving intelligence as will manipulation of the social environment.

Prenatal Environment of Twins. A little known fact about twins is that they average some 4 to 7 points lower in IQ than singletons (Vanderberg, 1968). The difference also shows up in scholastic achievement, as shown in the distribution of reading scores of twin and singleton girls in Sweden (Figure 12).

If this phenomenon were due entirely to differences between twins and singletons in the amount of individual attention they receive from their parents, one might expect the twin-singleton difference to be related to the family's socio-economic status. But there seems to be no systematic relationship of this kind. The largest study of the question, summarized in Figure 13, shows about the same average amount of twin-singleton IQ disparity over a wide range of socio-economic groups.

Three other lines of evidence place the locus of this effect in the prenatal environment. Monozygotic twins are slightly lower in IQ than dizygotic twins (Stott, 1960, p. 98), a fact which is consistent with the finding that MZ twins have a higher mortality rate and greater disparity in birth weights than DZ twins, suggesting that MZ twins enjoy less equal and less optimal intrauterine conditions than DZ twins or singletons. Inequalities in both intrauterine space and fetal nutrition probably account for this. Also, boy twins are significantly lower in IQ than girl twins, which conforms to the well known greater vulnerability of male infants to prenatal impairment (Stott, 1960). Finally, the birth weight of infants, when matched for gestational age, is slightly but significantly correlated with later IQ, and the effect is independent of sociocultural factors (Churchill, Neff, & Caldwell, 1966). In pairs of identical twins, the twin with the lower birth weight usually has the lower IQ (by 5 to 7 points on the average) at school age. This is true both in white and in Negro twins. The birth-weight differences are reflected in all 11 subtests of the Wechsler Intelligence Scale for Children and are slightly greater on the Performance than on the Verbal tests (Willerman & Churchill, 1967). The investigators interpret these findings as suggesting that nutrient supplies may be inadequate for proper body and brain development in twin pregnancies, and that the unequal sharing of nutrients and space stunts one twin more than its mate.

Thus, much of the average difference between MZ twins, whether reared together or reared apart, seems to be due to prenatal environmental factors. The real importance of these findings, of course, lies in their implications for the possible role of prenatal environment in the development of all children. It is not unlikely that there are individual maternal differences in the adequacy of the prenatal environment. If intrauterine conditions can cause several points of IQ difference between twins, it is not hard to imagine that individual differences in prenatal environments could also cause IQ differences in single born children and might therefore account for a substantial proportion of the total environmental variance in IQ.

Abdominal Decompression. There is now evidence that certain manipulations of the intrauterine environment can effect the infant's behavioral development for many months after birth. A technique known as abdominal decompression was invented by a professor of obstetrics (Heyns, 1963), originally for the purpose of making women experience less discomfort in the latter months of their pregnancy and also to facilitate labor and delivery. For about an hour a day during the last three or four months of pregnancy, the woman is placed in a device that creates a partial vacuum around her abdomen, which greatly reduces the intrauterine pressure. The device is used during labor up to the moment of delivery. Heyns has applied this device to more than 400 women. Their infants, as compared with control groups who have not received this treatment, show more rapid development in their first two years and manifest an overall superiority in tests of perceptual-motor development. They sit up earlier, walk earlier, talk earlier, and appear generally more precocious than their own siblings or other children whose mothers were not so treated. At two years of age the children in Heyns' experiment had DQs (developmental quotients) some 30 points higher than the control children (in the general population the mean DQ is 100, with a standard deviation of 15). Heyns explains the effects of maternal abdominal decompression on the child's early development in terms of the reduction of intrauterine pressure, which results in a more optimal blood supply to the fetus and also lessens the chances of brain damage during labor. (The intrauterine pressure on the infant's head is reduced from about 22 pounds to 8 pounds.) Results on children's later IQs have not been published, but correspondence with Professor Heyns and verbal reports from visitors to his laboratory inform me that there is no evidence that the IQ of these children is appreciably higher beyond age 6 than that of control groups. If this observation is confirmed by the proper methods, it should not be too surprising in view of the negligible correlations normally found between DQs and later IQs. But since abdominal decompression results in infant precocity, one may wonder to what extent differences in intrauterine pressure are responsible for normal individual and group differences in infant precocity. Negro infants, for example, are more precocious in development (as measured on the Bayley Scales) in their first year or two than Caucasian infants (Bayley, 1965a). Infant precocity would seem to be associated with more optimal intrauterine and perinatal conditions. This conjecture is consistent with the finding that infants whose prenatal and perinatal histories would make them suspect of some degree of brain damage show lower DQs on the Bayley Scales than normal infants (Honzik, 1962). Writers who place great emphasis on the hypothesis of inadequate prenatal care and complications of pregnancy to account for the lower average IQ of Negroes (e.g., Bronfenbrenner, 1967) are also obliged to explain why these unfavorable factors do not also depress the DQ below average in Negro infants, as do such factors as brain damage and prenatal and infant malnutrition (Cravioto, 1966). Since all such environmental factors should lower the heritability of intelligence in any segment of the population in which they are hypothesized to play an especially significant role, one way to test the hypothesis would be to compare the heritability of intelligence in that segment of the population for which extra environmental factors are hypothesized with the heritability in other groups for whom environmental factors are supposedly less accountable for IQ variance.

A Continuum of Reproductive Casualty. A host of conditions associated with reproduction which are known to differ greatly across socioeconomic levels have been hypothesized as causal factors in average intellectual differences. There is no doubt about the fact of the greater prevalence in poverty areas of conditions unfavorable to optimal pregnancy and safe delivery. The question that remains unanswered is the amount of IQ variance associated with these conditions predisposing to reproductive casualty. The disadvantageous factors most highly associated with social conditions are: pregnancies at early ages, teenage deliveries, pregnancies in close succession, a large number of pregnancies, and pregnancies that occur late in the woman's reproductive life (Graves, Freeman, & Thompson, 1968). These conditions are related to low birth weight, prematurity, increased infant mortality, prolonged labor, toxemia, anemia, malformations, and mental deficiency in the offspring. Since all of these factors have a higher incidence in low socioeconomic groups and in certain ethnic groups (Negroes, American Indians, and Mexican-Americans) in the United States, they probably account for some proportion of the group differences in IQ and scholastic performance, but just how much of the true differences they may account for no one really knows at present. It is interesting that Jewish immigrants, whose offspring are usually found to have a higher mean IQ than the general population, show fewer disadvantageous reproductive conditions and have the lowest infant mortality rates of all ethnic groups, even when matched with other immigrant and native born groups on general environmental conditions (Graves et al., 1968).

Although disadvantageous reproductive factors occur differentially in different segments of the population, it is not at all certain how much they are responsible for the IQ differences between social classes and races. It is reported by the National Institute of Neurological Diseases and Blindness, for example, that when all cases of mental retardation that can be reasonably explained in terms of known complications of preg-

nancy and delivery, brain damage, or major gene and chromosomal defects are accounted for, there still remain 75 to 80 percent of the cases who show no such specific causes and presumably represent just the lower end of the normal polygenic distribution of intelligence (Research Profile No. 11, 1965). Buck (1968) has argued that it still remains to be proven that a degree of neurological damage is bound to occur among the survivors of all situations which carry a high risk of perinatal mortality and that a high or even a known proportion of mental retardation can be ascribed to the non-lethal grades of reproductive difficulty. A large study reported by Buck (1968) indicates that the most common reproductive difficulties when occurring singly have no significant effect on children's intellectual status after age 5, with the one exception of pre-eclamptic toxemia of pregnancy, which caused some cognitive impairment. Most of the complications of pregnancy, it seems, must occur multiply to impair intellectual ability. It is as if the nervous system is sufficiently homeostatic to withstand certain unfavorable conditions if they occur singly.

Prematurity. The literature on the relationship of premature birth to the child's IQ is confusing and conflicting. Guilford (1967), in his recent book on *The Nature of Intelligence,* for example, concluded, as did Stoddard (1943), that prematurity has no effect on intelligence. Scott (1966), on the other hand, presents impressive evidence of very significant IQ decrements associated with prematurity. Probably the most thorough review of the subject I have found, by Kushlick (1966), helps to resolve these conflicting opinions. There is little question that prematurity has the strongest known relation to brain dysfunction of any reproductive factor, and many of the complications of pregnancy are strongly associated with the production of premature children. The crucial factor in prematurity, however, is not prematurity per se, but low birth-weight. Birth-weight apparently acts as a threshold variable with respect to intellectual impairment. All studies of birth-weight agree in showing that the incidence of babies weighing less than 5½ lbs. increases from higher to lower social classes. But only about 1 percent of the total variance of birth-weight is accounted for by socioeconomic variables. Race (Negro versus white) has an effect on birth-weight independently of socioeconomic variables. Negro babies mature at a lower birth-weight than white babies (Naylor & Myrianthopoulos, 1967). If prematurity is defined as a condition in which birth-weight is under 5½ lbs., the observed relationship between prematurity and depression of the IQ is due to the common factor of low social class. Kushlick (1966, p. 143) concludes that it is only among children having birth-weights under 3 lbs. that the mean IQ is lowered, independently of social class, and more in boys than in girls. The incidence of extreme subnormality is higher for children with birth-weights under 3 or 4 lbs. But when one does not count these extreme cases (IQs below 50), the effects of prematurity or low birth-weight—even as low as 3 lbs.—have a very weak relationship to children's IQs by the time they are of school age. The association between very low birth-weight and extreme mental subnormality raises the question of whether the low birth-weight causes the abnormality or whether the abnormality arises independently and causes the low birth-weight.

Prematurity and low birth-weight have a markedly higher incidence among Negroes than among whites. That birth-weight differences per se are not a predominant factor in Negro-white IQ differences, however, is suggested by the findings of a study which compared Negro and white premature children matched for birth-weight. The Negro children in all weight groups performed significantly less well on mental tests at 3 and 5 years of age than the white children of comparable birth-weight (Hardy, 1965, p. 51).

Genetic Predisposition to Prenatal Impairment. Dennis Stott (1960, 1966), a British psychologist, has adduced considerable evidence for the theory that impairments of the central nervous system occurring prenatally as a result of various stresses in pregnancy may not be the *direct* result of adverse intrauterine factors but may result *indirectly* from genetically determined mechanisms which are triggered by prenatal stress of one form or another.

Why should there exist a genetic mechanism predisposing to congenital impairments? Would not such genes, if they had ever existed, have been eliminated long ago through natural selection? It can be argued from considerable evidence in lower species of mammals observable by zoologists today that such a genetic mechanism may have had survival value for primitive man, but that the conditions of our present industrial society and advances in medical care have diminished the biological advantage of this mechanism for survival of the human species. The argument is that, because of the need to control population, there is a genetic provision within all species for multiple impairments, which are normally only potentialities, that can be triggered off by prenatal stress associated with high population density, such as malnutrition, fatigue from overexertion, emotional distress, infections, and the like. The resulting congenital impairment would tend to cut down the infant population, thereby relieving the pressure of population without appreciably reducing the functioning and efficiency of the young adults in the population. Stott (1966) has presented direct evidence of an association between stresses in the mother during pregnancy and later behavioral abnormalities and learning problems of the child in school. The imperfect correlation between such prenatal stress factors and signs of congenital impairment suggests that there are individual differences in genetic predisposition to prenatal impairment. The hypothesis warrants further investigation. The prenatal environment could be a much more important source of later IQ variance for some children than for others.

Mother-Child Rh Incompatibility. The *Rh* blood factor can involve possible brain damaging effects in a small proportion of pregnancies where the fetus is *Rh*-positive and the mother is *Rh*-negative. (*Rh*-negative has a frequency of 15 percent in the white and 7 percent in the Negro population.) The mother-child *Rh* incompatibility produces significant physical ill effects in only a fraction of cases and increases in importance in pregnancies beyond the first. The general finding of slightly lower IQs in second and later born children could be related to *Rh* incompatibility or to similar, but as yet undiscovered, mother-child biological incompatibilities. This is clearly an area greatly in need of pioneering research.

Nutrition. Since the human brain attains 70 percent of its maximum adult weight in the first year after birth, it should not be surprising that prenatal and infant nutrition can have significant effects on brain development. Brain growth is largely a process of protein synthesis. During the prenatal period and the first postnatal year the brain normally absorbs large amounts of protein nutrients and grows at the average rate of 1 to 2 milligrams per minute (Stoch & Smythe, 1963; Cravioto, 1966).

Severe undernutrition before two or three years of age, especially a lack of proteins and the vitamins and minerals essential for their anabolism, results in lowered intelligence. Stoch and Smythe (1963) found, for example, that extremely malnourished South African colored children were some 20 points lower in IQ than children of similar parents who had not suffered from malnutrition. The difference between the undernourished group and the control group in DQ and IQ over the age range from 1 year to 8 years was practically constant. If undernutrition takes a toll, it takes it early, as shown by the lower DQs at 1 year and the absence of any increase in the decrement at later ages. Undernutrition occurring for the first time in older children seems to have no permanent effect. Severely malnourished war prisoners, for example, function intellectually at their expected level when they are returned to normal living conditions. The study by Stoch and Smythe, like several others (Cravioto, 1966; Scrimshaw, 1968), also revealed that the undernourished children had smaller stature and head circumference than the control children. Although there is no correlation between intelligence and head circumference in normally nourished children, there is a positive correlation between these factors in groups whose numbers suffer varying degrees of undernutrition early in life. Undernutrition also increases the correlation between intelligence and physical stature. These correlations provide us with an index which could aid the study of IQ deficits due to undernutrition in selected populations.

One of the most interesting and pronounced psychological effects of undernutrition is retardation in the development of cross-modal transfer or intersensory integration, which was earlier described as characterizing the essence of *g* (Scrimshaw, 1968).

The earlier the age at which nutritional therapy is instituted, of course, the more beneficial are its effects. But even as late as 2 years of age, a gain of as much as 18 IQ points was produced by nutritional improvements in a group of extremely undernourished children. After 4 years of age, however, nutritional therapy effected no significant change in IQ (Cravioto, 1966, p. 82).

These studies were done in countries where extreme undernutrition is not uncommon. Such gross nutritional deprivation is rare in the United States. But there is at least one study which shows that some undertermined proportion of the urban population in the United States might benefit substantially with respect to intellectual development by improved nutrition. In New York City, women of low socioeconomic status were given vitamin and mineral supplements during pregnancy. These women gave birth to children who, at four years of age, averaged 8 points higher in IQ than a control group of children whose mothers had been given placebos during pregnancy (Harrell, Woodyard, & Gates, 1955). Vitamin and mineral supplements are, of course, beneficial in this way only when they remedy an existing deficiency.

Birth Order. Order of birth contributes a significant proportion of the variance in mental ability. On the average, first-born children are superior in almost every way, mentally and physically. This is the consistent finding of many studies (Altus, 1966) but as yet the phenomenon remains unexplained. (Rimland [1964, pp. 140–143] has put forth some interesting hypotheses to explain the superiority of the first-born.) Since the first-born effect is found throughout all social classes in many countries and has shown up in studies over the past 80 years (it was first noted by Galton), it is probably a biological rather than a social-psychological phenomenon. It is almost certainly not a genetic effect. (It would tend to make for slightly lower estimates of heritability based on sibling comparisons.) It is one of the sources of environmental variance in ability without any significant postnatal environmental correlates. No way is known for giving later-born children the same advantage. The disadvantage of being later-born, however, is very slight and shows up conspicuously only in the extreme upper tail of the distribution of achievements. For example, there is a dispro-

portionate number of first-born individuals whose biographies appear in *Who's Who* and in the *Encyclopedia Britannica*.

Social class differences in intelligence

Social class (or socioeconomic status [SES] should be considered as a factor separate from race. I have tried to avoid using the terms *social class* and *race* synonymously or interchangeably in my writings, and I observe this distinction here. Social classes completely cut across all racial groups. But different racial groups are disproportionately represented in different SES categories. Social class differences refer to a socioeconomic continuum *within* racial groups.

It is well known that children's IQ's, by school age, are correlated with the socioeconomic status of their parents. This is a world-wide phenomenon and has an extensive research literature going back 70 years. Half of all the correlations between SES and children's IQ's reported in the literature fall between .25 and .50, with most falling in the region of .35 to .40. When school children are grouped by SES, the mean IQs of the group vary over a range of one to two standard deviations (15 to 30 IQ points), depending on the method of status classification (Eells, et al., 1951). This relationship between SES and IQ constitutes one of the most substantial and least disputed facts in psychology and education.

The fact that intelligence is correlated with occupational status can hardly be surprising in any society that supports universal public education. The educational system and occupational hierarchy act as an intellectual "screening" process, far from perfect, to be sure, but discriminating enough to create correlations of the magnitude just reported. If each generation is roughly sorted out by these "screening" processes along an intelligence continuum, and if, as has already been pointed out, the phenotype-genotype correlation for IQ is of the order of .80 to .90, it is almost inevitable that this sorting process will make for genotypic as well as phenotypic differences among social classes. It is therefore most unlikely that groups differing in SES would not also differ, on the average, in their genetic endowment of intelligence. In reviewing the relevant evidence, the British geneticist, C. O. Carter (1966, p. 192) remarked, "Sociologists who doubt this show more ingenuity than judgment." Sociologist Bruce Eckland (1967) has elaborately spelled out the importance of genetic factors for understanding social class differences.

Few if any students of this field today would regard socioeconomic status per se as an environmental variable that primarily *causes* IQ differences. Intellectual differences between SES groups have hereditary, environmental, and interaction components. Environmental factors associated with SES differences apparently are not a major *independent* source of variance in intelligence. Identical twins separated in the first months of life and reared in widely differing social classes, for example, still show greater similarity in IQ than unrelated children reared together or than even siblings reared together (Burt, 1966). The IQs of children adopted in infancy show a much lower correlation with the SES of the adopting parents than do the IQs of children reared by their own parents (Leahy, 1935). The IQs of children who were reared in an orphanage from infancy and who had never known their biological parents show approximately the same correlation with their biological father's occupational status as found for children reared by their biological parents (.23 *vs* .24) (Lawrence, 1931). The correlation between the IQs of children adopted in infancy and the educational level of their biological mothers is close to that of children reared by their own mothers (.44), while the correlation between children's IQs and their adopting parents' educational level is close to zero (Honzik, 1957). Children of low and high SES show, on the average, an amount of regression from the parental IQ toward the mean of the general population that conforms to expectations from a simple polygenic model of the inheritance of intelligence (Burt, 1961). When siblings reared within the same family differ significantly in intelligence, those who are above the family average tend to move up the SES scale, and those who are below the family average tend to move down (Young & Gibson, 1965). It should be noted that despite intensive efforts by psychologists, educators, and sociologist to devise tests intended to eliminate SES differences in measured intelligence, none of these efforts has succeeded (Jenson 1968c). Theodosius Dobzhansky (1968a, p. 33), a geneticist, states that "There exist some occupations or functions for which only extreme genotypes are suitable." But surely this is not an all-or-nothing affair, and we would expect by the same reasoning that many different occupational skills, and not just those that are the most extreme, would favor some genotypes more than others. To be sure, genetic factors become more important at the extremes. Some minimal level of ability is required for learning most skills. But while you can teach almost anyone to play chess, or the piano, or to conduct an orchestra, or to write prose, you cannot teach everyone to be a Capablanca, a Paderewski, a Toscanini, or a Bernard Shaw. In a society that values and rewards individual talent and merit, genetic factors inevitably take on considerable importance.

SES differences, and race differences as well, are manifested not only as diffences between group means, but also as differences in variance and in patterns of correlations among various mental abilities, even on tests which show no *mean* differences between SES groups (Jensen, 1968b).

Another line of evidence that SES IQ differences are not a superficial phenomenon is the fact of a negative correlation between SES and Developmental Quotient (DQ) (under two years of age) and an increasing positive correlation between SES and IQ (beyond two years of age), as shown in Figure 14 from a study by Nancy Bayley (1966). (All subjects in this study are Caucasian.) This relationship is especially interesting in view of the finding of a number of studies that there is a negative correlation between DQ and later IQ, an effect which is much more pronounced in boys than in girls and involves the motor more than the attentional-cognitive aspects of the DQ (Bayley, 1965b)). Figure 14 shows that on infant developmental scales, lower SES children actually have a "head start" over higher SES children. But this trend is increasingly reversed at later ages as the tests become less motoric and are increasingly loaded with a cognitive or *g* factor.

Race differences

The important distinction between the *individual* and the *population* must always be kept clearly in mind in any discussion of racial differences in mental abilities or any other behavioral characteristics. Whenever we select a person for some special educational purpose, whether for special instruction in a grade-school class for children with learning problems, or for a "gifted" class with an advanced curriculum, or for college attendance, or for admission to graduate training or a professional school, we are selecting an *individual*, and we are selecting him and dealing with him as an individual for reasons of his individuality. Similarly, when we employ someone, or promote someone in his occupation, or give some special award or honor to someone for his accomplishments, we are doing this to an individual. The variables of social class, race, and national origin are correlated so imperfectly with any of the valid criteria on which the above decisions should depend, or, for that matter, with any behavioral characteristic, that these background factors are irrelevant as a basis for dealing with individuals—as students, as employees, as neighbors. Furthermore, since, as far as we know, the full range of human talents is represented in all the major races of man and in all socioeconomic levels, it is unjust to allow the mere fact of an individual's racial or social background to affect the treatment accorded to him. All persons rightfully must be regarded on the basis of their individual qualities and merits, and all social, educational, and economic institutions must have built into them the mechanisms for insuring and maximizing the treatment of persons according to their individual behavior.

If a society completely believed and practiced the ideal of treating every person as an individual, it would be hard to see why there should be any problems about "race" per se. There might still be problems concerning poverty, unemployment, crime, and other social ills, and, given the will, they could be tackled just as any other problems that require rational methods for solution. But if this philosophy prevailed in practice, there would not need to be a "race problem."

The question of *race* differences in intelligence comes up not when we deal with individuals as individuals, but when certain identifiable *groups* or subcultures within the society are brought into comparison with one another *as groups or populations*. It is only when the groups are disproportionately represented in what are commonly perceived as the most desirable and the least desirable social and occupational roles in a society that the question arises concerning average differences among groups. Since much of the current thinking behind civil rights, fair employment, and equality of educational opportunity appeals to the fact that there is a disproportionate representation of different racial groups in the various levels of the educational, occupational, and socioeconomic hierarchy, we are forced to examine all the possible reasons for this inequality among racial groups in the attainments and rewards generally valued by all groups within our society. To what extent can such inequalities be attributed to unfairness in society's multiple selection processes? ("Unfair" meaning that selection is influenced by intrinsically irrelevant criteria, such as skin color, racial or national origin, etc.) And to what extent are these inequalities attributable to really relevant selection criteria which apply equally to all individuals but at the same time select disproportionately between some racial groups because there exist, in fact, real average differences among the groups—differences in the population distributions of those characteristics which are indisputably relevant to educational and occupational performance? This is certainly one of the most important questions confronting our nation today. The answer, which can be found only through unfettered research, has enormous consequences for the welfare of all, particularly of minorities whose plight is now in the foreground of public attention. A preordained, doctrinaire stance with regard to this issue hinders the achievement of a scientific understanding of the problem. To rule out of court, so to speak, any reasonable hypotheses on purely ideological grounds is to argue that static ignorance is preferable to increasing our knowledge of reality. I strongly disagree with those who believe in searching for the truth by scientific means only under certain circumstances and eschew this course in favor of ignorance under other circumstances, or who believe that the results of inquiry on some subjects cannot be entrusted to the public but should be kept the guarded possession of a scientific elite. Such attitudes, in my opinion, represent a danger to free inquiry and, consequently, in the long run,

work to the disadvantage of society's general welfare. "No holds barred" is the best formula for scientific inquiry. One does not decree beforehand which phenomena cannot be studied or which questions cannot be answered..

Genetic Aspects of Racial Differences. No one, to my knowledge, questions the role of environmental factors, including influences from past history, in determining at least some of the variance between racial groups in standard measures of intelligence, school performance, and occupational status. The current literature on the culturally disadvantaged abounds with discussion—some of it factual, some of it fanciful—of how a host of environmental factors depresses cognitive development and performance. I recently coedited a book which is largely concerned with the environmental aspects of disadvantaged minorities (Deutsch, Katz, & Jensen, 1968). But the possible importance of genetic factors in racial behavioral differences has been greatly ignored, almost to the point of being a tabooed subject, just as were the topics of venereal disease and birth control a generation or so ago.

My discussions with a number of geneticists concerning the question of a genetic basis of differences among races in mental abilities have revealed to me a number of rather consistently agreed-upon points which can be summarized in general terms as follows: Any groups which have been geographically or socially isolated from one another for many generations are practically certain to differ in their gene pools, and consequently are likely to show differences in any phenotypic characteristics having high heritability. This is practically axiomatic, according to the geneticists with whom I have spoken. Races are said to be "breeding populations," which is to say that matings within the groups have a much higher probability than matings outside the group. Races are more technically viewed by geneticists as populations having different distributions of gene frequencies. These genetic differences are manifested in virtually every anatomical, physiological, and biochemical comparison one can make between representative samples of identifiable racial groups (Kuttner, 1967). There is no reason to suppose that the brain should be exempt from this generalization. (Racial differences in the relative frequencies of various blood constituents have probably been the most thoroughly studied so far.)

But what about behavior? If it can be measured and shown to have a genetic component, it would be regarded, from a genetic standpoint, as no different from other human characteristics. There seems to be little question that racial differences in genetically conditioned behavioral characteristics, such as mental abilities, should exist, just as physical differences. The real questions, geneticists tell me, are not whether there are or are not genetic racial differences that affect behavior, because there undoubtedly are. The proper questions to ask, from a scientific standpoint, are: What is the direction of the difference? What is the magnitude of the difference? And what is the significance of the difference—medically, socially, educationally, or from whatever standpoint that may be relevant to the characteristic in question? A difference is important only within a specific context. For example, one's blood type in the ABO system is unimportant until one needs a transfusion. And some genetic differences are apparently of no importance with respect to any context as far as anyone has been able to discover—for example, differences in the size and shape of ear lobes. The idea that all genetic differences have arisen or persisted only as a result of natural selection, by conferring some survival or adaptive benefit on their possessors, is no longer generally held. There appear to be many genetic differences, or polymorphisms, which confer no discernible advantages to survival.[6]

Negro Intelligence and Scholastic Performance. Negroes in the United States are disproportionately represented among groups identified as culturally or educationally disadvantaged. This, plus the fact that Negroes constitute by far the largest racial minority in the United States, has for many years focused attention on Negro intelligence. It is a subject with a now vast literature which has been quite recently reviewed by Dreger and Miller (1960, 1968) and by Shuey (1966), whose 578 page review is the most comprehensive, covering 382 studies. The basic data are well known: on the average, Negroes test about 1 standard deviation (15 IQ points) below the average of the white population in IQ, and this finding is fairly uniform across the 81 different tests of intellectual ability used in the studies reviewed by Shuey. This magnitude of difference gives a median overlap of 15 percent, meaning that 15 percent of the Negro population exceeds the white average. In terms of proportions of variance, if the numbers of Negroes and whites were equal, the difference *between* racial groups would account for 23 percent of the total variance, but—an important point—the differences *within* groups would account for 77 percent of the total variance. When gross socioeconomic level is controlled, the average difference reduces to about 11 IQ points (Shuey, 1966, p. 519), which, it should be recalled, is about the same spread as the average difference between siblings in the same family. So-called "culture-free" or "culture-fair" tests tend to give Negroes slightly lower scores, on the average, than more conventional IQ tests such as the Stanford-Binet and Wechsler scales. Also, as a group, Negroes perform somewhat more poorly on those subtests which tap abstract abilities. The majority of studies show that Negroes perform relatively better on verbal than on non-verbal intelligence tests.

In tests of scholastic achievement, also, judging from the massive data of the Coleman study (Coleman, et al., 1966), Negroes score about 1 standard deviation (SD) below the average for whites and Orientals and considerably less than 1 SD below other disadvantaged minorities tested in the Coleman study—Puerto Rican, Mexican-American, and American Indian. The 1 SD decrement in Negro performance is fairly constant throughout the period from grades 1 through 12.

Another aspect of the distribution of IQs in the Negro population is their lesser variance in comparison to the white distribution. This shows up in most of the studies reviewed by Shuey. The best single estimate is probably the estimate based on a large normative study of Stanford-Binet IQs of Negro school children in five Southeastern states, by Kennedy, Van De Riet, and White (1963). They found the SD of Negro children's IQs to be 12.4, as compared with 16.4 in the white normative sample. The Negro distribution thus has only about 60 percent as much variance (i.e., SD^2) as the white distribution.

There is an increasing realization among students of the psychology of the disadvantaged that the discrepancy in their average performance cannot be completely or directly attributed to discrimination or inequalities in education. It seems not unreasonable, in view of the fact that intelligence variation has a large genetic component, to hypothesize that genetic factors may play a part in this picture. But such an hypothesis is anathema to many social scientists. The idea that the lower average intelligence and scholastic performance of Negroes could involve, not only environmental, but also genetic, factors has indeed been strongly denounced (e.g. Pettigrew, 1964). But it has been neither contradicted nor discredited by evidence.

The fact that a reasonable hypothesis has not been rigorously proved does not mean that it should be summarily dismissed. It only means that we need more appropriate research for putting it to the test. I believe such definitive research is entirely possible but has not yet been done. So, all we are left with are various lines of evidence, no one of which is definitive alone, but which, viewed all together, make it a not unreasonable hypothesis that genetic factors are strongly implicated in the average Negro-white intelligence difference. The preponderance of the evidence is, in my opinion, less consistent with a strictly environmental hypothesis than with a genetic hypothesis, which, of course, does not exclude the influence of environment or its interaction with genetic factors.

We can be accused of superficiality in our thinking about this issue, I believe, if we simply dismiss a genetic hypothesis without having seriously thought about the relevance of typical findings such as the following:

Failure to Equate Negroes and Whites in IQ and Scholastic Ability. No one has yet produced any evidence based on a properly controlled study to show that representative samples of Negro and white children can be equalized in intellectual ability through statistical control of environment and education.

Socioeconomic Level and Incidence of Mental Retardation. Since in no category of socioeconomic status (SES) are a majority of children found to be retarded in the technical sense of having an IQ below 75, it would be hard to claim that the degree of environmental deprivation typically associated with lower-class status could be responsible for this degree of mental retardation. An IQ less than 75 reflects more than a lack of cultural amenities. Heber (1968) has estimated on the basis of existing evidence that IQs below 75 have a much higher incidence among Negro than among white children at every level of socioeconomic status, as shown in Table 3. In the two highest SES categories the estimated proportions of Negro and white children with IQs below 75, are in the ratio of 13.6 to 1. If environmental factors were mainly responsible for producing such differences, one should expect a lesser Negro-white discrepancy at the upper SES levels. Other lines of evidence also show this not to be the case. A genetic hypothesis, on the other hand, would predict this effect, since the higher SES Negro offspring would be regressing to a lower population mean than their white counterparts in SES, and consequently a larger proportion of the lower tail of the distribution of genotypes for Negroes would fall below the value that generally results in phenotypic IQs below 75.

TABLE 3.—ESTIMATED PREVALENCE OF CHILDREN WITH IQ's BELOW 75, BY SOCIOECONOMIC STATUS (SES) AND RACE GIVEN AS PERCENTAGES (HEBER, 1968)

SES	White	Negro
High 1	0.5	3.1
2	.8	14.5
3	2.1	22.8
4	3.1	37.8
Low 5	7.8	42.9

A finding reported by Wilson (1967) is also in line with this prediction. He obtained the mean IQs of a large representative sample of Negro and white children in a California school district and compared the two groups within each of four social class categories:

[6] The most comprehensive and sophisticated discussion of the genic-behavior analysis of race differences that I have found is by Spuhler and Lindzey (1967).

(1) professional and managerial, (2) white collar, (3) skilled and semiskilled manual, and (4) lower class (unskilled, unemployed, or welfare recipients). The mean IQ of Negro children in the first category was 15.5 points below that of the corresponding white children in SES category 1. But the Negro mean for SES 1 was also 3.9 points below the mean of white children in SES category 4. (The IQs of white children in SES 4 presumably have "regressed" upward toward the mean of the white population.)

Wilson's data are not atypical, for they agree with Shuey's (1966, p. 520) summarization of the total literature up to 1965 on this point. She reports that in all the studies which grouped subjects by SES, upper-status Negro children average 2.6 IQ points *below* the low-status whites. Shuey comments: "It seems improbable that upper and middle-class colored children would have no more culture opportunities provided them than white children of the lower and lowest class."

Duncan (1968, p. 69) also has presented striking evidence for a much greater "regression-to-the-mean" (from parents to their children) for high status occupations in the case of Negroes than in the case of whites. None of these findings is at all surprising from the standpoint of a genetic hypothesis, of which an intrinsic feature is Galton's "law of filial regression." While the data are not necessarily inconsistent with a possible environmental interpretation, they do seem more puzzling in terms of strictly environmental causation. Such explanations often seem intemperately strained.

Inadequacies of Purely Environmental Explanations. Strictly environmental explanations of group differences tend to have an ad hoc quality. They are usually plausible for the situation they are devised to explain, but often they have little generality across situations, and new ad hoc hypotheses have to be continually devised. Pointing to environmental differences between groups is never sufficient in itself to infer a causal relationship to group differences in intelligence. To take just one example of this tendency of social scientists to attribute lower intelligence and scholastic ability to almost any environmental difference that seems handy, we can look at the evidence regarding the effects of "father absence." Since the father is absent in a significantly larger proportion of Negro than of white families, the factor of "father absence" has been frequently pointed to in the literature on the disadvantaged as one of the causes of Negroes' lower performance on IQ tests and in scholastic achievement. Yet the two largest studies directed at obtaining evidence on this very point—the only studies I have seen that are methodologically adequate—both conclude that the factor of "father absence" versus "father presence" makes no independent contribution to variance in intelligence or scholastic achievement. The sample sizes were so large in both of these studies that even a very slight degree of correlation between father-absence and the measures of cognitive performance would have shown up as statistically significant. Coleman (1966, p. 506) concluded: "Absence of a father in the home did not have the anticipated effect on ability scores. Overall, pupils without fathers performed at approximately the same level as those with fathers—although there was some variation between groups" (groups referring to geographical regions of the U.S.). And Wilson (1957, p. 177) concluded from his survey of a California school district: "Neither our own data nor the preponderance of evidence from other research studies indicate that father presence or absence, *per se*, is related to school achievement. While broken homes reflect the existence of social and personal problems, and have some consequence for the development of personality, broken homes do not have any systematic effect on the overall level of school success."

The nationwide Coleman study (1966) included assessments of a dozen environmental variables and socioeconomic indices which are generally thought to be major sources of environmental influence in determining individual and group differences in scholastic performance—such factors as: reading material in the home, cultural amenities in the home, structural integrity of the home, foreign language in the home, preschool attendance, parents' education, parents' educational desires for child, parents' interest in child's school work, time spent on homework, child's self-concept (self-esteem), and so on. These factors are all correlated—in the expected direction—with scholastic performance within each of the racial or ethnic groups studied by Coleman. Yet, interestingly enough, they are not systematically correlated with differences *between* groups. For example, by far the most environmentally disadvantaged groups in the Coleman study are the American Indians. On every environmental index they average *lower* than the Negro samples, and overall their environmental rating is about as far below the Negro average as the Negro rating is below the white average. (As pointed out by Kuttner [1968, p. 707], American Indians are much more disadvantaged than Negroes, or any other minority groups in the United States, on a host of other factors not assessed by Coleman, such as income, unemployment, standards of health care, life expectancy, and infant mortality.) Yet the American Indian ability and achievement test scores average about half a standard deviation higher than the scores of Negroes. The differences were in favor of the Indian children on each of the four tests used by Coleman: non-verbal intelligence, verbal intelligence, reading comprehension, and math achievement. If the environmental factors assessed by Coleman are the major determinants of Negro-white differences that many social scientists have claimed they are, it is hard to see why such factors should act in reverse fashion in determining differences between Negroes and Indians, especially in view of the fact that *within* each group the factors are significantly correlated in the expected direction with achievement.

Early Developmental Differences. A number of students of child development have noted the developmental precocity of Negro infants, particularly in motoric behavior. Geber (1958) and Geber and Dean (1957) have reported this precocity also in African infants. It hardly appears to be environmental, since it is evident in nine-hour-old infants. Cravioto (1966, p. 78) has noted that the Gesell tests of infant behavioral development, which are usually considered suitable only for children over four weeks of age, "can be used with younger African, Mexican, and Guatemalan infants, since their development at two or three weeks is similar to that of Western European infants two or three times as old." Bayley's (1965a) study of a representative sample of 600 American Negro infants up to 15 months of age, using the Bayley Infant Scales of Mental and Motor Development, also found Negro infants to have significantly higher scores than white infants in their first year. The difference is largely attributable to the motor items in the Bayley test. For example, about 30 percent of white infants as compared with about 60 percent of Negro infants between 9 and 12 months were able to "pass" such tests as "pat-a-cake" muscular coordination, and ability to walk with help, to stand alone, and to walk alone. The highest scores for any group on the Bayley scales that I have found in my search of the literature were obtained by Negro infants in the poorest sections of Durham, North Carolina. The older siblings of these infants have an average IQ of about 80. The infants up to 6 months of age, however, have a Developmental Motor Quotient (DMQ) nearly one standard deviation above white norms and a Developmental IQ (i.e., the non-motor items of the Bayley scale) of about half a standard deviation above white norms (Durham Education Improvement Program, 1966–67, a, b).

The DMQ, as pointed out previously, correlates negatively in the white population with socioeconomic status and with later IQ. Since lower SES Negro and white school children are more alike in IQ than are upper SES children of the two groups (Wilson, 1967), one might expect greater DMQ differences in favor of Negro infants in high socioeconomic Negro and white samples than in low socioeconomic samples. This is just what Walters (1967) found. High SES Negro infants significantly exceeded whites in total score on the Gesell developmental schedules at 12 weeks of age, while low SES Negro and white infants did not differ significantly overall. (The only difference, on a single subscale, favored the white infants.)

It should also be noted that developmental quotients are usually depressed by adverse prenatal, perinatal, and postnatal complications such as lack of oxygen, prematurity, and nutritional deficiency.

Another relationship of interest is the finding that the negative correlation between DMQ and later IQ is higher in boys than in girls (Bayley, 1966, p. 127). Bronfenbrenner (1967, p. 912) cites evidence which shows that Negro boys perform relatively less well in school than Negro girls; the sex difference is much greater than is found in the white population. Bronfenbrenner (1967, p. 913) says, "It is noteworthy that these sex differences in achievement are observed among Southern as well as Northern Negroes, are present at every socioeconomic level, and tend to increase with age."

Physiological Indices. The behavioral precocity of Negro infants is also paralleled by certain physiological indices of development. For example, x-rays show that bone development, as indicated by the rate of ossification of cartilege, is more advanced in Negro as compared with white babies of about the same socioeconomic background, and Negro babies mature at a lower birth-weight than white babies (Naylor & Myrianthopoulos, 1967, p. 81).

It has also been noted that brain wave patterns in African newborn infants show greater maturity than is usually found in the European newborn child (Nilson & Dean, 1959). This finding especially merits further study, since there is evidence that brain waves have some relationship to IQ (Medical World News, 1968), and since at least one aspect of brain waves—the visually evoked potential—has a very significant genetic component, showing a heritability of about .80 (uncorrected for attenuation) (Dustman & Beck, 1965).

Magnitude of Adult Negro-White Differences. The largest sampling of Negro and white intelligence test scores resulted from the administration of the Armed Forces Qualification Test (AFQT) to a national sample of over 10 million men between the ages of 18 and 26. As of 1966, the overall failure rate for Negroes was 68 percent as compared with 19 percent for whites (*U.S. News and World Report*, 1966). (The failure cut-off score that yields these percentages is roughly equivalent to a Stanford-Binet IQ of 86.) Moynihan (1965) has estimated that during the same period in which the AFQT was administered to these large representative samples of Negro and white male youths, approximately one-half of Negro families could be considered as middle-class or above by the usual socioeconomic criteria. So even if we assumed that all of the lower 50 percent of Negroes on the SES scale failed the AFQT, it would still mean that at least 36 percent of the middle SES Negroes failed the test, a failure rate almost twice as high as that of the white population for all levels of SES.

Do such findings raise any question as to the plausibility of theories that postulate exclusively environmental factors as sufficient causes for the observed differences?

WHY RAISE INTELLIGENCE?

If the intelligence of the whole population increased and our IQ tests were standardized anew, the mean IQ would again be made equal to 100, which, by definition, is the average for the population. Thus, in order to speak sensibly of raising intelligence we need an absolute frame of reference, and for simplicity's sake we will use the *present* distribution of IQ as our reference scale. Then it will not be meaningless to speak of the average IQ of the population shifting to values other than 100.

Would there be any real advantage to shifting the entire distribution of intelligence upward? One way to answer this question is to compare the educational attainments of children in different schools whose IQ distributions center around means of, say, 85, 100, and 115. As pointed out earlier, there is a relationship between educational attainments and the occupations that are open to individuals on leaving school. Perusal of the want-ads in any metropolitan newspaper reveals that there are extremely few jobs advertised which are suitable to the level of education and skills typically found below IQs of 85 or 90, while we see day after day in the want-ads hundreds of jobs which call for a level of education and skills typically found among school graduates with IQs above 110. These jobs go begging to be filled. The fact is, there are not nearly enough minimally qualified persons to fill them.

One may sensibly ask the question whether our collective national intelligence is adequate to meet the growing needs of our increasingly complex industrial society. In a bygone era, when the entire population's work consisted almost completely of gathering or producing food by primitive means, there was little need for a large number of persons with IQs much above 100. Few of the jobs that had to be done at that time required the kind of abstract intelligence and academic training which are now in such seemingly short supply in relation to the demand in our modern society. For many years the criterion for mental retardation was an IQ below 70. In recent years the National Association for Mental Retardation has raised the criterion to an IQ of 85, since an increasing proportion of persons of more than 1 standard deviation below the average in IQ are unable to get along occupationally in today's world. Persons with IQs of 85 or less are finding it increasingly difficult to get jobs, any jobs, because they are unprepared, for whatever reason, to do the jobs that need doing in this industrialized, technological economy. Unless drastic changes occur—in the population, in educational outcomes, or in the whole system of occupational training and selection—it is hard to see how we can avoid any increase in the rate of the so-called "hard-core" unemployed. It takes more knowledge and cleverness to operate, maintain, or repair a tractor than to till a field by hand, and it takes more skill to write computer programs than to operate an adding machine. And apparently the trend will continue.

It has been argued by Harry and Margaret Harlow that "human beings in our world today have no more, or little more, than the absolute minimal intellectual endowment necessary for achieving the civilization we know today" (Harlow & Harlow, 1962, p. 34). They depict where we would probably be if man's average genetic endowment for intelligence had never risen above the level corresponding to IQ 75: ". . . the geniuses would barely exceed our normal or average level; comparatively few would be equivalent in ability to our average high school graduates. There would be no individuals with the normal intellectual capacities essential for making major discoveries, and there could be no civilization as we know it."

It may well be true that the kind of ability we now call intelligence was needed in a certain percentage of the human population for our civilization to have arisen. But while a small minority—perhaps only one or two percent—of highly gifted individuals were needed to advance civilization, the vast majority were able to assimilate the consequences of these advances. It may take a Leibnitz or a Newton to invent the calculus, but almost any college student can learn it and use it.

Since intelligence (meaning *g*) is not the whole of human abilities, there may be some fallacy and some danger in making it the *sine qua non* of fitness to play a productive role in modern society. We should not assume certain ability requirements for a job without establishing these requirements as a fact. How often do employment tests, Civil Service examinations, the requirement of a high school diploma, and the like, constitute hurdles that are irrelevant to actual performance on the job for which they are intended as a screening device? Before going overboard in deploring the fact that disadvantaged minority groups fail to clear many of the hurdles that are set up for certain jobs, we should determine whether the educational and mental test barriers that stand at the entrance to many of these employment opportunities are actually relevant. They may be relevant only in the correlational sense that the test predicts success on the job, in which case we should also know whether the test measures the ability actually required on the job or measures only characteristics that happen to be correlated with some third factor which is really essential for job performance. Changing people in terms of the really essential requirements of a given job may be much more feasible than trying to increase their abstract intelligence or level of performance in academic subjects so that they can pass irrelevant tests.

IQ gains from environmental improvement

As was pointed out earlier, since the environment acts as a threshold variable with respect to IQ, an overall increase in IQ in a population in which a great majority are above the threshold, such that most of the IQ variance is due to heredity, could not be expected to be very large if it had to depend solely upon improving the environment of the economically disadvantaged. This is not to say that such improvement is not to be desired for its own sake or that it would not boost the educational potential of many disadvantaged children. An unrealistically high upper limit of what one could expect can be estimated from figures given by Schwebel (1968, p. 210). He estimates that 26 percent of the children in the population can be called environmentally deprived. He estimates the frequencies of their IQs in each portion of the IQ scale; their distribution is skewed, with higher frequencies in the lower IQ categories and an overall mean IQ of 90. Next, he assumes we could add 20 points to each deprived child's IQ by giving him an abundant environment. (The figure of 20 IQ points comes from Bloom's [1964, p. 89] estimate that the effect of extreme environments on intelligence is about 20 IQ points.) The net effect of this 20-point boost in the IQ of every deprived child would be an increase in the population's IQ from 100 to 105. But this seems to be an unrealistic fantasy. For if it were true that the IQs of the deprived group could be raised 20 points by a good environment, and if Schwebel's estimate of 26 percent correctly represents the incidence of deprivation, then the deprived children would be boosted to an average IQ of 110, which is 7 points higher than the mean of 103 for the non-deprived population! There is no reason to believe that the IQs of deprived children, given an environment of abundance, would rise to a higher level than the already privileged children's IQs. The overall boost in the population IQ would probably be more like 1 or 2 IQ points rather than 5. (Another anomaly of Schwebel's "analysis" is that after a 20-point IQ boost is granted to the deprived segment of the population, the only persons left in the mentally retarded range are the non-deprived, with 7 percent of them below IQ 80 as compared with zero percent of the deprived!)

Fewer persons, however, are seriously concerned about whether or not we could appreciably boost the IQ of the population as a whole. A more feasible and urgent goal is to foster the educational and occupational potential of the disadvantaged segment of the population. The pursuit of this aim, of course, must involve advances not only in education, but in public health, in social services, and in welfare and employment practices. In considering all feasible measures, one must also take inventory of forces that may be working against the accomplishment of amelioration. We should not overlook the fact that social and economic conditions not only have direct environmental effects, but indirectly can have biological consequences as well, consequences that could oppose attempts to improve the chances of the disadvantaged to assume productive roles in society.

Possible dysgenic trends

In one large midwestern city it was found that one-third of all the children in classes for the mentally retarded (IQ less than 75) came from one small area of the city comprising only five percent of the city's population (Heber, 1968). A representative sample of 88 mothers having at least one school-age child in this neighborhood showed an average of 7.6 children per mother. In families of 8 or more, nearly half the children over 12 years of age had IQs below 75 (Heber, Dener, & Conry, 1968). The authors note that not all low SES families contributed equally to the rate of mental retardation in this area; certain specifiable families had a greatly disproportionate number of retarded children. Mothers with IQs below 80, for example, accounted for over 80 percent of the children with IQs under 80. Completely aside from the hereditary implications,what does this mean in view of studies of foster children which show that the single most important factor in the child's *environment* with respect to his intellectual development is his foster mother's IQ? This variable has been shown to make the largest *independent* contribution to variance in children's IQs of any environmental factor (Burks, 1928). If the children in the neighborhoods studied by Heber, which are typical of the situation in many of our large cities, have the great disadvantage of deprived environments, is it inappropriate to ask the same question that Florence Goodenough (1940, p. 329) posed regarding causal factors in retarded Tennessee mountain children: "*Why* are they so deprived?" When a substantial proportion of the children in a community suffer a deplorable environment, one of the questions we need to answer is who creates their environment? Does not the genetic × environment interaction work both ways, the genotype to some extent making its own environment and that of its progeny?

In reviewing evidence from foster home studies on environmental amelioration of IQs below 75 (the range often designated as indicating cultural-familial retardation) Heber, Dever, and Conry (1968, p. 17) state: "The conclusion that changes in the living environment can cause very large increments in IQ *for the cultural-familial retardate* is not warranted by these data."

What is probably the largest study ever made of familial influences in mental re-

tardation (defined in this study as IQ less than 70) involved investigation of more than 80,000 relatives of a group of mentally retarded persons by the Dight Institute of Genetics, University of Minnesota (Reed & Reed, 1965). From this large-scale study, Sheldon and Elizabeth Reed estimated that about 80 percent of mentally retarded (IQ less than 70) persons in the United States have a retarded parent or a normal parent who has a retarded sibling. The Reeds state: "One inescapable conclusion is that the transmission of mental retardation from parent to child is by far the most important *single* factor in the persistence of this social misfortune" (p. 48). "The transmission of mental retardation from one generation to the next, should, therefore, receive much more critical attention than it has in the past. It seems fair to state that this problem has been largely ignored on the assumption that if our social agencies function better, that if everyone's environment were improved sufficiently, then mental retardation would cease to be a major problem" (p. 77).

An interesting sidelight of the Reeds' study is the finding that in a number of families in which one or both parents had IQs below 70 and in which the environment they provided their children was deplorably deprived, there were a few children of average and superior IQ (as high as 130 or above) and superior scholastic performance. From a genetic standpoint the occurrence of such children would be expected. It is surprising from a strictly environmental standpoint. But, even though some proportion of the children of retarded parents are obviously intellectually well endowed, who would wish upon them the kind of environment typically provided by retarded parents? An investigation conducted in Denmark concluded that ". . . it is a very severe physical trauma for a normallly gifted child to grow up in a home where the mother is mentally deficient" (Jepsen & Bredmose, 1956, p. 209). Have we thought sufficiently of the rights of children—of their right to be born with fair odds against being mentally retarded, not to have a retarded parent, and with fair odds in favor of having the genetic endowment needed to compete on equal terms with the majority of persons in society? Can we reasonably and humanely oppose such rights of millions of children as yet not born?

Is Our National IQ Declining? It has long been known that there is a substantial negative correlation (averaging about —.30 in various studies) between intelligence and family size and between social class and family size (Anastasi, 1956). Children with many siblings, on the average, have lower IQs than children in small families, and the trend is especially marked for families of more than five (Gottesman, 1968). This fact once caused concern in the United States, and even more so in Britain, because of its apparent implication of a declining IQ in the population. If more children are born to persons in the lower half of the intelligence distribution, one would correctly predict a decline in the average IQ of the population. In a number of large-scale studies addressed to the issue in Britain and the United States some 20 years ago, no evidence was found for a general decline in IQ (Duncan, 1952). The paradox of the apparent failure of the genetic prediction to be manifested was resolved to the satisfaction of most geneticists by three now famous studies, one by Higgins, Reed, and Reed (1962), the others by Bajema (1963, 1966). All previous analyses had been based on IQ comparisons of children having different numbers of siblings, and this was their weakness. The data needed to answer the question properly consist of the average number of children born to *all* individuals at every level of IQ. It was found in the three studies that if persons with very low IQs married and had children, they typically had a large number of children. *But*—it was also found that relatively few persons in the lower tail of the IQ distribution ever married or produced children, and so their reproduction rate is more than counterbalanced by persons at the upper end of the IQ scale, nearly all of whom marry and have children. The data of these studies are shown in Figure 15.

In my opinion these studies are far from adequate to settle this issue and thus do not justify complacency. They cannot be generalized much beyond the particular generation which the data represent or to other than the white population on which these studies were based. The population sampled by Bajema (1963, 1966), for example, consisted of native-born American whites, predominantly Protestant, with above-average educational attainments, living all or most of their lives in an urban environment, and having most of their children before World War II. Results from a study of this population cannot be confidently generalized to other, quite dissimilar segments of our national population. The relationship between reproductive rate and IQ found by Bajema and by Higgins et al. may very well not prevail in every population group. Thus the evidence to date has not nullified the question of whether dysgenic trends are operating in some sectors.

If this conclusion is not unwarranted, then our lack of highly relevant information on this issue with respect to our Negro population is deplorable, and no one should be more concerned about it than the Negro community itself. Certain census statistics suggest that there might be forces at work which could create and widen the genetic aspect of the average difference in ability between the Negro and white populations in the United States, with the possible consequence that the improvement of educational facilities and increasing equality of opportunity will have a *decreasing* probability of producing equal achievement or continuing gains in the Negro population's ability to compete on equal terms. The relevant statistics have been presented by Moynihan (1966). The differential birthrate, as a function of socioeconomic status, is greater in the Negro than in the white population. The data showing this relationship for one representative age group from the U.S. Census of 1960 are presented in Figure 16.

Negro middle- and upper-class families have fewer children than their white counterparts, while Negro lower-class families have more. In 1960, Negro women of ages 35 to 44 married to unskilled laborers had 4.7 children as compared with 3.8 for non-Negro women in the same situation. Negro women married to professional or technical workers had only 1.9 children as compared with 2.4 for white women in the same circumstances. Negro women with annual incomes below $2000 averaged 5.3 children. The poverty rate for families with 5 or 6 children is 3½ times as high as that for families with one or two children (Hill & Jaffe, 1966). That these figures have some relationship to intellectual ability is seen in the fact that 3 out of 4 Negroes failing the Armed Forces Qualification Test come from families of four or more children.

Another factor to be considered is average generation time, defined as the number of years it takes for the parent generation to reproduce its own number. This period is significantly less in the Negro than in the white population. Also, as noted in the study of Bajema (1966), generation length is inversely related to educational attainment and occupational status; therefore a group with shorter generation length is more likely subject to a possible dysgenic effect.

Much more thought and research should be given to the educational and social implications of these trends for the future. Is there a danger that current welfare policies, unaided by eugenic foresight, could lead to the genetic enslavement of a substantial segment of our population? The possible consequences of our failure seriously to study these questions may well be viewed by future generations as our society's greatest injustice to Negro Americans.

INTENSIVE EDUCATIONAL INTERVENTION

We began with mention of several of the major compensatory education programs and their general lack of success in boosting the scholastic performance of disadvantaged children. It has been claimed that such mammoth programs have not been adequately pinpointed to meeting specific, fine-grained cultural and cognitive needs of these children and therefore should not be expected to produce the gains that could result from more intensive and more carefully focused programs in which maximum cultural enrichment and instructional ingenuity are lavished on a small group of children by a team of experts. The scanty evidence available seems to bear this out. While massive compensatory programs have produced no appreciable gains in intelligence or achievement (as noted on pp. 2–3), the majority of small-scale experiments in boosting the IQ and educational performance of disadvantaged children have produced significant gains. It is interesting that the magnitude of claimed gains generally decreases as one proceeds from reports in the popular press, to informal verbal reports heard on visits at research sites and in private correspondence, to papers read at meetings, to published papers without presentation of supporting data, and to published papers with supporting data. I will confine my review to some of the major studies in the last category.

First, some general observations.

Magnitude of Gains. The magnitude of IQ and scholastic achievement gains resulting from enrichment and cognitive stimulation programs authentically range between about 5 and 20 points for IQs, and between about one-half to two standard deviations for specific achievement measures (readings, arithmetic, spelling, etc.). Heber (1968) reviewed 29 intensive preschool programs for disadvantaged children and found they resulted in an average gain in IQ (at the time of children's leaving the preschool program) of between 5 and 10 points; the average gain was about the same for children whose initial IQs were below 90 as for those of 90 and above.

The amount of gain is related to several factors. The intensity and specificity of the instructional aspects of the program seem to make a difference. Ordinary nursery school attendance, with a rather diffuse enrichment program but with little effort directed at development of specific cognitive skills, generally results in a gain of 5 or 6 IQ points in typical disadvantaged preschoolers. If special cognitive training, especially in verbal skills, is added to the program, the average gain is about 10 points—slightly more or less depending on the amount of verbal content in the tests. Average gains rarely go above this, but when the program is extended beyond the classroom into the child's home, and there is intensive instruction in specific skills under short but highly attention-demanding daily sessions, as in the Bereiter-Engelmann program (1966), about a third of the children have shown gains of as much as 20 points.

Average gains of more than 10 or 15 points have not been obtained on any sizeable groups or been shown to persist or to be replicable in similar groups, although there have been claims that average gains of 20 or more points can be achieved by removing certain cultural and attitudinal barriers to learning. The actual evidence, however, warrants the caution expressed by Bereiter and Engelmann (1966, p. 7): " 'Miracle cures' of this kind are sometimes claimed to work with disadvantaged children, as when a child is found to gain 20 points or so in IQ after

a few months of preschool experience. Such enormous gains, however, are highly suspect to anyone who is familiar with mental measurements. It is a fair guess that the child could have done as well on the first test except that he misinterpreted the situation, was frightened or agitated, or was not used to responding to instructions. Where genuine learning is concerned, enormous leaps simply do not occur, and leaps of any kind do not occur without sufficient cause."

The initial IQ on entering also has some effect, and this fact may be obscured if various studies are coarsely grouped. Bereiter and Engelmann (1966, p. 16), in analyzing results from eight different preschools for culturally disadvantaged children that followed traditional nursery school methods, concluded that the children's average gain in IQ is *half* the way from their initial IQ level to the normal level of 100. This rule was never more than 2 points in error for the studies reviewed. This same amount of IQ gain is generally noted in disadvantaged children during their first year in regular kindergarten (Brison, 1967, p. 8).

I have found no evidence of comparable gains in non-disadvantaged children. Probably the exceedingly meager gains in some apparently excellent preschool programs for the "disadvantaged" are attributable to the fact that the children in them did not come from a sufficiently deprived home background. Such can be the case when the children are admitted to the program on the basis of "self-selection" by their parents. Parents who seek out a nursery school or volunteer their children for an experimental preschool are more apt to have provided their children with a somewhat better environment than would be typical for a randomly selected group of disadvantaged children. This seems to have been the case in Martin Deutsch's intensive preschool enrichment program at the Institute of Developmental Studies in New York (Powledge, 1967). Both the experimental group (E) and the self-selected control groups (C_{ss}) were made up of Negro children from a poor neighborhood in New York City whose parents applied for their admission to the program. The E group received intensive educational attention in what is overall the most comprehensive and elaborate enrichment program I know of. The C_{ss} group, of course, received no enriched education. The initial average Stanford-Binet IQs of the E and C_{ss} groups were 93.32 and 94.69, respectively. After two years in the enrichment program, the E group had a mean IQ of 95.53 and the C_{ss} group had 96.52. Both pre- and post-test differences are nonsignificant. The enrichment program continued for a third year through the first grade. For the children in the E group who had had three years of enrichment, there was a significant gain over the C group of 8 months in reading achievement by the end of first grade, a score above national norms. This result is in keeping with the general finding that enrichment shows a greater effect on scholastic achievement than on IQ per se.

Many studies have employed no control group selected on exactly the same basis as the experimental group. This makes it virtually impossible to evaluate the effect of the treatment on pre-test—post-test gain, and the problem is made more acute by the fact that enrichment studies often pick their subjects on the basis of their being below the average IQ of the population of disadvantaged children from which they are selected. This makes statistical regression a certainty—the group's mean will increase by an appreciable amount because of the imperfect correlation between test-retest scores over, say, a one-year interval. Since this correlation is known to be considerably lower in younger than in older children, there will be considerably greater "gain" due to regression for younger groups of children. The net results of selecting especially backward children on the basis of IQ is that a gain in IQ can be predicted which is not at all attributable to the educational treatment given to the children. Studies using control groups nearly always show this gain in the control group, and only by subtracting the control group's gain from the experimental group's gain can we evaluate the magnitude of the treatment effect. Only the gain over and above that attributable to regression really counts.

Still another factor is involved in the inverse relationship generally found between children's age and the size of IQ gains in an enrichment program. Each single item gotten right in a test like the Stanford-Binet adds increasingly smaller increments to the IQ as children get older. Each Stanford-Binet test item, for example, is worth two months of mental age. At four years of age getting just two additional items right will boost an IQ at 85 up to 93. The same absolute amount of improvement in test performance at 10 years of age would boost an IQ of 85 up to only 88. The typical range of gains found in preschool enrichment programs, in the age range of 4 to 6, are about what would be expected from passing an additional two to four items in the Stanford-Binet. This amount of gain should not be surprising on a test which, for this age range, consists of items rather similar to the materials and activities traditionally found in nursery schools—blocks, animal pictures, puzzles, bead stringing, copying drawings, and the like. I once visited an experimental preschool using the Stanford-Binet to assess pre-test—post-test gains, in which some of the Stanford-Binet test materials were openly accessible to the children throughout their time in the school as part of the enrichment paraphernalia. Years ago Reymert and Hinton (1940) noted this "easy gain" in the IQs of culturally disadvantaged preschoolers on tests depending on specific information such as being able to name parts of the body and knowing names of familiar objects. Children who have not picked up this information at home get it quickly in nursery school and kindergarten.

In addition to these factors, something else operates to boost scores of five to ten points from first to second test, provided the first test is really the first. When I worked in a psychological clinic, I had to give individual intelligence tests to a variety of children, a good many of whom came from an impoverished background. Usually I felt these children were really brighter than their IQ would indicate. They often appeared inhibited in their responsiveness in the testing situation on their first visit to my office, and when this was the case I usually had them come in on two to four different days for half-hour sessions with me in a "play therapy" room, in which we did nothing more than get better acquainted by playing ball, using finger paints, drawing on the blackboard, making things out of clay, and so forth. As soon as the child seemed to be completely at home in this setting, I would retest him on a parallel form of the Stanford-Binet. A boost in IQ of 18 to 10 points or so was the rule; it rarely failed but neither was the gain very often much above this. So I am inclined to doubt that IQ gains up to this amount in young disadvantaged children have much of anything to do with changes in ability. They are largely a result simply of getting a more accurate IQ by testing under more optimal conditions. Part of creating more optimal conditions in the case of disadvantaged children consists of giving at least two tests, the first only for practice and for letting the child get to know the examiner. I would put very little confidence in a single test score, especially if it is the child's first test and more especially if the child is from a poor background and of a different race from the examiner. But I also believe it is possible to obtain accurate assessments of a child's ability, and I would urge that attempts to evaluate preschool enrichment programs measure the gains against initially valid scores. If there is not evidence that this precaution has been taken, and if there is no control group, one might as well subtract at least 5 points from the gain scores as having little or nothing to do with real intellectual growth.

It is interesting that the IQ gains typically found in enrichment programs are of about the same magnitude and durability as those found in studies of the effects of direct coaching and practice on intelligence tests. The average IQ gain in such studies is about nine or ten points (Vernon, 1954).

What Is Really Changed When We Boost IQ? Test scores may increase after special educational treatment, but one must then ask which components of test variance account for the gain. Is it *g* that gains, or is it something less central to our concept of intelligence? We will not know for sure until someone does a factor analysis of pre- and post-test scores, including a number of "reference" tests that were not a part of the pre-test battery. We should also factor analyze the tests at the item level, to see which types of test items reflect the most gain. Are they the items with the highest cultural loadings? It is worth noting that the studies showing authentic gains used tests which are relatively high in cultural loading. I have found no studies that demonstrated gains in relatively noncultural or nonverbal tests like Cattell's Culture Fair Tests and Raven's Progressive Matrices.

Furthermore, if gain consists of actual improvement in cognitive skills rather than of acquisition of simple information, it must be asked whether the gain in skill represents the intellectual skill that the test normally measures, and which, because of the test's high heritability, presumably reflects some important, biologically based aspect of mental development. Let me cite one example. In a well-known experiment Gates and Taylor (1925) gave young children daily practice over several months in repeating auditory digit series, just like the digit span subtests in the Wechsler and Stanford-Binet. The practice resulted in a marked gain in the children's digit span, equivalent to an IQ gain of about 20 points. But when the children were retested after an interval of six months without practicing digit recall, their digit performance was precisely at the level expected for their mental age as determined by other tests. The gains had been lost, and the digit test once again accurately reflected the children's overall level of mental development, as it did before the practice period. The well-known later "fading" of IQ gains acquired early in enrichment program may be a similar phenomenon.

But there is another phenomenon that probably is even more important as one of the factors working against the persistence of initial gains. This is the so-called "cumulative deficit" phenomenon, the fact that many children called disadvantaged show a decline in IQ from preschool age through at least elementary school. The term "cumulative deficit" may not be inappropriate in its connotations with respect to scholastic attainment, but it is probably a misleading misnomer when applied to the normal negatively accelerated growth rate of developmental characteristics such as intelligence. The same phenomenon can be seen in growth curves of stature, but no one would refer to the fact that some children gain height at a slower rate and level off at a lower asymptote as a "cumulative deficit." In short, it seems likely that some of the loss in initial gains is due to the more negatively accelerated growth curve for intelligence in disadvantaged children and is not necessarily due to waning or discontinuance of the instructional effort. The effort required to boost IQ

from 80 to 90 at 4 or 5 years of age is minuscule compared to the effort that would be required by age 9 or 10. "Gains" for experimental children in this range, in fact, take the form of superiority over a control group which has declined in IQ; the "enriched" group is simply prevented from falling behind, so there is no absolute gain in IQ, but only an advantage relative to a declining control group. Because of the apparently ephemeral nature of the initial gains seen in preschool programs, judgments of these programs' effectiveness in making a significant impact on intellectual development should be based on long range results.

A further step in proving the effectiveness of a particular program is to demonstrate that it can be applied with comparable success by other individuals in other schools, and, if it is to be practicable on a large scale, to determine if it works in the hands of somewhat less inspired and less dedicated practitioners than the few who originated it or first put it into practice on a small scale. As an example of what can happen when a small-scale project gets translated to a large-scale one, we can note Kenneth B. Clark's (1963, p. 160) enthusiastic and optimistic description of a "total push" intensive compensatory program which originated in one school serving disadvantaged children in New York City, with initially encouraging results. Clark said, "These positive results can be duplicated in every school of this type." In fact, it was tried in 40 other New York schools, and became known as the Higher Horizons program. After three years of the program the children in it showed no gains whatever and even averaged slightly lower in achievement and IQ than similar children in ordinary schools (U.S. Commission on Civil Rights, 1967, p. 125).

Finally, little is known about the range of IQ most likely to show genuine gains under enrichment. None of the data I have seen in this area permits any clear judgment on this matter. It would be unwarranted to assume at this time that special educational programs push the whole IQ distribution up the scale, so that, for example, they would yield a higher percentage of children with IQs higher than two standard deviations above the mean. After a "total push" program, IQs, if they change at all, may no longer be normally distributed, so that the gains would not much affect the frequencies at the tails of the distribution. We simply do not know the answer to this at present, since the relevant data are lacking.

Hothouse or Fertilizer? There seems to be little doubt that a deprived environment can stunt intellectual development and that immersion in a good environment in early childhood can largely overcome the effects of deprivation, permitting the individual's genetic potential to be reflected in his performance. But can special enrichment and instructional procedures go beyond the prevention or amelioration of stunting? As Vandenberg (1968, p. 49) has asked, does enrichment act in a manner similar to a *hothouse*, forcing an early bloom which is nevertheless no different from a normal bloom, or does it act more like a *fertilizer*, producing bigger and better yields? There can be little question about the hothouse aspect of early stimulation and instruction. Within limits, children can learn many things at an earlier age than that at which they are normally taught in school. This is especially true of forms of associative learning which are mainly a function of time spent in the learning activity rather than of the development of more complex cognitive structures. While most children, for example, do not learn the alphabet until 5 or 6 years of age, they are fully capable of doing so at about 3, but it simply requires more time spent in learning. The cognitive structures involved are relatively simple as compared with, say, learning to copy a triangle or a diamond. Teaching a 3-year-old to copy a diamond is practically impossible; at five it is extremely difficult; at seven the child apparently needs no "teaching"—he copies the diamond easily. And the child of five who has been *taught* to copy the diamond seems to have learned something different from what the seven-year-old "knows" who can do it without being "taught." Though the final performance of the five-year-old and the seven-year-old may *look* alike, we know that the cognitive structures underlying their performance are different. Certain basic skills can be acquired either associatively by rote learning or cognitively by conceptual learning, and what superficially may appear to be the same performance may be acquired in preschoolers at an associative level, while at the conceptual level in older children. Both the four-year-old and the six-year-old may know that 2+2=4, but this knowledge can be associative or cognitive. Insufficient attention has been given in preschool programs so far to the shift from associative to cognitive learning. The preschooler's capacity for associative learning is already quite well developed, but his cognitive or conceptual capacities are as yet rudimentary and will undergo their period of most rapid change between about five and seven years of age (White, 1965). We need to know more about what children can learn before age five that will transfer positively to later learning. Does learning something on an associative level facilitate or hinder learning the same content on a conceptual level?

While some preschool and compensatory programs have demonstrated earlier that normal learning of certain skills, the evidence for accelerating cognitive development or the speed of learning its practically nil. But usually this distinction is not made between sheer performance and the nature of the cognitive structures which support the gains in performance, and so the research leaves the issue in doubt. The answer to such questions is to be found in the study of the kinds and amount of transfer that result from some specific learning. The capacity for transfer of training is one of the essential aspects of what we mean by intelligence. The IQ gains reported in enrichment studies appear to be gains more in what Cattell calls "crystallized," in contrast to "fluid," intelligence. This is not to say that gains of this type are not highly worthwhile. But having a clearer conception of just what the gains consist of will give us a better idea of how they can be most effectively followed up and of what can be expected of their effects on later learning and achievement.

Specific Programs. Hodges and Spicker (1967) have summarized a number of the more substantial preschool intervention studies designed to improve the intellectual capabilities and scholastic success of disadvantaged children. Here are some typical examples.

The *Indian Project* focused on deprived Appalachian white children five years of age, with IQs in the range of 50 to 85. The children spent one year in a special kindergarten with a structured program designed to remedy specific diagnosed deficiencies of individual children in the areas of language development, fine motor coordination, concept formation, and socialization. Evaluation extended over two years, and gains were measured against three control groups: regular kindergarten, children who stayed at home during the kindergarten year, and children at home in another similar community. The average gain (measured against all three controls) after two years was 10.8 IQ points on the Stanford-Binet (final IQ 97.4) and 4.0 IQ on the Peabody Picture Vocabulary Test (final IQ 90.4).

The *Perry Preschool Project* at Ypsilanti, Michigan, also was directed at disadvantaged preschool children with IQs between 50 and 85. The program was aimed at remedying lacks largely in the verbal prerequisites for first-grade learning and involved the parents as well as the children. There was a significant gain of 8.9 IQ points in the Stanford-Binet after one year of the preschool, but by the end of second grade the experimental group exceeded the controls, who had had no preschool attendance, by only 1.6 IQ points, a nonsignificant gain.

The *Early Training Project* under the direction of Gray and Klaus at Peabody College is described as a multiple intervention program, meaning that it included not only preschool enrichment but work with the disadvantaged children's mothers to increase their ability to stimulate their child's cognitive development at home. Two experimental groups, with two and three summers of preschool enrichment experience in a special school plus home visits by the training staff, experienced an average gain, four years after the start of the program, of 7.2 IQ points over a control group on the Stanford-Binet (final IQ of *E* group was 93.6).

The *Durham Education Improvement Program* (1966–1967b) has focused on preschool children from impoverished homes. The basic assumption of the program is stated as follows: "First, Durham's disadvantaged youngsters are considered normal at birth and potentialy normal academic achievers, though they are frequently subjected to conditions jeopardizing their physical and emotional health. It is further assumed that they adapt to their environment according to the same laws of learning which apply to all children." The program is one of the most comprehensive and intensive efforts yet made to improve the educability of children from backgrounds of poverty. The IQ gains over about an eight to nine months' interval for various groups of preschoolers in the program are raw pre-post test gains, not gains over a control group. The average IQ gains on three differents tests were 5.32 (Peabody Picture Vocabulary), 2.62 (Stanford-Binet), and 9.27 (Wechsler Intelligence Scale for children). In most cases, IQs changed from the 80s to the 90s.

The well-known Bereiter-Engelmann (1966) program at the University of Illinois is probably the most sharply focused of all. It aims not at all-round enrichment of the child's experience but at teaching specific cognitive skills, particularly of a logical, semantic nature (as contrasted with more diffuse "verbal stimulation"). The emphasis is on information processing skills considered essential for school learning. The Bereiter-Engelmann preschool is said to be academically oriented, since each day throughout the school year the children receive twenty-minute periods of intensive instruction in three major content areas—language, reading, and arithmetic. The instruction, in small groups, explicitly involves maintaining a high level of attention, motivation, and participation from every child. Overt and emphatic repetition by the children are important ingredients of the instructional process. The pre-post gains (not measured against a control group) in Stanford-Binet IQ over an eighteen months' period are about 8 to 10 points. Larger gains are shown in tests that have clearly identifiable content which can reflect the areas receiving specific instruction, such as the Illinois Test of Psycholinguistic Abilities and tests of reading and arithmetic (Bereiter & Engelmann, 1968). The authors note that the gains are shared about equally by all children.

Bereiter and Engelmann, correctly, I believe, put less stock in the IQ gains than in the gains in scholastic performance achieved by the children in their program. They comment that the children's IQs were still remarkably low for children who performed at the academic level actually attained in the program. Their scholastic performance was commensurate with that of children 10 to 20 points higher in IQ. Such is the advantage of highly focused training—it can significantly

boost the basic skills that count most. Bereiter and Engelmann (1966, p. 54) comment, ". . . to have taught children in a two-hour period per day enough over a broad area to bring the average IQ up to 110 or 120 would have been an impossibility." An important point of the Bereiter-Engelmann program is that it shows that scholastic performance—the acquisition of the basic skills—can be boosted much more, at least in the early years, than can the IQ, and that highly concentrated, direct instruction is more effective than more diffuse cultural enrichment.

The largest IQ gains I have seen and for which I was also able to examine the data and statistical analyses were reported by Karnes (1968), whose preschool program at the University of Illinois is based on an intensive attempt to ameliorate specific learning deficits in disadvantaged three-year-old children. Between the average age of 3 years 3 months and 4 years 1 month, children in the program showed a gain of 16.9 points in the Stanford-Binet IQ, while a control group showed a loss of 2.8 over the same period, making for a net gain of 19.7 IQ points for the experimental group. Despite rather small samples (E = 15, C = 14), this gain is highly significant statistically (a probability of less than 1 in 1000 of occurring by chance). Even so, I believe such findings need to be replicated for proper evalution, and the durability of the gains needs to be assessed by follow-up studies over several years. There remains the question of the extent to which specific learning at age three affects cognitive structures which normally do not emerge until six or seven years of age and whether induced gains at an early level of mental development show appreciable "transfer" to later stages. It is hoped that investigators can keep sufficient track of children in preschool programs to permit a later follow-up which could answer these questions. An initial small sample size mitigates against this possibility, and so proper research programs should be planned accordingly.

"Expectancy Gain." Do disadvantaged children perform relatively poorly on intelligence tests because their teachers have low expectations for their ability? This belief has gained popular currency through an experiment by Rosenthal and Jacobson (1968). Their notion is that the teacher's expectations for the child's performance act as a self-fulfilling prophecy. Consequently, according to this hypothesis, one way to boost these children's intelligence, and presumably their general scholastic performance as well, is to cause teachers to hold out higher expectations of these children's ability. To test this idea, Rosenthal and Jacobson picked about five children at random from each of the classes in an elementary school and then informed the classroom teachers that, according to test results, the selected children were expected to show unusual intellectual gains in the coming year. Since the "high expectancy" children in each class were actually selected at random, the only way they differed from their classmates was presumably in the minds of their teachers. Group IQ tests administered by the teachers on three occasions during the school year showed a significantly larger gain in the "high expectancy" children than in their classmates. Both groups gained in IQ by amounts that are typically found as a result of direct coaching or of "total push" educational programs. Yet the authors note that "Nothing was done directly for the disadvantaged child at Oak School. There was no crash program to improve his reading ability, no special lesson plans, no extra time for tutoring, no trips to museums or art galleries. There was only the belief that the children bore watching, that they had intellectual competencies that would in due course be revealed" (p. 181). The net total IQ gain (i.e., Expectancy group minus Control group) for all grades was 3.8 points. Net gain in verbal IQ was 2.1; for Reasoning (nonverbal) IQ the gain was 7.2. Differences were largest in grades 1 and 2 and became negligible in higher grades. The statistical significance of the gains is open to question and permits no clear-cut conclusion. (The estimation of the error variance is at issue; the investigators emphasized the individual pupil's scores as the unit of analysis rather than the means of the E and C groups for each classroom at the unit. The latter procedure, which is regarded as more rigorous by many statisticians, yields statistically negligible results.)

Because of the questionable statistical significance of the results of this study, there may actually be no phenomenon that needs to be explained. Other questionable aspects of the conduct of the experiment make it mandatory that its results be replicated under better conditions before any conclusions from the study be taken seriously or used as a basis for educational policy. For example, the same form of the group-administered IQ test was used for each testing, so that specific practice gains were maximized. The teachers themselves administered the tests, which is a faux pas par excellence in research of this type. The dependability of teacher-administered group tests leaves much to be desired. Would any gains beyond those normally expected from general test familiarity have been found if the children's IQs had been accurately measured in the first place by individual tests administered by qualified psychometrists without knowledge of the purpose of the experiment? These are some of the conditions under which such an experiment must be conducted if it is to inspire any confidence in its results.

Conclusions About IQ Gains. The evidence so far suggests the tentative conclusion that the pay-off of preschool and compensatory programs in terms of IQ gains is small. Greater gains are possible in scholastic performance when instructional techniques are intensive and highly focused, as in the Bereiter-Engelmann program. Educators would probably do better to concern themselves with attempting to boost overall cognitive development. By the same token, they should deemphasize IQ tests as a means of assessing gains, and use mainly direct tests of the skills the instructional program is intended to inculcate. The techniques for raising intelligence per se, in the sense of *g*, probably lie more in the province of the biological sciences than in psychology and education.

Gordon and Wilkerson (1966, pp. 158–159) have made what seems to me perhaps the wisest statement I have encountered regarding the proper aims of intervention programs:

". . . the unexpressed purpose of most compensatory programs is to make disadvantaged children as much as possible like the kinds of children with whom the school has been successful, and our standards of educational success is how well they approximate middle-class children in school performance. It is not at all clear that the concept of compensatory education is the one which will most appropriately meet the problems of the disadvantaged. These children are *not* middle-class children, many of them never *will* be, and they can never be anything but second-rate as long as they are thought of as potentially middle-class children. . . . At best they are different, and an approach which views this difference merely as something to be overcome is probably doomed to failure."

"LEARNING QUOTIENT" VERSUS INTELLIGENCE QUOTIENT

If many of the children called culturally disadvantaged are indeed "different" in ways that have educational implications, we must learn as much as possible about the real nature of these differences. To what extent do the differences consist of more than just the well-known differences in IQ and scholastic ahcievements, and, of course, the obvious differences in cultural advantages in the home?

Evidence is now emerging that there are stable ethnic differences in *patterns* of ability and that these patterns are invariant across wide socioeconomic differences (Lesser, Fifer & Clark, 1965; Stodolsky & Lesser, 1967). Middle-class and lower-class groups differed about one standard deviation on all four abilities (Verbal, Reasoning, Number, Space) measured by Lesser and his co-workers, but the profile or pattern of scores was distinctively different for Chinese, Jewish, Negro, and Puerto Rican children, regardless of their social class. Such differences in patterns of ability are bound to interact with school instruction. The important question is how many other abilities there are that are not tapped by conventional tests for which there exist individual and group differences that interact with methods of instruction.

Through our research in Berkeley we are beginning to perceive what seems to be a very significant set of relationships with respect to patterns of ability which, unlike those of Lesser et al., seem to interact more with social class than with ethnic background.

In brief, we are finding that a unidimensional concept of intelligence is quite inadequate as a basis for understanding social class differences in ability. For example, the magnitude of test score differences between lower- and middle-class children does not always correspond to the apparent "cultural loading" of the test. Some of the least culturally loaded tests show the largest differences between lower- and middle-class children. At least two dimensions must be postulated to comprehend the SES differences reported in the literature and found in our laboratory (see Jensen, 1968c, 1968d). These two dimensions and the hypothetical location of various test loadings on each dimension are shown in Figure 17. The horizontal axis represents the degree of cultural loading of the test. It is defined by the test's heritability. I have argued elsewhere (Jensen, 1968c) that the heritability index for a test is probably our best objective criterion of its culture-fairness. Just because tests do not stand at one or the other extreme of this continuum does not mean that the concept of culture-fairness is not useful in discussing psychological tests. The vertical axis in Figure 17 represents a continuum ranging from "simple" associative learning to complex cognitive or conceptual learning. I have hypothesized two genotypically distinct basic processes underlying this continuum, labeled Level I (associative ability) and Level II (conceptual ability). Level I involves the neural registration and consolidation of stimulus inputs and the formation of associations. There is relatively little transformation of the input, so there is a high correspondence between the forms of the stimulus input and the form of the response output. Level I ability is tapped mostly by tests such as digit memory, serial rote learning, selective trial-and-error learning with reinforcement (feedback) for correct responses, and in slightly less "pure" form by free recall of visually or verbally presented materials, and paired-associate learning. Level II abilities, on the other hand, involve self-initiated elaboration and transformation of the stimulus input before it eventuates in an overt response. Concept learning and problem solving are good examples. The subject must actively manipulate the input to arrive at the output. This ability is best measured by intelligence tests with a low cultural loading and a high loading on *g*—for example, Raven's Progressive Matrices.

Social class differences in test performance are more strongly associated with the

vertical dimension in Figure 17 than with the horizontal.

ASSOCIATIVE LEARNING ABILITY

Teachers of the disadvantaged have often remarked that many of these children seem much brighter than their IQs would lead one to expect, and that, even though their scholastic performance is usually as poor as that of middle-class children of similar IQ, the disadvantaged children usually appear much brighter in nonscholastic ways than do their middle-class counterparts in IQ. A lower-class child coming into a new class, for example, will learn the names of 20 or 30 children in a few days, will quickly pick up the rules and the know-how of various games on the playground, and so on—a kind of performance that would seem to belie his IQ, which may even be as low as 60. This gives the impression that the test is "unfair" to the disadvantaged child, since middle-class children in this range of IQ will spend a year in a classroom without learning the names of more than a few classmates, and they seem almost as inept on the playground and in social interaction as they are in their academic work.

We have objectified this observation by devising tests which can reveal these differences. The tests measure associative learning ability and show how fast a child can learn something relatively new and unfamiliar, right in the test situation. The child's performance does not depend primarily, as it would in conventional IQ tests, upon what he has already learned at home or elsewhere before he comes to take the test. We simply give him something to learn, under conditions which permit us to measure the rate and thoroughness of the learning. The tasks most frequently used are various forms of auditory digit memory, learning the serial order of a number of familiar objects or pictures of objects, learning to associate pairs of pictures of familiar objects, and free recall of names or objects presented from one to five times in a random order.

Our findings with these tests, which have been presented in greater detail elsewhere (Jensen, 1968a, 1968b, 1968d, 1968e; Jensen, 1968f; Jensen & Rohwer, 1968), seem to me to be of great potential importance to the education of many of the children called disadvantaged. What we are finding, briefly, is this: lower-class children, whether white, Negro, or Mexican-American, perform as well on these direct learning tests as do middle-class children. Lower-class children in the IQ range of about 60 to 80 do markedly *better* than middle-class children who are in this range of IQ. Above about IQ 100, on the other hand, there is little or no difference between social class groups on the learning tests.

At first we thought we had finally discovered a measure of "culture-fair" testing since we found no significant SES differences on these learning tests. But we can no longer reconcile this interpretation with all the facts now available. Some of the low SES children with low IQs on culturally loaded tests, like the Peabody Picture Vocabulary Tests, do very well on our learning tests, but do not have higher IQs on less culturally loaded tests of *g*, like the Progressive Matrices. It appears that we are dealing here with two kinds of abilities—associative learning ability (Level I) and cognitive or conceptual learning and problem-solving ability (Level II).

One particular test—free recall—shows the distinction quite well, since a slight variation in the test procedure makes the difference between whether it measures Level I or Level II. This is important, because it is sometimes claimed that low SES children do better on our learning tests than on IQ tests because the former are more interesting or more "relevant" to them, and thus make them more highly motivated to perform at their best. This is not a valid interpretation, since when essentially the same task is made either "associative" or "cognitive," we get differences of about one standard deviation in the mean scores of lower- and middle-class children. For example, 20 unrelated familiar objects (doll, toy car, comb, cup, etc.) are shown to children who are then asked to recall as many objects as they can in any order that may come to mind. The random presentation and recall are repeated five times to obtain a more reliable score. Lower- and middle-class elementary school children perform about the same on this task, although they differ some 15 to 20 points in IQ. This free recall test has a low correlation with IQ and the correlation is lower for the low SES children. But then we can change the recall test so that it gives quite different results.

This is shown in an experiment from our laboratory by Glasman (1968). (In this study SES and race are confounded, since the low SES group were Negro children and the middle SES group were white.) Again, 20 familiar objects are presented, but this time the objects are selected so that they can be classified into one of four categories, *animals, furniture, clothing,* or *foods*. There are five items in each of the four categories, but all 20 items are presented in a random order on each trial. Under this condition a large social class difference shows up: the low SES children perform only slightly better on the average than they did on the uncategorized objects, while the middle SES children show a great improvement in performance which puts their scores about one standard deviation above the low SES children. Furthermore, there is much greater evidence of "clustering" the items in free recall for the middle SES than for the low SES children. That is, the middle-class children rearrange the input in such a way that the order of output in recall corresponds to the categories to which the objects may be assigned. The low SES children show less clustering in this fashion, although many show rather idiosyncratic pair-wise "clusters" that persist from trial to trial. There is a high correlation between the strength of the clustering tendency and the amount of recall. Also, clustering tendency is strongly related to age. Kindergarteners, for example, show little difference between recall of categorized and uncategorized lists, and at this age SES differences in performance are nil. By fourth or fifth grade, however, the SES differences in clustering tendency are great, with a correspondingly large difference in ability to recall categorized lists.

It is interesting, also, that the recall of categorized lists correlates highly with IQ. In fact, when mental age or IQ is partialled out of the results, there are no significant remaining SES differences in recall. Post-test interviews showed that the recall differences for the two social class groups cannot be attributed to the low SES group's not knowing the category names. The children know the categories but tend not to use them spontaneously in recalling the list.

In general, we find that Level I associative learning tasks correlate very substantially with IQ among middle-class children but have very low correlations with IQ among lower-class children (Jensen, 1968b). The reason for this difference in correlations can be traced back to the form of the scatter diagrams for the middle and low SES groups, which is shown schematically in Figure 18. Since large representative samples of the entire school population have not been studied so far, the exact form of the correlation scatter diagram has not yet been well established, but the schematic portrayal of Figure 18 is what could be most reasonably hypothesized on the basis of several lines of evidence now available. (Data on a representative sample of 5000 children given Level I and Level II tests are now being analyzed to establish the forms of the correlation plots for low and middle SES groups.) The form of the correlation as it now appears suggests a heirarchial arrangement of mental abilities, such that Level I ability is necessary but not sufficient for Level II. That is, high performance on Level II tasks depends upon better than average ability on Level I, but the reverse does not hold. If this is true, the data can be understood in terms of one additional hypothesis, namely, that Level I ability is distributed about the same in all social class groups, while Level II ability is distributed differently in lower and middle SES groups. The hypothesis is expressed graphically in Figure 19. Heritability studies of Level II tests cause me to believe that Level II processes are not just the result of interaction between Level I learning ability and experientially acquired strategies or learning sets. That learning is necessary for Level II no one doubts, but certain neural structures must also be available for Level II abilities to develop, and these are conceived of as being different from the neural structures underlying Level I. The genetic factors involved in each of these types of ability are presumed to have become differentially distributed in the population as a function of social class, since Level II has been most important for scholastic performance under the traditional methods of instruction.

From evidence on age differences in different tasks on the Level I—Level II continuum (e.g., Jensen & Rohwer, 1965), I have suggested one additional hypothesis concerning the developmental rates of Level I and Level II abilities in lower and middle SES groups, as depicted in Figure 20. Level I abilities are seen as developing rapidly and as having about the same course of development and final level in both lower and middle SES groups. Level II abilities, by contrast, develop slowly at first, attain prominence between four and six years of age, and show an increasing difference between the SES groups with increasing age. This formulation is consistent with the increasing SES differences in mental age on standard IQ tests, which tap mostly Level II ability.

Thus, ordinary IQ tests are not seen as being "unfair" in the sense of yielding inaccurate or invalid measures for the many disadvantaged children who obtain low scores. If they are unfair, it is because they tap only one part of the total spectrum of mental abilities and do not reveal that aspect of mental ability which may be the disadvantaged child's strongest point—ability for associative learning.

Since traditional methods of classroom instruction were evolved in populations having a predominantly middle-class pattern of abilities, they put great emphasis on cognitive learning rather than associative learning. And in the post-Sputnik era, education has seen an increased emphasis on cognitive and conceptual learning, much to the disadvantage of many children whose mode of learning is predominantly associative. Many of the basic skills can be learned by various means, and an educational system that puts inordinate emphasis on only one mode or style of learning will obtain meager results from the children who do not fit this pattern. At present, I believe that the educational system—even as it falteringly attempts to help the disadvantaged—operates in such a way as to maximize the importance of Level II (i.e., intelligence or *g*) as a source of variance in scholastic performance. Too often, if a child does not learn the school subject matter when taught in a way that depends largely on being average or above average on *g*, he does not learn at all, so that we find high school students who have failed to learn basic skills which they could easily have learned many years earlier by means that do not depend much on *g*. It may well be true that many children today are confronted in our schools with an educational philosophy and methodology which were mainly shaped in the past, en-

tirely without any roots in these children's genetic and cultural heritage. The educational system was never allowed to evolve in such a way as to maximize the actual potential for learning that is latent in these children's patterns of abilities. If a child cannot show that he "understands" the meaning of 1+1=2 in some abstract, verbal, cognitive sense, he is, in effect, not allowed to go on to learn 2+2=4. I am reasonably convinced that all the basic scholastic skills can be learned by children with normal Level I learning ability, provided the instructional techniques do not make *g* (i.e., Level II) the *sine qua non* of being able to learn. Educational researchers must discover and devise teaching methods that capitalize on existing abilities for the acquisition of those basic skills which students will need in order to get good jobs when they leave school. I believe there will be greater rewards for all concerned if we further explore different types of abilities and modes of learning, and seek to discover how these various abilities can serve the aims of education. This seems more promising than acting as though only one pattern of abilities, emphasizing *g*, can succeed educationally, and therefore trying to inculcate this one ability pattern in all children.

If the theories I have briefly outlined here become fully substantiated, the next step will be to develop the techniques by which school learning can be most effectively achieved in accordance with different patterns of ability. By all means, schools must discover *g* wherever it exists and see to it that its educational correlates are fully encouraged and cultivated. There can be little doubt that certain educational and occupational attainments depend more upon *g* than upon any other single ability. But schools must also be able to find ways of utilizing other strengths in children whose major strength is not of the cognitive variety. One of the great and relatively untapped reservoirs of mental ability in the disadvantaged, it appears from our research, is the basic ability to learn. We can do more to marshal this strength for educational purposes.

If diversity of mental abilities, as of most other human characteristics, is a basic fact of nature, as the evidence indicates, and if the ideal of universal education is to be successfully pursued, it seems a reasonable conclusion that schools and society must provide a range and diversity of educational methods, programs, and goals, and of occupational opportunities, just as wide as the range of human abilities. Accordingly, the ideal of equality of educational opportunity should not be interpreted as uniformity of facilities, instructional techniques, and educational aims for all children. Diversity rather than uniformity of approaches and aims would seem to be the key to making education rewarding for children of different patterns of ability. The reality of individual differences thus need not mean educational rewards for some children and frustration and defeat for others.

PARLIAMENTARY INQUIRY

Mr. GROSS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state his parliamentary inquiry.

Mr. GROSS. Is there pending on the Speaker's desk a communication from the Postmaster General?

The SPEAKER. The Chair will respond by saying that there is a communication from the President on the postal service system. It has been referred to the Committee on Post Office and Civil Service.

Mr. GROSS. Mr. Speaker, when was the referral made?

The SPEAKER. The Chair will advise the gentleman that the referral was made after it was received this afternoon, as are all other communications of a similar nature.

SUSPENSION OF DRAFT CALLS

The SPEAKER. Under previous order of the House, the gentleman from New York (Mr. RYAN) is recognized for 10 minutes.

(Mr. RYAN asked and was given permission to revise and extend his remarks.)

Mr. RYAN. Mr. Speaker, today I have introduced a resolution expressing the sense of the Congress that the President of the United States should suspend the monthly draft calls for a period of 180 days, or 6 months. I have been joined in cosponsoring the resolution by 8 other Members of the House: Congressman BROWN, of California, Congressman BURTON, of California, Congressman BUTTON, of New York, Congressman DIGGS, of Michigan, Congressman EDWARDS, of California, Congressman HELSTOSKI, of New Jersey, Congressman KOCH, of New York, and Congressman POWELL, of New York.

I believe that Congress must express its conviction that no more young men should be drafted to fight the tragic and still undeclared war in Vietnam.

As I have said on numerous occasions, most recently in connection with the supplemental appropriation bill which was before the House last week, Congress has always possessed the power to assert its influence on the conduct of the war. By voting against further appropriations for the Vietnam war, Congress could force the administration to deescalate our military involvement in Southeast Asia and hasten a negotiated settlement of that conflict.

Similarly, by expressing the belief that no more young men should be drafted to fight in a war for which Congress has never passed a formal declaration of war, the House could end the infusion of still more men into Vietnam and, moreover, make clear its determination that the administration must begin to withdraw American troops from Southeast Asia.

President Nixon has said that he seeks an agreement with North Vietnam for mutual withdrawal of troops over a 12-month period. But the successful negotiation of such an agreement—if it is possible at all—will take time, perhaps as long as a year. In the meantime, thousands of young men will continue to be drafted to fight in Vietnam, and many will be wounded or killed.

During the calendar year 1968, 298,010 men were drafted into the armed services, 32.3 percent—or almost one in three—of these draftees were sent to Vietnam. The Selective Service System has estimated that about 202,400 additional young men will be drafted during the first 7 months of the current year.

Mr. Speaker, I include at this point in my remarks figures showing the monthly draft calls for calendar year 1968 and the first 7 months of calendar year 1969.

Draft calls for calendar years 1968 and 1969

1968:	
January	34,000
February	23,300
March	41,000
April	48,000
May	45,900
June	20,000
July	15,000
August	18,300
September	12,002
October	13,008
November	10,000
December	17,500
Total	298,010
1969:	
January	26,800
February	33,700
March	33,100
April	33,000
May*	27,600
June*	25,900
July*	22,300
Total for first 7 months	202,400

*Estimated.

Despite the rejection of the policies of the Johnson administration in the primary and national elections of last year, the killing and destruction continues to take a heavy toll in Vietnam. During the 12 months that the Paris peace talks have already dragged on, over 12,000 American servicemen have died, and thousands more have been wounded. Moreover, the Nixon administration has yet to turn away from the military strategy of the Johnson administration.

In addition to the mounting casualties imposed by our continued presence in Vietnam, the war continues to pose a cruel dilemma to thousands of draft-eligible young men who face induction into the Armed Forces.

Many of these young men—including most recently over 250 student body presidents and newspaper editors from some of our finest universities and colleges—have indicated that, so long as the war in Vietnam continues, they intend to choose jail, if necessary, rather than serve in the Armed Forces.

A few months ago during the presidential campaign, President Nixon said that he favored substituting a volunteer army for the draft. Yet his only legislative proposal thus far has been to recommend a lottery system for selecting draftees. While a lottery would no doubt aid the millions of draft eligible young men in determining if and when they must serve in the Armed Forces, it would retain the basic feature of the present system—namely, conscription.

While substantive alternatives to the present draft, including both a volunteer army and a system of alternative service which would allow a conscriptee to choose service in any of several domestic programs in place of military service have been suggested, it is unlikely that any of these proposals will be acted upon until the Vietnam war is over unless Congress takes the initiative.

An immediate 6-month suspension of the draft calls by the President would provide an opportunity for Congress to assert its proper role in formulating foreign policy, assess alternatives to the present draft system, and evaluate the progress made by the Nixon administration in negotiating an end to the conflict. It would additionally make clear the determination of Congress to withdraw American troops from Vietnam, thereby helping also to persuade the North Vietnamese that the administration does indeed seek a negotiated settlement.

Well over a year ago, in the course of the New Hampshire primary, presidential candidate Richard Nixon said:

The next President of the United States must end the war in Vietnam.

Today, President Nixon has yet to end the war in Vietnam. Unfortunately, there is little evidence that the present policy represents any change from the basic strategy which was pursued for so many years at such an incredibly heavy price by his predecessor.

The killing continues and the drafting of more young men goes on. If the administration is not prepared to take the steps necessary to extricate us from the quagmire in Southeast Asia, then I believe that Congress must assert its role—and I have outlined on a number of occasions how that can best be accomplished—to bring about a change in policy. Our first action ought to be to tell the President of the United States, as we propose today in our resolution, that no more young men should be drafted to fight in a war in which so many of them do not believe and find they cannot support. I urge that this resolution be brought to the House for prompt consideration.

HON. WILLIAM J. DRIVER—23 YEARS OF FEDERAL CAREER SERVICE

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. TEAGUE) is recognized for 15 minutes.

Mr. TEAGUE of Texas. Mr. Speaker, one of the Government's finest servants is leaving. The loss of Administrator

William J. Driver of the Veterans' Administration is more than the loss of a dedicated, unusually competent career public servant. We are losing a man who not only is the most competent administrator in Government, but one who knows, understands, and works most effectively with Congress on both sides of the aisle.

I cannot feel too much sympathy for Administrator Driver, for I understand he has job offers that make his Government pay look rather niggardly. I am surprised that one of his ability, competence, good sense, and understanding has not left for greener pastures years ago. But it is a mark of Bill Driver's character that he chose to remain, at financial sacrifice, to serve his Government and a constituency of veterans numbering in the millions.

Never has one man been so widely respected by Congressmen of both parties and by the veterans' groups as has Bill Driver. He has served with a single goal—to serve the veterans of this country as intended by the laws passed by the two bodies here. His success is marked by any measure one chooses to apply—response to veterans' needs, efficiency, compliance with congressional intent and results.

Bill Driver is the first career official to administer the affairs of America's veterans and their families. In the superb performance of his assignment, he has brought great and everlasting credit to the career service.

When he was appointed Administrator in December 1964 by President Johnson, the President declared:

> I hope the recognition of Mr. Driver for his effective and dedicated service will serve as an example to others in government service.

He has more than fulfilled those expectations.

Mr. Driver's service at the Veterans' Administration stretches back over almost 23 years, with time out only to return to military service in the Korean conflict.

Many professional honors have come to this exceptional man. He was winner in 1964 of the Coveted Career Service Award of the National Civil Service League and holds the Exceptional Service Medal and Meritorious Service Medal, the two highest awards granted by the Veterans' Administration. In 1965, he was the winner of the Management Achievement Award from the Society for Advancement of Management. He has received numerous awards for achievements and administration from Veterans' Service Organizations.

Mr. Driver was chosen by the President to serve on many important committees, including the Board of Foreign Scholarships, the President's Committee on Health Manpower, the Joint United States-Philippine Commission, the President's Committee on Consumer Affairs, the National Housing Council and several home financing committees.

Bill Driver holds degrees in business administration and public administration and a law degree which he earned in evening class attendance under the World War II GI bill. He was an outstanding military officer, winning the Legion of Merit, Bronze Star, Order of the British Empire, and Croix de Guerre.

His record of effective administration at the Veterans' Administration begins with his appointment in 1946. He was successively promoted to Director of Compensation and Pension Service, head of the Department of Veterans' Benefits, and then to Deputy Administrator.

We all know of the magnitude of VA's programs. Yet, under Bill Driver, this tremendously complex, immense operation embracing over 170,000 employees and expenditures of over $7 billion was run with astonishing success. He is responsible for some of the most effective innovations in administration and medical research. He initiated and made work efficiently and effectively a huge insurance program. He improved medical and nursing care in the Nation's largest medical program.

The esteem and high respect in which Mr. Driver's coworkers held him, I believe, is a true mark of his ability to bring out the best in those he worked with. If the Government had to pay overtime for the thousands and thousands of hours put in by Bill Driver and those dedicated to him and the VA, a supplemental appropriation would be necessary.

I salute Bill Driver not only as the finest Administrator of Veterans' Affairs ever to serve in the post, not only as a man with unparalleled congressional understanding, not only as a believer in causes of equality and human rights, but as a respected friend of many years.

This Congress, the Veterans' Administration—indeed, the entire Federal Government, and the millions served by the VA are going to sorely miss Bill Driver.

Mr. RIVERS. Mr. Speaker, the VA, as an independent agency, was 16 years old when Bill Driver joined it in 1946. It had a record of 35 years of service to America's veterans when he became its Administrator in 1965. Yet it can be said that in the past 4½ years, under Bill Driver's leadership, the VA has accomplished more "firsts" than in its entire previous existence.

For example, since January 1967 VA contact representatives in Vietnam have been providing first-time-in-history battlefield briefing on veteran benefits to our servicemen there. To date, nearly three-quarters of a million troops have been briefed on their veteran benefits.

In November 1966, VA representatives began counseling disabled servicemen in U.S. military hospitals on their veteran benefits. Under this program, begun in Bill Driver's tenure as Administrator of Veterans' Affairs, more than 160,000 interviews have been conducted, and more than 100,000 applications for benefits filed by servicemen in the 184 U.S. military hospitals served by VA.

Servicemen at 304 separation centers throughout the United States are also receiving veteran benefit briefing.

I could go on citing the "firsts" achieved by VA since William J. Driver became Administrator. The establishment of 21 U.S. veterans assistance centers throughout the country. VA's Outreach program to contact returning Vietnam era veterans, particularly the disadvantaged, to encourage them to further their education and assist them in finding jobs.

However, all of these "firsts" simply confirm a fact all of us who are privileged to know William J. Driver have long recognized.

The retiring Administrator of Veterans' Affairs is a man of compassion, concern, and can-do when it comes to helping America's veterans.

We will miss him. But we wish him, his wife and family nothing but continued health, happiness, and success in the years ahead.

Mr. MAHON. Mr. Speaker, Bill Driver was appointed Administrator of Veterans' Affairs by President Johnson in late 1964. Undoubtedly, the President had men like Bill Driver in mind when he said in a message to Congress in 1966:

> Among the many blessings which Americans can count is a corps of Federal civil servants that is unequaled anywhere in the world. Honest, intelligent, efficient, and—above all—dedicated, these men and women represent a national resource and a national asset.

Bill Driver's appointment was widely applauded at the time. A veteran of two wars and the first career official to administer the affairs of America's ex-servicemen and women, he brought to the office a demonstrated record of achievement and ability over a period of 16 years in the VA.

The needs of the Nation's veterans and their families were changing. Servicemen returning from Vietnam at a rapid pace were becoming new veterans with new needs. Veterans of other wars were growing older and their economic requirements were different. The GI home loan program needed adjusting to meet current market prices. It was the time to reevaluate the entire structure of veterans' benefits.

The President and the Congress responded to the challenge and set a landmark in veterans' legislation. New laws were passed to update benefits. The additional demands placed on the Veterans' Administration required capable leadership. Bill Driver put himself to the job. And I believe Members and veterans alike agree generally that he has done an excellent job.

My best wishes go with Bill and Mrs. Driver for health, happiness, and prosperity.

Mr. MILLS. Mr. Speaker, I would like to pay tribute to William J. Driver who has resigned as the Administrator of Veterans' Affairs. For almost 4½ years Bill Driver has served as head of the Veterans' Administration. He came to that office with eminent preparation and his outstanding performance as the Administrator can be attributed to his intimate knowledge of the agency and his devotion to veterans, to our country, and to our Government.

Each administration faces the challenge of attracting qualified people to serve in top positions. I submit that we should look more often to employees in the Federal career service. Bill Driver's career is a case in point.

William J. Driver graduated cum laude from Niagara University in 1941

with a degree in business administration. From 1942 to 1946 he served as a commissioned officer with Headquarters, Adjutant General, European Theater of Operations.

He joined the Veterans' Administration in Washington in February 1946 as special assistant to the Assistant Administrator for Contact and Administrative Service. While progressing through positions, each with increasing degrees of responsibility, he attended night classes at the law school of the George Washington University under the GI bill until he earned an LL.B. degree. Later, he received a master's degree in public administration from that university.

During the Korean conflict he was recalled to active duty, serving as a lieutenant colonel with the Office of the Assistant Chief of Staff, U.S. Army. His military decorations include the Legion of Merit, the Bronze Star, the Order of the British Empire, and the Croix de Guerre.

When his second tour of duty was completed Mr. Driver returned to the VA. He was named Director of the huge Compensation and Pension Service in 1956, and in January 1958 became head of the entire Department of Veterans' Benefits. In February 1961, he was named to the No. 2 post in the VA as Deputy Administrator. He was appointed Administrator of Veterans' Affairs by President Johnson on December 26, 1964.

Many awards attest to Bill Driver's ability. In 1964 he received the coveted Career Service Award of the National Civil Service League. He holds the Exceptional Service Medal and the Meritorious Service Medal, the two highest awards granted by the Veterans' Administration. In 1965 the Society for the Advancement of Management named him the winner of its Management Achievement Award for significant contributions toward the advancement of management in government. In 1967, he received AMVETS highest award, the Silver Helmet, for "outstanding and effective administration of the greatest rehabilitation accomplished in the history of mankind."

He was chosen by the President to serve on several important committees including the Board of Foreign Scholarships, the President's Committee on Health Manpower, the Joint United States-Philippine Commission, the President's Committee on Consumer Affairs, and the National Housing Council.

He is a member of the Advisory Committee on Education and Scholarships of the American Legion.

In the haste of business we so often take our public servants for granted. I cannot let this happen to Bill Driver who has served all of us faithfully and well.

I trust that Bill and his lovely wife, Marian, will enjoy their new endeavors. I hope that they will fondly remember the fine relationship the Administrator had with so many Members of Congress and be warmed by our good wishes that go with them.

Mr. WAGGONNER. Mr. Speaker, it is indeed a sad event that William J. Driver, the Administrator of Veterans' Affairs, has resigned.

Surely there can be no doubt of Mr. Driver's outstanding executive ability. Since joining the VA more than 23 years ago, he has climbed the ladder from a comparatively low rung to the highest position.

He began as the special assistant to the Assistant Administrator for Contact and Administrative Service in February 1946 and was named to the top post in December 1964.

At one point he was director of VA's huge Compensation and Pension Service which today dispenses about $4.6 billion annually. Later he headed VA's entire Department of Veterans' Benefits which included the familiar GI education bill, the loan program, which assisted in the building of one out of every five American homes after World War II, and one of the largest life insurance operations in the world.

When he became the No. 2 man in the VA in February 1961, and later as Administrator of Veterans' Affairs, his responsibility was expanded to include the largest medical program in the free world, which now includes a network of 166 hospitals.

The VA overall, judged by the size of the budget or by the number of employees, is the third largest agency in the entire U.S. Government.

Surely a career civil servant who can start at a modest post and work his way to the top of such a large and complex operation, has already proved he has what it takes.

As a Member of Congress, I wish Mr. Driver well in whatever he selects in the days and years ahead to further his already brilliant career.

Mr. Driver, in my opinion, was the most capable Administrator in the Federal service. I say this with no intention of exaggeration. I regret that his career was turned into a political football but I am sure that those who took part in the harassment have lost as much as those of us who defended him. Both sides are the losers equally because we have lost the services of this good man.

Mr. POAGE. Mr. Speaker, there is no better example of cooperation between the legislative and executive branches of our Government than that set in the administration of veterans' affairs during the past 3 years.

This Nation's 26 million veterans have been fortunate to have had a career civil servant, William J. Driver, at the head of the Veterans' Administration. The Congress and the Nation as a whole have shared in that good fortune.

Bill Driver knows the needs of veterans from the standpoint of his own experience as a veteran of two wars. He knows the science of administering these benefits from the lessons learned during the 19 years he spent in VA before he became its Administrator. As an intelligent student of government who completed two of his three academic degrees after entering Government service, he appreciates the significance of veteran's programs in the total social and economic framework of this country.

All of these qualifications have allowed him to work closely with the Congress in developing and administering programs that are deserved by our veterans and constructive to the total national interest.

As he leaves Government service after 23 years, I commend his record to all those who aspire to high civil service positions and to those who seek merely to earn the satisfaction of having served their country well. His departure is, I hope, but a temporary setback in the promotion of inservice career employees to the highest positions of responsibility in the U.S. Government.

Mr. PICKLE. Mr. Speaker, a Congressman speaks for his constituents and there is one voice back in Texas that just must be heard today as we pay tribute to William J. Driver, the retiring Administrator of Veterans' Affairs.

In 1964 President Lyndon B. Johnson appointed Mr. Driver to VA's highest position. The President did not know Bill Driver personally but in his wisdom he felt a Federal career employee would be best for the job. Mr. Driver was then serving as VA's Deputy Administrator. The President studied his outstanding record, he was also aware of the respect veterans' organizations held for him. The qualifications were there and so the President chose this fine career official to head the very large Veterans' Administration. He could not have made a better choice.

President Johnson's deep concern for America's veterans is a matter of record and his legislative program in this field is unsurpassed. He was very proud of the accomplishments of the Veterans' Administration under the leadership of Bill Driver. He often spoke, publicly and privately, of the dedication the Administrator brought to his duties. I believe he would like to have his words reiterated on this occasion.

When President Johnson signed H.R. 12555 on March 28, 1968, he said:

> I want to pay public tribute to a career man whom I did not know when I named him to one of the most important posts in Government. There is not a Cabinet officer who handles much more money—other than perhaps HEW and Defense. There is not a more efficient administrator in the Government and not a finer public servant. I do not know what party he belongs to. I don't even know what State he comes from. All I know is that he does a great job for our country. Mr. William Driver.

At another bill-signing ceremony on October 23, 1968, the President said:

> Particularly, I want to recognize the services and the wisdom demonstrated by one of our career men, the man that all the veterans' organizations and the men of both parties recommended to me as the Veterans Administrator, Mr. Bill Driver. He has been a model of a public servant. And his ability to deal with these very delicate problems, with men who have suffered disabilities, and who are trying to be readjusted to life—it is just beyond compare. So as I leave this office, I want to say to Mr. Driver that if I could leave one wish behind me, it would be that all civil servants could handle their job like you handle yours and that we could have more civil servants in top administrative positions.

Mr. Speaker, I endorse every good word spoken on behalf of Bill Driver. I

wish a happy future for him and his lovely wife, Marian, and I am sorry that this man is leaving the Federal service.

The city of Austin literally fell in love with this quiet-spoken, distinguished gentleman. He has visited our city several times—at VFW functions, chamber of commerce banquets, and dedications. Our citizens have a higher respect for governmental employees because of the conduct and bearing and knowledge of Bill Driver, and I personally know him to be a high type, delightful public servant in the finest sense of the word.

Mr. TEAGUE of California. Mr. Speaker, I know that all of us in the House of Representatives, but particularly those of us who are privileged to serve on the Veterans' Affairs Committee, wholeheartedly join President Nixon in expressing warm thanks to Bill Driver for his many years of dedicated service to our country.

The accomplishments on behalf of America's veterans during William J. Driver's tenure as Administrator of Veterans' Affairs speak for themselves. And it is well that they do so because his inherent, sincere modesty would preclude the outgoing Administrator from setting forth a record of which any Government official and any American could be justly proud.

All of Bill Driver's outstanding civilian career in our Federal Government has been spent with the Veterans' Administration. This fact alone is a measure of his devotion to the welfare of America's veterans, their dependents and survivors. For, make no mistake, his repeatedly demonstrated administrative abilities could have won for him the same spectacular advancement in other agencies that marked his service with VA.

We on the House Veterans' Affairs Committee will remember Bill Driver for many things. For his unfailing courtesy. For his thorough preparation on every subject on which he ever testified before our committee. For his cooperation in response to all our requests.

But most of all, I think, for his determination and ability to make certain that our veterans and their families received the same courteous treatment, the same knowledgeable assistance, the same ready cooperation from all of his associates in VA that have been accorded us.

Bill Driver knew well that the highest possible standard of excellence in VA's service to our Nation's veterans would more than meet the requirements of those of us in Congress who have known and worked with him.

His successor can also be certain of this.

I have no doubt that the retiring Administrator of Veterans' Affairs will be an outstanding success in whatever endeavor he undertakes in the future. Certainly, I wish him such success as well as continued health and happiness.

Mr. ROBERTS. Mr. Speaker, it is no exaggeration to call William J. Driver, "Mr. Career Civil Servant."

A softspoken, modest man, Bill Driver has become to the thousands of executives in Government agencies what Sam Rayburn was to Members of the House of Representatives and Dwight Eisenhower was to the military—a man who worked his way to the very top.

After receiving a business administration degree from Niagara University, Bill Driver—like some 14 million others—went off to serve his country in World War II.

After the war he joined the VA in Washington as a special assistant to an assistant administrator.

Commendable, surely, but not yet noteworthy.

Rolling up his sleeves and going to work, Bill Driver received promotion after promotion to jobs with increasing responsibility.

In the early years he took law courses at night under the World War II GI bill and received an LL.B. degree from George Washington University.

His incredible success story evolved further in the years following his return to the VA after his active service in the Korean conflict.

After holding two major posts in the VA's huge Department of Veterans' Benefits, Bill Driver became Deputy Administrator of the VA in February 1961

When he was named Administrator of Veterans' Affairs in December 1964 he became, as far as I know, the only man in modern history who started in the ranks and worked his way to the very top position in one of the largest Government agencies.

Mr. William J. Driver is, indeed, a synonym for "Mr. Career Civil Servant." And I salute him as a friend of mine and the veterans of America. I am sorry to see him depart, but confident we shall again see him in public life, serving his nation and his government.

Mr. DANIEL of Virginia. Mr. Speaker, William J. Driver, the man who has done the most in behalf of this Nation's veterans, is about to leave Government service after 23 years. I want to express my appreciation for his legacy of public service as he departs for what I am certain will be many more years of dedicated service to a grateful Nation.

It is typical of Bill Driver that he is hardly known outside of the Federal Government, yet the programs he administers touch the lives of almost half the population of the United States.

As Administrator of Veterans' Affairs, Bill Driver directs an agency that is larger than several of the Presidential Cabinet Departments combined. The Veterans' Administration has more than 170,000 employees, annual expenditures of some $7 billion, and the mission of serving eligible beneficiaries among the Nation's more than 26 million veterans.

His accomplishments are unique not only for their magnitude and excellence, but for the fact that his entire adult career has been spent as a Government employee.

While he has barely reached the half-century mark, he has reached the topmost rung of the civil service ladder, and he has climbed every step of it by competence, dedication, and devotion to his Nation and our people.

From the time he earned his bachelor's degree in 1941, Bill Driver has served his country both as a civil servant and as a military man. His dedication has been evident in the quality of his service and the fact that he found time to complete two additional academic degrees while carrying full time executive responsibilities.

Men of his quality are a national resource of inestimable value no matter where their talents are applied. We shall miss Bill Driver as a public servant. I hope he returns to the fold in the near future.

Mr. HELSTOSKI. Mr. Speaker, there was no Veterans' Administration when Abraham Lincoln committed himself, his fellow citizens, and all future generations of Americans "to care for him who shall have borne the battle and for his widow and his orphan."

He would have been eminently pleased, however, with the manner in which William J. Driver, as Administrator of Veterans' Affairs for the past 4½ years, has led our Nation in the accomplishment of this essential task.

Every Member of Congress will have his own assessment of the outgoing Administrator of Veterans' Affairs. For myself, I think we may never again know the kind of leadership in the Veterans' Administration which he epitomized. Leadership forged from inherent ability, complete dedication, and unparalleled experience.

Leadership whose hallmark will be: He cared.

For America's veterans, their dependents, and survivors.

For all his associates in the Veterans' Administration, from the newest to the oldest employee.

For the Members of Congress who have the responsibility of enlarging, modernizing, and preserving the structure of veteran benefits built by our Nation over nearly two centuries.

For all of our citizens who must support not only an adequate, meaningful program of veteran benefits, but all governmental activities, from national defense to urban renewal.

Bill Driver will be missed, but he will never be forgotten.

Mr. LANDRUM. Mr. Speaker, for the benefit of young people who are considering careers in Government, I want to draw attention to the outstanding career of William J. Driver, Administrator of Veterans' Affairs.

Since his graduation from Niagara University in 1941, he has devoted his life to Government service, and has achieved new heights in career civil service.

As a young veteran of World War II, he joined the Veterans' Administration in 1946. About 19 years later Bill Driver was selected for the top post in this huge organization.

Bill Driver brought professional management to the $7 billion veterans' affairs program. While doing this Bill Driver earned the respect and admiration of veterans organizations as well as his associates in Government.

Among his honors is the coveted Career Service Award of the National Civil Service League, the Exceptional Service Medal, the Meritorious Service Medal, and the Management Achievement Award given by the Society for the Ad-

vancement of Management for significant contributions toward the advancement of management in Government.

Bill Driver's greatest achievement, Mr. Speaker, is having successfully climbed the career ladder to head the third largest agency in the U.S. Government. He is the first man to achieve this distinction among the millions who have served before him.

On his departure from Government, he deserves our utmost gratitude for his services and our best wishes in his future career. I tender both to him, Mr. Speaker, in grateful admiration.

Mr. FUQUA. Mr. Speaker, one of the greatest friends a veteran ever had has resigned after serving them with courage and compassion for more than 20 years.

I refer, of course, to the Honorable William J. Driver who since 1965 has steered the third largest independent Federal agency as Administrator of Veterans' Affairs.

His efforts on behalf of the Nation's 26,800,000 veterans can not pass without comment.

Bill Driver's outstanding leadership has been clearly demonstrated in conflict and peace—at home and abroad.

Those whom he has so faithfully served during his long span of service with the Veterans' Administration have time and again singled out Bill Driver with honors and testimonials.

Bill Driver was promoted to the post of Administrator by President Johnson who at that time singled him out for his outstanding achievement and demonstrated ability during his long career with the VA and his service to his country. His promotion was a milestone in career service. His departure will discourage thousands who strive for recognition as loyal and dedicated civil servant.

It has been a rare privilege for this great Nation of ours to have had such unequaled leadership in such a high Government post. Bill Driver has served with devotion his country, his Government, and his fellow veterans.

Mr. SATTERFIELD. Mr. Speaker, as a Member of Congress I have had the opportunity as we all do to talk to the heads of many Government agencies.

The job of a top Government office is really a temporary job, one that generally changes with the change of each administration.

However, Members of the House have, in recent years, dealt with a highly competent individual who knows more about his agency than any other man now in public service and I speak of Bill Driver, retiring head of the VA.

The reason is simple:

William J. Driver did not come to the post in the VA from Congress, from an executive position in State government or from some key position in private industry. Unlike any other top man in a large Government office, he came from within the agency.

Bill Driver just knows more about the VA than anyone else, and all of us who worked with him hoped we would be able to continue to do so.

We learned with sadness this is not going to happen. Bill Driver is departing, Mr. Speaker, and with him will go the know-how and competence we so greatly need in Government today. We cannot afford, as a Nation, Mr. Speaker, to lose the services of many Bill Drivers. We have too few to begin with.

Mr. ICHORD. Mr. Speaker, regretfully, Bill Driver has resigned as the distinguished leader of the Veterans' Administration.

As head of the third largest Federal agency, this richly endowed yet modest Administrator has clearly demonstrated his love for mankind, but more especially for those who offered their lives in the defense of this great Nation of ours.

Bill Driver, is a remarkable man. He graduated cum laude from Niagara University wth a degree in business administration. He added to this a degree in law, and yet, in spite of his busy career, Bill Driver went on to earn his master's degree at George Washington University.

Since his promotion by President Johnson as Administrator of Veterans' Affairs in 1964, Bill Driver has carried forth with vigor, honesty, and determination the trust vested in him.

His executive ability is keen as shown in his successful and continuous striving for improved legislation for the benefit of our 26,800,000 veterans and their families.

His colleagues in war and peace are proud of Bill Driver.

His country and those who have defended her flag are justly proud and will be forever grateful to Bill Driver.

Mr. AYRES. Mr. Speaker, the Veterans' Affairs Committee is losing the services of a man who has made our work a lot more effective during the last 4 years. While he was not a member of this committee, this man, William J. Driver, was a key figure in the development of sound programs for veterans of this Nation's wars.

Because he has spent more than 20 years in VA as a civil servant—the first to head the Veterans' Administration—Bill Driver could be depended on for sound recommendations as to the needs of veterans. As a skilled administrator, he could be depended on to carry out programs in the spirit intended by the Congress.

His rise to this position as head of the third largest agency in the Federal Government is a tribute to our career civil service system. His personal merit has been recognized and rewarded by advancement in this system because he has remained objective, dedicated, and nonpartisan.

His decision to resign from Federal service saddens me personally and leaves me with a sense of loss for the Veterans' Affairs Committee. I would feel an even greater sense of loss if I were not confident that Bill Driver's exceptional talents for administration and his deep sense of integrity will continue to serve this Nation wherever he chooses to apply them.

Perhaps by leaving Government in his prime after a successful career, he will furnish still another example of the value in the exchange of talents between the various sectors of our national endeavor.

As a member of the Veterans' Affairs Committee, I hate to lose him, but, knowing Bill Driver as I do, I am confident that he is leaving his agency in such a position that it will make the transition to a new Administrator quite smoothly and that it will serve Bill Driver's successor loyally and effectively.

Mr. HALEY. Mr. Speaker, as Administrator, William J. Driver was involved with the many departments of the Veterans' Administration. I was particularly interested in his relationship with VA's large Department of Medicine and Surgery. I wondered how a layman would provide leadership in the complex field of medicine. I believe Bill Driver was successful because he is a true professional among professionals. I am sorry he is leaving the public service.

Administrator Driver recognized and honored the commitment of the physician to his patient and he never lost his clear perspective and unerring faculty for differentiating between administrative and medical judgments.

Thus he built a remarkable feeling of mutual confidence, trust, and tolerance between his office and that of the medical staff. He shared with his professional colleagues a personal commitment to an ideal of service to humanity and a broad public concern.

Mr. Driver was deeply aware of problems facing the medical department: The competitiveness for scarce professional personnel, the rising cost of health care services, the need for modernizing or replacing outdated facilities, the impact of sophisticated and costly new procedures. Yet, he was not parochial in seeking creative solutions to these problems. He recognized that medical care of veterans is inextricably tied to the delivery of health care service to all Americans.

Mr. Driver's support of medical research, the education and training of professional and technical personnel in VA institutions, the sharing of facilities and skilled personnel with the medical community, the exchange of medical information, stemmed from his deep conviction that the VA medical program can best serve the veteran when it also contributes to the improvement of health care for all.

As Administrator, he enthusiastically learned all he possibly could about the rapid and dramatic changes occurring in the field of medicine. His interest proved to be stimulating and insatiable to the medical staff.

He encouraged and supported the development of the latest techniques, procedures, and treatment methods required to keep VA in the forefront of American medicine. These include organ transplants, hemodialysis, open heart surgery, day hospital care, nursing home care, and restoration programs.

As a true professional, Mr. Driver never lost his commitment to learning, to rationality, and to process of reasoning. More than this could not be asked of any Administrator. Bill Driver has done his work well.

Mr. ALBERT. Mr. Speaker, I join my

colleagues in expressing regret that William J. Driver has resigned as Administrator of Veterans' Affairs.

He has been a strong and progressive leader. Fortunately, veterans will continue to benefit from many of the constructive actions wrought under his administration. I think, in particular, of the U.S. Veterans' Advisory Commission.

In 1967, Administrator Driver responded to a Presidential directive in a bold and imaginative manner. The President asked VA, in consultation with leading veterans groups, to conduct a comprehensive study of the full scope of veterans needs and existing benefits. Two goals were specified but the manner of fulfilling the request was left to the Administrator.

Mr. Driver selected an 11-man study group which became the U.S. Veterans' Advisory Commission. The composition of the members reflected careful deliberation on behalf of the Administrator. He chose a well-rounded, impartial group with each member having a special knowledge to contribute. The Chairman was the former chairman of the National Rehabilitation Commission of the American Legion; other members were five immediate past national commanders of veterans organizations, four State service directors and one retired military officer.

The Commission held hearings across the country. All who wished to speak were accorded an opportunity. Witnesses appeared from business, industry, professional groups, the press, private citizens and, of course, all veterans' organizations. The VA staff provided technical and mechanical assistance. Mr. Driver was always available when asked but the Commission was on its own because the Administrator wanted a truly citizens' report. This is typical of the sincerity Bill Driver brought to every deliberation.

As a result, the report issued by the U.S. Veterans' Advisory Commission forms a basis for a sound and progressive veterans program. It will be useful for years to come.

So many accomplishments of the Veterans' Administration reflect Bill Driver's ability to act on current problems and to project a path for success in the future. This is the highest form of leadership. Members of Congress and the veterans of our Nation will miss it.

The public service is suffering a great loss with Bill Driver's departure. I wish him well in his new venture and I express gratitude for the service he has rendered our Government.

Mr. BOGGS. Mr. Speaker, for many years the needs of America's veterans, their wives, their widows, and children have been administered and guided by one who has served his Nation so well in time of conflict and peace.

Bill Driver's acute awareness of these needs for his brothers in arms has resulted in the world's most liberal system for rewarding men and women who offered their lives for the cause of freedom.

His dedication and ability have been demonstrated repeatedly in the successful direction of the third largest independent Government agency—the VA—which administers programs to assist approximately one-half of the total population of the United States.

Bill Driver's responsibilities to his country have been accepted with honor and humility. He has administered the largest medical program in the United States—a program that includes a network of hospitals and clinics involving some 5,000 doctors and 15,000 nurses.

He has directed one of the largest life insurance operations in the world, servicing some 6 million GI insurance policies with a face value of $40 billion.

Bill Driver knows only too well the horrors of war and the pain and suffering of many who fought them. He served his flag with gallantry in World War II and in the Korean conflict. His efforts were rewarded with decorations by a grateful United States, the British Empire, and the Republic of France.

As a career man, he has served the Veterans' Administration with fidelity, his service being recognized by coveted awards from the National Civil Service League, the Society for the Advancement of Management, and the American Veterans of World War II.

Seldom in history has a public administrator been endowed with such modesty and leadership ability.

It is a grateful Nation that today acknowledges with compassion and thankfulness these fine attributes in Bill Driver—a faithful servant who discharged his obligations without fanfare—a man who gave of his talents that others may benefit—a soldier of war—a leader in peace.

Mr. FASCELL. Mr. Speaker, on December 26, 1964, William J. Driver became the first career official to head the Veterans' Administration. Now, 4½ years later, he has resigned. I am sorry this is so but I accept his judgment and I want to pay tribute to this fine public servant.

Under his leadership VA has served the veteran community in an exemplary manner. On behalf of the veterans of Florida and, indeed, the whole Nation, I express deep appreciation to Bill Driver.

The Veterans' Administration is the largest independent agency in the Federal Establishment. As Administrator, Mr. Driver was charged with awesome responsibilities. It is an agency with a diversity of duties, its programs affect the lives of America's veterans and their dependents who comprise 48 percent of the total population. For example, the Veterans' Administration:

Operates the largest chain of hospitals in the country.

Is responsible for the third largest life insurance program in the world.

Pays out $4.5 billion annually in compensation and pension disability and death benefits to 5 million recipients.

Guided the largest program of adult education ever undertaken.

Conducts over 5,000 research projects covering almost every field of medicine.

These are but a few activities of the Veterans' Administration yet Bill Driver was an expert in each field.

Surely in the annals of the Veterans' Administration William J. Driver will be recorded as a great Administrator. This is a tribute to all Federal career employees.

Mr. PUCINSKI. Mr. Speaker, I find that many people outside of Government do not really have a clear picture of the Veterans' Administration. Often they do not know how large it is—the third largest in Government—with a budget of more than $7 billion.

Of course it takes a large agency to deal with a lot of people. As of March 1969, there were 26,794,000 veterans in civil life. Together with their families veterans make up nearly half of the population of the United States.

This grateful Nation has offered a variety of benefits to men who have served their country. They include:

Education and training under the GI bill for 11½ million veterans.

A loan program which has provided home, farm and business loans of more than $68 billion to more than 7 million veterans.

Compensation and pension payments of over $4.5 billion annually to some 4.5 million disabled veterans and dependents of deceased veterans.

Life insurance under a program whereby VA services some six million policies and supervises another 3.6 million.

A medical program described as the largest in the free world under a single head. On an average day some 92,995 veterans are treated in VA's 166 hospitals.

As must be apparent, any man who can run an operation of this magnitude and diversity with genuine understanding must truly be an unusual man.

And Mr. William J. Driver is that unusual man. A top-level Administrator, Bill Driver, could, no doubt, run any large organization inside or outside of Government.

This calm, knowledgeable, cooperative, Administrator has been a man who I, as a member of the House Veterans' Affairs Committee, have come to know and place confidence in. He not only has technical knowledge, he has an inner sense of compassion and duty.

Bill Driver has been the right man in the right place and at the right time. I am sorry to see him go.

Mr. DULSKI. Mr. Speaker, this is an opportunity to pay tribute to an outstanding civil servant: William J. Driver, Administrator of Veterans' Affairs.

I regret that it is occasioned by his resignation from the Veterans' Administration.

Many Members of Congress feel a very personal loss because Bill Driver is leaving public service. We have come to rely on his leadership in all things dealing with veterans. But I think now of another group he served well—the 171,000 VA employees, third largest workforce in Government.

The policies of an agency reflect the character of its highest official. Yet, more important is the implementation of those policies. It is only when words are translated into action that the intent of the program is tested and the concern of management is known.

To Bill Driver, equal employment opportunity is a way of life and employees

are individuals with feelings and ambitions.

Because he was a career public servant himself, he recognized and encouraged the special dedication to duty desired by our Government and inherent in the best of career employees.

His high regard for public service is reflected in the members of his top staff. Each is a career employee with an average of 20 years VA service.

He chose a woman as the Assistant Administrator for Personnel—not because it was the popular thing to do, but because he knew her work and had confidence in her ability. Even as veterans benefited from this knowledgeable staff, so did VA employees.

The extraordinary record of employee relationship set by the Veterans' Administration under Bill Driver was hailed on many fronts.

Lyndon B. Johnson, former President:

I am proud of the fine record the Veterans Administration has set in supporting our Economic Assistance Programs. VA's youth employment initiatives are an example for all our partners in Government.

John W. Macy, Jr., former Chairman of the Civil Service Commission:

Throughout VA's vast organization, there has been a managerial desire to seek improvements in human relations, a willingness to tackle the complex problems of the contemporary market place, and there has been affirmative support for interagency enterprises in the community. I am certain that these conditions were a reflection of the imagination and leadership in the agency.

John F. Griner, National President, American Federation of Government Employees:

I have noted a pronounced improvement in the morale and working conditions under the administration of William J. Driver. As a citizen as well as President of this Union, I am grateful that he considered equitable treatment of employees as a major responsibility in conducting the Veterans Administration's affairs.

Mr. Speaker, I have had many opportunities to work very closely with Bill Driver in Government, and I have found him to be one of the most dedicated and conscientious public servants that I have ever known.

Bill Driver's service to his country, and particularly to the Veterans' Administration is one to which he and all of us can look with pride.

As a member of the Committee on Veterans' Affairs, it is a great honor and pleasure for me to say: Thank you, Mr. Administrator, for a job well done.

Mr. MORSE. Mr. Speaker, William J. Driver is leaving the Veterans' Administration, but the contributions he made in 20 years of service will continue to benefit the veterans of this Nation for years to come.

Throughout Mr. Driver's VA service, the growth of veterans programs and extension of benefits to veterans and their families brought about increasing workloads in the VA and a need for effective and efficient tools for processing the masses of data associated with the administration and operation of veterans programs. To this end, the most modern business tools and techniques are being employed.

The VA was one of the first Federal agencies to use computers for the processing of large amounts of data, having initiated the program under the leadership of the then Administrator, Sumner Whittier. Mr. Driver, as the Chief Benefits Director, recognized the vast potential of automatic data processing—ADP—and was an enthusiastic advocate of its use. He was responsible for the conversion of the enormous compensation and pension system, from a variety of manual-mechanical operations maintained at 69 separate stations to a centralized ADP system. The magnitude of this undertaking may be appreciated by the fact that this system maintains 4.6 million accounts and disburses about 57 million checks each year representing Government benefits to veterans and their families totaling close to $4.5 billion.

As Deputy Administrator, Mr. Driver played a leading role in establishing a new department; the Department of Data Management which centralized the supervision of all data processing activities and resources of the agency under a single organization. This was a pioneering step subsequently taken by many in private industry and elsewhere in the Government.

During Mr. Driver's tenure as Administrator of Veterans' Affairs, the development of automated systems to replace the slower and less flexible manual systems has flourished and brought about greatly improved service to veterans at far less cost to the Government.

Under his leadership, the VA personnel and payroll operation was converted to a centralized ADP system. The system automatically processes personnel and payroll data for over 170,000 central office and field station employees. Every other week it produces a magnetic tape authorizing the Treasury Department to issue salary checks, and U.S. savings bonds and notes for VA employees. The system also generates personnel documents, various management reports and accumulates cost accounting data.

Mr. Driver's ability to anticipate an agency need for adapting to changing conditions brought increasing emphasis on the use of computers to facilitate expanding operations. By mid 1969 the VA had over 50 data-processing systems in operation, most of which replaced less effective processes and lowered administrative costs. These processes have provided administrative savings totaling close to $20 million. These are recurring annual savings which on a cumulative basis total over $86 million. In addition, about $21 million savings have been realized from ADP systems which were developed to satisfy one-time requirements such as a Federal pay raise or an increase in veterans compensation and pension payments.

As Administrator, Bill Driver set an example that I hope others will follow. Service to veterans was first in his mind and he balanced it with an economical awareness.

My warmest wishes go with Marion and Bill Driver. I know that Bill will contribute greatly to whatever endeavor he undertakes, and I truly appreciate the many years of outstanding service he has given to this Nation.

Mr. ZABLOCKI. Mr. Speaker, it was with regret that I learned a few weeks ago of William J. Driver's intended resignation as Adiministrator of the Veterans' Administration.

It was my privilege to serve with Bill Driver on the United States-Philippine Commission charged with the duty of resolving the sensitive question of payments for certain Philippine veterans. Throughout our deliberations it was impressive to observe Bill Driver's diplomacy and the response he invoked in the other members. With a wisdom enhanced by sincerity, he sought a just solution. That effort was recognized by men of good faith from both countries.

Many times I have called on the VA Administrator for counsel, information, and help in veterans' affairs. No VA matter was too minor to receive his personal attention. Sometimes immediate action was required. Never was I left wanting, even on a weekend.

On one occasion a pilot group of U.S. veterans assistance centers—USVAC's—were announced with less than 20 days allotted for the opening. Much of the preparation fell to the Veterans' Administration. The first 10 USVAC's were opened on schedule. A month later, a second group, including one in my home district of Milwaukee, was in operation. This indicates a well-organized agency.

I know and veterans have confirmed it repeatedly that they find it easier to get information and help from the VA—a fact directly attributable to the aggressive programs Bill Driver encouraged.

Servicemen about to be discharged for disability are given a headstart on their vocational rehabilitation through the assistance of VA representatives who visit them at military hospitals. Bedside assistance is also furnished to speed claims for compensation, disability insurance, and other benefits administered by VA.

These are but a few of the VA accomplishments initiated by Bill Driver. His record will be hard to match.

I regret our veterans are losing this outstanding man. Surely good things will follow him as he enters private life and I wish him every happiness and satisfaction in all that he pursues.

Mr. BROWN of California. Mr. Speaker, the retiring Administrator of Veterans' Affairs is a genuinely modest man who advanced through the ranks of the Veterans' Administration during his 23-year career with VA on the basis of outstanding ability and solid accomplishments.

To each new assignment he brought fresh enthusiasm, an undiminished capacity and willingness to learn, a continuing dedication to the welfare of America's veterans, and, of course, the invaluable experience of his previous jobs.

For example, I am sure he is proud, as am I, of the success of the present post-Korean GI bill, of the 60 percent enrollment at the college level compared

with 49 percent under the Korean GI bill and 46 percent under the World War II program after the same period of time.

I am confident that he is gratified, too, at the cooperation of our military officials in permitting VA representatives to offer battlefield briefing to our servicemen in Vietnam on their veteran benefits, and to provide similar orientation to servicemen in U.S. military hospitals and at separation points throughout the country.

And I am certain that he has been thrilled by the quiet but monumental triumphs of VA medical research.

As he leaves the Veterans' Administration, William J. Driver can be proud of his record as an outstanding Administrator of Veterans' Affairs.

GENERAL LEAVE TO EXTEND

Mr. FLOWERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of the special order taken by the gentleman from Texas (Mr. TEAGUE).

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

THE U.N. STRIKES A BLOW AGAINST HUMAN RIGHTS

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, an event at the United Nations last week is well worth the attention of this House. A concerted Arab and Soviet effort to expel B'nai B'rith after 22 years of participation in human rights debates has made significant headway. By a 10-to-8 ballot, the Economic and Social Council voted to postpone continuing a specific "consultative" category to the Coordinating Board of Jewish Organizations. The coordinating board represents B'nai B'rith chapters in 40 countries with 500,000 members. This delays for a year assurance of the continuing right of this group to make proposals and participate in U.N. activities on human rights matters.

How bizarre this decision is. Well might Arab States and the Soviet Union unite in unholy wedlock to silence the voice of this Jewish organization in the area of human rights. Truth and the spotlight of information hurts, especially in this case.

The whole world knows slavery still proliferates in areas of the Arab world, along with barbaric punishments and tortures. The entire world also knows how the Soviet Union speaks of human rights to the globe as it actively and mercilessly persecutes Jews within its borders. Hitler is alive and well within the Soviet Union and in the Arab States.

Other nongovernmental organizations will be intimidated by this action, and become fearful of bringing human rights matters to the attention of the U.N. Expulsion of one organization can lead to expulsion of others. The Soviets have pried open the door to ejection of other organizations which are Western-oriented. The U.N. Charter gives nongovernmental organizations the right to seek "consultative status" by vote of the Economic and Social Council. Such status allows them to focus attention upon such evils. Now a precedent has been set which can stifle future activities of this sort.

Where is the voice of U Thant, that ardent champion of the mighty? Where is the spirit of the United Nations, now that a crisis of severe internal proportions confronts it? What will it do?

The American Jewish community has given fervent support to the United Nations from its very inception. It has stood by in seething, growing indignation as this organization has pilloried Israel via a series of unfair resolutions and condemnations. Now this insult and subjugation of liberty to dictatorship has been inflicted upon an organization which has always been in the forefront of the struggle for human rights. Perhaps no other organization of its kind has better symbolized the search for dignity and championship of the oppressed. Is this not a central idea of the U.N. itself—or one of them?

Shall the U.N. become an instrument for oppression? Or perhaps the Security Council will now pass a resolution condemning B'nai B'rith for aggression in defense of its right to be heard on behalf of the voiceless?

I must admit my patience is sorely tried and my disgust growing at this succession of action. Always, however, one theme runs through all these actions as a thread in a piece of cloth.

It is the Jew who is to blame. It is the Jew who must be singled out. It is the Jewish state which must sacrifice its interests to placate butchers and dictators. It is Israel which must plead for recognition and rationalize its right to survive. It is a Jewish organization which is pilloried mercilessly by so-called civilized delegates of an organization which savors the title of "world parliment." I would sooner listen to a prostitute speak of love.

Yet the Jewish people are accustomed to such a role, and bear it upon their shoulders as a familiar—nay, even a friendly burden. Let others search their consciences.

A free world must not permit a combination of Soviet oppressors ashamed of the truth and their Arab bootlickers who fear the future to silence the voices of truth. Let dictators shout louder and curse truth—it will be heard over their bellows, propaganda machines and cannon. Look to the Middle East for confirmation. For all of Russia's arms, the banners of David stand firmly where they were placed in the June war. Let the people who run the U.N. take heed. In the American community, their good will is very rapidly running out. I say this with great sadness.

THINKING BEYOND CONTROLLING OUR MILITARY DYNAMIC

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, here on Capitol Hill we are now engaged in an unprecedented confrontation between Congress and the military. This is not occurring because of sheer contrariness on the part of Congress. Rather, it is because basic concepts are in need of challenge, thoughtful review and revision. A continuing series of revelations on Pentagon misuse of major fund appropriations is only the charge which has triggered the present chain of events.

We are confronted not just with abuse of trust, nonenforcement of contracts and growing militarization of society. Instead, we have a question of deciding whether our entire posture in a diplomatic and military sense is germane to today's confrontations and tomorrow's inevitable challenges.

Accepted doctrines must be called into question because they have failed. The Communist world is no longer monolithic, as continuing military confrontations in Asia between Red China and the Soviet Union amply illustrate. Revolutionary conflicts will continue throughout the have-not world, and we must decide whether or not we choose to become involved. Even now we continue to thrash in agony in the grips of our present Vietnam involvement. With more urgency all the time, we are confronted with choices on weapons systems which are not only prohibitively expensive, but questionable as to necessity. How many times over must we be able to annihilate any given enemy? How necessary are all our overseas military installations, with their challenge to local sensitivities, expense of maintenance and military commitments?

What is superiority in this age in a military sense? Surely, there is no comparison to what it meant in times gone by. We are seeking to apply Metternich's balance of power theory, World War I's system of alliances and World War II's sufficiency of force to this new world. Battleships, divisions, field firepower, and showing the flag are meaningless in a thermonuclear era. Further, we are faced with the fact of Soviet parity with us in the sphere of thermonuclear sufficiency. There is no Pax Americana, and we must understand that this is so not because of our internal failure, but because of ability of the Soviet Union to produce the same type and quantity of weapons we can. Escalating such an arms race is folly piled upon foolishness.

We must rethink our concepts in light of these factors, applying them geopolitically, fiscally and with a fine understanding of what our society must aim for. For the present, our Military Establishment is a choice target, and rightfully so, in terms of abuses they have perpetrated in tandem with our industrial giants in the military field. Reining in the military industrial complex, is essential, to be sure. But we must also take this one step beyond—in the realm of our foreign presence, commitments, and priorities.

America will destroy herself if she insists upon intervening everywhere, doing this in such a fashion that we undermine and betray our traditional principles upon which our Nation rests. One

reason for the national malaise of the spirit now besetting the Nation is our trampling upon national ideals in the name of Vietnam. How can be pose as a citadel and exemplar of democratic principles when we support, arm, and intervene on the behalf of every tinpot dictator in the world? A list of those we support and favor with red carpet treatment is as sad as it is long.

Stroessner of Paraguay. Franco of Spain. Portugal's dinosaurs. Every military junta from Spain to Argentina. No, this is not Jefferson's realized dream. Nor is it what we speak of on the 4th of July. Americans have always been ready to fight and die for liberty, dignity, and the soaring elements of the human spirit. They are only degraded, however, when they nestle closely with men and regimes our forebears would abhor and reject instantly.

By all means let us place strict controls over the raging, unchained monster across the Potomac and its masters in the industrial establishment. Let us avoid, however, making the complex a mere scapegoat. By doing this, we become enmeshed in the sideshows and forget the main tent.

America must place greater emphasis on selectivity in its choice of allies and giving of commitments. Our bases must be few as well as strategic. Our commitment of force must be carefully chosen, agreed to by the legislative branch, and minimum in terms of time. Our deterrent must be enough to counter the maximum Soviet challenge, and not enough to pulverize all mankind a thousand times over.

These are the salient points to make in the ABM debate—in cutting military budgets—in discussing commitments and sale of weapons. For if we become so obsessed with weapons, commitments and the symbols of power, we shall surely lose our soul as a free nation. In the name of freedom, we are in danger of discarding liberty internally.

We are a participatory democracy, devoted to the dignity of the individual and inextricably attached to making this real to all. Now is the time to reaffirm such devotion in the form of the reforms we institute. It is our responsibility to make our institutions, including the complex of our military and defense firms, reflect our national ideals. They must not be allowed to become our masters, with a life all their own. Which dynamic shall prevail? I wonder. If the military dynamic wins out, we are lost as a free nation and the world will inevitably topple over the brink of thermonuclear conflict. Let us not forget that creation of an overwhelming amount of military force to such an establishment as ours creates an irresistible attraction to use it. This was amply proved in World War I. Our technology is out of control, and must be channeled as well as controlled.

It is my passionate desire to see a strong America, her civilian life rich and in control, acting prudently in the national interest which in turn reflects our heritage and institutions. Let us keep these long range goals in mind as we continue to press our effort to control the forces which now are loose among us.

REV. ALEXANDER RINALDO, C.S.

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, on May 15 of this year, my home community, Syracuse, N.Y., paid tribute in the form of a testimonial to a most dedicated servant of God on the occasion of the 30th anniversary of his ordination to the Holy Priesthood, the Rev. Alexander Rinaldo, C.S., pastor of St. Peter's Church, in that city.

Father Rinaldo has accurately been described as a "spiritual dynamo," in recognition of his untiring efforts in behalf of all things good. Further, he is also known as "the priest with time for all."

A native of Dueville, Italy, Father Rinaldo was ordained in Piacenza and served as a chaplain to English war prisoners in Trieste, later coming to America and eventually assuming his present role as pastor of St. Peter's Church.

I believe that Father Rinaldo's message on this occasion was magnificent and thus would like to share it with my colleagues:

MAY 18, 1969.

My first pleasant duty, this evening is to express my thanks to the Father Provincial, To His Honor Judge Frank DelVecchio and to Mr. Mario Rossi, for their speaking participation in this program.

I shall always cherish the beautiful sentiments which they have put into words. It would have been honor enough for me to merely have had them in attendance, but to have them speak such eloquent testimonials—none of which I feel I deserve—fills my heart to overflowing.

And my second chore, of course, is to voice my gratitude for your presence—parishioners and friends who have joined me on this felicitous occasion. We have broken bread together—you and I—this morning during the sacrifice of the Mass—tonight—at this brotherly meal—and it is I who must be thankful, for you have come here on a Sunday evening to do me this honor. It is as though you had entered my home—and while my residence could never approach this one in size—today this is, indeed, our abode—our dwelling—our house of many mansions.

For, this is where our heart is—
And wherever that is,
Wherever we are together—
That is our home.

I have been a priest for 30 years. But that is unimportant.

For God Himself has measured our term in infinity itself:

"Thou are a priest forever."

You know the yard stick used by the Catholic Church is the frame of Eternity. The Deposit value is the souls of all men. The reward is God. Under this light we should evaluate the past. 12 years in Seminary training the young man in prayer, meditation, sacrifice, give ample time to learning; literature, science, religion. At the end the young man can really accept responsibility and pledge to God and to the Catholic Church: chastity, poverty and obedience.

Only on this condition the Bishop can give the young man the Priestly powers and say: "Thou are a priest forever."

I will not, therefore, reckon the milestones beyond the reference I have just made: I will, instead, speak briefly of the emotions which move me on this occasion. Tonight, I want to reach across the separation of miles and time and touch the hands of all Priests, that had the honor to serve this Community of St. Peter's. It is really a journey of spirit, love and thanksgiving. I want them to feel sure that the faith of our community is the faith of our Fathers.

And tonight, you and I—together—turn our thoughts, too, to our beloved Bishop, His Excellency, the Most Reverend Walter A. Foery for his guidance and counsel, for his patience and understanding, in making it possible for our parish to move forward and to reach its goals.

The new Church, which some people consider a gem of art and of Religion, a new Rectory, the home for Priests, and not in long distance the promise of a Religious Center of Education for our youth and adults alike to keep the people of God united in the charity of Christ. My devotion and admiration is tonight toward Father Louis Riello, who, in all humility and determination gave us the beautiful house of the Lord where to pray and to purify our souls.

The bricks, the mortar, the plaster that are St. Peter's Church are important of course, but they fade into the background for me, tonight, because the Church I see as I stand among you is the Church made up of people—my loyal and energetic and devoted Assistants, Father Louis and Father Henry—the choir that lifts its voice to God—the sisters who train our children in Religion—the parishioners who come to Mass—to Confession—to receive the Sacraments—at times of Joy and sorrow—the men and women and the youth who toil so willingly and so happily in our Societies and organizations—the afflicted and the agonizing who do me honor when they seek my humble counsel.

Yes, the panorama tonight is human, indeed—it stretches before my mind's eye from the days when I said farewell to my mother in Italy—to that period of trepidation and misgiving when I first walked on the good earth of America, the land of the brave and the land of the free—to the parishes where I was privileged to serve as an Assistant Pastor—to St. Peter's. I see so many people—so many who have been kind and good and loyal—who have given of themselves unsparingly so that we might—together build for the future.

The monument of memory reaches high, and it is built of souls. Jesus started his Mission when he reached the age of thirty years.

You, the people, are my mission.

Thirty days, thirty months, thirty years, for me—it does not matter. Time is one. My time is you. And I say this with humility and gratitude. It has been my good fortune to have been called to serve you.

God has been generous to me in this respect; I would not presume to ask anything more—for to be among you is a duty that touches my heart deeply, but rests lightly on my shoulders. I do not reckon my labor as toil—but as an expression of joyful endeavor.

The good Lord has been kind to me and so have you, my beloved parishioners.

No matter if we pray in Church, at home, or on the street, prayer and charity are two reflecting lights that shine from the Sanctuary of God and return to him and gives you, my people a great privilege, as St. Peter the Apostle says: "You are the Royal Priesthood".

Rev. Fathers, Rev. Sisters, Honorable guests of the dais, honor guests, Ladies and gentlemen:

I thank you and may God bless you.

WILLIAM J. DRIVER, ADMINISTRATOR OF VETERANS' AFFAIRS

(Mr. HANLEY asked and was given permission to extend his remarks at this

point in the RECORD and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, I want to join my colleagues in commenting on the exemplary career of a civil servant who is about to leave Government at the height of his career. William J. Driver, Administrator of Veterans' Affairs, has illustrated during 23 years that Government service, in and out of uniform, can lead a man to heights above and beyond the call of ordinary duty.

In addition to serving his country in uniform during two wars, he has climbed civil service ranks to the very top. During his brilliant administration of veterans' affairs he has demonstrated executive skills that will assure his achieving new heights in the private sector where these skills and his brand of integrity are no less important to our Nation.

Bill Driver's success is based on intelligence, perseverance and dedication. A cum laude graduate of Niagara University before he entered World War II military service, he saw fit to study law at night while carrying full-time responsibilities as a civil servant. Earning a law degree at George Washington University in 1952, he continued there to earn a master's degree in public administration in 1965.

His educational achievements have been matched and surpassed by his administration of the third largest Government agency. The VA has more than 170,000 employees, annual expenditures of some $7 billion, and the mission of serving eligible beneficiaries among the Nation's more than 26 million veterans.

The intricate fabric of this Nation's economy has positions that require executive abilities of similar magnitude, and surely Bill Driver will fill one of them. No matter what capacity he chooses to serve in after he leaves Government, I am convinced that Bill Driver will demonstrate that the opportunity for public service is not limited for those who serve as civil servants and in uniform.

PFC. BENJAMIN R. MAULDIN, U.S. MARINE CORPS, ASKS TO SERVE HIS COUNTRY

(Mr. POAGE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. POAGE. Mr. Speaker, this morning I received a letter from one of my constituents, Pfc. Benjamin R. Mauldin of Temple, Tex., who is now serving in the U.S. Marine Corps. I think his letter and his attitude is so striking that I want to share it with the Members of the House.

This young man's letter reads:

DEAR SIR: I being a person, a citizen of the United States, now employed by that government in its military service find that even though this government claims not to be descriminate, especially in its military, has descriminated against myself. I was not descriminated upon because of my race or my sex, but rather, because of my age. I am but seventeen years old and, because of that reason I find myself restricted. It seems, that because of my age I am denied even an equal opportunity to serve in a war zone. I have been in the Corps for seven months now and think myself at least as capable as the next Marine to serve in VietNam. For this reason, among others, I am now putting forth to you, my representative, as an American citizen, a request that I receive at the very least an equal opportunity to receive orders to report to staging for Wes Pac and if at all possible, with your much appreciated help, do, in fact, receive orders to report to Wes Pac.

I am not quite sure what is in your power to be done but I could see no other action to take which might have so quick a result as this. I realize that this action restricting people of my age from serving in Viet Nam was taking into account such as my own safety. Sir, I waiver any right I have because of this law. I am ready to serve my country, my government, my people, and my heritage now! Sir, with people pledging violence rather than faith and obedience as I now am, can't you find some way to help me? There are people sent to Viet Nam who don't want to go. I will gladly replace anyone of them. Please, sir, have an understanding of my situation and take some action in my behalf. I request this of you as an American who wishes to earn his right to live in this country, to dissent its policies if I think myself well enough informed, to protest its dissenters when I see fit, and to stand up and say that I have done my fair share.

My M.O.S. is 0844. My parents address is as follows:

Mr. & Mrs. Roy Mauldin,
710 North 4th Street,
Temple, Texas 76501.

Thank you very much,

Pfc. BENJAMIN R. MAULDIN,
U.S. Marine Corps.

This letter is signed by Benjamin R. Mauldin, Pfc., U.S. Marine Corps, of Temple, Tex.

Mr. Speaker, I am proud to represent this young man, and I hope that he will be permitted to earn his right to serve his country as he desires.

We need more men of his kind.

RESEARCH ON AGING ACT

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. BINGHAM. Mr. Speaker, I am today introducing legislation entitled the "Research on Aging Act." This bill would provide an intensive, centrally coordinated review of what has been learned and what remains to be investigated about the biological process of aging. It is identical to S. 870, which has been introduced in the Senate by Senator WILLIAMS of New Jersey.

The bill proposes to establish a Research Commission on Aging to gather, analyze, and evaluate all information related to the biological aspects of aging, and through a biological research board within the Commission, prepare a 5-year research plan.

Medical developments push the longevity figures higher and higher each year, increasing the number of senior citizens in the Nation as a proportion of the total population. It is right and humane that we do everything possible to insure that our senior citizens are able to lead healthy, comfortable lives in retirement. Many medical experts believe that mastery over the very process of aging itself is very nearly within the grasp of scientific and medical knowledge. Researchers in the field of aging say we have reached a point in our knowledge and technology where dramatic breakthroughs may be expected. They compare the potential of modern genetic biology to the physical sciences in the 1930's when many of the revolutionary advances of the past several years were germinated.

Despite these conditions and possibilities, the Federal Government is currently spending less than 5 cents per person per year on basic research on the aging process. A new gerontological research center within the National Institute of Child Health and Human Development of the National Institutes of Health is now in the process of construction by the Federal Government. It will house more than 300 scientists and supporting personnel. But this new facility must be utilized efficiently and responsibly.

At the moment, breakthroughs are occurring in molecular biology, immunology, and many other fields that may have application in understanding and affecting the aging process. Research on aging itself is being conducted in insufficient amounts and without specific goals.

What is needed is a careful effort to pull existing knowledge together into a useful form, and to devise a truly comprehensive design for future exploration in this important research area.

At the time he introduced the same bill in the Senate, Senator WILLIAMS noted that the bill "would provide the strong leadership of the Federal Government which is required to bring to fruition the dramatic potential of such a program of research." I wholeheartedly concur with that assessment, and am happy to join with him to advance this program by introducing the Research on Aging Act.

EXPOSED—GOVERNMENT OF THE PEOPLE, BY THE INSIDERS, FOR THE INSIDERS

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, the Government Employees Exchange for May 28, 1969, carries a very startling exposé of a conglomerate of leading national officials which calls itself the National Council of Technical Services Industries. An interesting feature of NCTSI is that top level favors cost less than $40,000 in annual dues which, in turn, is probably deductible as a business expense from their income taxes.

Among the members of the giant influence cartel are Abe Fortas, Secretary of State William Rogers, former Secretaries of State Dean Acheson and Dean Rusk, Gossip Columnist Drew Pearson, former income tax Commissioner Sheldon Cohen, and a myriad of other behind-the-scenes actors.

Mr. Sidney Goldberg, the courageous editor of Government Employees Exchange, is certainly deserving of the commendation of every Member of this House and the thanks of the American people for relentlessly exposing corrupt double dealers who have sneaked themselves into the heart of our Government to rot away its structure for their own

personal enrichment and aggrandizement.

I include the news article from the Government Employees Exchange, as follows:

FORTAS TIED TO NCTSI, ROGERS, ACHESON, HISS—"SMEAR" OF CIVIL SERVANTS LAID TO CAMPAIGN OF DISTRICT OF COLUMBIA BASED ASSOCIATION

The "all-pervasive" ties of resigned Supreme Court Justice Abe Fortas brought him into intimate association with a group of private contractors, organized as the National Council of Technical Service Industries, which led a "smear campaign" against Federal employees, a representative of the Internal Revenue Service revealed to this newspaper on May 22.

Other "lobbying and political" ties of the former Justice included Secretary of State William P. Rogers, former Secretaries of State Dean Acheson and Dean Rusk, as well as Alger Hiss, with whom Mr. Fortas had first collaborated as a "colleague" in the office of the General Counsel of the Agricultural Administration Agency in 1933.

Other "colleagues" at the AAA were Thurmond Arnold, later a law partner in the firm of Arnold, Fortas and Porter, and Adlai E. Stevenson, whose law partner George Wildman Ball subsequently became Under-Secretary of State under Dean Rusk.

OTTO F. OTEPKA

The ties which Mr. Fortas formed with Thurmond Arnold, Dean Acheson and Alger Hiss subsequently placed him in the camp "against Otto F. Otepka," where Mr. Fortas played a crucial role after the assasination of President John F. Kennedy, the source revealed.

Because of President Johnson's close ties to two high officials, both of whom had aroused the opposition of Attorney General Robert Kennedy, President Johnson initially was disposed to "re-instate" Mr. Otepka as Chief Security Evaluations of the State Department, the source stated.

At this juncture, Secretary Rusk asked former Secretary of State Dean Acheson, of the "lobby law firm" of Covington and Burling, to have Mr. Fortas "intercede" with President Johnson "against Mr. Otepka." A member of the law firm of Covington and Burling is Donald Hiss, the brother of Alger Hiss, the source revealed.

After Mr. Fortas' intervention with President Johnson, it was agreed that Mr. Otepka would be "left to Mr. Rusk", the source commented.

"BOBBY" BAKER

Another reason for President Johnson's "changing his mind" on Otto F. Otepka, the source said, was the fact that Abe Fortas was the lawyer of Robert "Bobby" Baker, who had been Mr. Johnson's "good right arm" when he was a Senator. It was known that "Bobby" Kennedy was determined to force Vice President Johnson "off the ticket" by prosecuting "Bobby" Baker.

To save "Bobby" Baker, Abe Fortas made arrangements with Drew Pearson and Jack Anderson, columnists with The Washington Post to "reveal" scandals about Foreign Service Officer Don Reynolds on whom Attorney General Robert Kennedy had been counting for a probe of Mr. Baker's ties.

A "hidden force" in the background, on whom Mr. Fortas was counting, was William P. Rogers, the Attorney General under President Eisenhower who had developed the extreme doctrine of "executive privilege", asserting that the Executive Branch could deny documents to the Legislative Branch.

WILLIAM P. ROGERS

After the defeat of Richard Nixon for President by John Kennedy, William P. Rogers became closely associated with The Washington Post, was legal counsel for Drew Pearson and later was Director of The Washington Post, including Radio and Television Stations WTOP.

William P. Rogers had gained in great influence at *The Washington Post* following the suicide in August 1963 of Philip Graham, who had tried to keep its reporting "objective". However, this event marked the beginning of the rise of a "strong pro-Johnson and pro-Fortas policy" at *The Washington Post* and the concurrent influence there of William P. Rogers who was allied both with Mr. Fortas and with Drew Pearson.

OTEPKA OR BAKER

Because of the attack of Robert Kennedy on "Bobby Baker", a situation arose where President Johnson came to realize he would have to choose between protecting "Bobby" Baker or Otto Otepka. The issue was clear that in this case it was "Bobby" Baker who would be saved and Otto Otepka who would be sacrificed, the source revealed.

LOBBY LAWYERS

Abe Fortas, Dean Acheson, William P. Rogers and George Wildman Ball were all members of "lobby law firms", a Washington phenomenon based on the "peddling" of political influence rather than on brilliant law practice, the source at the Internal Revenue Service continued. The main function of these "lobby firms" is to represent in Washington the large American corporations with "billions of dollars" of contracts with the American government. Through their passing their members between the executive, legislative and judicial branches, these law firms generally have access at all times to "secret" files, including FBI reports and CIA documents, the source revealed.

One of the main areas of "secret" documents is the Internal Revenue Service which is able to check out all "income flow documents", including the records kept at banks of all checks written. Thus the Commissioner of the Internal Revenue Service is, from the standpoint of political "influence," on the par with the Director of the Federal Bureau of Investigation and the Central Intelligence Agency, the source at the IRS continued.

SHELDON COHEN

The Commissioner of the Internal Revenue Service under President Johnson became Sheldon Cohen, a partner and close friend of Abe Fortas. Through Sheldon Cohen, the firm of Arnold, Fortas and Porter obtained an advantage over the other "lobby firms", such as the one to which George Wildman Ball, Dean Acheson and William P. Rogers belonged, the source said.

"The nature of this advantage can be seen", the IRS source continued, "by the fact that Secretary Rogers had intimations of the Fortas-Wolfson carried them out in a way that nothing could be traced back to him".

"Through two associates, Norman Ostrow and John A. Wells, confidential material from Alexander Rittmaster became available to Mr. Rogers", the IRS lawyer stated. "Yet publicly Mr. Rogers continued to support Justice Fortas", he added.

"The reasons for Mr. Rogers action may soon be published", he said. "They may very well have a great deal to do with the ties of Sheldon Cohen to Justice Fortas and material in the secret files of the IRS", the source commented.

NCTSI

On the recommendation of the firm of Arnold, Fortas and Porter, approximately twenty of the largest private contractors having contracts for "personnel services" grouped themselves into a "National Counsel of Technical Service Industries" with an office publicly shown as located at 888 Seventeenth Street, N.W. The dues membership of the largest corporations was placed at $39,000 per year and the annual income of the NCTSI ranged between $400,000 and $500,000.

In turn, the NCTSI actually allowed its main business to be run by Paul Porter acting for Abe Fortas and Thurmond Arnold. The Constitution of the NCTSI expressly stated that its Board of Directors would hold "the annual meeting on the third Wednesday of January in the law offices of Arnold and Porter at 1229 Nineteenth Street, N.W., Washington, D.C.", the source revealed.

"SMEAR" CIVIL SERVANTS

In its campaign against the Classified Civil Service, the NCTSI resorted to a publicity campaign, including the "ghost writing" of an article which appeared in the October 1968 issue of *Nation's Business*, the official publication of the United States Chamber of Commerce. The article was entitled, "Riding the Gravy Train" and it stated that Federal employees were overpaid and cost the government more than hiring personnel through private contractors.

The article in *Nation's Business* aroused an "outcry" among Federal employees and John W. Macy, Jr., the former Chairman of the Civil Service Commission wrote a letter to the magazine in which he called the article a "low, vicious, unjustified attack" on Federal Employees. Joe Young of *The Washington Evening Star* called the article "so much bilge water".

JOHN F. GRINER

John F. Griner, the President of the American Federation of Government Employees, wrote letters to Senators, Congressmen and to Sheldon Cohen, Commissioner of the Internal Revenue Service pointing out that the article in *Nation's Business* has been published under the inspiration of the NCTSI. He asked that the IRS investigate whether the NCTSI was a bona fide "non-profit education association" or a "lobbying organization" instead. Although Mr. Griner's letter was mailed in November, the IRS has to date not rendered any public decision regarding the "status of the NCTSI", the source at the IRS commented.

WILLIAM O. DOUGLAS

Besides his contacts in the executive and legislative branches, Abe Fortas "cultivated" the judiciary where his firm was an "inside influence", the same IRS source, himself a lawyer, continued.

Part of Abe Fortas influence on the judiciary came from "ideology," based largely on Abe Fortas' early ties with the Harvard and Yale law students who manned the "New Deal Agencies". Among these were William O. Douglas, Associate Justice of the Supreme Court, who taught Fortas at Yale.

Besides "ideology", Mr. Fortas was active in setting up "interlocking" financial ties in investments with members of the Federal bench. These took the form of "tax shelters", or real estate corporations in which Supreme Court justices and judges of the federal bench could "profit" handsomely.

A typical "tax shelter" arrangement involved a partnership between Supreme Court Justices Abe Fortas and William Brennan, who together with David L. Bazelon, Chief Judge of the U.S. Court of Appeals for the District of Columbia, and Judge J. Skelly Wright of the same court had an interest in Concord Village Associates. The Associates owned the complex of 531 "garden type apartments" in Arlington Virginia known as Concord Village. Besides the four members of the judiciary, other "partners" were Mrs. Bazelon; Mrs. Fortas, using her professional maiden name of Carolyn Agger; former Supreme Court Justice Arthur Goldberg; and a Senator.

THE PARVIN FOUNDATION

The "closest" ties in the Abe Fortas complex, however, involved a merger of "ideology" and "practical" interest, such as the Justice's relationship with the Louis A. Wolfson Foundation. Another such relationship

existed with the Albert Parvin Foundation, which was a "front" for the various Albert Parvin enterprises, the IRS lawyer revealed further.

The "attorney" for the Parvin Foundation was "Carolyn Agger," the maiden name used by Mrs. Fortas in her legal work. The only "paid" official of the Parvin Foundation was Justice William O. Douglas, Mr. Fortas' teacher at Yale. Another Director of the Parvin Foundation is Chief Judge William J. Campbell of the United States District Court for Northern Illinois, who is a protege both of Mr. Fortas and of the late Adlai Stevenson, another young lawyer whom Mr. Fortas came to know in 1933 as an attorney at the Agricultural Administration Agency.

HARRY A. GOLDMAN

Besides the Albert Parvin family, the chief operator of the Parvin enterprises is Harry A. Goldman, who arranged the investment of the Parvin money into two major gambling houses in Las Vegas, the Flamingo Hotel and the Fremont Hotel.

Part of the information which "Bobby" Kennedy had planned to use against "Bobby" Baker involved conversations and arrangements involving the transfer of money at Las Vegas, the source revealed.

LEGITIMIZING INCOME

One of the main functions of the Las Vegas and Reno gambling establishments, the IRS source continued, is to "legitimatize" illegal income. He explained that the "major hoodlum, gangster and MAFIA" organizations have income from such illegal operations as the "numbers rackets", "prostitution", "drug smuggling" and "black mail" and "protection." Since these are all illegal forms of income, the money earnings must be made "legitimate" by some method. The "method" is to lose the money at the gambling tables to a "gambling banker", who then pays taxes on his gambling winnings and can thereafter deposit all the previously illegal money into any bank as "legitimate" money.

A major portion of the money that flows into "political patronage" on Capitol Hill originates in the "legimatizing" halls of the gambling casinos in Las Vegas and Reno, the IRS source observed. "How some of this money gets into the pockets of elegant gentlemen would amaze the civics course teachers in the American public schools", he concluded.

LEADERSHIP

(Mr. HALL asked and was given permission to extend his remarks at this point in the RECORD and to include pertinent material on "Leadership.")

Mr. HALL. Mr. Speaker, some years ago my friend, Gen. Bruce C. Clark, U.S. Army, retired, wrote a booklet entitled "Soldier Management and Moral." In this booklet General Clark sets down in simple language the concepts and ideals that are required of anyone expected to exercise leadership today.

I would especially commend the reading of General Clark's booklet to the administrators and educators on our Nation's campuses who seem to have lost the "keys to leadership" and find their schools beset by almost open revolt.

Gen. George Marshall said:

First in importance will be the development of a high morale and the building of a sound discipline, based on wise leadership and a spirit of cooperation through all ranks.

This statement sets the tone for General Clark's booklet, which has been translated into many languages, and used by field commanders all over the world.

I include this booklet as a part of the RECORD, so that all Members and others who are interested, might be able to study this fine article:

SOLDIER MANAGEMENT AND SOLDIER MORALE

Gen. George C. Marshall: "First in importance will be the development of a high morale and the building of a sound discipline, based on wise leadership and a spirit of cooperation through all ranks."

OCTOBER 1, 1965.

FOREWORD BY BRUCE C. CLARKE, GENERAL, USA, RETIRED

The subject of Leadership is complicated to the theorist. Many and large books have been written on the academic side of the problem of being a good leader. Fortunately, the rules are capable of being reduced to a few simple and practical terms. The two short articles in this little pamphlet were prepared originally to do just that. Soldier Management was an outline which I prepared several years ago for a lecture on Leadership to the First (Senior) Class at West Point. Soldier Morale was prepared for a lecture to commanders and staff officers of X Corps in Korea in 1953 when the troops there were faced with the morale problems which usually follow an armistice. Together these two outlines might well be used as closely related leadership check lists which officers and noncommissioned officers can use to an advantage in their units. On looking back upon my experience in the Army serving under many immediate commanders whose ranks have progressed through the years from corporal to that of 4-star general, I recall no case where any one of my superiors was able to establish a climate of good leadership in his unit if he violated many of the simple rules given here. Conversely, all who observed well the simple rules were looked upon by their subordinates as good leaders. Many of them were outstanding.

SOLDIER MANAGEMENT FROM THE VIEWPOINT OF THE COMPANY OFFICER

An outline

1. Introduction: (a) From the company officer's viewpoint, soldier management and leadership go hand in hand. The purpose of this talk is to assist the young officer and the senior noncommissioned officer in his everyday problems of handling and managing soldiers.

(b) There were fair, good, and outstanding units of all echelons in the past war. Primarily this variation in units was in direct ration to the qualities of leadership displayed by the unit officers.

(c) Leadership which produces success in battle can easily be adapted to other activities and produce equal or greater success.

2. What men expect from their leaders: (a) Men have a right to expect from their leaders:

(1) Honest, just, and fair treatment.

(2) Consideration due them as mature professional soldiers.

(3) Personal interest taken in them as individuals.

(4) Loyalty.

(5) Shielding from harassment "higher up."

(6) The best in leadership.

(7) That their needs be anticipated and provided for.

(8) All the comforts and privileges practicable.

(9) To be kept oriented and told the "reason why."

(10) A well-thought-out program of training, work, and recreation.

(11) Clear-cut and positive decisions and orders which are not constantly changing.

(12) Demands on them commensurate with their capabilities not too small nor too great.

(13) That their good work be recognized—and publicized where appropriate.

(b) To the military leader, men are tools. He is successful to the extent that he can get the men to work for him. Ordinarily, and on their own initiative, people run on only 35% capacity. The success of a leader is measured by the extent to which he can "tap" the other 65%.

(c) It is the men below who make or break an officer. Sometimes, but not often enough, those above recognize what the ones below do for them in this respect. Regardless of the recognition the officer should not lose sight of the basic truth.

3. Some Pointers on Leadership: Some people are natural-born leaders. Others, possessing the ordinary attributes, can be fine leaders through the observation of certain procedures. Some of these are:

(a) Almost every man wants to do what is expected of him. When he does not do so, it usually is because he has not been properly instructed. This is the only tenable attitude an officer or NCO can take toward his subordinates. He will recognize the exceptions and know what to do about them.

(b) Men admire a strict officer if he is also just.

(c) An officer who tries to be a "good fellow" loses his grip early.

(d) A new officer cannot be easy at first and then get strict. He can, however, be strict at first and then ease off as circumstances warrant.

(e) Company and platoon leaders should know every man in their organizations.

(f) Men must look to their titular leaders for rewards and punishments. The company commander, himself, must decide who shall be promoted. He can and should accept recommendations, but it must never be thought that he rubberstamps the first sergeant's list. The company commander personally assesses company punishment, not the first sergeant. He usually does this in the first sergeant's presence.

(g) One should be able to select competent subordinates. If the commander makes a mistake in choice then the man should be replaced. Do not carry deadwood along for fear of admitting an error in selection. Handle your own mistakes; do not pass them along.

(h) An officer should not look for cheap popularity with his subordinates. They expect the officer to play his part according to his position. They do not begrudge him his rank, pay, or prerogatives if he uses them in the interest of his subordinates and superiors.

(i) Military courtesies start between officers. Observation of these courtesies between seniors and subordinates is not belittling to either; they are evidences of alertnesss, pride, and good manners.

(j) An officer can expect the same attention from his men that he gives them—it works both ways.

(k) The officer should give orders in a manner which indicates he expects compliance. He should be clear and positive and should follow them up.

(l) An officer should not issue orders which he cannot enforce. Along that line, it is a wise officer who refrains from criticism of a situation until he learns the reasons therefor, and can make logical constructive suggestions.

(m) An officer must develop initiative in his subordinates. They learn by doing. In so learning they make mistakes. Learn to *underwrite the honest mistakes* of your subordinates.

(n) An officer must not belittle the importance of his subordinates. He must give them responsibilities and then back them up. A good officer does not by-pass subordi-

nate commanders. He uses his NCOs and adds to their prestige by so doing.

(o) An officer should be as good as his word. He should not make promises of rewards and punishments he cannot fulfill. He should fulfill those he makes.

(p) A good officer will know the names, background, and individual characteristics of his men. He must have a genuine personal interest in them or they will not have it in him. Each individual has problems. There is no easier way of getting a grip on men than by helping them to solve the personal problems that give them great concern.

(q) Be enthusiastic and cheerful. These attitudes in a leader, as well as their opposites, are contagious.

(r) Do not be too familiar with your men. Good soldiers do not expect it. It is not necessary to call your men by their first names or nicknames even if you sleep in the same foxhole with them. Doing so does not increase your leadership ability or your grip on your men.

(s) Morale is a natural product of good leadership. Morale is not produced only by USO shows. Diversions are important, however, good morale comes from doing well a worthwhile job and receiving recognition for it. (See article on Soldier Morale which follows.)

(t) Every man experiences fear in a crisis. The leader cannot show it. He must fortify himself with a scale of values which enables him to control his emotions. The only fear that should worry a good leader is the fear of being afraid.

(u) Do everything you can to increase the personal pride of your men. Cleanliness, neatness, and orderliness are evidences of personal pride. A proud outfit is a good outfit.

(v) When a man has punishment coming to him be sure to give it to him, but in an impersonal way and to a degree that fits the circumstances and the offense. When he pays his debt, forget the incident.

(w) Listen to the suggestions of your subordinates. If they are adopted pass on the credit to them.

(x) Be intellectually honest. An officer cannot be expected to know everything. He cannot bluff his men and retain their respect. When he does not know he should say so.

(y) Be loyal. Criticism of your superiors in front of subordinates lays you open to the same treatment. Remember, loyalty works both ways.

(z) Rank should be used to serve your subordinates. Rank is not a reward nor a license to exercise your idiosyncrasies. Rank has one object: to enable the officer to fulfill his responsibilities.

(aa) An officer's presence when the conditions are unpleasant and where the going is tough—"sharing the situation with the men"—is all-important.

(ab) Above all, set the proper example. Men will look to the officer for their model. The higher the rank the greater the obligation to those below to set the proper example.

4. Conclusion: Basis of the officer-enlisted man relationship in the American Army. We have heard the charge that the officer-enlisted man relationship is based upon the Prussian system as brought to this country by Baron von Steuben. There is nothing wrong today with the following instructions written by Baron von Steuben at Valley Forge and published by the Continental Congress. It is when we get away from them that we get into difficulties:

"Instructions for the Captain

"A captain cannot be too careful of the company the state has committed to his charge. He must pay the greatest attention to the health of his men, their discipline, arms, accoutrements, ammunition, clothes, and necessaries.

"His first object should be to gain the love of his men by treating them with every possible kindness and humanity, inquiring into their complaints, and when well founded, seeing them redressed. He should know every man of his company by name and character. He should often visit those who are sick, speak tenderly to them, see that the public provision, whether of medicine or diet, is duly administered, and procure them besides such comforts and conveniences as are in his power. The attachment that arises from this kind of attention to the sick and wounded is almost inconceivable; it will, moreover, be the means of preserving the lives of many valuable men.

"Instructions for the Lieutenant

"He should endeavor to gain the love of his men, by his attention to everything which may contribute to their health and convenience; he should often visit them at different hours; inspect into their manner of living; see that their provisions are good and well cooked, and as far as possible oblige them to take their meals at regulated hours. He should pay attention to their complaints, and when well founded, endeavor to get them redressed; but discourage them from complaining on every frivolus occasion."

SOLDIER MORALE

The one question most frequently asked by visitors to military units is: "How is the morale?" This question usually leads to a discussion of many things and usually ends in an agreement that the morale is "Excellent." I am aware of no commander who ever rated the morale of the men in his unit as anything but "Excellent." But I am sure that the morale in some units is "more excellent" than in others.

What is morale? Our manual on leadership defines morale as the mental and emotional state of the individual. As such, it is naturally influenced by many factors.

The basis of good morale

Although morale is a complex and intangible quality, it must have a solid basis of these three factors which lead to a general feeling of confidence, well-being and accomplishment. Military leadership and management play a large part in providing the three factors, although the military commander alone cannot provide them all to the full extent needed:

1. Doing well,
2. An important job,
3. And receiving recognition.

Adjuncts to Morale

During the course of this article I will refer to these elements, but first let's consider the several adjuncts to morale which have an influence on units but which in themselves alone do not produce good morale if the basis of good morale is missing.

Good Management: We all like to be in a unit where there is good management, where things run smoothly, where things are planned, where men do not have to "hurry up and wait." The basis for good management is prior planning, thorough organization, and continuing supervision.

Well Informed: Men like to be kept informed ahead of time as to things that affect them or are apt to affect them. It is far better for the commander to keep his men informed, than to have them seek to get such information from rumors. Most soldiers enter into training programs and other military activities with vigor and enthusiasm if they know their purpose and the reason.

Well Trained: This is an important part of factor one. If, a unit is not well trained its men know it. This fact adversely affects their confidence, especially if they anticipate there is a possibility of using that training in a critical situation. Every soldier likes to feel that he is playing on a winning team—he knows he can't win if he isn't well trained.

Chances for Advancement: Making progress is morale raising to all men. Knowing that there is an opportunity for advancement and that only excellent performance and preparation lead to promotion in a unit helps the morale.

Good Physical Condition: Good physical condition goes hand-in-hand with good mental condition. These two elements are basic to achieving good morale.

Good Administration: Men like to know that the administration in their unit is good, that their pay accounts and individual records are correct, that the date they are due for rotation home will not be overlooked, that their allotments are going through on schedule. These matters are very personal to a man and affect his confidence in his unit.

Confidence in Their Equipment: We are the best equipped Army in the world. There is always better equipment under development than is in the hands of troops. There would be no progress unless that were true. The talking down of our equipment as being obsolete, the statements that we do not have the latest and best are detrimental to morale.

Confidence in Their Leaders: Men expect their leaders to know their jobs, to share the hardships with them and to take a personal interest in their problems. The men like to see their leaders where things are going on—where the weather is bad or the night dark and wet.

Comfortable Quarters: With a little encouragement men will fix up comfortable quarters under most any condition. They should always be made as comfortable as the circumstances permit.

Good Mess: The food issued to the American soldier is the best that any Army ever received. There is no excuse in the Army for other than a good mess. Where messes are not good, command attention is lacking.

Good Mail Service: The importance of this should be apparent to all. The soldier counts on his mail—he looks forward with anticipation to every mail call.

Good Medical Attention: Confidence in the medical service is of tremendous importance to any unit, especially to a combat unit.

Post Exchange Facilities: The Post Exchange gives the man a source of small necessities and little luxuries so that he can vary the routine of issue items and have some things in accordance with his own wishes.

Leaves and Passes: A constant and well-implemented policy in such matters provides breaks in routine which are most beneficial. The leave program should be planned so that each individual knows approximately when he is going. He can then plan for it.

Religious Services and Character Guidance: It is especially important that an Army made up mostly of young soldiers be provided with facilities for religious services in accordance with their preferences and a program of character guidance with a view to continuing in the service the wholesome influence of home and community life.

Awards and Letters of Commendation: These means of recognition of good work play a most important part in factor three of the basis of good morale. A good commander is ever alert to detect and recognize good work.

Diversions: There are many important activities that fill up spare time, thereby keeping the soldier pleasantly and profitably occupied and adding to his contentment. Among these are movies, U.S.O. camp shows, dayroom and library facilities, athletics, and well equipped hobby shops.

Standards: Soldiers like to be in a "sharp" unit. They appreciate the achievement of high standards in discipline, dress, housekeeping, police, maintenance, training, and athletics. The lift in morale that comes from

impressive military ceremonies is an important factor.

Most of the various adjuncts to morale are expected by troops as a matter of course. Therefore, the presence of them does not necessarily add to morale but the absence of any of them is quickly noticed and adversely affects the morale substantially.

Evidences of morale

In discussing the subject of morale with visitors, I often ask and am asked: "What do you look for in a unit in order to gauge the morale?" Since morale is influenced by so many factors, there are naturally many indications of the state of morale in a unit. The things I look into and note in making a quick size-up of a unit include:

Saluting: Is it well done? Do the men speak? Do they seem pleased to greet you? Do they come forward to report?

Dress: Is it uniform, neat, clean, worn smartly?

Good Housekeeping: Is the area neat, orderly, clean? Are offices cluttered up? Are bulletin boards neat? Are signs clean, neat, uniform? Are barracks neatly arranged? Has there been an effective effort to make the unit attractive?

Pride: Are they eager to show their accomplishments? Are they eager to point out their history? Do they have something good to sell and try to sell it?

Participation in Charities and Unit Improvement Projects: These extra-curricular activities indicate the unit spirit in an organization.

Athletic Programs and Support of their Teams: An athletic program, enthusiastically supported, on the small unit level so that many men actually participate, is always a favorable indication of morale as is the support of unit teams in competitions. Competition between platoons is most beneficial.

Church Attendance: This is a good indicator.

Soldiers Deposits and Other Savings: A man who is saving his money each month is "banking on his future" and is usually a well adjusted and confident soldier. When there are many such soldiers in a unit there is a depth of stability in the organization.

Enlistment and Reenlistment Records: Except where unusual conditions exist, the records of enlistment and reenlistment are good indices of the relative morale in the units.

AWOLs: Where situations exist to make such offenses on the part of the man reasonably easy to commit, this item is an indicator of morale.

Size of Sick Call: Unless there are special reasons for it, a continuing large sick call is a danger signal in a unit.

Courts-Martial Rate: This often indicates morale in a unit, but it must be analyzed carefully for extraordinary influencing factors. For example, a very low court-martial rate may indicate not good morale, but a lax discipline.

Incidents and Accidents: Usually these occur in sizeable numbers only as a result of conditions existing over a period of time which set the stage for them. Because of this, they are an indication of the soundness of the basic structure of a unit which include the state of morale of its members.

Complaints to the Inspector General: These come about when men are not well informed and properly handled. Thus, they are an indication of morale.

Outside influence on morale

The factors, adjuncts and indications of of morale covered so far have to do with those things that are generally within the ability of military leadership and management to influence. But there are influences on the morale of soldiers, especially those on duty in a far-off land, which stem from attitudes of officials, members of Congress, the press, radio commentators and the public at home. These factors have to do with the last two elements of the basic premise:

2. An important job,

3. And receiving recognition.

It is necessary that the soldier feel that he is needed where he is in an important mission, that his sacrifices are of both immediate and of long range benefit to his country, his home, his family and himself. He will feel that importance so long as the people at home feel it. He is very sensitive to public opinion at home and, because of good radio, newspaper, and mail facilities, is constantly abreast of the attitude at home toward the importance of his job. The "home town" and other releases by Information Officers play an important part in the attitude at home. Unless the people at home help maintain in him the feeling that he is doing an important job for them, the heart of the basic premise upon which good morale is built is eliminated. Then the several adjuncts to morale cannot fully fill the void regardless of the efforts made.

The third element—"receiving recognition"—generally follows from the second, insofar as the atttiude of the public is concerned. Visits, speeches and actions of officials, articles by newspaper correspondents and contents of letters which the soldier receives from home all affect morale. Because of this, every citizen shares with the military leaders the responsibility for the morale of the service personnel.

SUMMARY

The morale of a man in a military organization comes from many factors. It may well be summed up in one word, "Confidence." Confidence in his training, equipment, leadership, in himself, in his unit and in the support from home. The military commanders play a big part in it but so do civilian officials, members of Congress, the press, radio commentators and the general public at home. Together they must insure that the soldier does well an important job and receives recognition for it. So long as this is accomplished there is a general feeling of confidence, well-being, and progress in a military unit; and the report which states that the "morale is excellent" will be sound.

PROTECTING THE CONSUMER

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am today introducing legislation to amend the Fair Packaging and Labeling Act, requiring the disclosure by retail distributors of unit retail prices of packaged consumer commodities. In sponsoring this legislation, I am joining with the distinguished Senator from Wisconsin, Hon. GAYLORD NELSON, and my colleague from New York, Hon. BENJAMIN S. ROSENTHAL.

On Monday of this week, I testified before Commissioner Bess Myerson Grant, of the Department of Consumer Affairs of the city of New York, on the matter of food pricing and packaging, and at this point I insert the statement I presented at that hearing:

Commissioner Grant, ladies and gentlemen—It is a pleasure for me to be here on the occasion of the first public hearing to be conducted by the Department of Consumer Affairs. When I was a member of the City Council last year, I voted to establish this Department, and to give it independence from the Economic Development Administration. If that legislation had not passed as amended by the Council, I doubt that these hearings today would have taken place.

I would like, also, to commend Commissioner Bess Myerson Grant for her initiative and her enthusiasm. She is devoting herself without reservation and without fear to the consumer interest. I look forward especially to the productive results from this hearing.

Last week the cost of living again reached an all time high, with an increase of seven-tenths of one percent recorded for the month of April alone, and a 2.6 percent rise for the first four months of 1969. The running increase in consumer prices for the last twelve months was 6.5 percent, which means that if you had put your money in a savings bank and received the legal maximum of five percent interest you would have been 1.5 percent worse off at the end of the year than at the start of it. And that figure is before taxes. These inflationary pressures make consumer protection a most important subject, particularly to those who live on fixed or limited income, and that includes most of us.

Unfortunately, there is little that the Department of Consumer Affairs can do about inflation. But what it can do is to see that consumers get enough information to make sensible choices about how and where they are going to spend their money. One way to do this is by truth-in-pricing.

In the past few years, the consumer has had to face a bewildering array of supermarket monkeyshines. First is the enormous proliferation of package sizes and dimensions. The hearings on the Federal Truth-in-Packaging law revealed that some common products have multiplied into hundreds of different sizes, some of which may be expressed only in the most complex fractional form.

Second, we have an incredible variety of shapes of containers, what Deputy Mayor Costello last year called "the snail and giraffe shaped packages." There is a salad oil that comes in a vessel shaped like an hourglass. There are packages of air, with the produce resting on the bottom of the box. The ingenuity of the finest creative minds is brought to bear to make less appear to be more, and their efforts are frequently successful.

Third is the practice of shaving the third dimension. This is the custom of reducing the quantity of a product offered for sale, but not changing the traditional or accepted package size. This is accomplished in various ways: a transfusion of air, an extra layer of glass or other packaging material, or a reduction in that dimension of the product which is not normally noticed by the consumer. For example, soda has gone from 32 to 28 ounces while the normal height of the bottle has been retained, raisins and frozen foods now come in packages which are wider but flatter. This practice is the equivalent of shrinking the size of the moon by paring off pieces from the dark side. You get away with it for a while, but eventually, you will poke through to the sunny side, and there will be no more moon.

It is by no means every manufacturer or packager who engages in the misleading and deceptive practices which I have described. But it is every honest businessman and competitor who must be protected from the trickster, from those who would spare the package and spoil the product. The consumer should not be the hamster on whom every new artifice is tested and perfected before the years pass and the Federal Trade Commission finally catches up with it.

There is a relatively easy answer to price and package confusion. That is truth-in-pricing: a simple rule that would require the store to state, at the point of sale, just what the product costs per ounce. Let the buyer decide if she wants to pay more to pour her maple syrup out of a spout. She may reasonably decide to do so. But let her know

that she is paying for the glass as well as the syrup.

If the housewife wants the new miracle ingredient in her detergent that will make clothes whiter than white, she is welcome to it. If she wants higher quality, solid fruit instead of fragments, perfume instead of toilet water, so much the better. But let her know the choice she is making. And do not try to fool her into thinking that she is paying less when in fact she is paying more.

I do not believe that people will flock to the cheapest brands when truth-in-pricing regulations are adopted. Many shoppers, for reasons of taste or pride, prefer expensive brands. Whole schools of advertising have grown up to appeal to such preferences.

But it is unconscionable for the housewife who wants the cheapest brand of an identical product to be unable to pick it out because she is faced with a zoo of trick packages. That is not a system which will be tolerated indefinitely, despite the pressure of industry lobbyists.

Truth-in-pricing is not the ultimate solution to the complicated problem of providing fairness in the marketplace. But it is, in my judgment, a minimum requirement in order to allow the consumer to make intelligent comparisons of value.

It is not, in any sense, a radical reform. You can get the best view of it as part of an evolutionary process: first, a package was required by law to state its contents and weight or volume; second, under Regulation 49 of the New York City Department of Consumer Affairs, it was required to state its total price. Each past regulation was protested on the ground that it was impractical, unenforceable and a restriction on trade. Each past regulation proved itself over the years to be practical, enforceable, and no restriction on trade. And so it will be with truth-in-pricing. This regulation will become a benchmark for honest competition, and, years from now, people will wonder how we ever did without it.

So my advice to you, Commissioner Grant, is to move ahead. Let New York City lead the way in consumer protection, and give us in Congress an example for the nation.

Thank you.

THE SUPREME COURT AND WELFARE

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, the Supreme Court's ruling on residency requirements in State welfare programs further evidences the necessity for adoption of House Joint Resolution 82, to enable Congress by two-thirds vote of each House to override decisions of the High Court.

The decision on residency is as unfair to families appearing to benefit from it as it is to the States themselves. It may very well discourage families from establishing firm roots in any community, thus leading to an emergency of vagabond almsmen who move with the birds between North and South as the seasons change.

During the depression years before World War II, many a father or son reluctantly left western Pennsylvania in search of employment in Cleveland, Detroit, or any other metropolitan area where there was an opportunity for employment. Seldom did anyone send for the rest of the family, however, until he felt that his job was secure and the new residency permanent.

Under the philosophy now established by the Supreme Court, families will be encouraged to move about like gypsies in the full knowledge that instant relief will be available wherever the grass appears to be greener or the weather more appealing.

The decision destroys an inherent State right and can bring about a breakdown in residency requirements for voting and in various licensing systems. Furthermore, reciprocity arrangements between States may eventually become meaningless if the new concept for welfare applicants is extended.

Mr. Speaker, I include in the RECORD the following recent editorial from the Wall Street Journal and the editorial of May 5 from the Philadelphia Inquirer:

[From the Wall Street Journal]

A LARGE BLANKET

The Supreme Court's edict against residency requirements in state welfare programs is disturbing in its likely practical effects, but even more disturbing as further evidence of the Court's willingness to write its own social opinions into law on any handy if tenuous Constitutional ground.

The residency requirements have been passed by more than 40 state legislatures, and also authorized by the Federal Congress. We think most Americans would agree they are manifestly reasonable. If the citizens of a state decide to tax themselves to pay especially high benefits to the indigent among them, why should they be penalized for this generosity by the additional necessity to support the indigent of other states who may be attracted by the high benefits?

The standard one-year residency test seems a straightforward means of avoiding such a penalty. All the more so since, as Chief Justice Warren pointed out in his dissent, other means of support are in fact often available to those who fail to meet this test.

The Court majority struck down the tests by alleging they restrict a Constitutional right to travel. This is a "fundamental" right, it held, and no citizen should suffer a "penalty" for exercising it. Thus, to the extent such requirements are intended to "deter" interstate travel of indigents they are unconstitutional. Other justifications offered in their defense are not the "compelling" reasons necessary to impinge on a fundamental right.

There seems to be legal precedent for much of this argument, and it would make some sense if the provisions in question were in fact a "penalty" or "deterrent." Yet no one alleges (at least yet) that the Constitution requires any state to maintain a welfare program, let alone a schedule of benefits higher than those elsewhere. If it chooses to do so without a residency restriction, it subsidizes and provides an incentive for the migration of indigents. The whole purpose of residency requirements is merely to mitigate that incentive.

The distinction between enacting a penalty and refusing to enact a subsidy is admittedly a somewhat subtle one, but we would hope not one beyond the ken of the average Supreme Court Justice. Yet the majority not only disingenuously clouds this distinction, but casts a large blanket for future intervention in legislative prerogatives.

Other than the social notions of the Justices, after all, what are the standards of a "fundamental" right or a "compelling" justification? Why, as the Chief Justice asked, will not the same reasoning be used to strike down residency requirements for voting, professional licensing or what not? Both his dissent and Justice Harlan's quite pertinently allude to the now-deplored era when the Court used the "due process" clause to write its social views into the Constitution. They observe that the present Court's rationale is similarly open-ended.

The era of "substantive due process" ended in the late 1930s when the Court started to adhere to the principle of using judicial review to pass on a legislature's Constitutional power to pass particular laws, instead of misusing judicial review to pass on a legislature's wisdom in doing so. The welfare decision is merely the latest in a string of rulings showing today's Court has again strayed, and needs to return to precisely the same principle.

[From the Philadelphia (Pa.) Inquirer, May 5, 1969]

CONTINUING ATTACK ON RESIDENCY LAWS

Two weeks ago, when the U.S. Supreme Court declared unconstitutional state laws setting minimum periods of residency as an eligibility requirement for welfare applicants, Chief Justice Warren warned in a dissenting opinion that the ruling could lead to invalidation of state residency laws applicable to voters.

It has not taken the Court long to move in the direction predicted by the Chief Justice. It has agreed to hear a challenge against Colorado's six-month residency law for voters which was in effect for last years Presidential election, even though the law has since been repealed and replaced by a two-month residency requirement.

Additional questions arise as a result of the Court's entry into the thicket of residency laws. If the principle of unrestricted movement of citizens from state to state is to be evoked against residency laws generally, as it was in the welfare ruling, a floodtide of litigation against a wide range of state laws may be in the offing.

What about motor vehicle registration and driver licensing? How about licenses for professional and vocational practices of many kinds? Such regulations and requirements vary from state to state. What of laws requiring holders of certain occupational positions to live within the boundaries of the locality where they work? There is an almost endless list of state laws that, to one extent or another, could be said to cause hardship for persons who change their place of residence.

Arguments before the Supreme Court in the Colorado voting case may be unusually far-reaching in their scope of interest in light of the recent decision nullifying welfare residency restrictions.

NEW AMERICAN POLITICS: VOTING AT 18

(Mr. HAMILTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HAMILTON. Mr. Speaker, one of the root feelings of young people today is that they are called upon to bear the heaviest burdens of the Nation through military service, but they are not allowed to help elect the leaders who make the Nation's policies. This feeling inevitably contributes to their frustration with the political process. This Nation cannot risk their alienation. Allowing them to vote would be a dramatic and effective way of showing young people that this Nation wants and needs their participation.

I. PUBLIC SUPPORT FOR VOTING AT 18

Last year's Gallup poll found public support for voting at 18 had reached an alltime high. Two out of every three adults—64 percent—thought 18-, 19-,

and 20-year-olds should be permitted to vote. Only 17 percent of all adults held this view in 1939 when the first national Gallup survey on voting at 18 was conducted.

Today, bipartisan support for voting at 18 is a reality. In its 1968 platform the Democratic Party pledged:

We will support a Constitutional amendment lowering the voting age to 18.

The Republican Party stated in its 1968 platform:

In recognition of the abilities of these younger citizens, their desire to participate, and their service in the nation's defense, we believe that lower age groups should be accorded the right to vote. We believe that states which have not yet acted should re-evaluate their positions with respect to 18 year olds voting, and that each such state should decide this matter for itself. We urge that the states act now.

Besides public support and bipartisan party support, our recent Presidents have also lent their support to voting at 18:

President Eisenhower in his January 7, 1954, state of the Union message said:

I urge Congress to propose to the States a constitutional amendment permitting citizens to vote when they reach the age of 18.

President Kennedy said on May 21, 1954, before becoming President:

Indeed, I would support such an amendment (voting at 18) in my own state and in the Congress if it were supported by the experience and demand of many states.

President Johnson, in transmitting to Congress a proposal to amend the Constitution to lower the voting age to 18, stated on June 27, 1968:

We should now extend the right to vote to more than ten million citizens unjustly denied that right. They are the young men and women of America between the ages of 18 and 21.

President Nixon, during the recent presidential campaign, had the following to say in support of voting at 18:

I am for the 18 year old vote. The reason I think 18 year olds should vote is that I think they would add to the interest in American elections, they would add to the quality of the debate, the younger generation today is better educated, it knows more about politics, more about the world, than many of the older people. That is why I want them to vote—not because they are old enough to fight, but because they are smart enough to vote.

On February 5, as members of the Youth Franchise Coalition, 15 organizations formally committed themselves to work together to achieve the goal of voting at 18: Americans for Democratic Action; Citizens Division, Democratic Party; Citizens for Vote 18; Citizenship Education Program, SCLC; Committee for Community Affairs; LUV—Let Us Vote; NAACP, Youth and College Division; National Education Association; Southern Committee on Political Ethics; Student National Education Association; Student World Federalists; U.S. National Student Association; U.S. Youth Council; Young Democratic Clubs of America; Young Republican National Federation.

I believe access to the ballot is the fundamental and basic requirement for citizen participation in a democratic society. Today, efforts to involve 12 million young Americans in the most basic process of a democracy appear to be closer to success than at any time since the first major effort to secure voting at 18 began in 1942.

II. WHY WE HESITATE ON VOTING AT 18

First. The prospect of 12 million new and allegedly irresponsible voters is a cause of concern. The principal theme of those opposed to lowering the voting age is irresponsibility. Twenty-one as the age of voting responsibility has no relevance in our 20th century—hopefully a time in which we all have shed our suits of armor.

Those opposed to lowering the age of voting seek proof positive that youth will handle their franchise intelligently even before having the opportunity to vote. The same impossible demand was made in opposition to female sufferage 50 years ago and equal voting rights for Negroes only 3 years ago. No tragedy occurred on ratification of the 19th amendment in 1920 and no catastrophe has resulted since passage of the Voting Rights Act of 1965. What has happened is large segments of our population now play a positive role within our political system—one of the earmarks of a democracy.

In May 1968 a Gallup poll disclosed that as many college-aged Americans considered themselves Republicans as Democrats—29 percent Republicans, 29 percent Democrats, and 42 percent Independents.

To counter the arguments of those who point to the December 1964 demonstrations at Berkeley, I point out the demonstrations began with the protests against the very exclusion from decisionmaking that the 21-year-old voting laws epitomize.

If the stereotype of the Berkeley student is false, and it is, then the idea that most college students are irresponsible is all the more false. Almost 10,000 Indiana University students recently protested action by the Indiana General Assembly resulting in a substantial increase in tuition—an action directly affecting them yet an action in which they had no direct voice being excluded from voting. National TV coverage showed the protest was peaceful and orderly.

As Indiana University students recently demonstrated, real experience does not come from observation but from participation. It is our responsibility to insure that positive participation also takes place within, as well as outside, our political system.

Second. Low voter participation of young people between 21 and 30. President Kennedy's Commission on Registering and Voting Participation in its report submitted December 20, 1963 stated:

The Commission is concerned over the low voter participation of this age group between 21 and 30. We believe that a major reason for this low turnout is that, by the time they have turned 21 (the minimum voting age in 46 of the 50 states), many young people are so far removed from the stimulation of the educational process that their interest in public affairs has waned. Some may be lost as voters for the rest of their lives.

Third. There has never been a concerted national effort to bring together the forces favoring voting at 18 to insure serious consideration by Congress and the State legislatures. The Youth Franchise Coalition has only recently been formed to plan and coordinate a national educational and political action campaign to secure the right to vote for all citizens of the United States at age 18.

The genius of our American political system has been its adaptability. Our political leaders and parties have always been capable in the end of embracing new ideas and new people. Political leaders and parties refusing to accept transfusions of new ideas and new people have always been left behind.

III. WHY WE SHOULD SUPPORT VOTING AT 18

First. The most compelling reason for lowering the voting age is that American politics needs the transfusion that younger voters would provide.

Senator MANSFIELD said:

Lowering the voting age to 18 will tend to bring about a better and more equitable balance in the electorate of the nation. As life expectancy rises, the number of older voters increases. A corresponding expansion in the number of younger voters will not only broaden the political base of the Government, it may well provide concurrently a more balanced approach in the nation's general political outlook.

Forty percent of our population is now under 21 years of age. By 1970 half of our population will be under 27 and about 7 percent will be between the ages of 18 and 21. Thus, the average age of Americans is now approaching the lower 20's after having climbed upward since the first decades of the last century. America is gradually becoming as "young" as it was at the time of its revolution.

Younger voters would indeed provide the transfusion needed today in American politics. More than any other factor, it was the nonviolent and student-led demonstrations of the early 1960's that produced the climate in this country necessary for enactment of the landmark Civil Rights Act of 1964 and 1965. Students have formed the backbone of the opposition to previous U.S. policies in Vietnam.

Because student demonstrations, marches, and speeches have in part been outside our political system, some students have felt the need to resort to unlawful acts to make their point. In doing so, they have made my point as well: there should be no need for civil disobedience in a political system meeting the needs of the people.

The energy, ingenuity, and idealism of young Americans will instill new purpose and drive in our political system if they are given the right to vote—the means to true involvement in the American political system.

Second. If young people receive the right to vote immediately after graduating from high school, they will form the habit of civic responsibility early in life.

Rather than blindly adhering to the present standard, borrowed from ancient English common law which designated 21 as the minimum age for knighthood, why not choose an age marking a definite turning point in the lives of young Americans today—the usual age of graduation

from high school. Given the fact that 21-year-olds are today's most delinquent voters, it makes sense to grant the franchise at the age by which most young Americans today graduate from high school so that what was learned may be put to practical use before being forgotten.

Seventy-five percent of our people graduate from high school today. Over 40 percent will attend college at some point. By comparison, 45 percent completed high school in 1940 and 16 percent could expect to attend college.

Third. TV now gives young people a feeling of immediacy and involvement concerning international and domestic problems—an involvement never before possible.

The 18-, 19-, and 20-year-olds have witnessed the important events of our age. Such experiences combined with knowledge gained in high school have created the desire in young Americans to have a real voice in decisions affecting them.

Improved education combined with a feeling of identification with the important social and political currents of today have made young people an important force. Our voting laws have unfortunately relegated young Americans to an outside force exerting pressure on, rather than participating within, our political system.

Fourth. Increasingly, the lives of 18-, 19-, and 20-year-olds are being affected by direct Federal Government action—the draft, taxation, job training programs, as well as through service in the Peace Corps, VISTA, and the Teacher Corps. All responsible Americans should have a voice in determining how their Government will affect their lives. Congressional resolutions lowering the voting age to 18 were first introduced in 1942—the same year the draft induction age was lowered to 18. The same situation exists today with one-half of our servicemen killed in Vietnam not being able to vote.

Fifth. 18-, 19-, and 20-year-olds can marry and start families, pay taxes, drive cars, and carry firearms. They are subject to the same penal code as are those of 21 years of age and over. Being treated as adults under the law, they should join adults in determining the laws which apply equally to both groups.

Sixth. Since Georgia, Kentucky, Alaska, and Hawaii now provide for voting by young Americans under 21, those under 21 and residing in other States are being deprived of their equal rights under the law in not being able to vote. Certainly the capacity of young Americans to make intelligent choices is not governed by the State boundaries within which they happen to reside.

Seventh. Nothing in the recent political history of the four States providing for under-21 voting indicates the college-age vote is irresponsible. In Kentucky, a State in which 18-year-olds have been voting since 1956, 80 percent of almost 200,000 18-to-20-year-olds went to the polls. Gallup polls in 1954 showed that 77 percent of Georgia's 18-to-20-year-olds would go to the polls if able to vote. Subsequently, Georgia's 18-to-20-year-olds now make up 20 percent of the State's electorate.

Eighth. Eighteen-year-olds now vote in 18 other countries of the world. Certainly young people residing in the United States are as well prepared today to make intelligent choices as are their contemporaries in other countries of the world.

IV. CONCLUSION

The history of the 18-year-old suffrage dates back to 1770 when there were attempts to draft a lower voting age in State constitutions. Today, efforts to involve 12 million young Americans in the most basic process of democracy appears to be more near success than at any time since 1942.

With assurances from the Youth Franchise Coalition that 18- to 20-year-olds really want to participate within our political system and that these new voters will support legislators who make it possible, chances for passage of a constitutional amendment providing for voting at 18 by the 91st Congress is bright.

I join those supporters of Votes in their feeling that a nation distrustful of its youth, "is a nation that does not have the vision to endure."

Mr. Speaker, the proposed constitutional amendment follows:

ARTICLE —

SECTION 1. The right of any citizen of the United States to vote shall not be denied or abridged by the United States or by any State on account of age if such a citizen is eighteen years of age or older. The Congress shall have power to enforce this article by appropriate legislation.

SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. TIERNAN of Rhode Island (at the request of Mr. ALBERT) for today on account of official business.

Mr. WYMAN of New Hampshire (at the request of Mr. GERALD R. FORD) for an indefinite period on account of illness.

Mr. MIZELL of North Carolina (at the request of Mr. GERALD R. FORD) for today on account of official business.

Mr. CULVER for the week of June 2 on account of official business for the House Foreign Affairs Committee.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PUCINSKI, for 30 minutes today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. HAMMERSCHMIDT) to address the House and to include extraneous matter:)

Mr. SAYLOR, for 30 minutes, today.

Mr. CUNNINGHAM, for 60 minutes, today.

(The following Members (at the request of Mr. FLOWERS), to revise and extend their remarks and to include extraneous matter to:)

Mr. RARICK, for 30 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. RYAN, for 10 minutes, today.

Mr. TEAGUE of Texas (at the request of Mr. FLOWERS), for 15 minutes, today; to revise and extend his remarks and include extraneous matter.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. O'NEILL of Massachusetts in four instances, to revise and extend his remarks and include extraneous matter.

Mr. MACGREGOR following message of President on foreign aid.

Mr. HECHLER of West Virginia to revise and extend his remarks in colloquy with the gentleman from Arizona (Mr. UDALL).

Mr. KEITH to follow Mr. STAGGERS.

Mr. GROSS, and to include extraneous matter.

(The following Members (at the request of Mr. HAMMERSCHMIDT) and to include extraneous matter:)

Mr. PETTIS.

Mr. MESKILL in two instances.

Mr. DERWINSKI in two instances.

Mr. COLLINS in three instances.

Mr. STAFFORD.

Mr. MCDONALD of Michigan.

Mr. RIEGLE in two instances.

Mr. ASHBROOK.

Mr. MAYNE.

Mr. SCHWENGEL in three instances.

Mr. JOHNSON of Pennsylvania.

Mr. NELSEN.

Mr. CHAMBERLAIN in two instances.

(The following Members (at the request of Mr. FLOWERS), and to include extraneous matter:)

Mr. O'HARA in two instances.

Mr. WILLIAM D. FORD in two instances.

Mr. FOUNTAIN in two instances.

Mr. DINGELL in two instances.

Mr. EDWARDS of California in two instances.

Mr. ROBERTS in two instances.

Mr. LONG of Maryland in three instances.

Mr. CASEY in two instances.

Mr. BIAGGI in two instances.

Mr. BOLLING.

Mr. MOORHEAD in two instances.

Mr. MINISH.

Mr. RARICK in three instances.

Mr. GALLAGHER in two instances.

Mr. FEIGHAN.

Mr. FRIEDEL in two instances.

Mr. DANIEL of Virginia in three instances.

Mr. MARSH.

Mr. FUQUA in two instances.

Mr. HELSTOSKI in two instances.

Mr. LANDRUM in two instances.

Mr. OBEY in two instances.

Mr. SATTERFIELD.

Mr. ICHORD in two instances.

Mr. DANIELS of New Jersey.

Mr. VANIK in two instances.

Mr. NICHOLS.

Mr. GONZALEZ in two instances.

Mr. PATTEN.

Mr. ROGERS of Florida in five instances.

Mr. EVINS of Tennessee in two instances.

SENATE BILL REFERRED

A Joint Resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 60. Joint resolution to establish a Commission on Balanced Economic Development; to the Committee on Interstate and Foreign Commerce.

ADJOURNMENT

Mr. FLOWERS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER. Pursuant to the provisions of House Concurrent Resolution 277, 91st Congress, the Chair declares the House adjourned until 12 o'clock noon on Monday, June 2, 1969.

Thereupon (at 1 o'clock and 45 minutes p.m.) pursuant to House Concurrent Resolution 277, the House adjourned until Monday, June 2, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

810. A communication from the President of the United States, transmitting a draft of proposed legislation to revise the laws relating to post offices and post roads and for other purposes; to the Committee on Post Office and Civil Service.

811. A letter from the Comptroller General of the United States, transmitting a report on the administration by the Small Business Administration of the disaster loan program in connection with the 1964 Alaska earthquake; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FRIEDEL: Committee on House Administration. House Resolution 425. Resolution, transfer of funds within the offices of the Clerk and the Sergeant at Arms of the House of Representatives, and for other purposes (Rept. No. 91-278). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANNUNZIO (for himself, Mr. CONYERS, Mr. MURPHY of Illinois, Mr. PRICE of Illinois, Mr. RONAN, Mr. PUCINSKI, Mr. STOKES, Mr. MILLER of California, Mr. KLUCZYNSKI, Mr. GRAY, and Mr. SHIPLEY):

H.R. 11737. A bill to amend the Merchant Marine Act, 1936, to encourage shipbuilding, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H.R. 11738. A bill to clarify and strengthen the cargo-preference laws of the United States, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. AYRES:

H.R. 11739. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. BINGHAM:

H.R. 11740. A bill to promote the advancement of biological research in aging through a comprehensive and intensive 5-year program for the systematic study of the basic origins of the aging process in human beings; to the Committee on Education and Labor.

By Mr. BURKE of Massachusetts:

H.R. 11741. A bill to amend the Internal Revenue Code of 1954 with respect to expenses of plastic surgery and hypertricohology; to the Committee on Ways and Means.

By Mr. BYRNES of Wisconsin:

H.R. 11742. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors; to the Committee on the Judiciary.

H.R. 11743. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacicus advertising; to the Committee on the Judiciary.

H.R. 11744. A bill to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CULVER:

H.R. 11745. A bill to amend title II of the Social Security Act to provide a 15-percent across-the-board increase in monthly benefits, with subsequent cost-of-living increases in such benefits and a minimum primary benefit of $80; to the Committee on Ways and Means.

By Mr. DINGELL (for himself, Mr. BLATNIK, Mr. SAYLOR, and Mr. KARTH):

H.R. 11746. A bill to establish a clean water trust fund, in which Federal water use fees shall be deposited and from which shall be expended all amounts for Federal water pollution control programs; to the Committee on Public Works.

By Mr. FISHER (for himself, Mr. BERRY, Mr. BURTON of Utah, Mr. DON H. CLAUSEN, Mr. HANSEN of Idaho, Mr. JOHNSON of California, Mr. LEGGETT, Mr. LLOYD, Mr. MCCLURE, Mrs. MAY, Mr. OLSEN, Mr. REIFEL, Mr. WOLD, Mr. BURLESON of Texas, Mr. PRICE of Texas, Mr. PURCELL, Mr. WHITE, and Mr. LUJAN):

H.R. 11747. A bill to impose a quota on imported fresh, chilled, or frozen lamb meat and certain prepared or preserved lamb meat; to the Committee on Ways and Means.

By Mr. HATHAWAY:

H.R. 11748. A bill to amend the Internal Revenue Code of 1954 regarding credits and payments in the case of certain use of gasoline and lubricating oil; to the Committee on Ways and Means.

By Mr. HELSTOSKI:

H.R. 11749. A bill to amend section 109 of title 38, United States Code, to provide benefits for members of the Armed Forces of nations allied with the United States in World War I and World War II; to the Committee on Veterans' Affairs.

By Mr. UDALL (for himself, Mr. HAMILTON, Mr. HANLEY, Mr. HECHLER of West Virginia, Mr. LANDRUM, Mr. STEED, Mr. PASSMAN, Mrs. GREEN of Oregon, Mr. STEPHENS, Mr. ASHLEY, Mr. HULL, and Mr. PURCELL):

H.R. 11750. A bill to revise the laws relating to post offices and post roads, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CUNNINGHAM (for himself, Mr. CORBETT, Mr. GERALD R. FORD, Mr. DERWINSKI, Mr. JOHNSON of Pennsylvania, Mr. MCCLURE, Mr. MESKILL, Mr. LUKENS, Mr. ARENDS, Mr. ANDERSON of Illinois, Mr. RHODES, Mr. POFF, Mr. TAFT, Mr. BOB WILSON, Mr. BOW, Mr. BUSH, Mr. TEAGUE of California, Mr. COLLINS, Mr. DICKINSON, Mr. ERLENBORN, Mr. HOSMER, Mr. KUYKENDALL, Mr. MARTIN, Mr. BROOK, and Mr. RUPPE):

H.R. 11751. A bill to revise the laws relating to post offices and post roads, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CUNNINGHAM (for himself, Mr. DELLENBACK, Mr. POLLOCK, Mr. BYRNES of Wisconsin, Mr. STEIGER of Arizona, Mr. BROWN of Michigan, Mr. FINDLEY, Mr. MOSHER, Mr. MAYNE, Mr. GUDE, Mr. STEIGER of Wisconsin, Mr. BROWN of Ohio, Mr. UTT, Mr. RIEGLE, Mr. MCCLORY, Mr. AYRES, Mr. ZION, Mr. ESCH, Mr. MATHIAS, Mr. TALCOTT, Mr. PETTIS, Mr. HANSEN of Idaho, and Mr. QUIE):

H.R. 11752. A bill to revise the laws relating to post offices and post roads, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ADAMS (for himself and Mr. TUNNEY):

H.R. 11753. A bill to revise the laws relating to post offices and post roads, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. HECHLER of West Virginia:

H.R. 11754. A bill to impose an excess profits tax on the income of corporations during the present emergency; to the Committee on Ways and Means.

H.R. 11755. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. KASTENMEIER:

H.R. 11756. A bill to promote public health and welfare by expanding, improving, and better coordinating the family planning services and population research activities of the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. KOCH:

H.R. 11757. A bill to amend the Fair Packaging and Labeling Act to require the disclosure by retail distributors of unit retail prices of packaged consumer commodities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. McDADE:

H.R. 11758. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. MOSS (for himself, Mr. BROOMFIELD, Mr. MONAGAN, Mr. REID of New York, Mr. ROSENTHAL, Mrs. HANSEN of Washington, Mr. CONTE, Mr. FRASER, Mr. ROYBAL, Mr. HORTON, Mr. TUNNEY, Mr. FINDLEY, Mr. PEPPER, Mr. THOMSON of Wisconsin, and Mr. MAILLIARD):

H.R. 11759. A bill to amend title III of part I of the Foreign Assistance Act of 1961 to provide for a program of investment guarantees in Latin American countries to encourage local participation in self-help community development projects; to the Committee on Foreign Affairs.

By Mr. NELSEN:

H.R. 11760. A bill to amend the Public Health Service Act to authorize the Secretray of Health, Education, and Welfare to provide financial assistance for education and information programs relating to drugs and their abuse, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. PODELL:

H.R. 11761. A bill to permit officers and employees of the Federal Government to elect coverage under the old-age, survivors,

and disability insurance system; to the Committee on Ways and Means.

By Mr. PODELL (for himself, Mr. MATSUNAGA, Mr. FASCELL, Mr. THOMPSON of New Jersey, Mr. WOLFF, Mr. O'NEILL of Massachusetts, Mr. FARBSTEIN, Mr. RONAN, Mr. ANDERSON of Illinois, Mr. BIAGGI, Mr. PIKE, Mr. MOORHEAD, Mr. LEGGETT, Mr. EDWARDS of California, Mr. WILLIAM D. FORD, Mr. GRAY, Mr. RYAN, Mr. BUTTON, Mr. MORSE, Mr. OLSEN, Mr. ROSENTHAL, Mr. HOWARD, Mr. MCCARTHY, Mr. RODINO, and Mr. DIGGS):

H.R. 11762. A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates; to the Committee on Government Operations.

By Mr. REES (for himself, Mr. BRADEMAS, Mr. CAREY, Mr. CONYERS, Mr. EDWARDS of California, Mr. FRASER, Mr. GAYDOS, Mr. HECHLER of West Virginia, Mr. HICKS, Mr. LONG of Maryland, Mr. MEEDS, Mr. MINISH, Mrs. MINK, Mr. OLSEN, Mr. PIKE, Mr. REUSS, Mr. ROYBAL, Mr. SYMINGTON, Mr. TIERNAN, Mr. TUNNEY, and Mr. VAN DEERLIN):

H.R. 11763. A bill to improve the operation of the legislative branch of the Federal Government, and for other purposes; to the Committee on Rules.

By Mr. REUSS:

H.R. 11764. A bill to improve intergovernmental relationships between the United States and the States and municipalities, and the economy and efficiency of all levels of government, by providing Federal block grants for States and localities which take steps to modernize State and local government; to the Committee on Government Operations.

By Mr. ROBISON:

H.R. 11765. A bill to amend the Internal Revenue Code of 1954 to make it clear that an expenditure otherwise allowable as a medical expense deduction shall not be disallowed on the ground that it is a personal, living, or family expense if it is made pursuant to the prescription or recommendation of a physician; to the Committee on Ways and Means.

By Mr. ROGERS of Florida (for himself, Mr. LENNON, Mr. MOSHER, Mr. DOWNING, Mr. KARTH, Mr. HATHAWAY, Mr. CLARK, Mr. ST. ONGE, Mr. JONES of North Carolina, Mr. HANNA, Mr. LEGGETT, Mr. PELLY, Mr. KEITH, Mr. SCHADEBERG, Mr. DELLENBACK, Mr. RUPPE, Mr. GOODLING, and Mr. BRAY):

H.R. 11766. A bill to amend title II of the Marine Resources and Engineering Development Act of 1966; to the Committee on Merchant Marine and Fisheries.

By Mr. ST GERMAIN:

H.R. 11767. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. STANTON:

H.R. 11768. A bill to assist students who, to attend college, are relying on their own wage-earning capacity rather than depending on others; to the Committee on Education and Labor.

H.R. 11769. A bill to amend the act of August 13, 1946, relating to Federal participation in the cost of protecting the shores of the United States, its territories, and possessions, to include privately owned property; to the Committee on Public Works.

H.R. 11770. A bill to regulate imports of milk and dairy products, and for other purposes; to the Committee on Ways and Means.

By Mr. STEED (for himself, Mr. EDMUNDSON, and Mr. CAMP):

H.R. 11771. A bill to provide for the disposition of funds appropriated to pay judgments in favor of the Sac and Fox Indians, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. STEED (for himself and Mr. CAMP):

H.R. 11772. A bill to supplement the antitrust laws of the United States by providing for fair competitive practices in the termination of franchise agreements; to the Committee on the Judiciary.

By Mr. WHALEN:

H.R. 11773. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising; to the Committee on the Judiciary.

By Mr. CHARLES H. WILSON:

H.R. 11774. A bill to afford protection to the public from intrusion into their homes through the postal service of offensive sexually oriented mail matter; to the Committee on Post Office and Civil Service.

By Mr. WOLFF (for himself, Mr. WALDIE, Mr. FLOOD, Mr. CORMAN, Mrs. MINK, Mr. GARMATZ, Mr. BEVILL, Mr. BLATNIK, Mr. DERWINSKI, Mr. GIAIMO, Mr. JACOBS, Mr. MOORHEAD, Mr. KLUCZYNSKI, Mr. GROVER, Mrs. MAY, Mr. MORGAN, Mr. ANDERSON of Illinois, and Mr. MONTGOMERY):

H.R. 11775. A bill to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam; to the Committee on Ways and Means.

By Mr. WRIGHT:

H.R. 11776. A bill to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. DANIELS of New Jersey:

H.J. Res. 748. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. GILBERT:

H.J. Res. 749. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. HELSTOSKI:

H.J. Res. 750. Joint resolution to proclaim National Night Driving Safety Week; to the Committee on the Judiciary.

By Mr. NIX:

H.J. Res. 751. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. WEICKER:

H.J. Res. 752. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. RYAN (for himself, Mr. BROWN of California, Mr. BURTON of California, Mr. BUTTON, Mr. DIGGS, Mr. EDWARDS of California, Mr. HELSTOSKI, Mr. KOCH, and Mr. POWELL):

H. Con. Res. 278. Concurrent resolution requesting that the President of the United States stop selecting and inducting individuals into the Armed Forces for a period of 180 days; to the Committee on Armed Services.

MEMORIALS

Under clause 4 of rule XXII,

199. The SPEAKER presented a memorial of the Legislature of the State of Minnesota, relative to the age requirement in the aid to the permanently and totally disabled public assistance program, which was referred to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. PEPPER:

H.R. 11777. A bill for the relief of Dr. Fredesvinda Mercedes Gonzalez-Pena; to the Committee on the Judiciary.

By Mr. TEAGUE of California:

H.R. 11778. A bill for the relief of Vincent Shau Lee; to the Committee on the Judiciary.

By Mr. WYATT:

H.R. 11779. A bill for the relief of Arline and Maurice Loader; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

127. The SPEAKER presented a petition of Ralph Boryszewski. Rochester, N.Y., relative to impeachment proceedings, which was referred to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

JOHN JOSEPH CARDINAL WRIGHT

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, I am glad to insert in the RECORD another article regarding John Cardinal Wright, of Pittsburgh, Pa., so that his story is brought to the attention of the Members of Congress and the American people:

[From the Pittsburgh (Pa.) Press, May 4, 1969]

JOHN CARDINAL WRIGHT—STILL IN TOUCH WITH THE PEOPLE

(By Ann Carey)

An Irish-blooded priest whose favorite dish is Italian spaghetti, who keeps jelly beans in his living room and sniffs hyacinths every chance he gets—that's Pittsburgh's new cardinal.

Robust John Joseph Cardinal Wright, Boston born and bred and a 10-year resident of Pittsburgh as its eighth Catholic bishop, has impressed three popes and many bishops and cardinals with the scholarship of his writings.

The New York Times has called him "one of the most able administrators and thinkers in the American hierarchy."

His formal elevation six days ago to cardinal, bypassing the usual American step of being named archbishop, in a solemn, centuries-old ceremony in Rome's venerable Sistine Chapel, makes him one of the most powerful men in the Catholic Church.

But it's the cardinal's warm, merry "humanness" that has endeared him to people throughout the world, from a handful of Paris Boy Scouts he went camping with as a newly ordained priest in France to thousands of Pittsburghers in the second largest Catholic diocese in the country.

When you want to find out how this much-lauded man is most often regarded, you talk to unwed mothers who have been at St. Roselia, to alcoholics, to taxi drivers and bus drivers, to militant blacks who got financial aid from him in the face of frowns of many, to his adoring household staff, to the mothers whose babies he has baptized at St. Paul's Cathedral on Easter.

And from them you get a picture of a man who squeezes hours from one of the busiest schedules in the City to make time for people.

"He didn't look at me like I was dirt. He kept making jokes and he even asked me to pray for him. Can you imagine that!" said a young woman who had an illegitimate child.

A mother whose baby he baptized exclaimed, "When I look at that man, I really feel I kind of know what Jesus must have been like. He's firm but he's as kind as God makes them."

A bus driver said after listening to a Wright sermon, "You get the feeling he's one of the best politicians around. You just feel he gets whatever he goes after. But I admire him for it."

The adulation, the limelight, the glowing adjectives—have they changed the man?

Leo Donnelly, his chauffeur and personal assistant who's been with him for 22 years, the nuns who run his house, the priests who assist him insist he's the same.

He still stops to talk to little children on the street. He still greets everyone he meets with a handshake or a hug and a "God bless you," and he still says goodbye with a hearty "Pray for me."

He ramrods through each day on a schedule that barely gives him time to brush his teeth and he does it with a joviality that turns glowers into beams wherever he goes.

The new cardinal is not a simple man, despite his frank openness.

Each time he makes news—especially when he wrote the U.S. bishops' qualified endorsement of Pope Paul's controversial encyclical forbidding artificial birth control—he has baffled some of the top journalists in the country by defying classification as either "liberal" or "conservative."

Robert Gruenberg of the Chicago Daily News Service was one of those who struggled unsuccessfully to pinpoint him and finally gave up.

"He is recognized as one of the more erudite men of the American Catholic establishment. . . . A study of his past pronouncements on various issues—from race to peace—would tempt the indiscriminating to place him in either the 'conservative' or the 'liberal' camp," the newsman wrote.

"The closest that one might come in describing him is as a 'hard-nosed dove' (on matters of war and peace) or as a Catholic 'Boston Brahmin' in matters of intellect."

Cardinal Wright says emphatically, "I despise labels. They're a lazy way for people to categorize. I much prefer to have ideas and men judged on their own merits."

The 11,000-word pastoral letter he wrote last fall emphasizing that the Church's traditional stand condemning contraception still applies.

But the letter also said that Catholic couples who practice contraception will not be turned away from the Church, which ties in with one of the cardinal's strongest beliefs.

"You cannot judge another man," he states with all the positiveness of a Harvard mathematician reciting the multiplication table.

"If history and experience has taught me anything, it's that the reasons why people do things are never what you suspect and never what they say," he said in a recent interview.

For all the complexities of his nature, ebullient Cardinal Wright nevertheless has an overriding philosophy that gives him a solid concrete foundation to what he says and does.

"You can't say no to life," he repeats. "You have to say yes to life and art and beauty and love."

Cardinal Wright doesn't believe that man is getting better and better, what he calls the "myth of progress."

Sitting with his leg curled up underneath him, he stared out the window. "I find wonderful examples of humanity in antiquity and I find all the examples of evil present today. And the reverse is true. Everything I'd want to ask God was asked by Job. The Hebrew prophets described the exact same social problems we have today.

But he admits there are special problems today. "We're in grave danger of being dehumanized by technocracy—not technology. It's the impersonalized, automated, IBM card-way people are being treated."

Cardinal Wright believes something else has happened to our society, something he thinks is far worse. He believes the U.S. has started to say "a qualified yes" to life. "That means we're sick because the next step is to say no."

He explains that one area where he thinks this has happened is in family life—birth control. "People are saying no to life—the next step is to start strangling babies after they're born if they're not wanted. Oh yes, I believe it's coming."

He foresees the end coming—"It happened in Greece."

He is convinced the continent of the 21st Century is Africa. "They're on the way up. They're saying yes to everything. The time will probably come when they start saying no and then the picture will pass to someone else."

When man starts trying to avoid pain by becoming inhibited and not saying yes, Cardinal Wright believes he's "over the hill."

The ruddy-faced cardinal himself appears to be a long way away from the hill.

This is a man who bristles with enthusiasm and zest for life, love, art, music, theater, good food and most of all people.

At 59 he's strong and healthy—but worried about being overweight. "You have to be careful if you want to stay around," he says with a faint sigh. The nuns who take care of his big, homey house on Warwick Terrace say he skimps on breakfast and lunch and only at dinner eats a full meal.

The eighth bishop of Pittsburgh was born in the Dorchester section of Boston on July 18, 1909. As the eldest of six children of John J. and Harriet L. Cokely Wright, he was a mixture of English and Irish ancestry but it was quickly observed he had a heavy dose of Irish wit.

His father attended Burdett Business College and was an accountant for a paper firm in Hyde Park, Mass. He died in 1962. His mother is very ill in a nursing home in Massachusetts.

Cardinal Wright has two sisters and three brothers, including a librarian and a physician, but none is in religious life.

Handsome and likable, young John Wright showed early signs of being highly intelligent and eargerly curious about the world and his place in it.

After going to Boston Latin School, he started out thinking he wanted to be a reporter. During college he worked on the night desk of a Boston newspaper.

The story persists that he changed his mind when sent to get a picture of a dead girl from the grief-stricken mother.

The 1931 yearbook of Boston College said in its capsule characterization of him: "Jack stands unopposed as the outstanding scholastic figure in the class." The cardinal shrugs that off as an attempt to offset the fact he was not exactly the school's sports star—he hated athletics.

He also used to be employed after school at the Hyde Park branch of the Boston Public Library for the hefty sum of 25 cents an hour.

It was from his father, an avid reader, that he learned to love books, devouring them by the shelfful.

An early riser who still nevertheless reads late into the night, he has kept many of the same habits he has always had—with a few exceptions. He no longer chases fires after listening to the police radio.

Since being ordained a priest in Rome in 1935 at the age of 26, his church career has sped ahead like greased lightning. His doctoral thesis was published as a book. He served as a priest in Scotland, England and France.

He taught philosophy at St. John's Seminary, and in his spare time taught Italian and poured forth a steady stream of pamphlets and articles on Catholic social teaching.

In 1950 he took over as the first bishop of the then brand new diocese of Worcester, Mass., where he became known as the "little man's pal."

Before he left in 1959 to head the six-county Pittsburgh Roman Catholic Diocese, he was named "citizen of the year."

He delighted his Worcester flock and won their affection with his corncob pipe, his knowledge of the cartoon character Charlie Brown, his teas for unwed mothers, his love of music, his New England frugality and his Boston-brogued charm.

But he also became known as a perceptive businessman in his dealings to build a new hospital and to rebuild a tornadoed college. His debating background always kept him garnering the last word.

Since he came to Pittsburgh—on St. Patrick's Day—he has been a consistent newsmaker, more for himself than his office.

Almost immediately he established a list of firsts.

He was the first Catholic bishop to visit the County Workhouse in its 93-year history and confirmed 21 inmates who were serving sentences on everything from murder to morals charges.

He was the first Catholic prelate to speak before a Methodist general conference in the 226 years of Methodism. And later he became the first Catholic bishop to speak at a Lutheran church convention in America.

He made 41 round trips to the Rome sessions of the Second Vatican Council where he served on the principal theological commission.

When he got back he conducted a night course to explain the council's declarations.

He still thinks the ideas of the historic council have not yet filtered down to all the people. He shrugs that "you can't expect instantaneous results from something that far reaching."

But he also adds, "Former councils lacked the means to communicate. It used to be hard to get the news. Now it's hard to get the news straight."

He says he means the news media present reactions to the news so fast that "before the real issues are clear, the bonfires have started."

The black-haired, big-eyed cardinal has consistently impressed others with his many interests.

Historians marvel at his collection of St. Joan of Arc artifacts, valued at well over $70,000 and the largest personal collection in the country.

He speaks fluent Italian and French and keeps informed on what's happening in the world—a throwback to his early newspaper days.

Asked to sum up Vatican II, an almost all-consuming interest for a long while, he said: "The 19th or 20th bishop of Pittsburgh, probably black, will say, I think, that we did a reasonably good job. It is a planting. It will take many years of weeding and cultivating before reaping a harvest."

He has been outspoken on social issues.

In 1966 he called for a halt to the bombing of North Vietnam. He refused to talk about race unless it was the "human race." He said

Pope Paul VI gained a "heroic stature" for his stand against birth control. He told organized labor it had to fight for social justice.

In Pittsburgh too he crusaded against the name "morals court," saying it was being used to try other offenses and was ruining reputations. He was successful in getting it changed.

He has waged a consistent fight against alcoholism and has backed proposals helping alcoholics' rehabilitation.

As bishop he banned uniform apparel for children receiving their first communion and ordered a 10 per cent tithe on diocesan collections for "neighbors in need."

Cardinal Wright's soaring kite has a lengthy tailstring of honorary degrees and merit citations.

His hard-driving demands are sometimes hard on his staff and he can be inflexible in how he wants things done.

But John Joseph Cardinal Wright is also a kind man. The men and women who have known him the longest love him—perhaps the best testimonial of all.

The key to Cardinal Wright may be in one statement he made in a recent interview. "I love the Catholic Church as I love nothing else," he said earnestly. "I don't think of the Church as an organization—an institution. To me it's the personal presence of Christ in history.

"I see all truth and all faiths related to the Church and I think the Church has never been more powerful, more influential in the world. The pope is a symbol of permanence and stability in the midst of chaos."

This is a man who has stacked all the zeal and energy and devotion most men put into family or a career or making money into his religion without becoming a fanatic.

He is getting ready now to leave Pittsburgh. On the day he learned Pope Paul named him a cardinal, he said, "I'd spend the rest of my life in Pittsburgh." But he was quick to add, "But I'm ready to go wherever the pope wants me. We priests accept our assignments without knowing much about them."

But he's looking forward to the challenges and opportunities of Rome as he has always looked forward to every big step in his life.

In his words, "You have to keep saying yes or you're over the hill."

And John Joseph Cardinal Wright is a church man who isn't ready to start slipping down the other side.

COMMISSIONER BENNETT TO RETIRE

HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mrs. HANSEN of Washington. Mr. Speaker, a notable career in Federal Government service comes to a close this coming Saturday. Robert L. Bennett, Commissioner of Indian Affairs, will retire after 36 years, largely in the Bureau of Indian Affairs.

Commissioner Bennett is an Indian and a graduate of the respected Haskell Institute at Lawrence, Kans. He progressed through ranks of the BIA to become a skilled and visionary Commissioner.

The Commissioner recently delivered a speech at Dartmouth College where he told of the challenges and achievements of Indians.

I include the text of his address in the RECORD:

CULTURAL FACTORS IN THE EDUCATION OF AMERICAN INDIANS

It might be said that we are celebrating two events today—not only the 200th anniversary of Dartmouth College, but also the revival, during the 1960's, of public concern for the educational well-being of American Indian youth. Because Dartmouth was founded with a primary purpose of providing higher education for Indians, I am most gratified to have this distinguished forum to discuss publicly those aspects of Indian education which particularly require the attention of groups such as this.

Since both Dartmouth and the American Indians pre-date the American Republic itself, it is plain that both possess a remarkable ability to adjust to the ever-changing shape and pace of America's cultural, social and political life. In our time, however, those changes seem to be coming so swiftly and so irrevocably that we are all put to test to maintain the socio-political equilibrium. Dartmouth, like other educational institutions, is not immune from the pressure. Nor are the Indian citizenry of this Nation. I am convinced that the responses of the great colleges like Dartmouth to the needs of people such as Indians will be a significant factor in determining the form and substance of the new American society.

Although Indians are a very small minority in this country—the Indian population is well under a million—there is considerable new political action taking place among the Indian communities. For more than a hundred years Indians had remained the stolid and silent prototypes of what the white man alleged they were. But, today, Indian young people have moved in upon the fronts of community action. The Indian warrior today is fighting his great battle on the social level. He has abandoned the arrow and the musket for books and public platforms.

The transition from obscurity to a conspicuous role in contemporary political affairs has not been an easy one for the new generation of Indian youth. It has been accompanied by some confusion as to goals, some hostility to the dominant society, and a great deal of defensiveness in the way Indians see themselves. These are traits that characterize many of the social activists in this country today; but in the Indian they are often more acute because the culture gap between Indians and other Americans is wide and deep.

There are fundamental differences, however, between Indian social action and some of the current social movements by other groups. Indian youth are motivated by the desire to *stabilize* their communities, not disrupt them; to make them more economically viable rather than more dependent upon government largesse. They are turning to the government for increasing help but are rejecting the paternalism that was the core of the special federal-Indian relationship for so many decades.

"We are building, not burning," is the way one youthful Indian leader puts it. It is indeed true. From Florida to Alaska, there are evidences that building is going on in Indian communities. Not merely construction of facilities, like homes and schools and water and power lines and roads. Community spirit is building up, too. The voices of the Indian people are beginning to be heard on matters of resources development, environmental control, and education of their children.

Such constructive activities as these can be sustained only through an educated leadership. Indians understand the tremendous importance to themselves of quality education and equality of educational opportunity. The various tribes invest about $20 million annually in college scholarships; and during the past three years that I have served as Commissioner of Indian Affairs, the Bureau of Indian Affairs contributed another $10 million for higher education aid.

The vast majority of young Indian men and women today are seeking not to close the gates of the colleges, but to force open gates to institutions that have hitherto had few if any Indians among the student ranks.

Even so, only about 20 percent of the Indian college age population continues schooling beyond high school, whereas the national rate exceeds 40 percent. There are serious blocks to their success in school and college—financial need being one, but the culture gap being an even greater obstacle. For this reason, the educational needs of American Indians must necessarily be viewed from the perspective of the American Indian culture, and the special education requirements it imposes upon our schools.

This is the area in which Dartmouth College could, with singular appropriateness, assume a leading role in broadening educational opportunities for Indians. What could be more in keeping with the spirit of this 200th anniversary celebration than to sponsor a nationwide effort to develop educational programs that accommodate to the needs of Indian students? The focus is needed equally at the college preparatory and the college levels.

Dartmouth is already moving in such a direction. I commend to the attention of all communities the program called A.B.C.—"A Better Chance." It is a program that works with maximum effectiveness when a high school and a college both participate. Dartmouth is participating in A.B.C. with the town of Hartford, Vermont, situated across the Connecticut River from Dartmouth's site in Hanover, New Hampshire. Hartford has opened its high school—and, more than that, its heart—to educationally and socially disadvantaged youngsters from many parts of the country. This year Hartford is providing schooling, board and room, for ten Indian boys, and Dartmouth is providing tutorial services needed by those boys to qualify them for entrance into the College.

Dr. McGean, Secretary of the College—and to whom I am indebted for the invitation to be the speaker at this bicentennial—informs me that the townspeople of Columbia are also eager to launch an A.B.C. program. I hope it will be possible. There would be no more fitting locale than here, where Dartmouth's founder, Dr. Wheelock, began his teaching services to Indians as head of Moor's Charity School more than two centuries ago.

The need for charity is hardly less today than it was in Dr. Wheelock's day. I do not mean charity in the narrow sense that implies an obligation of the more affluent to provide for the poor, but charity in the broad sense of kindliness and understanding. These are the qualities that Indian students need most desperately to feel within the school environment; because when they are absent the relevance of education declines precipitously for them. This is a *cultural* response on their part which cannot be ignored in our desire to stimulate the intellectual response.

Indians are frustrated by the tendency of most other Americans either to romanticize and stylize them on the one hand, or, on the other, to minimize their place in our society. Even after 200 years, and in spite of the purposeful efforts of many Indian leaders today to be involved with the non-Indian world, most Indians are still a people apart, still strangers in their own land.

Even while adopting the outward aspects of modern American life, Indians today, as a whole, are probably less fully attuned to the non-Indian lifeway than many of them were in the early part of the last Century. Some of the Eastern tribes in those days assumed with ease and great success such European culture add-ons as systematic farming and formal schooling.

Back in the days when Oklahoma was Indian Territory, Indian groups operated schools and colleges that later formed the

core of the State's public school system. This kind of *leadership* in education on the part of Indians has been absent for many, many years, except in individual instances. It is only now beginning to reappear, currently in the form of Indian demands for control of elementary and secondary schools serving their children. The new interest in education is prompted by a sense of frustration with the average school program that ignores the Indian cultural background.

Indians today feel threatened by the pressures now forcing total assimilation, because they fear the loss of their self-identity. Being *Indian* and being aware of it sustained them during years of oppression. They challenge the motives of those who would make them less Indian. They seek from education the ability to be both Americans *and* Indians. An either/or choice is intolerable to them. Because Indian history, and Indian contributions to the building of this Nation, are an integral part of our national history, Indians ask that these facts be fully acknowledged within the framework of our educational programs. Only when other Americans recognize the full significance of the Indian role in the making of the nation will the Indian people of today be accorded their rightful place of dignity and social acceptance within the American ecumene.

The Indian's determination to retain his identity has contributed to a social phenomenon in modern America—the revival of tribalism. To be sure, today's tribalism has little in common with primitive tribalism, other than to retain remnants of the religious orientation of the Indian society. Today's tribal structures are usually modeled upon American governmental forms, and the objectives and services of tribal governments are, broadly speaking, comparable to those of county governments. The new tribalism is multi-ethnic in character, as is the Indian cutlure itself. Indian lifeways have been modified by the Spanish horse and Spanish weaving and by the industrious, acquisitive English mores. They have also been modified by the trade and agriculture schools of the 19th and early 20th Centuries, and by commercialized farming and motorized deep-sea fishing; by World War II and the enlistments of thousands of young Indian men; by air transportation and rocketry. Native Alaskans man the defense early warning system on the Arctic, Navajos and others assemble intricate electronic devices for space exploration, and the tribes are turning to computers to help keep account of their natural resources.

But the new Indian doesn't always feel comfortable in his new role. The tenor of Indian thinking is well expressed by a student who recently graduated from the federal Institute of American Indian Arts in Santa Fe. He composed a brief piece of poetry that is memorable to me not alone because it demonstrates literary artistry but also because of is revealing undertone of bravado. It goes like this:

"We shall learn all these devices the white man has.
"We shall handle his tools for ourselves.
"We shall master his machinery and his inventions, his skills, his medicine, his planning;
"But we'll retain our beauty.
"And still be Indian."

Some Indians, like myself, walk always in two worlds, trying to maintain the perspectives of both and to draw unto ourselves the best of both. This is not always done with ease, yet it is the course that must be walked by all American Indian children growing up today. It will be harder for them than it was for me, because the gap between the traditional Indian lifeway and the new technological society is far greater than was the gap between rural and city life in the earlier part of this Century. Some of the traits and values that are the very core of contemporary American society are totally alien to their Indian upbringing. They must learn to live by the new code, yet their heritage cautions them against foolishly abondoning the basic values of the old.

To be sure, thousands upon thousands of Indians have already become a part of present-day city and suburban American life. But many thousands more remain in their traditional home environs, on or near their reserved lands. They live in a sub-culture which is too often made up of the worst aspects of American civilization mitigated only by remnants of a simpler and more orderly lifeway. Poverty is the common chord shared by nearly all rural Indians today. The economic depression of the more isolated communities is exceeded only by the atmosphere of social depression. These are the conditions that today's Indian leadership is trying to combat.

From such rural environments comes the booming Indian population. Seventy-five percent of today's Indians is under the age of 25 years!

These are the young people for whom I have such great concern. These young people are the hope for rebuilding the Indian-owned lands and for the making of a new Indian culture that can live compatibly and coequally with the whole American community.

These Indian youth are usually very sensitive—sometimes hyper-sensitive—to the differences between themselves and others. They tend to deal with slights, real or imagined, by snubbing the offender forever. This is a form of censure that derives from the Indian culture; but outside the Indian culture it has the unfortunate effect of exhausting the patience and goodwill of many non-Indians. Such niceties of social behavior point up the culture difference between Indians and other Americans.

Although Indian students are attending colleges and universities today in unprecedented numbers, many find the experience an endurance test that exceeds their capacity. Very few institutions—either secondary or collegiate—have attempted seriously to help them through the adjustment period. They need academic help to enable them to progress in the classrooms, and they need social help in accommodating to the alien patterns of student life.

Most high schools, and colleges as well, tend to polarize rather than synthesize the cultural differences between Indian students and others. Perhaps this is a large part of the reason why so few Indians are to be found today in colleges like Dartmouth.

It may also be argued, of course, that Indians are not in the Ivy League because there are no longer many Indians in the East. It is true that most tribes, including those for whom Dartmouth was founded, were long ago moved westward. They generally tend today to think of themselves as westerners and to look only to western schools for their education. Even my own people, the Oneidas, to whom upstate New York was homeland, are now very much a part of the Wisconsin scene.

Indian students today are found predominantly in schools in the west—in the State universities and land grant colleges; and in such places as Fort Lewis College in Durango, Colorado, or Bacone College in Oklahoma, both of which were, like Dartmouth, founded largely for purposes of providing higher education for Indians. A few institutions in the West, most notably thus far in Arizona and New Mexico, have established special centers for furtherance of Indian affairs studies. The University of New Mexico has established a special program in law studies for American Indians, to encourage the entrance of more Indians into the legal profession. Arizona State University and the the University of Arizona both encourage Indians to enter the teaching profession and are developing new programs for teachers of Indian children which include the teaching of English as a second language and the teaching of Indian history.

Indians have not found a like degree of interest and concern in the institutions located in more easterly parts of the country. I wish a more intensive effort could be made to attract Indians to schools outside their own regions because the ultimate effect would be to give tremendous new breadth to Indian thinking and to Indian understanding of their own country.

It is not enough to offer scholarships, grants and loans to the Indian students who are the cream of graduating classes of the better high schools and academies. My concern is that the less well academically and socially prepared have an opportunity to broaden their backgrounds so that they, too, can compete successfully in such academic environments as Dartmouth offers.

They need such programs as A.B.C. They need, also, programs such as the transitional year that Yale has instituted. I have no doubts about the ultimate abilities of Indian children to perform as capably as any others in the classrooms. In fact, in the earlier elementary years they do somewhat better than average. The slump comes in the early 'teens, when chronic deficiencies in mastering the English language are compounded by chronic feelings of social frustration.

Within the school environment, whether it be a public high school or a private academy or a college, Indian students need to be re-assured that they truly belong within the American society. They need to know that their teachers and their peers hold them in regard for their own worth as individuals. It is not enough to pay them passing tribute because they are the First Americans; they ask to be recognized as a vital part of the fabric of America today.

What Indian youth hope to find in school is the experience of achievement that will sustain them and help obliterate the feeling of being born losers that engulfed their parents and their grandparents.

I believe my observations are sufficient to suggest ways in which the educational institutions of this country can help Indians toward the feeling and the reality of achievement.

As for the general public, typified by the townspeople of Columbia, Connecticut, there are other ways to help. The A.B.C. program is one. Your continuing public awareness and active interest in Indian education is another.

Your tax dollars are contributing to the education of about 100,000 or more Indian youngsters in public high schools throughout the country. Federal aid is available to those schools, often to a greater extent than it is employed, to provide the special language and counseling and related supplementary education services that many Indians require. You can help assure that funds are used more effectively for Indians in public schools.

Your tax dollars are also contributing to the education of about 50,000 Indian youngsters in the federal day and boarding schools that serve Indians who cannot attend public schools—either because none are available or because their needs are such that they require supplementary services not provided by their public schools. Federal boarding schools today operate on a per capita student budget of about $1,650 annually—half the amount expended in the operation of a first-rate private preparatory school. We *cannot* do justice to Indian youth on such a pennypinching scale. The schools need expert counselors and corps of teacher specialists in all fields—the price for which comes high, and the competition for which is usually won by the affluent and progressive high school systems in more urban areas.

Where there is the will, a way can usually be devised. Indian youth today have the will to build a better world for themselves and their people. You, the public, can help pave

the way, by being informed and concerned. I have confidence that the educational community of America—and the general public—will respond to the yearning and the need of Indian young people and pave the way for more of them to move out of the shadows of limited educational opportunity. When all of them have access to the best in education this country has to offer, and the most they can absorb, then the Indian people will no longer feel like strangers in their own land.

In any way that I can help, I shall always do so to the ultimate of my own ability and influence, for the problem of making quality education available to Indian children is always the matter of uppermost concern to me.

In a sense, this is my valedictory. At the end of this month, I plan to withdraw from my position as Commissioner of Indian Affairs. I shall not, however, withdraw from active participation in efforts to foster the betterment of the Indian citizenry of this country. For most of the 35 years I have given to public service, the service has been in the area of Indian affairs. It has been my life—and my life interest will go on. Perhaps, with release from the administrative responsibilities, will come the ability to be more active within the general community—and so I look forward to closer contact with interested people such as yourselves.

And, because old Indians never die, I look forward to the next 200 years of friendship with Dartmouth.

SEX EDUCATION—PARENTS TAKE ACTION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. RARICK. Mr. Speaker, the battle by concerned parents to stop immorality and perversion from entering their schools is now nationwide.

The unfortunate situation is that in most States instead of the sex panderers seeking to legitimatize their nefarious design on youth they have been able to sneak into the education field and force the outraged parents to come to the defense of their children by restricting and outlawing the pornographic education.

It is unfortunate that many of these concerned parents have not yet followed the example of those who brought suit in the name of religious freedom under the Constitution to protect their children from God in the schools. Further, in many States it is a criminal offense for anyone to contribute to the delinquency of a minor child, even in the guise of "education."

Clearly the extremists in the field of perverting the minds of our youth under the guise of sex education programs have disturbed a hornet's nest and it is probably only a matter of time until criminal actions and other litigation arises. And I feel confident that once this evil monster is brought out into the open with all of its unwholesome and unnatural objectives it will be completely removed from any program of compulsory education.

Mr. Speaker, I include, following my remarks, a resolution from the Missourians for National Security, a letter from Mrs. Frances H. Purcell, of Rock Island, Ill., and a news clipping from the local paper.

The courts were used to get God out of schools—surely the courts can be used to get compulsory pornography out.

The material referred to follows:

ST. LOUIS, MO.,
May 17, 1969.

Hon. JOHN R. RARICK,
House of Representatives,
House Office Building,
Washington, D.C.

MY DEAR MR. RARICK: For what assistance it may be worth to you in connection with your House Resolution 329, there follows the text of a resolution adopted by Missourians for National Security:

"Whereas Missourians for National Security have become aware of a massive drive to establish compulsory and detailed sex education in the public schools of our Nation beginning with kindergarten pupils, such drive primarily being led by SIECUS, and

"Whereas we approve the teaching of physical hygiene and proper health habits as well as biological facts at suitable ages, we are unalterably opposed to the promotion of the "new morality" regarding intersexual relations, perversions, and/or other "situation ethics" as expounded by SIECUS in the kindergarten or elementary grades, and

"Whereas we are in accord with Psychiatrist William McGrath, M.D., of Phoenix, Arizona, who stated 'Premature interest in sex is unnatural and will arrest or distort the development of the personality. Sex education should not be foisted upon children; should not begin in the grade schools. Anyone who would deliberately arouse the child's curiosity or stimulate his unready mind to troubled sex preoccupations ought to have a millstone tied around his neck and be cast into the sea,' therefore, be it

"Resolved, That Missourians for National Security, by unanimous vote, go on record in full support of House Resolution 329, which would establish a ten-man committee to conduct a thorough and penetrating investigation into the operations and tax-exempt status of SIECUS."

Sincerely,

HOWARD ROBB,
Chairman, Missourians for National Security.

ROCK ISLAND, ILL.,
May 15, 1969.

Attorney General JOHN N. MITCHELL,
U.S. Department of Justice,
Washington, D.C.

DEAR ATTORNEY GENERAL MITCHELL: Sex education courses have been introduced into the curriculum of the State of Illinois School District #41, County of Rock Island, City of Rock Island, public schools.

These sex education courses and the instructional material used in said courses has been approved by the office of the Superintendent of Education and the Board of Education of said public school district.

Staff members of the Superintendent of Education Office and duly elected School Board of Education members have publicly stated that the sex education courses are permissive; that parents of minor children are informed of the content of the instructional material being used in sex education courses; that they are permitted to view all audio-visual, visual aid and textbook material used in the sex education course before any part of it is used in the instruction of their minor child.

These same persons have publicly stated that no Religious Morality Guidelines are taught, nor can they be, since by law, No Religion can be taught in public schools.

Having given careful consideration to the above statements, I, Frances H. Purcell, citizen of the United States of America, State of Illinois, County of Rock Island, City of Rock Island, do herewith petition the Attorney General of these United States for a redress of grievances in behalf of my minor child, Mildred E. Lawrence, for the following reasons:

(1) I was not afforded the opportunity to preview ALL sex education instructional material being used in the eleventh grade of the Rock Island Senior High School before said material was taught my minor child, a duly enrolled student of said grade in said school.

(2) I did not receive a notice from any member of the Rock Island Senior High School administrative staff, faculty, superintendent of education staff or from any member of the Illinois Public School District #41 prior to the sex education course being taught my minor child, *nor did other eleventh grade students' parents.*

(3) I did not know my minor child was receiving said sex education instruction until two days before the completion of a six-week presentation of said instruction in a required course of study, physical education.

(4) I was not afforded the opportunity to have my minor child excused from the sex education course.

(5) Since my minor child was given the sex education instruction *without my knowledge or consent,* I have viewed the audio-visual and text book material used in said instruction and have found them to be offensive, objectionable, and completely contrary to the biblical Christian religious morality guidelines in which I believe and have instilled in my minor child.

(6) In the textbook, *Toward Adulthood,* by Alice M. Call, I find the morality guidelines set forth by Miss Call, humanist religion promoter Lester A. Kirkendall, who is a director of the *American Humanist Association* listed in Gale Research Company's book, *National Organizations of the U.S.,* under "Religious Organizations", and Irving Tebor completely unacceptable, therefore protest these having been taught my minor child without my knowledge and consent.

(7) I find the series of six "Basis for Sex Morality Series" filmstrips narrated by "convinced Humanist and unashamed of it" Dr. Bryan Green of Birmingham, England, offensive, lewd, suggestive, off-color, atheistic, anti-Holy Biblical, and immoral according to my religious beliefs. I therefore protest this series having been shown my minor child in a public school without my knowledge or consent.

Whereas atheistic, anti-Holy Biblical Humanist Religion indoctrination has been forced upon my minor child in a public school without my knowledge or consent, I do

Herewith charge any and all persons, individually and collectively, who are or have been performing the teaching of, causing the teaching of, supplying material for the teaching thereof, and publicly promoting the teaching of humanistic religious morality guidelines to my minor child in the State of Illinois Public School District #41 Rock Island Senior High School with a flagrant violation of my God-given parental rights to prevent the Humanist Religion Morality being taught my minor child, and I

Further charge any and all aforementioned persons, individually and collectively with a flagrant violation of the religious freedom rights of my minor child as set forth in the first amendment to the Constitution of the United States of America.

I respectfully request you, Mr. Attorney General, to hear my petition for a redress of grievances as guaranteed under the first amendment to the Constitution of the United States of America in behalf of my minor child, Mildred E. Lawrence.

I further respectfully request that you use all powers of your office for the purpose of issuing an immediate injunction forbidding the teaching of the humanist religion mo-

rality under the guise of sex education, family life, sociology, psychology, physical education, and/or any and all other courses of elective and/or required curriculum now being used or ever to be used in taxpayer-supported public schools located in any and all fifty states of these United States of America.

Respectfully submitted in behalf of my minor child, Mildred E. Lawrence, this 15th day of May, 1969 A.D.

FRANCES H. PURCELL.

[From the Washington (D.C.) Evening Star, May 27, 1969]

ABOUT 700 HEAR CRITICISM OF SEX COURSES LAW

About 700 persons crowded into a Rockville junior high school auditorium last night and listened with approval to indictments of a 1967 Maryland law requiring sex courses in all public schools.

Two ministers, two Baltimore physicians and a suburban newspaper publisher criticized the law as a moral and political encroachment on parental duties.

They said it preempts a parent's right to teach his child about sex when, where and how he chooses, and dispenses with moral strictures.

The Rev. Richard Grammer, pastor of a Glen Burnie Baptist church, said the sex program is part of a "new morality" that has become "a raging cancer eating into the structure of our nation."

He said public school sex education is related to the "topless and bottomless bars . . . the see-through dress . . . and erotic publications—from Playboy to hard-form pornography."

Although the law stipulates that sex programs be taught in all grades, even kindergarten, some school boards have taken time in implementing the courses. Dr. James Sensenbaugh, superintendent of Maryland public schools, last month urged administrators to be flexible in administering programs.

Howard Moses, a neurologist at Johns Hopkins Hospital, attacked the Sex Information and Education Council of the United States (SIECUS) as infiltrating the schools and encouraging the "amoral" system.

He said some SIECUS officials help operate Sexology Magazine, which he described as "the worst smut and grime that you've ever run across." School libraries, he maintained, are loaded with SIECUS materials.

Grammer and Leo D. Paulin, publisher of a chain of Montgomery County newspapers, said an original rationale of the program—that it would reduce illegitimate pregnancies and venereal disease—has been discredited elsewhere.

Washington has had sex education in its schools since 1959 but promiscuity among teenagers is on the increase, Paulin said.

Two speakers recommended that children be withdrawn from sex classes, as the law allows. But Moses said every course is "imbued with sex education" and that the program would inevitably affect children.

He said qualifications of those who teach and plan the program are a serious problem.

The audience at Julius West Junior High, asked to provide funds for literature to appeal the law, donated more than $426.

WISDOM

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. COHELAN. Mr. Speaker, every now and again one of our younger constituents writes to us to share a wisdom which transcends their age.

This month I received a striking letter from Miss Ann Hederson, a sixth-grade student at Wildwood School in Piedmont, Calif.

Ann Hederson addressed herself to the pollution of San Francisco Bay, but it could just have well been any other bay in the country. In six short lines she conveyed just about all that needs be said on why we must immediately act to bring an end to the pollution of our environment.

I commend these few lines of verse from my sixth-grade constituent to the Members of this House and to the readers of this RECORD, and include her letter in the CONGRESSIONAL RECORD at this point:

DEAR MR. COHELAN:

Soon all the people on this earth,
Will very likely die of thirst,
For we were not made to live this way,
With polluted water in our bay,
Write this poem is all I can do,
So then the rest is up to *you*.

Sincerely,

ANN HEDERSON,
Piedmont, Calif.

MRS. JOHN CURRY, OF GREENWOOD, IND., SUGGESTS TRIBUTE TO EISENHOWER

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. BRAY. Mr. Speaker, many suggestions have been made for memorials and tributes to General Eisenhower and one of my constituents, Mrs. John Curry, of Greenwood, Ind., has come up with an idea I wish to bring to the attention of all our citizens.

Mrs. Curry's suggestion could quite easily be put into practice without legislation, by communities, groups, and individuals. Raising the flag on Father's Day as a special tribute to General Eisenhower would be most fitting, I am sure, and I am happy to commend her idea to everyone. Her letter follows:

MARCH 28, 1969.

DEAR SIR: Fifteen minutes ago I heard about the death of President Eisenhower over the television. I must say that it was a shock to hear about it. I was praying for a speedy recovery for him. For as a young citizen he meant a lot to me. I don't know why I have waited so long to do what I am going to ask of you now.

It all started back 10 years ago in 1959, when I was in grade school. I wrote a letter to the President about a clipping that I had seen in the newspaper concerning Fathers Day. The article was about the flag being raised on Mothers Day and all other National Holidays, but why not on Fathers Day? I was only eight at this time, but it had me wondering why this was so.

On October 6, 1959, I received my answer from him. He said that he appreciated my interest in writing to him about the flag. He inclosed a White House card with his letter. On the card it read, with best wishes, Dwight D. Eisenhower. I can't tell you how thrilled I was with that.

I then wrote back to him and asked him how I would go about having this day be placed on the National Calendar. On July 8, 1960, I received another letter from the President. He said that it would be necessary for it to receive the endorsement of the Congress. He also suggested that I might write to the Representative from my district or to one of the Senators from my State about my request.

So now is the time for me to write. It may seem very, very small to you, for I know that he will have monuments erected in his memory, but I want the world to know that there are some real devoted young Americans left.

I'm trying to ask you if you can have this day put on the National Calendar, and have the Flag raised on this day in Honor and Memory of this wonderful, wonderful man? If you could have this done for me I would be so grateful. It would be a tribute to President Dwight D. Eisenhower, from a young but very proud American. I'm proud to be living in a country like this, and it is men like this man that made it this kind of a country.

Thank you.

MRS. JOHN CURRY.

Greenwood, Ind.

PROF. ROBERT EISNER OF NORTHWESTERN UNIVERSITY OPPOSES TAX SURCHARGE AND INVESTMENT TAX CREDIT

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1969

Mr. REUSS. Mr. Speaker, Robert Eisner, professor of economics at Northwestern University, has prepared a cogent statement on fiscal policy in which he sets forth his reasons for opposing the extension of the tax surcharge and of certain excise taxes, and for supporting repeal of the 7-percent investment tax credit. I commend his statement to my colleagues:

STATEMENT BY ROBERT EISNER

I am happy to explain my opposition to extension of the 10% tax surcharge and certain excise tax rates and my support of repeal of the 7% investment tax credit.

The essential considerations in coming to a decision on any tax proposal must be the following: 1) For what will the resources transferred as a consequence of the tax be used? 2) What will be the overall effect on the general levels of employment, output and prices? 3) Is the proposal equitable in the light of reasonable alternatives? A decision cannot, however, be based on economic judgment alone. We must accordingly be realistic and accurate in our appraisal of other governmental actions likely to be influenced by tax actions and we must be open and frank with regard to our political or ethical preferences and prejudgments.

We start from the economic argument that extension of the surcharge and certain excise tax rates are not economically indicated unless we presuppose continued high and even growing levels of Federal expenditures. If Federal expenditures are cut significantly, extension of current high tax rates would prove both unnecessary and harmful.

Now, it is a useful exercise in college courses in the principles of economics to elucidate the likely effects of tax rate changes upon the economy on the assumption that "other things" and, particularly, the rate of government expenditures, are unchanged. In our real political economy, however, it is essential to recognize that government expenditures need not be and are not likely to be unaffected by changes in tax rates. A much more realistic assumption on which to base

our analysis would be that higher tax rates would give this Administration (and any Administration) more opportunity for higher government expenditures.

Here we must be frank about our political preferences. There are certain types of increases in government expenditures or subsidies to private expenditures which I would welcome. There is very much to be done, and the hour is late, to meet pressing domestic needs. Each of us may differ somewhat as to exact orders of priority, but there is widespread recognition of pressing needs to solve the devasting problems of our cities, to educate our youth, to improve transportation, to combat pollution, and to house this generation and the next. The extents to which these and other tasks should be undertaken entirely out of government revenues or via tax incentives and subsidies to private enterprises are largely, or though undoubtedly not entirely, technical questions which can be reasonably well resolved once there is common agreement as to purpose.

The current surcharge, however, has not been imposed as a means of raising revenues or freeing resources to meet domestic needs. It has rather been imposed as a consequence of the demands of our military venture in Vietnam, and its proposed continuance is clearly associated with the continuance of that venture. It behooves all of us who are anxious to see this costly drain on American lives and fortunes ended speedily to do nothing to facilitate its continuance. The American people were told that the surcharge was a one-year measure when it was enacted. President Nixon indicated in his campaign that he would end the surcharge. He has also indicated his intention of bringing the war in Vietnam to an end. There should be no two ways about it. The surcharge should end and the war should end. Continuation of the surcharge runs a grave risk of facilitating the endless continuation of the some thirty billion dollars per year of spending in connection with the war which has brought our economy and the American people to so many of their present difficulties.

I am in fact hopeful that the war will be rapidly diminished in scope and soon ended. This Committee and the Congress have the responsibility to take economic measures to encourage that outcome. It will be argued in some quarters that the proper place to curb expenditures not deemed in the public interest is at the expenditure or authorization level and not in tax policy. I find this argument at best politically unrealistic and at worst hypocritical, where advanced by those who lack any real concern for curbing the expenditures in question. As the Congress well knows, it is difficult to cut specific expenditures and all the more difficult in a period of war tension to cut expenditures in a way that many voters would believe, however falsely in my opinion, would injure our brave fighting men. The American people are upset at high taxes and there is a real political opportunity now to act in a way which will both relieve them of some of their tax burdens and exert pressure to end the painful and unpopular war which has done so much to create them.

While on sober reflection, one would base the case of the connection between taxes and government expenditures on fundamental political and economic considerations, it is worthwhile to note that the Secretary of Defense asserted recently that our B–52 raids in South Vietnam are being curtailed somewhat out of budgetary considerations. If, in his judgment, such budgetary considerations can limit the level of violence in Vietnam, despite the huge amounts of money that have been made available to pursue the war, refusal to renew the surcharge, which has been clearly recognized as tied to the war, should be an effective way to bring about the speedy end to hostilities which almost all of us desire so urgently. When as free private individuals we decide that we do not want to have something we do not spend the the money for it. At the level of government we should act no differently. The surcharge can be supported only as a means of financing continued high levels of military activity in Vietnam and corresponding American casualties.

The Secretary of Defense has made another recent statement which is relevant. He has argued that even with the end of the war our extremely high levels of military expenditures, by far the highest in the world, should be maintained. There is proper concern in the Congress and in the nation at large at the amount of our military budget. We have all paid too little attention to the warning of the late President Eisenhower against the dangers of a powerful military-industrial complex. If we believe that our military expenditures, even aside from Vietnam, have exceeded all bounds of efficient provision of security for the American people, it is important again that our tax policy be consistent with efforts to bring our defense expenditures and, with it, our general military posture into conformity with our real self interest. Extension of the surcharge would only encourage those, in and out of the government, including many with their own private fortunes at stake, to move quickly to take any savings from the reduction and end of hostilities in Vietnam and dissipate them in a new, exceedingly costly and dangerous escalation of the arms race.

It is widely claimed that extension of the surcharge is necessary to combat inflation. I argued repeatedly [1] that enactment of the surcharge would do little to curb inflation which was consequent upon past escalation of the war and was sustained by continued expenditure in its pursuit. Continuation of the surcharge now, if coupled with continuation of the war, will again do little to curb inflation. The one sure and quick way to end inflation is to end the war. And with this we will end the painful distortions in our economy, such as high rates of interest, with which we are concerned.

There are indeed other arguments against continuance of the surcharge with which I am sympathetic. These relate to the uneven and inequitable nature of our tax burden. It is improper to continue a surcharge on the ordinary income of the great mass of the American people and of all of our business corporations and hence, indirectly, those who own them and those who buy their products, when tax loopholes and what amounts to cost-plus government contracts permit a significant minority to make huge gains and pay very little in taxes. This is apparently not the occasion for any extended analysis of the problems of tax reform, but I should call attention briefly to two matters close to my own past and present research, with which I am particularly familiar.

First, I must point out that high rates of taxation along with the availability of loopholes have encouraged wealthy individuals to take increasing portions of what economists would recognize as true income in forms which are not taxable and frequently not even counted as income for tax purposes or in our measurements of personal and national income. Most conspicuous and substantial are the huge amounts of income now enjoyed in the form of capital gains, both realized and unrealized. While these vary from year to year, it is clear even from preliminary estimates that they have been averaging proportions of our national income which could lead to current magnitudes in the neighborhood of 50 billion dollars and more. Additions to wealth on the part of most of us, whether to be spent soon or not, come in the form of highly taxable income. For those who take the capital gains route of earning money, taxes are of course minimal, and actually less than many seem to recognize. First and foremost, there is no tax at all on capital gains except insofar as they are technically "realized." This does not mean that individuals pay taxes on capital gains only to the extent that they spend amounts equal to their capital gains. For one can spend his capital gains quite effectively by spending more out of other income and allowing the capital gains to continue to accrue, "unrealized." One can further spend one's capital gains by borrowing against capital without ever selling or "realizing." And even, to the extent one does sell off the gains of, for example, $10,000 on original capital of $100,000, one pays only a minuscule tax. For if capital has increased in value by 10%, from $100,000 to $110,000, and one sells $10,000 of the capital, in the form of shares of stock, for example, one is liable to taxes only on the capital gains on the $10,000 of securities or assets sold. In this case that would amount to only some $900 of capital gains (10% of $9,091, to come to the total of $10,000 value of assets sold). The tax then even at maximum rate would be 25% of $909 or some $227 on a total capital gain of $10,000! That, one can readily see, is a rate of taxation of 2.27%, even on realized capital gains!

The argument and example above makes clear that improving the treatment of realized capital gains will only scratch the surface of the huge mass of untaxed income enjoyed in the form of capital gains. A small step in the right direction would be correction of the failure to tax at all the capital gains passed on at death. Taxation of capital gains at death would not only remove the aggravated inequity of complete avoidance of capital gains taxation on the part of those who, as a consequence of the current tax structure, do not sell assets during their lifetimes. It would also improve capital markets and substantially increase the Treasury's tax revenues by reducing the "lock-in" effect which discourages individuals from selling assets when in their own financial interests, aside from tax considerations, they would prefer to do so. In this connection, I might add that a publicized proposal to relate the tax on realized capital gains even more closely, but inversely, to the length of time which capital assets are held is, I believe, a step in the wrong direction. For this, like the loophole in realized capital gains taxation at death, would encourage people to hold on to assets and discourage them from freely selling and buying in the capital markets.

Secondly, particularly because this matter has also been under discussion in connection with the investment tax credit, I should like to express my strong opposition to any further "liberalization" of tax depreciation. There is a case, more constitutional perhaps than economic, in favor of tax depreciation allowances which would prevent our income taxes, particularly at the business levels, from becoming taxes on capital. To allow tax depreciation to exceed real economic depreciation is, however, merely to create a new loophole in the amount of tens of billions of dollars in the form of true economic income which is not considered taxable income because of excess depreciation charges which correspondingly reduce the figure finally considered taxable income. Knowledgeable economists, I am sure, point out that the major liberalization of tax depreciation by the Congress and the Treasury beginning with the new tax code of 1954 providing for additional forms of accelerated depreciation, and continuing through such other very substantial measures as the shortening of acceptable lives and corresponding increases in rates of depreciation

[1] See, for example, "The Proposed Income Tax Increase," *Illinois Business Review*, November 1967, pp. 6–8; "War and Taxes: The Role of the Economist in Politics," *Bulletin of the Atomic Scientists*, June 1968, pp. 13–18.

permitted in connection with the new guidelines, have already made tax depreciation far more than the true economic depreciation to be deducted in arriving at a correct measure of income. The tax loophole here is hence already tremendous. It should be reduced, not enlarged.

All of the arguments advanced above against the surcharge apply equally to extension of the excise taxes under consideration. I should add in addition, however, that excise taxes have further disadvantages in terms of equity and resource allocation which are well known to economists and, I believe, to the Committee. But receiving surprisingly little attention is the point that to the extent that higher taxes in the current situation are justified as a move against inflation, excise taxes must be recognized as a conspicuous exception. Increased taxes on income, other things remaining the same, can be expected to reduce upward pressure on prices by reducing the effective demand, that is, the purchasing power, which can be applied to goods and services. Higher excise taxes will reduce real purchasing power only and precisely to the extent that they raise prices paid by the purchaser. To combat inflation, by which we mean rising prices of goods and services, by tax legislation which raises the prices of goods and services is clearly contradictory.

Finally, I should like to turn my attention to the investment tax credit. First, it must be acknowledged, the arguments against tax increases which will facilitate continuation of high war and defense expenditures apply in principle as well as to a real tax increase in the form of repeal of the investment tax credit. In the instance, though, I believe, that questions of equity and allocation of resources may properly be viewed as dominant. On this topic, again, I have done a great deal of research and have argued, with the support of my research findings, that the investment tax credit is in large part an inequitable tax loophole. Its avowed purpose, according to its original sponsors, was to offer an incentive for greater business investment and consequent technological advance and contribution to economic growth. I confess to being dubious initially that this form of intervention in the economy is economically justified. The free market and business enterprise should normally be trusted to decide upon the proportion of resources to be allocated to current consumption as opposed to investment for the future and as to one form of investment against another. Before asking government to encourage a particular form of investment, that in eligible equipment, as opposed to investment in plant, in research and development, in human beings generally, a clear case should be established that the market mechanism has somehow broken down and that a correction to the bias or disfavor introduced by the market with regard to this particular form of investment is necessary. No such case, in my opinion, was ever demonstrated.

Further, the particular form of the investment credit for equipment, as finally enacted, offered relatively little advantage or incentive to those who might, as a consequence of the legislation, invest more than they would have invested otherwise. It is rather offered most of the benefits for investment which unquestionably would have been undertaken anyway. Merely to clarify this point, rather than to endorse any particular alternative, a measure which would have offered no tax credit for investment not above the average investment of the previous five years but, say, a 14% credit or even a 21% or 28% credit for investment above the previous average, would have been much more effective in stimulating new investment. It would have brought about a much higher ratio of dollars of additional investment to dollars of lost tax revenues than what has been accomplished with the current act.[2]

The investment tax credit thus constitutes in large part a "give-away" of particular benefit to those businesses and their owners that normally invest heavily in equipment. If the level of business taxation has been considered too high, a more appropriate method for reducing that level would have been a general reduction in income tax rates for corporate business and corresponding appropriate reductions in individual income tax rates from which unincorporated business would benefit as well. An investment tax credit for equipment which offers disproportionate tax savings and benefits to those businesses and their owners which normally purchase large amounts of equipment is precisely the type of tax loophole that this Committee should be committed to eliminate. While I would have favored eliminating the tax credit at any time, its elimination now is particularly called for in the light of concern that the high levels of projected business investment demand are particularly harmful to efforts to contain inflation and to keep down our currently very high rates of interest. For while I have argued that the investment tax credit constitutes in much larger part a pure tax reduction, rather than an incentive for greater business expenditures on equipment, there is no reason in the current situation to offer any stimulus to such business spending. And at last, on the subject of the investment credit, its removal at this time may perhaps facilitate the application of selected credits or tax incentives, along lines apparently under consideration by the Administration, which would encourage particular business expenditures, whether for manpower training, urban rebuilding or other purposes, where there are cleary compelling reasons for government intervention.

In conclusion, I may reiterate that I oppose extension of the surcharge on the grounds that it is a war-related measure which can only facilitate continuation of our costly military venture in Vietnam and the new escalation of the arms race which some would apparently favor as the war and spending directly related to it are ended. Since continuation of these high tax rates will be associated with continuation if not expansion of the high government expenditures for war and defense, extension of the surcharge, far from proving a measure to combat inflation will actually, as I have argued previously with some confirmation from subsequent events, do nothing effective to combat inflation. Continuation of special excise taxes is undesirable for the same reasons and also because it will actually contribute diretcly to inflation in the higher prices to be paid by purchasers to cover the taxes. I also see merit in opposition to continuation of both the excise taxes and the surcharge so long as major tax loopholes contribute to such an inequitable tax structure and concentration of tax burden on the great mass of individuals and businesses which earn their incomes in forms which do not permit ready tax avoidance. And lastly, despite recognition that repeal of the investment tax credit is in effect a tax increase which might also contribute to excessive war and military expenditures, other considerations of equity and resource allocation lead me to favor its repeal.

[2] I have set forth some statistical results of analysis of this subject in "Tax Policy and Investment Behavior: Comment," *American Economic Review*, June 1969, galleys currently available.

NEED FOR SAFEGUARD

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MARSH. Mr. Speaker, recently the Secretary of the Army, in an address to the Union League Club's public affairs luncheon in New York City on April 28, 1969, outlined in his remarks the need for the Safeguard anti-ballistic-missile system.

In a very definitive statement he points out what Safeguard can do and cannot do. In pointing to the need of this system, he outlines very clearly the work of the Soviets' antimissile program, as well as the development of their nuclear strike capabilities. His speech clearly draws on the geopolitical considerations, and shows that the Safeguard system is designed to prevent, rather than start, a nuclear exchange. It is designed as a measure to insure peace rather than a step toward war.

For the reasons mentioned above, I would like to bring it to the attention of other Members of the House:

REMARKS BY THE HONORABLE STANLEY R. RESOR, SECRETARY OF THE ARMY, UNION LEAGUE CLUB'S PUBLIC AFFAIRS LUNCHEON, NEW YORK CITY, N.Y., MONDAY, APRIL 28, 1969

SAFEGUARD

I want to talk to you today about what seem to me to be the major considerations involved in the current debate over the President's decision to continue deployment of a thin ballistic missile defense system. The facts of the thermonuclear age, and even more of the prospect of a possible thermonuclear war, are horrible to contemplate. Yet technology and certain irrevocable decisions have made these facts and that awful prospect inescapable today. The debate over whether or not we should deploy an anti-ballistic missile system cannot be conducted without taking into account of those facts, and the decision must be one which offers the greatest hope of reducing the prospect of such a war.

I want first to describe the nuclear environment within which our judgments must be made. I will next describe certain trends in that environment which cause serious concern and which we believe require the deployment of the Safeguard ballistic missile defense system in order to preserve stability in that nuclear situation. Finally, I want to give you my views of the most significant reservations which have been expressed by those opposing deployment.

Let me describe briefly the nuclear arms environment in which we live. I do this knowing that it is generally familiar to most of you, but I believe that an informed discussion of defense against ballistic missiles must proceed from a common understanding of the facts of the nuclear environment in which we can now live. We cannot unilaterally or quickly change the fact that we live in a world where peace is ultimately preserved by the mutual capability of the major powers to assure one another's destruction in the event of war—a delicate nuclear balance.

We and the Soviets each have large arsenals of nuclear warheads. Some are affixed to missiles which are either land-based or carried in submarines, and some are intended to be delivered by bombers. Our land-based

missiles, most Minutemen, are buried in hardened silos. Our nuclear submarines, the Polaris, are virtually impossible to locate when on station. And some of our bombers are on alert and prepared to take off on short notice. For these reasons our nuclear striking power could *today* survive an attack by *all* of the missiles now in the Soviet inventory and still retaliate with a blow which would destroy the Soviet Union as a nation, killing millions of its people and eliminating much of its industrial capacity. Our confidence in this ability to retaliate derives not solely from the number of weapons we have, but also from the fact that with three basically different weapons systems we are confident that many weapons will penetrate any defense which the Soviets might erect. The Soviets know this and their behavior is influenced accordingly.

The Soviets also have the capacity to absorb a first strike by our nuclear forces and in retaliation inflict destruction on the United States sufficient to end our existence as a nation. I am sure that they believe it vital to their national interests to retain at least that capability.

What I have described is mutual assured destruction, the doctrine which has been the basis of our deterrence since the Soviets first deployed large numbers of intercontinental ballistic missiles.

None of us prefers to see the world this way. But it is the world we live in. In the absence of another way to offset the Soviet threat and to provide the nation a means to ensure its survival, reliance on retaliation as our deterrent has been affirmed by every President since General Eisenhower. And in all likelihood we will have to continue to rely on our assured destruction as our deterrent until, either by agreement or by parallel action, we and the Soviets move to some other basis for our security.

Because deterrence is the foundation of the very survival of our nation today, we must make every reasonable effort to protect our retaliatory forces. And it is because we see certain trends in Soviet deployments and activity in the development of nuclear forces—trends which if continued could lead to substantial threats to our nuclear forces—that we have taken the steps we are taking in the deployment of the Safeguard ballistic missile defense system.

Let me describe for you, insofar as time and security requirements permit, what it is that has caused us to take these steps. First is the continuing deployment of the Soviet SS–9 intercontinental ballistic missile. The SS–9 can carry a warhead with a yield of up to 25 megatons, that is powerful enough so that if it hits within one mile of a Minuteman silo that missile is very likely to be rendered useless if not destroyed. One SS–9 can also carry three separate smaller warheads of about 5 megatons each. These would have to impact within about one-half of a mile of a silo to be effective. There are no insuperable technical barriers to achieving that accuracy, and if it is achieved, the threat to our Minuteman force would grow rapidly with the continued deployment of the SS–9. We have seen as recently as two weeks ago evidence of Soviet testing the SS–9 with multiple warheads and we have reason to believe that that testing will continue.

Why do we regard the SS–9 as a potential threat to the Minuteman? Principally because we can see at this time only one military use for such large missiles in such great numbers, and that is to erode the Minuteman deterrent force. The nuclear weapons which leveled Hiroshima and Nagasaki were one-one-thousandth the yield of the single SS–9 warhead. No strategist or planner believes that a weapon meant for attacks on all but the largest cities needs to be any larger than about one megaton, one-fifth the yield of each of the SS–9 multiple warheads which are under development. We assume from the warhead size of other Soviet missiles that they understand the sufficiency of smaller explosions. What the continuing deployment of the SS–9 represents then is a growing capability on the part of the Soviets to destroy our ICBMs, which are a key element in our deterrent.

At the same time we are faced with a rapid growth in the Soviet nuclear powered missile-carrying submarine force, comparable to our Polaris. The Soviets have been building such vessels for several years, but at a gradual rate. Recently the rate increased noticeably, and if it continues the Soviets will have a force equal to ours by 1975. How does this bear on our ability to guarantee retaliatory destruction of the Soviet Union in case of an attack? Submarine-launched missiles would pose a grave threat to our bomber forces. At all times some of our bombers are in an alert position. If the Soviets launched land-based ICBMs at us today, we would have enough warning time to enable those alert planes to take off before their airfield were hit. But if the missiles were launched from submarines off our coast, that warning time could be cut by half or more. Short of keeping an adequate number of our bombers aloft at all times—and that would cost about $1 billion per year—we know of no way to get an adequate number of them off their airfields in time to avoid a submarine-launched missile. This then is another potential threat which faces us—a growing capability on the part of the Soviets to destroy or severely damage the bomber component of our retaliatory forces.

If these threats materialize we would be left to rely primarily on our nuclear submarines for our retaliatory force. This is a formidable force, and one which we are confident is safe *now* from detection and destruction by the Soviets. But just as we are constantly working on ways to counter the Soviet submarine threat, so we too can be sure they are seeking ways to counter ours. Thus if the emerging threats described above materialize, we are left to depend on a system which may suddenly become vulnerable to a Soviet development which we cannot immediately counter. It would be unwise to rely on any single component of our nuclear force to ensure our survival—and it has long been our practice not to do so.

In view of the threat to our ICBMs which the SS–9 can pose, and the threat to our bomber force which the Soviet submarine force can pose, we need to find a means to counter those threats should they emerge and thus preserve our retaliatory capability. The Safeguard ballistic missile defense system is such a means.

Basically, Safeguard is a relatively thin defense against ballistic missiles—thin in the sense that it will not possess the capability to protect our cities from a massive Soviet attack. Protection from such attack is not technically feasible under present circumstances. Moreover, we recognize that the Soviets see it in their national interest to preserve their retaliatory capability against us. A thick missile defense of our cities would probably appear to them as a threat to that capability and in all likelihood cause them to add additional offensive nuclear forces.

Safeguard will, however, protect a minimum essential number of our missile sites from a Soviet first strike. It will also provide added warning time for our bomber forces on alert. These two contributions will help to preserve our nuclear deterrent.

In addition, the Safeguard ballistic missile defense system is designed to protect the United States from any small ICBM attack, the kind which Communist China might be capable of launching in the 1970's. Communist China is developing an ICBM capability. It is not progressing quite at the rate we once thought it would, but it is progressing. We expect that by the mid-1970's Communist China will possess the capability of killing ten to twenty million Americans in a nuclear strike. The Chinese Communists should be deterred by our retaliatory capability, but we are sufficiently uncertain of how they might react in a crisis that it seems prudent to protect against a Chinese nuclear attack if at all possible. Additionally, our Asian allies will have greater confidence in the credibility of our commitments if they know that we can come to their aid, when it is in our interest to do so, with little risk to us of a nuclear attack from China.

Finally, there is the problem of an accidental launch. I would hope that the other nuclear powers, like ourselves, have established procedures and designed devices to prevent the accidental launch of any of their nuclear weapons. But with a thousand enemy nuclear warheads deployed, the chance of such an accident nonetheless exists. If it should happen, at the least there would be great destruction; at the worst, it might lead to misunderstandings as to motive and to the initiation of further nuclear exchange. The protection that the Safeguard System will provide against an accidental launch alone provides substantial justification for the cost of the system.

One aspect of the President's decision to deploy the Safeguard system has not received the attention which I believe it deserves, and this has led to misunderstanding. The Safeguard plan has been approved in principle, but insofar as execution is concerned only two installations have been recommended to Congress for authorization—one at Malmstrom Air Force Base in Montana and one at Grand Forks Air Force Base in North Dakota. Before further deployments are approved, the intelligence estimates on which the potential threats described here are based, will be updated and reviewed and at the highest levels of government. If those estimates reveal a change in the development of the threat as we now see it, the Safeguard deployment will be modified accordingly. The progress of deployment will also be governed by the status of any arms control discussions we may be having with the Soviets. In short, Safeguard will be deployed only as the threat against which it is designed to protect develops and only if it is not inconsistent with any progress we might be making in arms control talks.

In this connection, some have asked why it is necessary to begin deployment now. Why not wait until more facts are available on the Soviet SS–9 deployment and the growth of the Soviet submarine fleet and until we have tested Soviet intentions in arms control? If we proceed now with the deployment approved by the President last month our first sites will not be operational until 1974. If the Soviet developments continue at the current rate they could at that time pose an unacceptable threat to our nuclear forces, and the Chinese threat may have begun to materialize. If the decision to deploy is postponed for even one year we would have to disband our present manufacturing and construction preparations, and the readiness of the first sites would be delayed approximately two years. The first sites then would not be operational until 1976.

This, then, is the case for Safeguard. It is a carefully measured response to a potentially serious threat to our national security. It is a response which can be tailored as the threat evolves or fades, and as we learn more of our chances to reach arms control agreement with the Soviets.

Why, then, is it the subject of so much controversy? I believe that its critics are driven by three concerns. First, there is concern that our deployment will lead to a further escalation in the arms race, increasing the burden of the cost of arms. Secondly, there is concern that it will diminish the chances for an arms control agreement between us and the Soviet Union. And thirdly, there is a concern that the system will not work, and that the money to be spent, which is indeed a large sum, will be wasted. These are matters which should concern us, but I

believe on careful analysis that they do not drive us to conclude that we should not deploy the system.

First, as to whether the deployment will escalate the arms race, I think the answer there is clearly no, unless the Soviets are unalterably determined to gain a first strike capability against us. Because Safeguard is not a city or population defense against the Soviet's capability to inflict intolerable fatalities on the United States, Safeguard will not impact on the Soviet deterrent. Therefore it should not evoke a reaction from the Soviets, if they intend to continue to rely on their retaliatory capability for their deterrent. The best evidence of the limited purpose of the Safeguard system lies not in our professions of its purpose but in the deployment of the Safeguard missile sites. They are deployed initially near two of our major Minuteman fields, and subsequently near other such fields, near major air bases and generally along both coasts of the mainland. The fact that Safeguard is designed only as a protection for our deterrent forces from the Soviet attack and for protection against a light Chinese attack, is evident from the sites chosen for the system. These are sites from which an effective defense of our cities against a large Soviet attack could *not* be undertaken, even if such a defense were technically feasible.

Turning to the second concern, I do not believe that the deployment of Safeguard will lessen the chances for an arms control agreement with the Soviets. In fact, it may even increase these chances. We should first recall the events of last year. In May Congress debated the question of the deployment of the Sentinel anti-ballistic missile system. In that debate the argument was made, as it is now being made, that a ballistic missile defense deployment would frustrate the chance for arms control talks with the Soviets. Nonetheless, Congress then authorized deployment, and it was *after* Congress' decision that the Soviets suggested that we begin arms control talks.

The Soviets have, as you know, *already* deployed a ballistic missile defense around Moscow. On the basis of current intelligence we believe that they intend to continue the development and deployment of that system. They also have the Tallinn defensive system which is now believed to be primarily directed against bombers. But it is not clear that it cannot be upgraded to obtain an anti-ballistic missile capability. Moreover, they have stated that they do not regard defensive systems as provocative. It seems clear then that the Soviets do not believe there is a necessary inconsistency between the deployment of defensive systems and arms control talks.

I mentioned the chance that our deployment of Safeguard may improve the likelihood of arms control negotiations. There are two bases for this. First, by merely responding to the recent Soviet developments described above we are serving notice that we are prepared to take the necessary steps to ensure our security. If there was ever any doubt in the minds of the Soviets, this should provide further evidence of our determination to prevent them from obtaining any advantage in strategic nuclear arms, thus adding incentive to negotiate an arms control agreement. Second, by responding to those Soviet developments with a defensive system designed so that it should not escalate the arms race, we have served notice on them that we seek the kind of stability which would be achieved in an arms control agreement.

Finally, as to the effectiveness of Safeguard, it is important to recognize that the system we contemplate does not embrace any unproved technological features. Each of the components, the radars, the missiles, the communications, and the computers, is within the current state of the art. Our testing program has provided satisfactory results thus far and we will continue an intensive testing program. Through the production, deployment and operational manning of the first two sites, the system will be given an even higher confidence by assuring that any minor unforeseen problems are identified and remedied.

In closing, I would like to make some observations which, while they do not relate directly to the decision to deploy Safeguard, do seem to me to underlie in some respects the debate in which we are engaged and which are matters for all of us to think about in the long term. Our nuclear strategy rests today on a delicate nuclear balance. This will be so as long as we rely on nuclear weaponry for security and so long as offensive weapons dominate. I do not believe that we should be prepared *now* to consign *future* generations to live under this delicate nuclear balance unless we see that it is absolutely necessary. We should strive, and we should be willing to spend, in an effort to find our way out of that uneasy world. This is of course the focus of our arms control efforts. But in the beginning at least, arms control arrangements will merely stabilize the condition of balance of nuclear destruction, not eliminate it.

One can conceive of long-term developments, either in the arms control field or outside it, whereby the defense is allowed to overtake the offense, and our security is preserved not because of our evident willingness to destroy our enemies and be destroyed ourselves in the process, but because of our ability to protect ourselves in the first instance from those enemies. Safeguard does not promise us this. Because it is designed only to protect our deterrent capability, it is not in itself going to lead to this kind of readjustment in the nuclear world. But it is a step in that direction, for it represents a decision to choose an option involving defense instead of additional offense in the continuing quest for our security.

INDUSTRY AND DEFENSE: A TIMELY INDICATION OF THE U.S. MILITARY-INDUSTRIAL RELATIONSHIP

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. SIKES. Mr. Speaker, Vice Adm. J. B. Colwell, U.S. Navy, has delivered an interesting and timely commentary on the U.S. military-industrial relationship which I think should be called to the attention of the Congress. It was delivered before the New York chapter of the American Ordnance Association on April 10, 1969, and will appear in the July-August 1969 issue of Ordnance. I submit these remarks for reprinting in the CONGRESSIONAL RECORD at this time:

INDUSTRY AND DEFENSE: A TIMELY VINDICATION OF THE U.S. MILITARY-INDUSTRIAL RELATIONSHIP

(By Vice Adm. J. B. Colwell, U.S. Navy, Deputy Chief of Naval Operations, Fleet Operations and Readiness)

The United States today has a very large military establishment. It is sizable in manpower, numbering over two million men. It is sizable in real property holdings, both here and abroad. It has a sizable inventory of aircraft, vehicles, and ships.

The cost of maintaining this force also is sizable. This year some 60 per cent of our governmental budget or 12 percent of our gross national product will be spent in support of our defense establishment. Without debating the adequacy of this outlay, past and current, it is an obvious fact that military preparedness is an expensive business.

This military force is built upon and sustained by the largest industrial economy the world has ever known. To defend our Nation in today's environment, we must have the most advanced, most effective weapons which can be produced, and we must have them in sufficient numbers. There is no second-place prize in a military contest.

It is our industrial technology and production capacity which make it possible to put such weapons into the hands of our troops. The resulting military force safeguards our economy. Our economy, thus secure, maintains for our society the world's highest standard of living with its rights to life, liberty, and the pursuit of happiness.

This, simply stated, is the military-industrial relationship which exists in our country.

Certainly there is a so-called "military-industrial complex" in this country! Our military forces could not exist without it, and, in the international environment in which we find ourselves, our country could not long exist without the means to achieve military security.

There are those, however, who would have us believe that the military and industry operate in an entirely different manner from the normal manufacturer-consumer relationships which are accepted in other sectors of our economy.

The country has been warned of an insidious Military-Industrial Complex, controlled by an oligarchy of military and industrial leaders. The necessary teamwork between industrial management and members of the Defense Department is alleged by some to represent a form of conspiracy, generated not in the Nation's interest but for the purpose of personal power and immense profit.

The existence of this complex, we are warned, will lead to the ruination of our economy, the reduction of our democracy to a garrison state, and, finally, to our destruction through irrational war.

I am not so naive as to forget that there are historical incidents of illegal activities and collusion in the past, nor to deny that there are people in the military and in business today who would turn a dishonest dollar. But I would emphatically deny that such activity is widespread, and I submit that the possibility of activity so extensive as to approach a conspiracy is indeed remote.

Let me develop the strange kind of logic which leads to an erroneous conclusion about the military-industrial relationship. It begins with the establishment of demand which, in this supposed case, is generated by an aberration in the desires of the military leader whose mind is fixed on war and who demands all the things with which to wage war. It is never satisfied with the capability or quality of the weapons in the arsenal and is constantly striving for more and better arms.

Industry, so the story goes, always interested in a good market, responds to fill this demand. Going further, industry applies the professional hard sell, playing on the fears and egos of the anxious and easily convinced military.

By elaborate advertising and lavish entertainment, the fable continues, industry generates artificial demands for useless weapons. Once this cycle is established, the military and industry join forces and control this process for their mutual advantage. The middlemen are the retired military officers employed by the defense contractors.

How is it that such business can be carried on despite governmental controls and con-

gressional checks? How can it be done right under the noses of a suspicious press and public? Again, the explanation is the military mind.

However, this time the critics have transformed the character of this mind. It is no longer slow and easily persuaded. The point is now made that military opinions and advice prevail because the military has produced an unending supply of distinguished, capable articulate, and effective leaders.

Their skill, energy, and dedication make them dominant in almost every government or civic organization they may inhabit, from high position to the local PTA. They are able to dazzle the Congress by their intricate budgetary footwork.

The public at large is supposedly hoodwinked by a vast public-relations campaign (referred to in the complex as propaganda) and by what might be called the military-industrial auxiliary. This includes all those who have ever served in the military and a number of organizations and persons who are just sympathetic.

They lobby for the complex, supplement the propaganda with periodicals extolling the merits of a strong defense posture, and generally subvert the population by encouraging youth to enlist, making patriotic speeches, and organizing Fourth of July parades.

However, this is *not* the way it works in real life. You know it, I know it, and I think the great American public knows it.

Let us look at the structure which militates against the feared unholy alliance. In the first place, each service has a limited budget which it will not knowingly waste on unneeded weapons or inflated prices.

Secondly, anyone remotely familiar with Government contracting procedures knows that the restraints, checks, audits, and requirements make it extremely difficult for any collusion to take place. Also, the contractors are competing among themselves.

One might ask a contractor who has just lost a major contract-formulation/contract-definition bid, after having spent millions of his own money, what his opinion is of the military-industrial complex!

What about those retired senior officers who are employed by industry? The real reasons are very evident. It is good commonsense for a company engaged in building weapons to hire individuals conversant with the operational employment of those weapons. Oil companies employ petroleum engineers, drug firms employ physicians, defense firms hire military professionals. To do otherwise would result in less effective designs and a less capable military arsenal.

If there were such a thing as a highly polished smoothly functioning military-industrial complex working for the mutual benefit of both parties, would our shipbuilding industry be in the shape it is in today? Would 58 per cent of U.S. naval combatant ships be 20 years old or older? Would our aging and overworked fleet be on the verge of obsolescence?

Consider these figures: in 1963, the gross national product was just under $600 billion—the Navy shipbuilding account was $2.8 billion; in 1966 the GNP had risen to $750 million but Navy ship construction had dropped to $2 billion; in 1969, with a near-$900 billion GNP, the amount allocated to building new men of war had dwindled to $1.2 billion.

I ask you, what has happened to the smoothly effective operation of the military-industrial complex?

And then there is the charge of militarization of American society. I would submit that in a society which permits citizens dressed as Viet Cong to march on Easter Sunday, overemphasis on the military virtues of loyalty, patriotism, duty, discipline, and service to country is hardly the problem. If the culture is so geared to the military, if the military is so respected, admired, powerful, and influential, why is retention of officers and men one of our most serious problems?

No, I think that those who are so concerned with this danger not only have overlooked our long history, they have closed their eyes to the present opposition to the draft, dissension over the Vietnam war, and disillusionment with structured power.

Of all of the fallacious arguments, the one which personally distresses me most is the allegation that the military man essentially wants war. The charge is leveled from time to time that the leaders of the complex deliberately plan wars because war justifies the existence of the establishment; that war provides experience for the military novice, challenges for the professional, and the field to exercise, prove, and perfect the industrial products. Thus war is not only welcomed but actively sought.

Well, what of these charges? What about this mythical beast?

First let me say that there is no such thing as the military mind. Military men as a group have similar inclinations, feelings, and general codes, but to assume that they think differently from any other segment of our society is ridiculous. They are products of the same schools, live in the same neighborhoods, read the same literature, and are exposed to the same pressures of domestic life as are other Americans. And as Americans they differ among themselves in their thinking just as do their neighbors.

In point of fact, the military man historically has opposed reckless, aggressive, belligerent action. He may argue that the danger of war requires more armament, but he will never argue that increased armament makes war desirable. He dreads war.

Concerning the professional associations, it is a significant point that these organizations serve a vital purpose in bringing together professionals who are engaged in a serious, expensive business critical to our national survival. Such liaison has been vastly beneficial in maintaining our defense.

I have attempted to show that fear of a massive military partnership with industry is without basis in fact. Such a thing does not now, nor did it ever, exist. Under our form of government, under the leadership of wise men imbued with an abiding love of country, it will not come to pass.

We cannot return to a simpler time when the problems of world leadership and the complexities of technological warfare did not rest upon our shoulders. The threat which we face is real, and we must have a modern strong military establishment in order to defend ourselves.

I view the military-industrial complex, if we choose to use that term, as an essential element of our national survival. An occasional self-serving individual there may be, for infallibility is a scarce commodity. But patriotism is in rich supply, and our loyalty and integrity are not for sale.

FANNING THE FLAMES

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ASHBROOK. Mr. Speaker, those who are familiar with the day-to-day happenings in New York City are aware, of course, of the conflicts that have been waged on the college campuses. Of equal concern is the inciting of high school students in the area who are much more susceptible to the arguments of the radical elements. No issue among students is too minor if dissension between administrators and students can be created.

The New York Daily News of Tuesday, May 27, carried an article on radical, underground high school publications by its education editor, Judson Hand. As Mr. Hand observes, the tone of most of the underground publications is blatantly revolutionary, and one or more of them has appeared at virtually every public and private high school in New York City. Needless to say, the problem of maintaining a peaceful atmosphere in the schools is compounded by the dissemination of incendiary literature exhorting impressionable young minds to rebel against those in authority.

The situation in the New York City area is no doubt being repeated in other schools in the country and should be the subject of possible corrective action. I submit the above-cited article, "High School Students Turn to New Texts—On Rebellion," by Judson Hand, for inclusion in the RECORD at this point:

HIGH SCHOOL STUDENTS TURN TO NEW TEXTS—ON REBELLION

(By Judson Hand)

Schools throughout the metropolitan area are being flooded with underground, revolutionary newspapers and do-it-yourself manuals for student rebellion.

The publications range from crudely mimeographed tirades against the school establishment, published, mostly on an irregular basis, by teenage radicals and their older allies, to The New York High School Free Press, which claims a citywide circulation of more than 50,000.

Dozens of school and city officials, including Mayor Lindsay, have cited the underground press as a major factor in the student disturbances this spring in the city's public school system.

As much as most principals would like to curb the excesses of the radical high school press, virtually all agree that this would be difficult, if not impossible, because of protections to free speech under the First Amendment.

Sometimes, the underground newspapers compete directly with authorized high school publications. For example, The Hickory Hog appeared at Andrew Jackson High School in Queens, where the school paper is called The Hickory Log.

"Hog" is the code word in underground newspapers for school officials and cops.

The tone of most of the underground publications is blatantly revolutionary. Cartoons of students holding pistols to the heads of principals are not unusual. And school authorities are reviled in the most obscene terms.

Because of the inflammatory material, many high school principals have banned the publications inside their schools, but it's perfectly legal for students to distribute them on sidewalks just off school property.

"There's nothing we can do about this," said Louis Shuker, principal of Jamaica High School and an outspoken critic of the underground press.

Another principal, Edward Kolevzon of Columbus High School in the Bronx and president of the High School Principals Association, believes that the high school underground press should be investigated by authorities.

"We've asked the mayor, the Board of Education and Superintendent of Schools Bernard Donovan to conduct such an investigation, but so far all three have declined to answer our letters," said Kolevzon.

The mimeographed papers, one or more of which has appeared at virtually every public and private high school in the city, are passed furtively from student to student in school hallways and washrooms even though, in many cases, the students risk disciplinary action from their principals if they are found with the publications on them inside the schools.

By far the most popular of the high school radical papers is the High School Free Press, which students call "the Freep."

The Free Press is sold on some newsstands (for 15 cents) and is hawked outside schools by students (for five cents). It includes advertising for rock records, movies, mod clothing and radical political groups. An agency called Vulture sells ads for the "Freep" and seven other publications, some radical and some devoted to rock music and mod art.

Much of the newspaper, which usually runs to about 20 tabloid pages, is devoted to dispatches from radical students, mainly at high schools in the city but some from as far afield as Atlanta and Santiago, Chile.

The tone of many of the dispatches is that of an article against student suspensions which appeared on page three of a recent issue of the "Freep."

"This year suspensions have been mostly political in nature," declares the correspondent. "The Board of Education is training plainclothes cops for permanent assignment to troubled schools. We'll have to show them that that ain't enough to stop us. Onward the struggle! Student power!"

Later on, the dispatch speculates that "the enemy" of the student movement may be no "obviously discernible person, but possibly your own mother!"

Another dispatch allegedly came from a student at Dalton, one of the city's best known private schools. Since the correspondent remained anonymous, however, this cannot be checked one way or the other.

"We are moving into a new stage with the capability of winning," said the correspondent. "In a large measure, we have been successful. Even the kids who were last year's gutless liberals (or worse) are demanding power."

The writer said that the radical movement in private schools was now concentrating on repeal of dress codes, the right of radical students to have their own bulletin boards and a school discipline committee which would include students. To promote these ends, the correspondent continued, "we have been using the existing student government to the utmost, stacking various committee meetings when necessary."

According to Shuker, the underground high school publications tend to break down into two groups—those produced by white radical students and those published by black students. However, the two groups of papers overlap, with white radical papers urging black power and black-oriented publications calling for more student rights and blasting the establishment.

Most parents, Shuker said, oppose the radical line of most of the underground papers and are horrified by the obscenities that they include.

"But a few parents actually support and applaud their children's participation in the underground press," he said. "Sometimes these parents are doctors and lawyers living in $60,000 homes. In one case, a mother and her son collaborated to produce their own underground paper against the administration of my school."

Shuker and other principals agreed that, though most of the high school underground papers were revolutionary in tone, they did not follow any discernible party line from Peking, Havana or Moscow.

"Many of the underground writers just aren't smart enough to have such an ideology," said Shuker. "But ideology or not, the incitements to rebellion are contagious and tend to discredit and undermine school administrators.

"Sometimes the stock-in-trade of these papers is outright lies," he added. "For example, I was accused falsefy of sending the names of all members of the senior class to draft boards."

In addition to underground newspapers, manuals outlining how to participate in student demonstrations are distributed widely at schools. One such manual lists "basic rules for avoiding useless arrests and injuries and for handling it when you get busted."

The Partisan, published by Youth Against War & Facism, is carrying an analysis, from a leftist point of view, of last spring's rebellion at Columbia University.

Rat, also widely read in the city's high schools, features "subterranean news," including a detailed account of recent student uprisings at Berkeley, California. The Movement, though published in San Francisco, has many readers in New York City and currently is carrying an article on dissent in local high schools and elsewhere entitled "Who's Against the Wall?"

The Guardian, which describes itself as "an independent radical newsweekly," includes tightly written news stories presented from a radical viewpoint.

Such papers as The Black Panther, The East Village Other and The Student Union Voice also are widely read among high school students.

"Where do you draw the line between obscenity and legitimate freedom of expression?" asked one principal. "And how do you decide when a student is advocating violent overthrow of the government?"

Most principals interviewed predicted that the underground press would continue to plague them—at least for the immediate future.

"Students are excited by it," said Shuker. "Some want to jump on the radical bandwagon."

H. CHAPMAN ROSE, CLEVELAND BAR ASSOCIATION PRESIDENT, SAYS LAWBREAKERS HAMPER WAR ON POVERTY

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MINSHALL. Mr. Speaker, my good friend, H. Chapman Rose, has legions of friends and admirers in the Nation's Capital who will be as pleased as I am to know that he has just been installed as president of the Cleveland Bar Association. It is an honor long overdue his brilliant record as lawyer, civic leader, and citizen. It also carries with it great responsibility, which Chappie Rose, as a proven leader, is well equipped to handle. His installation address is a promise of the excellence we can anticipate from him as head of the Bar and I would like to share it, prefaced by a biographical sketch from the May 15 Plain Dealer, with my colleagues in the House:

[From the Plain Dealer, May 15, 1969]

ROSE LEFT MARK IN MANY PLACES

H. Chapman Rose, who was graduated magna cum laude from Harvard law school, was installed last night as president of the Cleveland Bar Association.

Rose, a partner in the law firm of Jones, Day, Cockley & Reavis, also had the distinction during his undergraduate days at Princeton of introducing the silk hat and cutaway coat to the baseball diamond.

The departure from the usual baseball garb was the forerunner of a tradition that established "Chappy" Rose as the mediator in the break in athletic relations between Harvard and Princeton.

As a junior at Princeton and president of the Daily Princetonian when the break in athletic relations between the two schools occurred, Rose revived competition by challenging the Harvard Crimson staff to a "spoof" baseball game.

As captain and pitcher of the Princeton nine, Rose walked to the diamond garbed in silk topper and cutaway coat and proceeded to laugh the bitterness out of the minds of both colleges.

He was one of the outstanding Princeton college journalists and a leader in the student peace movement, the National Student Federation.

He was chosen by Supreme Court Justice Oliver Wendell Holmes as his "young fellow," an honor that went each year to an outstanding student.

After a year in Washington, Rose was admitted to the Ohio Bar in 1933 and joined the firm of Tolles, Hogsett and Ginn of Cleveland, predecessor to the firm of Jones, Day, Cockley & Reavis of Cleveland and Washington, D.C.

He joined the Army as a captain in July 1942 and was assigned to legal work in the office of the undersecretary of war and the headquarters of the Army Service Forces. In 1943, he was assigned by the War Department as an assistant to Bernard Baruch and John M. Hancock, then consultants to the Director of War Mobilization.

He was assigned in 1944 to the office of contract settlement, which had been set up under the Contract Settlement Act as a result of a report filed by Baruch and Hancock. He left the Army in December 1945 as a colonel to become director of Contract Settlement.

He returned to his law firm in 1946 and during 1948–49, he acted as counsel to the Industrial Advisory Committee of the Economic Cooperation Administration, which studied reparation problems.

In January 1953 he resigned from the law firm and his corporate offices to become an assistant secretary of the Treasury in the Eisenhower administration.

He was confirmed as assistant secretary Jan. 27, 1953 and assumed office Jan. 28. He served in this capacity until President Eisenhower nominated him to be an undersecretary of the Treasury on July 14, 1955. He was confirmed by the Senate on July 20, 1955 and took office Aug. 3.

On Jan. 10, 1956 Rose submitted his resignation as undersecretary to be effective Jan. 31 for "personal reasons," and in March, he rejoined his law firm in Cleveland.

Rose is a director of Basic Corp., Brush Beryllium Co., Clevite Corp., Cleveland Trust Co., and Jack & Heintz, Inc. He is also a trustee of Princeton University, Defiance College, Hotchkiss School, Western Reserve Academy and of the Cleveland Area Heart Society, the Cleveland Council on World Affairs, and the Musical Arts Association.

He and his wife, the former Katherine Cast, have one son, Jonathan Chapman, and live at 12407 Fairhill Road S.E.

Mr. Chairman, Distinguished Guests, Fellow Members of the Cleveland Bar Association, Ladies and Gentlemen: The first thing I want to do on taking over from Burns Weston is to speak my gratitude for the honor you have done me, and to promise to do my best. The second is to recognize what has been accomplished by Burns and his predecessor, Jim Davis. This is not to overlook in any way those who went before; it is in simple recognition of the fact that the turmoil of the last years has changed the character and content of many jobs—university presidencies and trusteeships, for example—and Jim and Burns have risen to the heightened challenge magnificently well.

The civil rights controversies, as well as the continuing possibility of civil disturbance, have imposed a special responsibility on lawyers, which this Bar Association, under their leadership, has moved to meet. Legal aid has been materially strengthened; cadres of lawyers have been organized on a stand-by basis to act in the event of civil disturbance either as defense counsel, or to assist the prosecution, or to act as observers to insure that legal rights are protected. We have cooperated with the Greater Cleveland Associated Foundation in projects funded by it and by the Ford Foundation seeking to upgrade our police force and its procedures. The Presidentially-sponsored lawyers' Committee for Civil Rights under Law, which as you recall provided lawyers and funds to try civil rights cases in the South in the early sixties, has now, again supported by a Ford Foundation grant, turned its attention to urban problems in the North. But instead of forming a separate Cleveland committee, as it has done everywhere else that it has gone, it has agreed to work here through the Bar Association; and our Committee on Law in Urban Affairs was formed for this purpose. Under the chairmanship of Jim Davis, and with Tom Gray as its Secretary, it is hard at work on various projects where lawyers can help to improve the racial climate of Cleveland. These are a few of the projects in this field that have been begun and will vigorously continue. It's a good record.

Much of this would have been impossible had not the necessary physical facilities for the Bar Association been created by the move to our new headquarters in the Terminal Tower, and, most important of all, had not the invaluable Peter Roper come on board as Executive Director.

One project of a broader nature that has had its beginning in this same fruitful period I want to talk about in a little more detail, because I mean to give it major emphasis in the coming year.

In cooperation with the Growth Association and with the approval of the judges and other public officials, we have had a leading firm of management consultants make a preliminary study of the functioning of our system of administering justice in the city and the county. This points to the feasibility and the necessity for a study in depth. We want to know why the dockets are as far behind as they are; whether the present division of jurisdiction between the Common Pleas Court and the several municipal courts in the county is the most efficient; where more modern administrative methods would help; where lawyers contribute to court delays; and so on.

Hand in hand with this study must go a campaign, in which the lawyers must take a leading part, to provide the necessary physical facilities for our system of justice. Even as remodeled, the County Court House on Lakeside is far too small; our county jail is an obsolete disgrace; our prosecutors' and probation officers' facilities are scattered and inadequate; the list could go on and on. It is neither fair not realistic to expect top performance from judges and other public officials who are forced to work with obsolete or inadequate tools. We as lawyers know this, because we are face to face with the problem in our work in the courts; it is our job to bring the facts home to the public, so that the needed funds will be voted.

To accomplish this is important far beyond the needs of the legal profession for more efficient tools with which to conduct its affairs. It is important because only so shall we move toward improving respect for law. When the likelihood or certainty of delay in a civil case tilts the scales against the poor man who can't afford to wait; when a poor man is held in an obsolete jail till trial, while a Wolfson is free on bail for years of appeals before he spends a night in prison—thus do we provide a superficially attractive basis for the SDS to argue that the law is a tool of what they call the military-industrial complex, and that it does not deserve to be respected. We must work ceaselessly at the hard and often dull job of removing these and many other flaws in the legal process, so that the law, and its processes, by being worthy of respect, may be respected.

And so I come to my final point, which relates also to respect for law. In my opinion there is nothing more dangerous in our national life today than the beginnings of an attempt at a philosophical justification for law breaking as a means of protest. By this I mean the violation of laws of undoubted validity, like those against trespass or assault, to get attention for a point of view. Here we as lawyers have, I am convinced, a responsibility that we have not so far fully discharged to challenge and rebut fuzzy, fallacious doctrine that is being heard too often from some undergraduates and some faculty voices on our campuses, and even from some pulpits.

This problem began with the very sound position taken originally by Dr. Martin Luther King, Jr., which was this: There is every justification for a non-violent disobedience to discriminatory laws whose constitutional validity is open to doubt. That in this case the doubt was well founded was held by the Supreme Court in due course. To disobey a doubtful law in order to test its validity, with a recognition that the legal penalty must be paid if the law is upheld, has always been the right of a free man in our society.

But the next step, taken not by Dr. King but by others, has led many people astray. Their heresy is this: Because they condemn the Vietnam war on moral grounds, and because the draft sends some men to the Vietnam war, they deem it proper to disobey the draft law. But there is no real doubt about the validity of the draft law; it has been sustained over and over again. Here begins the heresy: You may disobey a valid law because you disagree with a related government policy. You then wrap it in Dr. King's mantle by calling it civil disobedience.

But others have then gone a long step farther, to the position that, because there are evils on the campus or in the ghetto, it is all right to bring pressure to bear for their correction by breaking and entering, by occupying and holding buildings, by trespass, by malicious destruction of property, by assault, and by interfering forcibly with the rights of others to go about their lawful affairs.

I know of no one outside of the SDS or certain other extremist groups who would uphold the ultimate proposition stated this boldly. But the other day the President and the Attorney General both asserted that it was only a tiny minority on our campuses that was generating this turmoil. Then the president of one of our well-known colleges felt called upon to advise the President of the United States to expect the unrest to continue until the President and others of his administration addressed themselves more effectively and massively to the injustices of our society, including the poverty, the Vietnam war, and the inequities of the draft. In the context, it was almost, but not quite, a prediction that illegal conduct would continue on the nation's campuses, and almost, but not quite, a justification for it.

I detect something of the same atmosphere in the calmness of some of the ecclesiastical reaction to the demand of James Forman for half-a-billion dollars in what he calls reparations from the American churches. He has backed up this demand by the threat to disrupt church activities. As Erwin Griswold said in a lecture on dissent at Tulane last year: "I cannot distinguish in principle the legal quality of the determination to halt a troop train to protest the Vietnam War . . . from the determination to fire shots into a civil rights leader's home to protest integration." Similarly, I cannot distinguish in principle the legal quality of Mr. Forman's demand from that of the racketeer who threatens to damage a dry cleaning establishment unless the owner pays protection.

To put it that way oversimplifies the issue; but I think a little oversimplification is needed. People will say we have always recognized the *moral,* as distinguished from the *legal,* justification for disobeying a law that totally outrages one's conscience, if one were willing to pay the legal penalty. They will say that we have always recognized a special status for the religious conscientious objector. People will point to the war crime trials after World War II, which assumed a duty to disobey orders to commit the crime of genocide. Finally, people will cite the American Revolution, and other revolutions, bottomed on the right to overthrow a regime that has become intolerable. It would take all evening to reconcile these things—and I shall not attempt it, though it can be done—with this obvious truth: In the complexities of modern civilized life, no one can be allowed to arrogate to himself the choice of which laws he will obey and which he will flout. Modern western civilization, with its miracle of productivity, depends wholly on assurances given only by a system of law—upon predictions that people will perform their contracts, that people and their property can rely on certain minimum protections, that free speech is for everybody, that violent minorities on campuses or elsewhere will not be allowed to coerce majorities or other minorities, that changes in the rules can be made only in accordance with the rules, and so on.

To recognize that these things are true is, to be sure, no guarantee against lawlessness, either on the campus, or in the ghetto, or elsewhere. But I cannot help feeling that we make lawlessness more likely when we explain it, excuse it, and by soft impeachment seem to sanction it in the ways that I have mentioned. We as lawyers know this better than anyone else. Moreover, from our proximity to the industrial world, we know some things that are not as obvious to our friends in the colleges and the churches:

First, the incredible productivity of the American economy, which makes it possible for the first time to consider as a serious proposition the abolition of poverty in this country, derives from and depends on a commercial and industrial complex founded upon law, in which obedience to law is assumed.

Second, the belief that each man's conscience tells him what laws he must obey and what he can violate can threaten the productivity and abundance which underwrites the only hope of abolishing poverty.

Third, productivity and material sufficiency for the abolition of poverty are derived from and go hand in hand with the increasing complexity of our economy, the increasing urban concentration of our population, and the increasing vulnerability of our civilization to disruption.

Fourth, the theories that urge seizing class rooms to shut down a college could argue for seizing a power plant to shut down a city. As always in such a disaster the poor suffer most.

Knowing these things, we owe to ourselves and the community the duty to speak out.

I was glad the other day to see a quotation from Bayard Rustin, the organizer of Dr. King's March on Washington in 1963, and a philosopher of the civil rights movement. He was quoted last week in the *New York Times* as saying:

"A multiple society cannot exist where an element in that society, out of its own sense of masochism and guilt, permits another segment of that society to hold guns at their heads in the name of justice."

Our motivation to build a better world should not and does not derive its urgency from any sense of guilt. Visiting the sins of one generation upon another is dubious reli-

gious doctrine. It has the further vice that it impairs the balance and the wisdom of our response to the demands of the disadvantaged.

The urgency that we feel derives and should derive from the fact that for the first time in the long history of mankind upon this earth, this materialistic society of ours has acquired the material means to abolish poverty and hunger, at least in our own country; and justice requires that if we can do so, we must do so. Our urgency derives also from our national sense that we are indeed our brother's keeper and are therefore obligated to help him as far and as fast as we possibly can. As a nation we can do more than we are doing, and we must do more.

But if we yield to the demand of any generation or any group for speed at the cost of fairness, speed at the cost of trampling on the hard-won equal rights of others, speed, in short, at the cost of law, then, on the brink of success in the age-old struggle of mankind with poverty and hunger, we could indeed see our progress brought to a grinding halt. We lawyers are better able than almost any other discipline to insist on a historical perspective; to remind a confused America that it was a Supreme Court decision fifteen years ago in the school desegregation cases that made the largest single stride toward equality since the Emancipation Proclamation; that it has been the law and the courts that have been largely instrumental in pressing the country farther and farther toward this goal; and that real progress can come only through striking a national balance between means and ends in which respect for law is maintained and strengthened and not lost.

H. CHAPMAN ROSE.

REMARKS BY HON. JAMES D. HITTLE, ASSISTANT SECRETARY OF THE NAVY, MANPOWER AND RESERVE AFFAIRS, AT THE ARMED FORCES DAY DINNER, VALLEJO, CALIF., MAY 15, 1969

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. LEGGETT. Mr. Speaker, on May 15, 1969, it was my pleasure to attend the Armed Forces Day dinner in Vallejo, Calif., with the Honorable James D. Hittle, Assistant Secretary of the Navy. We were honored that General Hittle was able to spare his valuable time to come to my congressional district and deliver the major address.

General Hittle has had an illustrious career serving our country in many capacities. He served with distinction in the Marine Corps, and upon retirement served as advisor to former Secretary Gates, counsel to the Senate Armed Services Committee, and is presently Assistant Secretary of the Navy, Manpower and Reserve Affairs.

I would like to include, for the benefit of my colleagues, a copy of Secretary Hittle's remarks made at the Armed Services Day dinner at Vallejo, Calif.:

Ladies and Gentlemen: It's a pleasure in more ways than one for me to be with you for Armed Forces Day in Vallejo.

I am glad especially to bring you the good wishes of the Secretary of Defense, the Honorable Melvin R. Laird, and the Secretary of the Navy, the Honorable John H. Chafee. I can assure you that the role that Vallejo is performing in supporting our national security efforts is recognized and appreciated in our Nation's Capital.

Since this Navy Yard's first Commanding Officer, Commander David G. Farragut assumed command on 16 September 1854, Vallejo has made a continuing and large contribution to the development and maintenance of United States seapower in particular, and to the enhancement of our national defense in general.

It takes no long and involved general staff study to realize that our Nation's security is better because of the people in the Vallejo area. It takes no prolonged strategic analysis to realize that if it were not for what the people in the Vallejo area are doing, our Nation would not be as strong as it should be in these troubled times.

It also is a pleasure for me to be with you for personal reasons. Vallejo has a lasting meaning to me. Sometime ago—more years than I care to itemize—but I might as well admit that it was 30 years ago this coming July, I reported in to the Mare Island Naval Yard for my first operational assignment. The heavy cruiser, USS *Portland,* was then in drydock for overhaul and I went aboard as the junior Marine officer in the ship's detachment.

My stay in Vallejo was for a couple of months. During that time I learned some of the things that any Marine officer going to sea for the first time should learn as quickly as possible.

One of the first things of lasting value for my service career that I learned was that the best steaks aren't in wardroom country but down in the CPO mess. Another thing I learned real early was that with so many of the ship's officers going on leave while the ship is in drydock, a Marine lieutenant is welcomed for a very good reason—from their standpoint: He is a new addition to the watch list and obviously, in order for him to qualify he must stand more than the normal rotation of assignments. Consequently, it became evident to me very soon that if I didn't have some reason for getting the Marines off the ship for drill and for firing on the range, I was going to meet myself coming off Officer-of-the-Deck watch in port.

But probably one of the most unforgettable things that I learned during my stay in Vallejo was the goodness of the people of this area, their hospitality to servicemen, their understanding of their problems, and also that the people of Vallejo who are so intimately associated with defense activities considered themselves, and rightly so, part of our national security organization.

Today, on this Armed Forces Day I am not going to try to give you a strategic analysis of the multiple problems facing our Nation. I am not going to try to tell you of the great advances that have been made in defense managerial techniques through electronic computerization. These things are important.

But I want to talk with you about the most important single part of our national security. I refer to the people in our Armed Services.

I think that there has been too big a tendency by some to look upon our national defense in terms of materiel and not in terms of personnel. But I want to tell you that one of the most reassuring aspects of the new leadership that Secretary of Defense Laird and Secretary of the Navy Chafee have brought to the Defense Department and the Department of the Navy has been a renewed and enhanced emphasis on the importance of the individual fighting men in our Armed Services.

So for the time remaining to me this evening, I would like to tell you about some of the things that some of these patriotic, devoted people in our Armed Services are doing for our Nation, for you, for me, and for the cause of freedom every minute of every day.

Because South Vietnam is where the action is, that's where our Nation's attention is focussed—and probably rightly so.

But in watching the critical events of that far away, bitter, and crucial conflict, we must not forget those who are manning the rampart's of freedom in the distant skies, in distant lands, and on distant seas.

Today, there are approximately 1,200,000 United States fighting men serving outside the continental limits of the United States. Of these, over 500,000 are in the Southeast Asia area of conflict. The remaining 700,000 are protecting America's security and joining our Allies and protecting the cause of freedom elsewhere in the world. Many of these are serving in NATO. And, I would like to mention, specifically, the contribution of NATO: It has become fashionable for some who oppose our national secruity efforts to say that NATO has done its job, and that it's work is finished; so dissolve NATO and bring the boys home.

Nothing could be further from the strategic or moral truth. NATO has done—and is still doing—an historic and indispensable job. Since NATO was established soon after the end of World War II, not one single square inch of NATO has been surrendered to Communism. But, that job has not been finished. NATO's job will not be finished until the danger to the cause of freedom from the Mediterranean to the Arctic is ended.

And so those today in our Armed Services who are serving in that great arc of NATO's protection from the strategic borders of the Mediterranean northward along the Iron Curtain to the high seas of the Arctic are truly manning the ramparts of freedom. To them on this Armed Forces Day—an on every day—we owe our thanks for what they are doing to preserve freedom and our Nation's survival.

There is another type of indispensable, sometimes forgotten service that is being performed every minute of every day. You in Vallejo are well acquainted with it because of the work you are doing on our nuclear submarines. I refer to the crews of the nuclear submarines that today are on patrol deep below the surface of distant seas. Their tireless vessels are roving underwater guardians of peace.

Our Nation's fighting men are today in Korea guarding the freedom which American fighting men helped save from Communist aggression almost two decades ago. Let us not forget either our servicemen who are on duty in distant and unpublicized places such as the soldier serving at the isolated Kagnew Station in Ehtiopia; or, the airman facing the long cold nights at Thule Air Force Base in Greenland; or, the sailor at the Communications Station on the remote North West Cape of Australia. There may not be much glamor in such duty stations, but there is great necessity for them. Each fighting man in his own way is making his contribution to the security our Nation must have to survive.

And, let us not forget those servicemen who are at this very moment languishing in captivity as prisoners of war. To them and to their loved ones at home, our Nation owes a deep responsibility and a deep gratitude. And for them and for their families whose every moment of separation is an epoch of heartbreak, we must keep them in our thoughts and in our prayers.

But, let us talk for a moment about military personnel, not as a group or Service, but as individuals. Because that's what they really are. They are individual young men. Each has left the warmth and comfort of his home and is separated from those who are dear to him.

In these days of placard-carrying demonstrators and riots against the military, it is a constant source of reassurance to me to learn from our individual fighting men how

they feel about the job they are doing in defense of our country.

I'd like to relate to you just a few of the comments that have been made to me personally over the past few years by our men in uniform.

Prior to my appointment to my present position, I traveled in a newswriter and radio correspondent status extensively throughout Southeast Asia and to other parts of the world. I always welcome the chance to talk privately with our fighting men. I learned long ago that if you want to get a common-sense, unsophisticated answer to a complicated and difficult problem, ask the man who is doing the job.

Soon after the decision was made to openly enter the Vietnamese conflict, I visited Vietnam. The Marines had gone ashore from the fleet at the strategic coastal location of Chu Lai. I arrived there while the Marine operations were still continuing against surrounding enemy units, and while the Seabees were still constructing the expeditionary aircraft runway. I wanted to know what our young men in Vietnam who were doing the fighting thought about the anti-war picketing and protesting back home. I asked one young Marine, about 20 years old, in embattled Chu Lai what he thought of those carrying posters "We won't fight in Vietnam."

He said: "I wish I had one of those smart protesters here. I'd like to take him with me on outpost duty tonight. There's a V.C. (Viet Cong) sniper who's been trying to get me for the last three nights. But I haven't been able to nail him yet." He paused and smiled. "I'd sure like to get him in my foxhole when that sniper starts working on us. I want to see how much that poster-carrier will wave his cardboard then."

His speech finished, he trudged through the sand back to his platoon. In a few hours he'd be back on outpost duty, trying to nail the Communist Viet Cong sniper before the sniper gets him. I was sorry he couldn't take along a placard carrying protester.

The war there is one of ambushes and close-quarter, small unit firefights. I asked a sergeant in our Army's Special Forces, a veteran of some bloody patrol actions, what he thought about the picket lines and demonstrations protesting U.S. policy in South Vietnam.

He didn't have to ponder over a reply. He'd obviously been thinking a lot about it. "We're in a war," he said. "What those people are doing helps the enemy. And, I don't think any American has the right to do that."

North of Saigon I spent some time with the tough and combat hardened troops of one of our Army's divisions. While going up to the forward positions, I was accompanied by a Negro master sergeant carrying a shotgun for protection against an unexpected attack. He was, I could quickly appreciate, a real professional, dedicated soldier.

We talked about many things. Finally I asked him what he thought about the American youngsters who were protesting against the draft, against our involvement in Vietnam, or anything else it was handy to protest and riot against.

He thought a moment and what he said, in a simple way, stuck with me as one of the wisest evaluations I have ever heard about our youth today. He said, "Those kids really don't know what they're doing. They are listening to a lot of people they shouldn't be listening to; you know that, if I could get hold of them, talk to them and have them in my outfit, I know that almost every one of them would turn into good soldiers and good citizens."

What he was selling me in an unforgettable way is that we are often too quick to write off as failures our younger generation. The proof of his wisdom has been the performance of our Nation's young men who do get into the Armed Forces.

Time and again, I have been told in Vietnam by the older NCOs and the officers who had commands in Korea in World War II that today's troops are better than any we had in the past. That may be a somewhat bruising realization for those of us who have put in a career that extended back to World War II. But, at the same time it should be reassuring and comforting reflection as to the intrinsic goodness of our young people today who have gone from the picket line to the firing line. Truly, once again, it has been demonstrated that military service is, in the most fundamental sense, a school of good citizenship.

If there's anybody who has earned the right to complain about fighting in Vietnam, it is the man who has been wounded in that fighting. He has paid for that right with the high price of his blood and too often his limbs.

But I can report to you now on the basis of personal knowledge that if you want to hear gripings, complaints, and criticisms about the stand our Nation is making against Communism in Vietnam, then don't go to the hospital wards and visit the wounded from the Vietnam battlefront. Those who have borne the brunt of battle are not the ones who are beefing about it.

A few days ago in Pearl Harbor I visited the battle casualties who have been flown in for treatment to Tripler General Hospital. Among the wounded I talked with was a young corporal. One leg was in traction, an arm was in a cast, and he had machinegun holes in his stomach. He hadn't obviously yet reached his 20th birthday.

I stopped and chatted with him. I asked him how long he had been in Vietnam before he was hit. He said he had been there almost two years. I asked him why almost two years, as the required tour was one year. He replied that he had twice voluntarily extended his duty. I asked him why did you do that?

He replied, "I was assigned to train and fight with a local village militia platoon in the northern hill country." He continued, "I found out how much these people wanted to be able to defend their villages, their families against Communism. I knew what I was doing was important, and I wanted to keep on doing it." And, then he added, "I believe that those village militia men would stand and die rather than surrender, or let me be captured. I found out I was right. I would have been killed or captured if they hadn't stood by me when we were hit by a big V.C. unit."

A few days ago, I visited the Vietnam casualties at the Great Lakes Naval Hospital just outside Chicago. Above the bed of every Vietnam casualty was a United States flag. Each wounded fighting man, when he leaves the hospital can take the flag from over his bed with him. And, they do. And, when a new casualty comes in, he wants a flag over his bed without delay. This, again, is a reflection of the genuine patriotism, devotion, and inherent goodness of those who know what it means to defend their flag and what it stands for.

One more short account of a recent meeting with a Vietnam veteran. Recently while flying to a conference at Pearl Harbor, I noted a young corporal a few rows back from me in the plane. During the flight, I walked back and sat down and told him that I had served in the Marine Corps and started chatting with him.

He was, he told me, on his way to Vietnam. I asked him, "Is this your first time out?" He said, "No, I'll be going in to my second extension." I said, "Why have you served one full year, extended for a six-month period, and now extending for another six months?" He said, "Well, the first time I extended I did it because some of my close friends had been killed in action, and I wanted to get revenge. I got it, but I also, during that added six months, I realized how necessary and important our job is that we are doing in Vietnam, and I want to keep on doing more of it."

But probably the best and most lasting explanation of duty I have ever heard came from a young Negro Army sentry on a lonely observation post overlooking Cam Ranh Bay. I stopped in the course of a visit to talk with him. I asked him if he had a family. He said, "Yes, I'd just been married a few months before I came out here again." I asked, "What does your wife think of your coming to Vietnam a second time?" He said, "She agreed when I told her that I believed I should be back here. I volunteered for a second tour." I said to him, "Why did you volunteer in spite of the fact that you had been married only a few months?" He thought for a moment and said in very simple language, "I think that it is every American citizen's duty to do what he can to help his country when it is in trouble."

This young man is not alone in this feeling. When I was in Vietnam some few months ago, I learned that 17½ per cent of the U.S. fighting men in Vietnam are voluntarily extending their duty beyond the minimum required period.

It is these kind of devoted American young men wearing the uniform of our Armed Forces that we honor today. We should honor them every day and say a prayer of thanks that our Nation still has the kind of young men who serve with such efficiency and dedication in our Army, Navy, Air Force, Marine Corps, and Coast Guard. They are the ones who in their time, as every generation must do in its turn, are accepting the responsibility of fighting to defend the freedom and the way of life which previous generations of American fighting men have defended.

And yet, the paradox of our times is that these brave fighting men, manning the ramparts of freedom along the Iron Curtain in Europe, the DMZ in Korea, the wooded mountains and fertile valleys of Vietnam, in distant skies and in far away waters are subject of slurs by some of those at home who spend their time sniping at the military.

It is high time, I believe, that those who criticize our men in uniform should reflect for a moment on the fact that it is our fighting men who, in the final analysis, are preserving the very freedom that those who cast slurs on our military are so grossly abusing.

And, so, I want to thank you for the privilege of being with you tonight and joining with you in honoring our fighting men whose indispensable services we appreciate and whose devotion and patriotism we should constantly strive to emulate.

MICRONESIA: UNCLE SAM'S STEPCHILD

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. ZABLOCKI. Mr. Speaker, recently the Milwaukee Journal carried a series of articles by a staff reporter, Mr. Don C. Trenary, on the Trust Territory of the Pacific, more commonly called Micronesia.

In my judgment this series provides an incisive and informative description of the situation which currently exists in those Pacific islands, mandated to U.S. control as a strategic trust by the United Nations.

Although a number of newspaper stories have appeared on Micronesia recently, Mr. Trenary's articles, in seemingly greater measure than others, have

provided a coherent and insightful account. In particular he has appreciated the military significance of Micronesia in the future security planning of the United States.

At the same time, he does not gloss over the sometimes sorry record of America's stewardship in Micronesia which has brought matters there close to a crisis state.

The title which has been given Mr. Trenary's series—"Uncle Sam's Stepchildren"—conveys the neglect of the population's welfare which has characterized the past.

Mr. Trenary, however—as do I—takes comfort from the recent pronouncements by Secretary of the Interior Hickel that a "new deal" is in store for the inhabitants of these Pacific islands.

Having raised the hopes of the Micronesian population, our Nation must now follow through in providing the opportunity for economic and social development to the Micronesian people.

Otherwise, the disillusionment may mean a period of turbulence in the Trust Territories which, at best, would be an embarrassment for the United States. At worst, it could mean a serious weakening of our Pacific defenses.

Mr. Trenary has said what should be said about Micronesia. I urge my colleagues to read his articles and take them to heart.

The articles follow:

[From the Milwaukee Journal, May 20, 1969]

UNCLE SAM'S STEPCHILDREN—MICRONESIA TO VOTE SOON ON POLITICAL FUTURE

(By Don C. Trenary)

CHALON KANOA, SAIPAN.—Sometime in the near future, quite probably within the next three years, the Trust Territory of Micronesia is going to vote on whether to continue an affiliation with the United States, or to go it alone in independence.

The choice will be of national and international importance far beyond the smallness of the islands and the fewness of their inhabitants.

The territory lies in the tropical Pacific—the romantic and overrated South seas—between Honolulu, the Philippines and the equator, but more toward the Philippines than Hawaii.

MUCH WATER, LITTLE LAND

Its boundaries enclose a bit more area than that of the United States. Its land area is somewhat less than that of Waukesha and Milwaukee counties combined. Its population is about that of Racine; its 93,000 inhabitants could be put at one time into Camp Randall and Milwaukee county stadiums and have seats left over.

The islands are remote, scattered, largely unproductive of cash crops and, from all present knowledge, wholly without minerals. They also are stepping stones between Hawaii and the orient and contain sites of considerable military value. This fact has not escaped the attention of either the United States or the Micronesians.

On these islands live Uncle Sam's stepchildren.

They are a remarkable race.

NORTH ON RAFTS

Some 5,000 years ago, about the time the Egyptians were experimenting with pyramid building and 2,000 years before Homer's heroes fought at Troy, they started traveling northward on huge rafts from somewhere in Indonesia or Malaysia.

They were then the world's foremost navigators (others of the same race journeyed to Africa and conquered Madagascar). They navigated by charts of sticks, which showed the cadence of the waves. The art was passed from chiefly father to princeling son, often in a secret language. The boy was taken to sea and made to float for hours, until he could recognize the wave rhythm on his own body.

To begin to understand Micronesia, one must realize first that there are no Micronesians as such. Micronesia is a catchall term which means "little islands" and refers to a slab of geography.

A PACIFIC BABEL

The islanders came to their present homes in small groups, at various times and by different routes. Along the way, they picked up the blood and words of other races. They differ in skin color, physique and language.

In the islands, there are eight or nine different languages, depending on whether you class one as a separate tongue or a dialect.

The district of Ponape, population 18,500, has three different languages. Its principal island, 129 square miles, speaks six dialects.

As to the old myth of the dreamlike, always peaceful life of the South sea islanders, forget it. The history of Micronesia is as bloody as that of the Scotch highlands. Until it was put down by the Germans early this century, warfare someplace was almost incessant—island against island, district against district, village against village or even clan against clan.

The old differences linger.

A RACE APART

The Chamorros of the Marianas islands consider themselves a race apart. A strong and lively political party there advocates cutting away from Micronesia and joining up with Guam, which is Chamorro in race but politically separate, due to a historic accident.

The Yapese, whose fierce warriors once levied tribute on other islanders for a thousand miles around, consider themselves superior. The Trukese look down on the residents of the other islands around them to the point where, administration officials say, the outer islanders shun the Truk High School and prefer their own at Ulithi.

Instances can be multiplied.

Except among the Chamorros, who have adopted a western outlook, the clan system holds sway. In most of the territory, kings and nobles are powerful. Many of the Marshall islands have a well knit caste system.

TABUS, BLACK MAGIC

The islands are ostensibly Christian, but in places tabus and scared animals remain. There are black magic and white magic and witch doctors, some of them concededly good.

These are products of environment and do not in the least reflect on the brainpower of the Micronesians. They, in all their variations of race, have a reputation for intelligence, which I can attest personally after talking with some of the leaders.

Neither have the differences between islanders overly hampered the working of the active, if pretty impotent, congress of Micronesia.

Within a single life span, the islands have been under four governments:

The Spanish, who had ruled weakly for centuries.

The Germans, who bought the area after the Spanish American war, ruled in heavy handed fashion and brought about some advances, mainly economic.

The Japanese, who took the islands in World War I, used them as a forbidden kingdom for colonization and military bases. Under them, the islands made great economic strides, not all of which necessarily benefited the islanders.

The Americans, who took the islands in bloody fighting in World War II and were confirmed in occupation as a United Nations strategic trust.

In the quarter century since, we have governed Micronesia in peculiarly whimsical style. At times we have wholly overlooked it; at times we have breathed benevolence, the cashless kind. At present, we are ballooning generosity and buddy buddyness. The Micronesians—no fools—connect this with military needs and are waiting for the commercial.

The trust under which the United States holds Micronesia is unique, the only one which allows the military use of trust territory. For its husbandry, the nation is answerable to the UN security council. In reality, this is no control at all, for America has veto power there.

Nonetheless, the overlordship of the United States is reviewed yearly by the UN trusteeship council. This review is to be made within a few days. Harsh words will be said—they always are—especially by the Soviets and the African nations. Some of them in the past have seemed justified.

NEVER CAN WIN

Some administration officials, though, contend that the council review is a game the Americans never can win—if we do little, we are accused of neglect; if we pour in funds, we are charged with imperialism; if we try to set up new industry and ideas that change the traditional way of life, we are called guilty of the subversion of the indigenous population and of neocolonialism.

The trust territory arrangement always was intended to be temporary. Micronesians for years have been restively asking for a permanent solution. This may come soon.

Interior Secretary Walter J. Hickel said after his recent visit here: "I can see no reason to wait until 1972 for a vote on the territory's political future."

Before that, though, conferences are certain to take up the vexing question of American military bases.

[From the Milwaukee Journal, May 21, 1969]

UNCLE SAM'S STEPCHILDREN—ISLANDS WANT MORE SAY, MORE PAY FOR BASES

(By Don C. Trenary)

CHALAN KANOA, SAIPAN.—You can, if you like put the thing two ways. For one: If the Trust Territory of Micronesia chanced to fall into hostile hands, the state of Hawaii and possibly the west coast could be in danger. Even in times of peace, communication routes between the United States and the south orient might be cut, and ships and planes subject to possible harassment.

On the other hand: What have 93,000 people, living on 2,141 small islands in the Pacific, to do with the security and problems of a great power, with which they are not allied by race and culture, and at present only temporarily by political ties, even though they have already found they have much in common?

GEOGRAPHY IS FACTOR

Scratch Micronesia how you will, sooner or later the matter of military bases comes up.

Geography does it. The chains of islands that have been thrown into a geographer's grab bag and labeled Micronesia lie between Hawaii and the friendly Philippines. Great circle routes, beloved by navigators, air and water borne, run through them. In an area where land is scarce (one early Spanish captain sailed through the whole group without seeing an island), they have capabilities for airstrips and harbors. For 5,000 miles, there is nothing else.

SEIZED BY JAPANESE

The matter of military bases can be overstressed. There are, happily, many other affairs on which Americans and Micronesians are in concord. But the bases will be what the Micronesians will use to put pressure on the

United States when they sit down to confer about the trust territory's future political status—the pitchfork they will use to prod Uncle Sam.

Here is the situation:

The Japanese took Micronesia from Germany in World War I. Wholly illegally under League of Nations mandate, they made it a secret colony, closed to outsiders, and filled it with military bastions. The sneak attack on Pearl Harbor originated in the Marshall islands, the easternmost Micronesian chain.

American forces took the area. Many islands were by-passed or lightly defended and so escaped ravage. But in others—Kwajalein, Saipan, Peleliu, Babelthuap—war was written in blood and destruction. Fortress Truk, perhaps impregnable, was never taken, but was devastated by repeated air raids.

After the war, the United States continued to rule the area under a one of a kind, United Nations strategic trust, which gave the nation the right to use the territory for military purposes.

Entirely legally, whatever you may think of the methods, the military took over Kwajalein atoll, which contains the world's biggest lagoon, for missile research. The residents were moved out to Ebeye, another island on the same atoll.

LUXURY AND SLUMS

Among people who have visited it—and they are few because Kwajalein now is very hush, hush, shh—the atoll has become a scolding point due to the contrast between the luxury in which American technicians live on Kwajalein island and the slum conditions in which Micronesians live on Ebeye.

Eniwetok and Bikini were used for open air atom bomb tests. The residents were moved away. Atomic fallout, by a whim of wind, fell on persons living on Rongelap.

The military also has some military "retention" areas. These are areas the military can take over on Saipan, Kwajalein and Tinian.

SUBSTITUTE FOR OKINAWA?

Recently, military interest in Micronesia has quickened and you can whisper that it is due to a probable forthcoming loss of Okinawa as a United States military base. Japan wants that island back.

Gen. Lewis W. Walt of the marine corps went through parts of the territory in April, looking, he said, for marine training bases. He said that Babelthuap and Peleliu had good terrain.

The army started negotiations for use of the Roi-Namur complex of islands at Kwajalein atoll. Gold braid of the navy, according to the Marianas Star, has started appearing for visits on Saipan.

To the appearance of the military, Micronesia has had a varied reaction. After Gen. Walt's visit, the district legislature of Palau, in which Peleliu and Babelthuap are situated, said it wanted no marines, and cited World War II experience.

On the other hand, the legislature of the Marianas district, which includes Saipan, has said it would welcome military installations.

CONGRESS WANTS ROLE

The congress of Micronesia, representing the entire territory, has passed a resolution saying that no further land should be taken for military purposes without its consent and full consultation with the inhabitants.

It is the belief of American administrators here that the Micronesians object not so much to the establishment of bases as to the cavalier manner in which their land was seized in the past. This was also affirmed by Sen. Lazarus Salii of Palau, one of the most powerful Micronesian political leaders. The policy is changed—maybe, but efforts to find out facts take on a dreamlike quality here.

"If the military comes here for bases, it will have to get title from the Micronesian government or private owners," said Joseph F. Screen, commissioner for administration.

HICKEL'S VIEW

"I don't think military bases are opposed too strongly," said his boss, Secretary of the Interior Walter J. Hickel. "I think the opposition comes because they want to be consulted and do not like the way we have been doing it. This probably is not under the department of the interior, but we could consult with the department of defense over means."

In his Micronesia talks, Gen. Walt stressed spinoff benefits from the presence of the military in the form of roads, bridges, public works and a lift to the economy. Hickel in an interview also stressed the inpouring of money.

This is not entirely just mouthing. As one example, the prime industry of booming Hawaii is its military.

As to past seizures and use:

The Rangelap residents hit by atomic fallout have been given compensation.

Material still radioactive is now being cleaned off Bikini atoll. In a few months, replanting will start. The residents will be moved back in stages from their present home on Kili, which most of them do not like. The move will take six years.

"Something also is going to be done for the people of Eniwetok," said administrator Screen.

An agreement on general war damage claims has been reached between Japan and the United States. It is not yet approved by either congress or the Japanese diet. Under it, each nation will pay $5 million to be divided among Micronesians. The American portion will be in cash, the Japanese in goods.

Some Micronesians, Hickel said, contend that the Japanese will actually pay nothing at all, because by the agreement they get the right to use two Micronesian ports for their fishing vessels and the right to salvage some war sunken ships. They might wind up making money, he said.

This supposed weakness of the United States at the conference table will be remembered by the Micronesians when it comes time to talk about their future status. That will be no matter of a big guy shouting down a little, defenseless fellow. The Micronesians already have proved themselves canny bargainers.

PRICE GOES UP

After the takeover of Kwajalein island, the matter of compensation was let lie for years. Then a Micronesian delegation headed by Amata Kabua, a Marshalleze nobleman and a remarkable man, euchered the Americans into conference.

The Americans offered $600 an acre, an unheard of price for atoll land.

Without a word, the Marshall islands people walked out. Final settlement: $1,000 per acre for past and future use; land to be held on lease and revert to Kwajalein folk at the lease's end.

Already a Truk spokesman has said that, inasmuch as the presence of military bases may risk the lives of Micronesians, a higher price should be paid for future ones.

If by this you infer that the Micronesians are grasping and only interested in money, that implication is wrong. In a far broader way, they are interested in territorial administration and the welfare of their people, especially in getting a greater voice in their own management.

[From the Milwaukee Journal, May 22, 1969]

UNCLE SAM'S STEPCHILDREN—MICRONESIA PLEDGED A "NEW DEAL"

(By Don C. Trenary)

CHALAN KANOA, SAIPAN.—By a 20 minute speech in a high school auditorium whose tin roof had been whirled away by a 1968 typhoon, Secretary of the Interior Walter J. Hickel has changed the concept of the relationship between the United States and the Trust Territory of Micronesia.

To the 93,000 persons who live in the 2,141 islands of the territory, which lies in the tropical Pacific between Hawaii and the Philippines, he promised:

More Micronesians in high ranking positions in the territorial government, with a training program to start within 90 days.

Full and equal participation with American personnel in planning and decision processes.

Efforts to eliminate differences in pay schedules now existing between Americans and Micronesians doing similar work.

In the last two years, the territorial government has trained and hired 240 Micronesians for clerical and administrative posts, but the pay differential has been a very sore point.

The report for fiscal 1967 shows that, without even counting her 25% bonus for overseas work, a clerk typist in one of the three lowest American pay brackets was earning more than all but 20 Micronesians, all of them classed as senior professionals or executives.

Formation of a budget committee by the congress of Micronesia which would recommend priorities for public works and other plans within the territory.

Introduction of legislation which, if approved by the United States Congress, would eliminate tariff duties on the importation of Cicronesian products. (Although Micronesia has been an American trust territory for more than two decades, the United States still charges tariffs on its products. Principal products affected would be copra—dried coconut which is used as a base in cosmetics and many food products—and processed fish, almost entirely tuna. Because of the tariff, tuna caught in Micronesia waters now are quick frozen and sent elsewhere for canning.)

Removal of travel barriers. Americans going to Micronesia now must obtain a permit card from the Micronesian capital on Saipan; the process takes about five weeks.

Encouragement of capital investment.

The program was greeted by the Micronesians in the audience with cheers, hope and blotches of skepticism. The overall record of America's guardianship of the territory's people is not such as to set them dancing in the streets.

"It is the best statement in years," said Amata Kabua, an influential Micronesian senator from Majuro. "The situation could not be worse. We have hit bottom."

"Our record has been disgraceful," said a high American administrative official. "We are just starting to go now; it should be showing soon."

"We have done more construction work within the last year than in the previous 22," said Joseph F. Screen, commissioner for administration.

HIGHER BUDGETS

The quickening pace now is made possible by higher budgets. A decade ago, budgets ran around a million dollars, almost all of it devoted to salaries for American administrators.

For the present fiscal year, the budget is $30 million, of which $9.5 million is being spent for construction. The rest goes to operate all territorial government activities. Administration expenses cost a bit less than 10% of the budget.

For the next fiscal year, which starts in July, a budget of $41.6 million has been requested, carrying a larger allowance for construction.

For practical purposes, control over expenditures has been wholly in American hands.

A congress of Micronesia was set up in 1965. It has two houses, occupied by delegates democratically elected in the territory's six districts. It is an excellent sounding board for opinion, but has little real

power. It has no control over budgetary matters and its acts are subject to absolute veto by the high commissioner. If an act is passed and vetoed twice, the Micronesians can appeal to the secretary of the interior.

POLITICAL APPOINTEE

The high commissioner is an American political appointee. The last one was William Norwood, a former Honolulu newspaperman with some political experience as adviser to the Hawaii governor. The new one is Edward E. Johnston, a Honolulu insurance man with some political experience as Hawaii's lieutenant governor.

With more money in the last few years, the territory has been able to do more for an area once almost wholly neglected. Some of the accomplishments:

Regularly scheduled, although not daily and sometimes not direct air service to the major islands, operated by a subsidiary of Continental airlines. In its first year, the line has drawn triple the projected passenger volume. The airline is pledged to build six tourist standard hotels on the islands; the territory now has two.

Micronesia considers the new air service wonderful, but travel among the widely scattered island groups is still, by American standards, tedious and frustrating. Witness the case of the congressman from Kusaie, a major but outlying island, who could not get to Hickel's address.

The congressman had been underway for two weeks when the Hickel speech was postponed and he was told to go home again. When the date was reset, the congressman could not be reached in time to come.

At some of the minor outlying islands, a ship may not touch for months, and even this service must be subsidized.

A shipping line operating between the territory and the west coast; previously goods were transshipped in Japan. The line, however, reported a loss in its first eight months of operation.

More schools and health facilities. (Micronesians are very susceptible to western type diseases; tuberculosis is the greatest killer. However, the population has nearly doubled since the Japanese left.)

Increase of new cash crops. Pepper exportation from the island of Ponape is expanding, but the growing of cacao there has suffered a setback from the swollen shoot-disease.

Setting up of a bureau of commercial fisheries research facility in the Palau islands to study the fishing potential of the waters and establishment of a branch of a sea food company there. (The private firm ran into unexpected difficulty—the Micronesians, although once great navigators, now, it is said, dislike going to sea. The company had to bring in Okinawans for the heavy fishing work. Latest payroll figures: 109 Okinawans for an annual $300,000 payroll; 78 Micronesians for $89,604.)

Sometimes the professed aims of the Americans are at odd variance with what goes on.

Item: Emphasis is being put on vocational education. However, the agricultural vocational school on Ponape has been closed. One explanation: Not enough students. Another story: The school has 60 students and a budget of $60,000. The head asked a budget increase to $110,000, was cut to $50,000, closed up the school.

[From the Milwaukee Journal, May 23, 1969]

UNCLE SAM'S STEPCHILDREN—SAIPAN KEEPS SCARS OF WAR—AND PEACE

(By Don C. Trenary)

CHALAN KANOA, SAIPAN.—From the shallow bay water in front of the excellent Hotel Royal Kaga jut the turrets of two American amphibious tanks, knocked out in the ferocious fighting of the American conquest of Saipan in June, 1944.

Off a highway now bumpy, the last Japanese command post remains, a knife edge cleft in a vertical stone bluff. Field guns and a tank have been lugged from elsewhere to the flatland at the bluff's base and stand as a sort of war memorial.

Suicide cliff and Banzai cliff can be reached by road.

These were scenes of horror. From them frenzied Japanese civilians, told that rape and murder would follow surrender to the Americans, flung their children and themselves to death while below Japanese speaking American soldiers pleaded with them over loudspeakers not to.

SHRINES ON CLIFFTOPS

There are small shrines on each clifftop—small, upright wooden sticks carved with Japanese characters, left there by Japanese visitors in remembrance of what was.

Along the beach at the north end of the reef, the remains of an American half track still lie, now overgrown by trees. An exceptionally low tide disclosed the rusted metal parts of a Browning automatic rifle.

The visitor can go inside pillboxes, where Japanese defenders saw death coming to them from the sea. Magicienne bay still sparkles blue; white fangs of breakers still batter the north shore of Tinian island, from which Superfortresses took off to bomb Japan.

JAPANESE CITY GONE

Apart from that, there is little to remind those of us who touched this tropical island 25 years ago of the Saipan we then saw.

Garapan is gone. Under the Japanese it was a city of 12,500.

The status of Haruji, the Japanese sugar king, still stands, along with some of the shrines and outbuildings that once graced his estate. But the statue is riddled with bullet holes.

Trees grow in the grim, roofless Japanese jail. Tropical growth overlaps the ruins of the imposing stone Japanese hospital. Moldering walls of the wards are scrawled with graffiti. One of them starts: "A story of Jeseus. Jeseus is a good boy. . . ."

Parts of the former city area are occupied by new housing, America and Chamorro. But the old streets cannot be discerned or they crawl away, dimly visible, under the intruding growth of tropical plants.

You cannot tell where Garapan began or where it ended.

SHRUB TAKES OVER

Of the lush fields that greened the western side of the island when the Americans stormed ashore, no trace remains. They are overgrown by tangan tangan.

Tangan tangan is a spindly tropical weed shrub, its height about twice that of a man, its trunk about the size of a woman's slender wrist, its leaves like those of the locust tree.

After the Americans took the island, they found that tropical rain was eroding the exposed agricultural land. They seeded tangan tangan from airplanes to halt it. And tangan tangan has taken over the island, except for blotches where housing has been built and for one magnificent and peculiar exception.

The exception lies on the top of what is now known as Capital hill. The department of the interior, which now rules the island and the Micronesia trust territory, is not responsible for it.

ROLE OF THE CIA

After Chiang Kai-shek's defeat in China, so the story goes, the CIA was seized with abnormal delusion. It decided to train Chinese soldiers on Saipan for an invasion of the Chinese mainland.

Let John C. Santos tell about it. Santos is a Chamorro, now a driver for the Saipan Bus Co. but then was one of the drivers for the Chinese trainees.

"They were put into enclosed trucks and driven to the north end of the island," he said. "The north end was fenced off. It was all very secret. We knew something was up: They had skins like ours and we knew they were Chinese, or maybe Filipinos."

HILLTOP NOW CAPITAL

For the American heirarchy in charge of the training program, the CIA built on the hilltop a fine administrative building and an array of excellent, California style homes. The cost is said to have been $28 million (some say $30 million). The Chinese bivouacked elsewhere.

In 1962, the CIA gave up and pulled out. The hilltop was taken over by the government of the trust territory of Micronesia. It was the first time Micronesia had a capital actually inside its own borders. Previously, it had been ruled from Honolulu and then Guam.

The residences now house families of 92 high officials, 80 American and 12 Micronesians.

The fine homes form a startling contrast with the housing of some of the Chamorros on the flatlands below.

Many of these are emergency buildings, made necessary by a devastating typhoon last year. They are of wood, built on sort of an X frame, with the X fattened at the crossing. It is said high wind can't tip them over.

Others have survived the typhoon. They are of many materials, some of them of corrugated iron. A clutter of stuff is often in the yard.

Now, a person who has been long in the tropics is not shocked by poor housing or clutter. With very few exceptions, they seem to be always there.

WHAT HAS UNITED STATES DONE?

But there are some things that stick with the taste of bile to the back of the throat.

When we Americans took Saipan from the Japanese, it had thrifty fields and a fishing industry. Now it has neither.

When we Americans took the island, it had about 30,000 people. It's population now is somewhat less than 10,000.

Saipan has a fine, recent hotel, well up to mainland standards. It gives employment to 63 of the native population. Its principal owner is an American millionaire.

Saipan has two big construction projects under way.

One involves $1 million worth of housing for government staff members. The houses are nice but not elaborate. Some have split cedar shingles from Oregon. They say the shingles will not blow away in high wind.

The other project is an $850,000 community administrative center, to house the fire department, police department and such.

Both probably are needed.

WHAT OF LITTLE GUY?

But, emergency housing aside, what have more than two decades of American rule done for the little guy, the man without a government job?

Officials are talking about the possibility of a plantation system to grow truck farm crops. The United States has given AID money to help nations in other parts of the world break up their plantations.

There is tangan tangan and there are discarded beer cans.

But it is nice atop the hill. It must be wonderful in a tropical night, when the stars come out in plum sized splendor. It could make a man feel out of this world . . . way, way out of this world.

HONOLULU CHIEF OF POLICE DAN LIU RETIRES AFTER 37 YEARS OF SERVICE TO BECOME A SPECIAL ASSISTANT TO THE U.S. POSTMASTER GENERAL

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MATSUNAGA. Mr. Speaker, Honolulu's Police Chief Dan Liu will leave shoes that will be extremely difficult to fill when he retires next month after 21 years of service in that capacity to become a special assistant to the U.S. Postmaster General. Honolulu has been fortunate indeed to have had the services of such a dedicated public servant who, for the past 37 years, has worked unceasingly to improve the quality of law enforcement in the Islands.

We in Hawaii are sorry to see Chief Liu leave his post, for his stalwart character and the widespread community respect he commands have become an integral part of police administration in the city and county of Honolulu. As a man of the highest integrity, of compassion and humor, and yet of steel when the need arose, Chief Liu not only established but also followed his terse motto: "Service. Honor. Integrity." It is this motto that he leaves behind with the men in the Honolulu Police Department, and it is this same motto that he will undoubtedly bring with him to Washington as he answers the call to a high office in the national administration.

It has been an arduous trek for the high school business student who climbed his way up through the ranks from patrolman during Honolulu's early "Mamie Stover era" to chief of a highly efficient and respected island police force that today numbers 967 commissioned officers and 200 civilian employees.

At 61, and on the eve of his retirement, Chief Liu offered these remarks to Gardiner B. Jones, associate editor for the Honolulu Advertiser:

You always hear the trite thing about mixed emotions. After so many years of associations, you have left your life here with these men. There is a feeling of sadness but the new job is a challenge and I hope to be of service to the postmaster general and to the country.

As a tribute to Chief Dan Liu and the high type of public servant he personifies, I submit for inclusion in the CONGRESSIONAL RECORD, Mr. Jones' article, "Liu Tells of Early Days: No Rules, No Training," which first appeared in the Honolulu Sunday Star-Bulletin & Advertiser of May 18, 1969.

I am also privileged to offer for inclusion in the RECORD Senate Resolution 204, adopted by the Senate of the Fifth Legislature of the State of Hawaii on May 14, 1969, expressing appreciation and congratulations to Chief Liu.

The article and resolution follow:

[From the Honolulu Star-Bulletin & Advertiser, May 18, 1969]

LIU TELLS OF EARLY DAYS: NO RULES, NO TRAINING

(By Gardiner B. Jones)

From high school business student to nationally famous chief of Honolulu police . . . from the Mamie Stover era through politics and corruption to molder and leader of a modern, efficient force, a task he took on reluctantly . . . 37 years an officer, 21 of them as chief . . . and always the motto: "Service. Honor. Integrity."

There in a capsule is the life story of Chief Dan Liu as it emerged in an interview on the eve of his retirement at age 61 to become special assistant to the U.S. postmaster general.

"I joined the department in 1932," he said. "I had read about the sheriff's system being abolished. They were going to institute a chief of police system under a commission appointed by the governor."

OUT WITH THE POLITICS

"We had elected the City-County sheriff before. The change was the result of a study by Attorney General Homer Cummings. "The study found too much politics. And actually, it flowed out of the Massie case."

Liu at 22 was working for the Union Trust Co. He had been graduated from St. Louis High School where he studied business.

One of the men setting up the new police department was C. L. Howell, sent to Hawaii by the Berkeley, Calif., department, whose chief was a recognized authority on police administration.

Liu's boss—A. D. Castro—was on the police commission and he urged Liu to join the department.

"I went to see Howell," Liu said, "and he told me about police work and I became intrigued. I took the exam. In that group there were three university men, two locals and a retired Navy chief. We were the only ones that came out. They hired every man.

A DETERMINED GUY

"But I still was not sure I wanted it, but Howell was a determined guy and he kept calling at my home and each time I tried to be absent when he came.

"Finally, my mother said he was interested and kind enough to call and if I didn't want to accept I should go down there and decline. So I went down one evening about seven and Howell was cranking the mimeograph machine.

"So somehow I said could I give a hand and he said, by all means. As I am making 100 copies, he's telling me about the great challenge of police work. By 10 that night I thought I'd take a try at it."

In those days, Liu recalled, radio was in its infancy and the department had a few radio-equipped, two-man squad cars. Liu was assigned to one of the cars.

"We had no training then," he said. "You were assigned to an officer and you learned from him. Another thing that was haphazard, they did not issue any rules. I was sent on my first duty without even a badge and I was not even told how to make an arrest.

"I was sent on a domestic case, an affray between two brothers. All I thought was to go in and stop it. I found myself on the ground and a chair being swung over my head that missed by inches. A radio car came over just when one of the brothers was coming at me with an automobile crank.

"This experience showed the need of training and that's why when I became chief I was so determined we were going to have real and vigorous training—not just for recruits but for experienced officers, too."

Liu also worked in the records division and the detective division. As a detective he was under the tutelage of the tenacious John Jardine, whom he describes as "a conscientious and dedicated officer."

ANOTHER PROMOTION

After four years on the force, Liu was assigned to the office of Chief W. A. Gabrielson, who left the department after the police graft scandal broke in the mid-1940s.

Liu recalled the rectic war years, when Honolulu's population was swollen and the city governed by martial law.

"It was pretty orderly and the men were well disciplined considering the circumstances," he said. "We did not have the violence you might have expected.

"At that time, the houses of prostitution were running—they felt it was a social necesstiy, and the military maintained tight control. The police did not have too much to do with it because of martial law. They enforced their military regulations, including the curfew, on the civilians. Even burglary took a drop.

IT WAS NECESSARY

"Personally, I thought it was necessary during a period like that. I feel that if it weren't for martial law our problems would have been greater. Yet you have to recognize it was rather infamous, but people realized the situation demanded control."

As for the graft case, Liu said:

"It sprang from gambling and prostitution. Defense workers came back from the southern islands and they had a lot of money. It was easy come, easy go. In one case, the officers afforded transportation to a gambling place.

"When the graft broke it was a surprise to many of us. It involved only members of the vice squad."

By this time, Liu was an assistant chief.

"To me," he said, "it meant scandal, and so many of us could not understand. You would think there is this honor and integrity. That's why all along I insist we need to serve with honor and integrity and why we have this slogan posted: 'Service. Honor. Integrity.' "

HE TURNED IT DOWN

With Gabrielson out, the police commission sought to persuade Liu to become chief but he declined; he was unwilling to give up the security of his civil service status.

The commission tried on and off for two years to get Liu to accept the top post, but the security concern got in the way. Interestingly, having accepted, he served under six governors—Poindexter, Stainback, Long, King, Quinn and Burns. It happened like this:

"I have taken no vacation during the war," he said, "and I had 90 days coming and decided to go to the Mainland. Warren McDermott of Sears was on the commission and he told me to think things over.

"He said he wanted to straighten out and strengthen the department and it made me feel very humble. Chief Horrall in Los Angeles had worked with the patrol division here and I visited him. He told me to accept.

"He said, 'If I hear of you refusing, I'll come over and kick your ass.' "

THE FINAL DECISION

"Then word got into the papers that I was being considered and I got to thinking that the community might think that I was afraid and that's what finally persuaded me."

Liu became chief on Aug. 1, 1948, and set about immediately clamping down on vice—gambling, prostitution, opium and heroin—and sprucing up the department.

He said:

"It was a problem because you had holdovers from the sheriff days and many did not even have a high school education. It was partly that they could not adjust to the new ways.

"One of the first things was to raise the standards of entry and one of those was a high school education. There is still a need to upgrade and in the next two to three years we'll have a requirement for at least two years of college.

"Enforcement is not only equipment. An officer should be able to handle the social sciences. He must have knowledge of human behavior. It's going to take more than physical prowess and technical police skill. He has to be a generalist."

THE FUTURE OFFICER

Liu foresees the time when police officers will all be college graduates and will draw minimum pay of $10,000 a year.

Asked what he considered the major accomplishments of his years as chief, he listed these:

Institution of a police science program at the university, the police activities league, a cadet training program, the development of a crime laboratory, the installation of a computer system and the formation of a community relations division.

Also, he considered it important that the police had switched from the old olive drab uniform to blues. The old uniform, he said, reminded people too much of the martial law days.

"And," he smiled, "I changed the badge from that old seven-point star so the officers could not be called Pepsi-Cola cops after a radio show for kids."

Looking ahead to immediate needs, Liu said the department needs a helicopter patrol, more centralized communications, a training academy—and, above all, more men.

NEED 197 MORE OFFICERS

The force today numbers 967 commissioned officers and 200 civilian employes. Liu believes there is an immediate need for 197 more officers to cope with the problems of a growing city.

Liu was asked what criteria he would set for the man to succeed him as chief.

"He should have the basics of any police officer," Liu replied. "In the 19th century the needs were the same as far as traits go: integrity, character, dedication. And there is something you can't measure, and that's bravery.

"Naturally, he should be honest. He should be physically fit and willing to work long hours. He must provide vital leadership in the department and have good relations with the mayor, the council and the commission and represent the department to the public."

And what of his feelings on departure?

"You always hear the trite thing about mixed emotions," he said. "After so many years of associations, you have left your life here with these men. There is a feeling of sadness but the new job is a challenge and I hope to be of service to the postmaster general and to the country."

SENATE RESOLUTION 204

(Resolution extending deepest appreciation to Dan S. C. Liu, chief of the Honolulu Police Department, for his service to the community and congratulations and best wishes for continued success in his new endeavor)

Whereas Dan S. C. Liu, internationally acclaimed Chief of the Honolulu Police Department, has resigned to accept a position in Washington, D.C. as Special Assistant for International Relations to the Postmaster General of the United States; and

Whereas from humble beginnings, Dan Liu joined the police force in the midst of the great depression and by dint of perseverance, intellectual ability and personal integrity, steadily rose through the ranks to become Chief in 1948; and

Whereas for the more than 20 years he has led the Honolulu Police Department, Dan Liu has won honor, respect and public esteem for himself, the men of his department and the State of Hawaii; and

Whereas Dan Liu's record of public service has not been confined to law enforcement; but extends to active and effective membership and participation in national and international police organizations, his church and numerous organizations, largely connected with serving the youth of Hawaii; and

Whereas in recognition of his outstanding achievements, Dan Liu has now been appointed to a high office in the national administration: Now, therefore, be it

Resolved by the Senate of the Fifth Legislature of the State of Hawaii, Regular Session of 1969, That this body express and extend to Dan Liu its appreciation for his service to the community, its congratulations and best wishes for continued success in his new endeavor, and its admiration for a great son of Hawaii; and be it further

Resolved, That duly certified copies of this Resolution be transmitted to Dan Liu, to the Postmaster General of the United States and to Hawaii's Congressional Delegation.

THE SENATE OF THE STATE OF HAWAII,
Honolulu, Hawaii, May 14, 1969.

We hereby certify that the foregoing Resolution was adopted by the Senate of the Fifth Legislature of the State of Hawaii, Regular Session of 1969.

DAVID C. MCCLUNG,
President of the Senate.
SEICHI HIRAI,
Clerk of the Senate.

THE FAMILY PLANNING AND POPULATION ACT OF 1969

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. COHELAN. Mr. Speaker, last week, I had the pleasure of introducing, along with several of my distinguished colleagues in the House, legislation calling for the creation of a National Center for Population and Family Planning.

If established, this Center would be an innovative step toward solving the monumental and critical problems inherent in the population crisis—which in an important sense, are at the core of the poverty problem in the world. Statistics indicate a direct relation between poverty and family size: one of every five American children live in poverty; one-third of all families with five or more children live in poverty; 49 percent of all children living in poverty live in families of five or more children.

The Social Security Administration determines "poor" and "near poor" status on the amount of money a family has to spend for food per person per day. Continuous increases in family size without a corresponding increase in family income will force many families into a poverty existence, and will keep those already there from rising out of a poverty level.

Virtually all middle-class American families practice some form of family planning during the course of their reproductive years. However, low-income families without access to private medical care are often denied the opportunity to determine the number and spacing of their children. In this country 5.3 million low-income women in the childbearing years need family planning services, but less than 15 percent are currently receiving such services. Present efforts will reach only 800,000 low-income women this year.

In view of the urgency of the world's population problems, current research efforts are totally inadequate. There is presently no completely satisfactory contraceptive method available to the public. It is of the utmost importance that research facilities and activities be extended so that contraceptive methods that are safe, low in cost and suitable for various population groups in varied circumstances here and abroad be developed.

The high degree of infant mortality and birth defects is another area worthy of our consideration. Studies have shown that family planning is the most cost effective method—between $30 and $50 per person per year—of reducing infant mortality and the incidence of prematurity, mental retardation and birth defects. For every 500,000 women with three or more children, birth control services would prevent 2,173 infant deaths.

Our present efforts in these areas have been practically minimal and totally inadequate. Current family planning programs are scattered through various sections of HEW and as a result have become victims of disorganization and poor administration; further, they suffer from insufficient funds and a shortage of personnel.

The National Center proposed by this legislation would be under the direct supervision of the Assistant Secretary of Health and Scientific Affairs in the Department of Health, Education, and Welfare, and as such would provide for more centralized administration and organization. The Center would serve ultimately to coordinate and consolidate all current domestic population programs; in addition, it would serve to seek new avenues of solution to existing problems and would work for the prevention of the development of new problems.

The services to be offered by the Center are encompassed in a six-point program:

First. To administer all HEW project grants relative to family planning services;

Second. To administer and be responsible for all population and family planning research carried on by HEW or through HEW grants or contracts;

Third. To act as a clearinghouse for information on all domestic and international programs;

Fourth. To serve as a liaison with the activities carried on by other agencies of the Federal Government relating to population and family planning.

Fifth. To provide and/or support training for the manpower required to implement our domestic and foreign family planning programs and research; and

Sixth. To coordinate and evaluate other HEW programs related to family planning and population.

The bill provides for a much needed development of a comprehensive family planning program, requiring the Secretary of Health, Education, and Welfare to submit a 5-year plan to Congress, not later than 6 months after the bill's enactment, setting forth guidelines and goals regarding the extension of family planning services to all who desire them, and expanding needed research and manpower training programs.

To expand and improve the services and research activities of public and private nonprofit agencies and institutions,

the bill authorizes a total of $89 million for fiscal year 1971, to be utilized as follows

First, $30 million in special project grants for family planning services;

Second, $10 million in formula grants to State health agencies for planning, establishing, maintaining, and evaluating family planning services;

Third, $35 million in research grants to promote biomedical, contraceptive technology, and behavioral research related to population and family planning;

Fourth, $12 million in grants for construction of population research centers;

Fifth, $2 million in grants for training personnel in the family planning field.

This bill proposes to put responsibility for family planning and population control under the Medical Health Services Branch of HEW; in doing so, it would provide for more centralized administration, unification of existing programs, and the development of more comprehensive, all-inclusive programs designed to remedy one of the most pressing problems facing all of us today.

HONORARY DOCTOR DEGREE RECEIVED BY HON. CLEMENT ZABLOCKI

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. REUSS. Mr. Speaker, our distinguished colleague, Congressman CLEMENT ZABLOCKI, recently received an honorary degree from Alverno College, Milwaukee, Wis.

I include a copy of the college's citation and diploma awarded to him, as well as Mr. ZABLOCKI's acceptance speech:

CITATION OF MERIT

Of the many mansions that house a free people in a democratic society, the school is an important one for the statesman of responsibility and concern. For ultimately to be a true statesman is to feel responsible for education. It is to feel that the art and science of politics is part of the total educational process of humanity on which the building of the world depends. It is to know that although laws are made to free men, it is the truth under law that finally frees a man. It is to understand that concern for the democratic process demands education in that process.

Clement J. Zablocki's involvement in national and local educational programs make him an architect in such a process. He has helped to build through initiation and support of progressive legislation the edifice that houses for a free society the sources of freedom, justice and peace. He believes in education because he believes in man, knowing that education makes men easy to lead, but difficult to drive; easy to govern, but impossible to enslave.

Given on the occasion of the awarding of the honorary degree, Doctor of Laws.

KATHRYN F. CLARENBACH,
Chairman of the Board of Trustees.
Sister JOEL READ,
President of Alverno College.
Dated May 11, 1969, Milwaukee, Wis.

DIPLOMA

Alverno College, Milwaukee, Wisconsin, in recognition of Distinguished Achievements, the Board of Trustees of Alverno College has conferred upon Clement J. Zablocki the honorary degree of Doctor of Laws with all the rights and privileges pertaining to that degree.

In witness thereof, this diploma is given at Milwaukee, Wisconsin, on the eleventh day of May, in the year of our Lord, nineteen hundred and sixty-nine, bearing the signature of the President and the seal of the College.

Sister JOEL READ,
President of Alverno College.
KATHRYN F. CLARENBACH,
Chairman, Board of Trustees.

ADDRESS BY CONGRESSMAN CLEMENT J. ZABLOCKI, ELVERNO COLLEGE, MAY 11, 1969

Words are never so weak as when they are supposed to express gratitude. I think I had best say therefore as simply and as sincerely as I can—thank you for the high honor you have conferred upon me today. I say it joyfully and with great pride. I say it also with humility, knowing full well that many have made it possible for me to be here.

Gratitude is an old word with a long history. I use it here to express my determination to carry this honor *with honor*. That resolution is the more a challenge because of the prestige and renown of Alverno College, the distinguished quality of its faculty and administration, by the dedication and zeal of its students.

To be included in the noble purpose of this community of scholars will provide reassuring strength in the days ahead. In my own work as a Member of Congress there is a direct relationship with the pursuit of truth which is the happy, but sometimes no less burdensome, opportunity which is your daily task.

In fulfilling that role Alverno College is making a distinguished contribution to this community, state, and the entire nation. That contribution is all the more significant, however, because of the diversity of educational opportunity which Alverno represents as a *private* institution.

The urgency of preserving such diversity must be recognized and responded to. As the cost of private education soars the burden becomes more difficult.

A partial answer to this problem has come from the Federal government in the form of grant and assistance programs. Alverno and its sister colleges and universities throughout the country have been sustained to some extent by such programs.

Th fact remains, however, that other forms of governmental assistance must be provided if the private institution of higher learning is to thrive.

In view of the higher tuition costs which private schools must necessarily charge, one possible added source of assistance should be that of allowing tax credits to the parents who pay those tuitions.

An alternative solution might be that of providing direct grants to the students who attend private schools to help offset the higher tuition they pay. Such a program would make possible the full exercise of freedom of choice in education.

It seems to me that those who oppose such moves have lost sight of two essential factors—one essentially philosophical, the other involving certain practical realities.

The first of these considerations is the fact that institutions at every level of American society are built on the foundation of diversity. In the most important of these institutions, however, our educational system, we are told that the private school is "divisive", that it is "undemocratic." What could be more against the American character?

The second of these considerations involves a degree of practical common sense. The question to which opponents stay blind is one to which most taxpayers today remain painfully aware. If the private school is forced to curtail its operation and its students transfer to public schools from where is the added tax money to come?

These and many more questions must be answered honestly and realistically if meaningful solutions are to be found. Finding those solutions will not be easy; in the working out of the democratic process it may in fact entail a struggle.

While that effort may give us cause for dismay it must not make us despair. Against the tendency of cynicism and moral indifference toward those things in this country which are good, there is a strong countertendency of support for the principles of decency and fair play.

My own faith and hope is that, in the context of American traditions and the American character, these principles will prevail.

There is much good in the American body politic. Democracy is not a static system; it entails conflict. But most of all it depends upon an unflagging belief that good and just and honorable men will prevail.

To this struggle of regenerating America Alverno College commits its graduates today. I trust that this outstanding institution will continue to play its vital role.

I rejoice that through this honorary degree I have formally been given a place among you and a chance to share in that struggle.

SCIENCE ENDORSES IGNORANCE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. RARICK. Mr. Speaker, Columnist Jenkin Lloyd Jones has now joined the pioneer squad of truthseekers. He most certainly joins a small and select minority who, in their continuing search for the truth, may well reap the condemnation of their timid contemporaries who seem more content to rest on their Nobel laurels than seek honest answers to questions which may well prove the difference between survival and extinction of our culture.

For certainly, the secret closed door vote by which the National Academy of Sciences rejected Nobel Laureate Dr. William Shockley's suggestion that it encourage scientific inquiry into possible inherent or genetic differences in intelligence among groups of Americans can only be interpreted as fear of politically unpopular inquiry or prejudice against what they know may be the truth.

Mr. Jones' column follows:

[From the Washington (D.C.) Evening Star, May 24, 1969]

GENETICS TURNS OFF THE SCIENTISTS

(By Jenkin Lloyd Jones)

On April 29, by a show of hands in closed session, members of the National Academy of Sciences voted 200 to 10 against conducting any inquiry into possible inherent or genetic inferiority of intelligence among groups of American children, most particularly the children of "hard-core" chronic reliefers and apparent unemployables.

This is the third straight year that the national academy, composed of 850 distinguished scientists chartered as advisers to the U.S. government, has turned down such a proposal. Is the academy in this matter exhibiting a spirit of free scientific inquiry or is it putting on a display of inflexible dogma?

In supporting the turn down, Dr. Frederick Seitz, president of the academy, said, "It is essentially impossible to do good research in

this field as long as there are such great social inequities. And such research is also so easily misunderstood in these times."

Well, what does he really think—that the subject is not capable of being scientifically investigated or that the results might be misinterpreted? There's a vast difference.

The investigation was proposed by Dr. William Shockley of Stanford, one of the inventors of the transistor and a Nobel Prize physicist. He wanted to know if there is danger in down-breeding the American intelligence average through the proliferation of children of parents who represent the second generation of chronic relief-getters and who seem to have great difficulty in coping with their environments.

Dr. Shockley's question was received with all the cordiality that met a heretical question before the Spanish Inquisition. He was lucky to have escaped the pit and the pendulum.

For it is the current dogma of "liberalism" that while there are undoubtedly individual differences in intelligence, no one who loves his fellow man can entertain the unthinkable thought that there can be any genetic differences involving groups.

You can't be a humanitarian, according to this theory, without embracing as an article of faith the conviction that all general differences are the result of environment and the great leaps forward can be achieved by simply improving the environment.

Oddly, this is a very new idea. Until a generation ago most scientists were willing to concede that since both the Australian bushman and the Children of Israel came out of roughly similar environments something else must explain the vast difference in their contributions to civilization and their ability to grasp new ideas and new technologies.

Contrary to Dr. Seitz' plea that this question cannot be propery investigated because of "social inequities," there is no reason why the effect of improved housing, improved neighborhoods and improved schooling upon the IQs of children cannot be measurable.

If environment is as important as the dogma doggedly maintains, then these offspring of the hard core who have been moved into dramatically upgraded environments should show quick improvements. If long-standing social patterns of thought and behavior are the cause of the trouble, then these control groups should show slower but still steady increases in mental power.

The refusal of these eminent scientists to even look into the matter has a hollow ring.

There is no kindness in perpetuating delusion, however kindly it is meant. The mother who is told that her dull child may become bright if it is bused across town could be the victim of a cruel fraud. The professors who seem masochistically eager to see their colleges deluged with unprepared students from the ghettos may be promoting disappointment.

These professors have traditionally demanded higher and higher entrance standards. Now, if they are sure that the very environment of college will automatically prepare for the disciplines of college work ill-prepared black newcomers, then they are guilty of discrimination against generations of ill-prepared white students whom they cheerfully kept out. And if the new ghetto students stare blankly at the blackboard, explode in frustration and burn Old Main, whose fault is it?

The way to uplift and social progress does not lie in schemes based on rigid preconceptions which the proponents are unwilling to have tested.

The medieval alchemists were convinced that by the proper incantations base metal could be turned into gold. Modern science didn't begin until men were willing to test the nature of materials.

Is the National Academy of Sciences going back to alchemy?

THE CAMPUS IN TURMOIL: BY M. STANTON EVANS AND WALTER W. MEEK

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. BRAY. Mr. Speaker, one of the best and most interesting roundups of information and observation on campus turmoil appeared in a 12-part series appearing in the Indianapolis, Ind., News, April 21–May 3, 1969. Written by Mr. M. Stanton Evans, editor of the News, and Mr. Walter W. Meek, assistant city editor of the Arizona Republic, each writer contributed six articles, written in consultation with the other. They visited more than 30 campuses from coast to coast to complete their series. The articles follow:

SIGNS POINT TO COOLING OF STUDENT REVOLT

(By Walter W. Meeks, with M. Stanton Evans)

College and university officials across the country have braced for the expected "spring offensive" of the radical left.

But as spring 1969 unfolds, there are hopeful signs—no more than that—that the student revolt has cooled from its worst levels of violence in 1968.

There are indications that the new left vanguard, the revolutionary Students for a Democratic Society, has slipped in effectiveness.

Among several developing trends, two in particular seem to be changing the course of student dissent. One is that moderate forces are rallying against the destructive tactics of SDS and its allies. The other is that the dissident minority has split into separate thrusts, white and black.

Two recent incidents at ultraliberal Harvard University illustrate the trends:

On a cold day last January, an all-white troupe of about 40 SDS members picketed in the snow to protest a course in riot control offered by Harvard's Graduate School of Design.

Inside the bulding, a sit-in was in progress by another 150 students, all black. A spokesman told the instructor firmly that Harvard's Afro-American students would not permit a course designed "to suppress the only forms of protest remaining to black people."

While SDS kept its separate vigil in the snow, the protagonists inside decided to compromise. At last report the instructor had dedicated his course to the causes of riots instead of their control and was looking forward to a sizable black enrollment.

The issue evaporated and so did the SDS pickets. It was the second consecutive day that SDS was left in the cold.

The previous day, the Harvard faculty voted to strip ROTC of its academic standing.

SDS, covering the issue with moral bombast related to its dogmas on Vietnam and the U.S. military-industrial complex, demanded that ROTC be ejected from the campus.

But the faculty pointedly made its decision on academic grounds presented by student leaders who had researched the question for months. The moderates had taken the issue and the initiative away from SDS.

That is one approach being used by campus moderates. Another is the coalition counterattack to insure that the majority voice is heard along with the radical outcry.

At Harvard on April 9, SDS revived its demand for immediate ROTC eviction as one of the issues behind the seizure of an administration building by about 200 radicals.

According to moderate student sources, the SDS action was condemned by most of the Harvard student body and would have collapsed from lack of support. But the use of police to oust the radical occupation force turned the majority against the administration.

"Now we're just trying to keep the place together," said a moderate spokesman. "Most people here are thoroughly disgusted with SDS and the administration."

At colleges across the nation, elements opposed to the new left are beginning to speak and act with conviction.

Some agree with new-left goals but not its tactics; others disown the goals as well. But all are determined that the violence must stop.

BLACK STUDENTS GO SEPARATE WAY

The black students, bound up in racial pride and solidarity, have turned to their own leadership and counsel.

Under various banners across the country—Third World Liberation Front, Black Student Unions, Afro-American Student Associations—they are going their separate way.

A typical attitude of black student leaders is that of Yusuf Kaurouma, Afro-American Student Association president at the University of Colorado: "I'm not going to involve black students in anything that isn't good for black people."

"In effect, the blacks have said, 'Go do your own thing,'" lamented Dennis Stovall, former SDS chairman at the University of Oregon. "Of course it's reduced our effectiveness."

The sweeping goals of white revolutionaries don't always mesh with the concrete aims of black students, Stovall concedes. "The blacks, after all, are basically trying to get a piece of the action the white society has denied them."

The point was driven home last month when SDS launched its "spring offensive" at Columbia. Although this year's strike involved several items designed to appeal to Negroes, there was almost no black support for it. An SDS picket line in front of Columbia's Hamilton Hall featured only one black student, while several Negroes crossed the line to get into the building.

FEAR STATE AID JEOPARDIZED

At Michigan, the Black Student Union has criticized the student newspaper there for, among other things, taking too radical positions, creating an unfavorable university image and jeopardizing appropriations from the legislature.

With more and more universities listening attentively to the demands of black militants and moving to meet them, minority students generally are taking a tense wait-and-see attitude. This is depriving white radicals of much of their moral appeal and protective coloring.

"SDS has been scrambling for months and months to find some sort of coalition issue with the black kids," said Harvard senior Ken Glazier, outgoing chairman of the student-faculty committee that fashioned the ROTC decision.

Scrambling for issues is a fair description of SDS activities at most campuses today. For reasons that aren't completely clear, the energy that was available for Vietnam war protest a year ago seems to have been dissipated by the bombing halt, the Paris peace talks and all of the dramatic events that led finally to the election of President Nixon.

"It may be part of the national wait-and-see attitude toward the Nixon administration," offered a Boston University coed, "but a typical antiwar rally or draft card burning won't even draw the radicals out anymore."

To keep the movement moving, campus radicals are grabbing at whatever provocations are handy: The presence of ROTC, campus recruiting by the armed services and

defense industries, defense-related research on the campuses, grape boycotts and demonstrations against "objectionable" speakers.

At most campuses these issues don't excite many students. Where such issues do have radical potential, the trend among administrators and moderate student leaders is to deal with them before the radicals can magnify them into confrontations.

At the University of Washington, for example, SDS has taken up the cudgels against ROTC, but the program is already under open review by the university. The same is true at Columbia. At Stanford, SDS is faced with a student referendum supporting ROTC firmly.

Some universities, such as Washington, are cutting ties with campus laboratories that specialize in classified military and defense work.

There is strong evidence that excessive violence such as that at Columbia a year ago has discredited SDS with many faculty and student liberals who instinctively are sympathetic to its aims.

"This is a pretty liberal place," said Harvard senior Steve Kaplan in a massive understatement. "It's the kind of place where you could get 50 or 100 kids to occupy a building for any cause that makes sense. But most of the kids here wouldn't stand for another Columbia. They care too much about this place."

CONFRONTATION OVER ROTC

At the University of Washington last month when SDS announced plans for a confrontation over ROTC, about half of the full-time faculty members produced a statement supporting in advance whatever action the administration might have to take to keep order. Student body leaders, whose cast is decidely liberal, loudly condemned the SDS tactics and students demonstrated against SDS.

At several campuses, students complain the SDS would suffer near anonymity if it weren't for the attentions of the media, nervous administrators and angry politicians.

A reporter for the University of Colorado campus newspaper declared, "SDS would be nothing on this campus if the university and the legislature wouldn't insist on making them an issue, making martyrs of them."

Whatever the trends seem to be, it's also true that the student revolution is in as many stages as there are colleges and universities. It has barely started to surface at some places.

As a dean at fairly-placid Arizona State University said, "I don't think I want to be sitting here at this desk the day they decide to abandon the Paris peace talks."

His counterpart at another Southwestern school added, "I'll never say this place can't blow up. I just keep my fingers crossed."

THREE MAJOR KINDS OF ISSUES ON COLLEGE CAMPUS

Behind the turmoil that has gripped American campuses in recent months is a complex of issues, large and small, real and imaginary.

There are at least three major kinds of issues on the campus and as many kinds of collegiate groups pursuing them.

Issues and groups are not always neatly matched, however, so it is hard for an outside observer to disentangle what is going on.

A survey shows that the principal issues, each with a different kind of importance and backing, are:

1. Traditional student-administration squabbles over social rules, such as dorm hours, possession of automobiles, alcoholic beverages, and dress regulations.

2. Relatively-new campus disputes concerning nonsocial areas such as curriculum, grades, finance, admission policies and composition of the faculty.

3. Openly-political issues deriving from the Vietnam war, military recruiting and civil rights disputes.

The students involved in hashing out these things include the much publicized New Left, the less talked of but considerably more influential group of "reform liberals" on campus, and a smaller but increasingly active group of young conservatives.

These factions together add up to a minority on campus, each contesting for the sympathy of a nonpolitical majority.

Debate is spurred by a general mood of discontent among the politically active. Acting Chancellor John W. Snyder of Indiana University says campus turmoil is in large part a protest against things beyond the campus.

Controversy over ROTC supports this—a "campus" issue whose real locus is the war in Vietnam.

When the categories are rolled together—when the question of paternalism can be identified with some particular political cause—it is possible to get a real movement going.

Nearly all students, from new left to new right, are anti-paternalist on social rules. This is a traditional stance for collegians and the present effort differs from previous ones chiefly by its association with other questions.

When the paternalism question is cut out, student opinion fragments sharply, with the conservatives the first to go to their own way.

New leftists and liberals often are agreed on policy goals such as curricular "relevance," greater civil rights activity and opposition to the Vietnam war, but disagree on tactics. Conservatives have other views altogether.

The usual statement from "reform liberals"—and they are represented heavily in campus governments and newspapers—is that "I agree with some new left goals but oppose their methods."

This is the position taken by Steve Kaplan of Harvard, student body president Randy Gurie of Louisiana State, moderate student leader Jeff Kunz of Wisconsin and Jessica Josephson of Skidmore.

Jim Stovall, editor of the University of Tennessee Beacon, says that "just because someone wants change doesn't mean he is necessarily a radical."

Tactical divergence between liberals and the new left has loomed importantly as violence on campus heats up. Resort to force by Students for a Democratic Society and other radical groups has offended collegians who favor change but don't like disruption.

This has in some instances created a kind of de facto alliance on procedures between liberals and conservatives.

At Columbia, for example, the "Students for Columbia" organization, an anti-SDS group, is carefully nonideological except for its opposition to violence. At Wisconsin, conservatives and liberals have co-operated in anti-New Left activity.

At Indiana University student body president Edward Najam, a liberal, had conservative support in his election victory over a radical opponent.

A vivid example of such ideological mergers is the United California Students for an Academic Environment, which is battling the new left radicals in San Francisco State and other schools.

The C.S.A.E.'s attempt to counter radical disruption embraces political faiths from Eugene McCarthy Democrats to the conservative Young Americans for Freedom.

The question of violence has become so important, and new left insistence on "confrontation" so steady, that this question has tended to blot out the others.

California Gov. Ronald Reagan observes that "when demonstrators take to the streets in violence . . . that becomes the only issue." Until threats of force are halted, Reagan says, "you can't even treat with their demands."

Some liberals, such as Prof. Sidney Hook of New York University, agree. Others are not so sure and back away from a Reagan-like stance.

There is a body of liberal opinion which thinks the violence may have done some good—"it gets results"—or that new left confrontationists can be bargained with. This latter outlook has been particularly notable at Columbia.

From the new left point of view, however, there seems to be only one real issue, bringing American society to its knees. Many of the political questions agitated by the new left are in fact "nonissues," pretexts of getting at the nation as a whole.

Thus Mark Rudd, the Columbia S.D.S. leader in 1968, confessed the issues there were "manufactured," "nothing," "bull." The real purpose of the '68 strike, he said, was "an insurrection against the repressive structure of this society."

The pretexts chosen for this spring's SDS "offensive" at Columbia are even more obviously nonissues, excuses for kicking over the furniture.

Concern about such topics and majority reaction to them vary from campus to campus. Although certain patterns persist, the picture tends to change according to geography, size of school, public or private status, whether the legislature is in session, and the political outlook of the surrounding community.

The constant factor, on almost every campus, is that students are talking more than ever about the things which affect them and the American system of higher education.

SILENT CAMPUS MAJORITY OPPOSES NEW LEFT

The new left on American college campuses today is not only a minority, it is a minority within a minority.

Most students do not view the campus as a political institution and are not motivated strongly toward politics.

They are concerned about grades, careers, athletics, dates. Among those who are political, many are conventional liberals and others conservative. Still others are interested in politics but don't think the campus is the proper place for it.

Even at the hot spots of leftward revolution, interest in student politics is slow to ignite. In the last election at embattled San Francisco State, less than 12 per cent of the student body voted. Activists from all points on the political compass complain that the mass of students is apathetic toward political causes.

David F. Hull Jr., president of the Interfraternity Council at Louisiana State, speaks for a broad middle group in campus life.

He believes an increased student participation (although an undergraduate, he works as assistant dean of men) and opposes excessive paternalism, but is also a strong believer in the fraternity system, an energetic supporter of compulsory ROTC, and a critic of the new left.

Like many other moderate students, Hull says he agrees with some new left goals but opposes violent tactics. He thinks "the silent majority" of LSU students is not political and is mainly concerned with studies and athletics. This widely-held view is not always considered a reproach.

A large number of students agree, for example, with the Columbia senior who says "if I want to get involved in politics, I'll do it elsewhere." Dale Stark, a sorority leader at Indiana University, says: "I'm going here to be educated . . . I participate in other activities, but they come after my studies."

Bob Misko of the Penn State branch campus at Sharon, Pa., says: "Primarily I come here to get an education so I can prepare myself for an occupation."

Such nonpolitical students are a latent source of new left opposition. Robert Henry of Youngstown University, who works the

night shift to put himself through school, voices disdain for troublemaking-students.

"When you have to work," he says, "you don't have much time for demonstrations." He has a little sympathy for undergraduates who swarmed the Democratic National Convention last summer.

Reaction against new left use of force is evident in campus polls, rallies, petition drives. Open recruiting by military services and others on campus was supported by 67 per cent in a referendum two years ago at Columbia and by 6,000 petition signers last fall at Purdue.

At Michigan State, more than 10,000 students have signed a petition opposing "intimidation, violence and disruption" on the campus.

During the 1968 strike at Columbia University, students voted by better than 3-to-2 against amnesty for the strikers and by 4-to-1 in disagreement with SDS tactics, even though similar majorities favored the New Left position on two substantive issues. At Stanford, students voted 3,924 to 1,695 in condemnation of SDS tactics, 3-to-2 in favor of retaining academic credits for ROTC.

When Dean Rusk spoke at Indiana University in the fall of '67, SDS and other leftists tried to disrupt his appearance. Non-new leftists staged a counterdemonstration. According to I.U. sophomore Baron Von Kannon, "there were about 1,000 leftists outside the hall shouting, 'hell no, we won't go,' and about 2,000 of us saying Rusk had a right to speak."

Wisconsin's Committee to Defend Individual Rights is one of many groups waging ideological warfare against the left. Fred Weiss, Gerry Lachmund and other members of the group publish literature denouncing SDS for asserted totalitarianism. Members of Young Americans for Freedom and a group calling itself the "Hayakawas," after San Francisco State President S. I. Hayakawa, breached picket lines thrown up by militants.

On the San Francisco State campus itself, new leftists are opposed by the Committee for an Academic Environment, which has spread to more than 30 California campuses. CAE has obtained court injunctions to halt disruptive actions and gathered upwards of 2,000 petition signatures to recall student officials supporting radical tactics.

At Stanford, Young Americans for Freedom and the Young Republicans combined in a show of numbers against the SDS. "Once we started something," says the Young Republicans' leader, Bill Boyd, "we tapped the pent-up feeling of hundreds of people. It just took a handful of activists to bring out the true feelings of the majority."

Majority coalitions or similar groups exist at:

George Washington University.
Penn State.
Monmouth College in Illinois.
Arizona State.
Columbia.
Tennessee.

The Columbia group threw cordons around SDS-occupied buildings last year to prevent the movement of food or supplies to the leftists. Successor to this group is "Students for Columbia," now battling SDS at Morningside Heights as the left undertakes its "spring offensive" for 1969.

The "coalition" at Tennessee was formed to oppose liberal critics of the school administration. Chairman Jim Duncan says "our group is composed of concerned students who wish to demonstrate support for the U.T. administration in its efforts to maintain a truly free academic environment on this campus."

At Purdue University, the Semper Fidelis Society conducted a blood drive to combat new left antirecruiting efforts. "We're not a "right wing group," says organizer Allen Force.

"We more or less represent the middle of the road. Our blood drive allowed the average student on this campus to express his opposition to the new left tactics," he said.

At Los Angeles City College, a group called VIVA (Voices in Vital America) took direct action against a new left strike. Militant students had blockaded entrances to the schools, and VIVA members moved in and dismantled the barriers. The campus was opened up and the college continued to function.

Emergence of this countervailing force has stirred faculty concern about physical clashes. An official at Indiana University says, "I think if we snapped our fingers we could have enough kids out on the streets to eat the new left for breakfast. Our problem is to keep that from happening."

At Columbia during the '68 strike, many faculty members expressed their fear that athletes and others would tangle with the SDS contingent.

HOW MUCH SUPPORT FOR THE NEW LEFT

The extent to which antileft efforts represent majority opinion is also debated. SDS spokesmen at Columbia say the "majority coalition" did not represent the prevailing drift of student sentiment. Sophomore Fred Lowell, a leader in the coalition group and its successor organization, Students for Columbia, replies:

"We make no claim to represent anybody's views on broad political questions one way or the other. Our membership includes moderates, liberals and conservatives. We simply claim, on the evidence, that our stand against violence and disruption represents by far the majority attitude on the Columbia campus."

HOW UNIVERSITIES FIGHT CAMPUS REVOLUTION

They prayed for rain to wash out the student revolution at the University of Washington.

March 6 was the day picked by the radical Students for a Democratic Society for the first big test of strength on the Seattle campus.

SDS announced it would mass its forces for an anti-ROTC rally and a parade through an ROTC classroom building with the object of general disruption or worse. Its goal: An immediate end to ROTC.

Instead of rain the 32,000-student campus was bathed in sunshine and balmy air and the revolution began on schedule. For a tense 90 minutes Washington hung on the edge of national notoriety on the scale of Columbia a year ago.

All the physical elements were there: A radical core of from 600 to 700 enough to "liberate" any building on campus; a milling throng of 6,000 other students some openly hostile to SDS most simply curious and not a policeman in sight.

At the end of the march, on the steps of the administration building, a tiny knot of "crazies"—teenage radicals recruited from local high schools—begged the leaders to storm the buildings.

Instead, the SDS leaders eulogized their followers, warned darkly of what they might do next time and dispersed.

The teen radicals raged at the peaceful turn of events. "You blew it! We could have taken it. You blew it!" One of them screamed over and over at one of the SDS spokesmen.

"The people weren't ready for it. We're only 600 against thousands. You don't start a minority revolution," groaned one of the senior revolutionaries.

The crisis had passed without a cracked head or a broken window. SDS had refrained from any real disruption or violence, contrary to its announced intentions. Why?

In the last analysis, some observers thought, SDS was seized by acute indecision in the face of the huge student turnout.

But the University of Washington's response to the threat also was very special, a rare display of campus elements pulling together to prevent violence and disorder by a noisy minority.

Well in advance of the SDS rally, Charles E. Odegaard, university president, issued a statement making it clear what the university would and would not tolerate as free expression.

The rights of the majority and the university's functions would be protected from disruptive students and faculty, he warned.

Significantly, he didn't threaten police intervention or predict the university's exact response, even under pressure from the press to tip his hand.

In a totally-independent action, about half the tenured faculty members signed a declaration that they would support the administration's efforts to keep order. In fact, the statement was drawn up before the SDS rally was announced, said Prof. Arthur Bestor, one of the sponsors and a recognized campus liberal.

"Many of us personally advised the president that the use of force should be the very last resort," he said, "but we decided it was up to the faculty to give the administration a clear statement of where it stood."

A second faculty group of about 200 thought the statement was too broad an endorsement of police intervention. They issued a separate statement urging restraint after the pattern of Brandeis and Chicago universities, where radical sit-ins were allowed to run out of steam.

SMALL PRICE IN DISRUPTION?

In fact, the two groups privately were telling Odegaard the same thing. They counseled patience and the willingness to pay a small price in disruption to avoid police force.

The important point was that Washington's faculty was not standing aloof. When the rally came, about 50 faculty wearing identifying armbands turned out to act as "observers."

Added pressure against the radicals come from the University of Washington's non-establishment student government. President Thom Gunn, whose bushman hair style would classify him as a radical for most uptight adults, denounced the SDS methods and called an opposition rally for "rational discussion of the issues."

The opposition rally drew about 1,500 students at its peak. John Mosier, student vice-president, later worried that the moderates had suffered "a prestige blow" in failing to blunt the SDS affair. But most observers felt that ordinary curiosity won out and that the student government had struck the sharpest blow at SDS with censure from the radicals' peers.

As the final constraint on radical intentions, the campus newspaper, the Washington Daily, presented a complete explanation of the issues and positions for a week before the SDS event.

The radicals could not capitalize on campus ignorance and the shock value of violence if it came.

"People accused us of playing up SDS too much," said the Daily's editor, Ray Hallinan, an originator of the opposition rally. "But we have a responsibility to keep the situation cool and by honest reporting we channeled student opinion in that direction."

The SDS rally and march, complete with portable sound equipment, could probably have been declared illegal under campus regulations, Hallinan noted, but it wasn't.

HONEST RESPONSE TO THE ISSUES

Honest response to the issues, clear ground rules for dissent and firm willingness to enforce them, faculty and student stands against minority rule, thorough and open campus debate in the press and finally, official restraint—these were the elements that combined to prevent violence and disruption at the University of Washington.

Some or all of them have been missing at

most campuses that have been convulsed and occupied by police.

Nearly all students and university personnel interviewed across the country for this series agreed, as President Nixon has said since, that America's colleges must learn to cope with student dissent on their own terms, with minimum outside intervention.

Students nearly are unanimous in terming police force the last and worst possible resort. Editor Hallinan said:

"Once the police are on campus it's all over. The university no longer has any control. Whether it's justified or not, to many students the police are symbols of repression after Columbia and Chicago. They galvanize the uncommitted into action."

There are exceptions. Moderate students at embattled Berkeley and San Francisco State College assert that the choice there was between the police and criminal anarchy once administrators had let the situation deteriorate that far.

Moderate-to-conservative students at Columbia, who opposed the '68 SDS strike, say the summoning of police helped the left. "If they had called the police at the very beginning," says conservative Dave Carpenter, "they could have stopped the strike without violence.

"But by letting it build up for a period of days and then bringing in the police, they created a status quo in favor of the radicals and made the final action much more violent."

WRECKERS CALLED A TINY CORE

As Harvey's faculty dean, Franklin L. Ford, has put it, the avowed wreckers of the university are a tiny core at the center of concentric circles of student interests and unrest. The problem is to keep the disease from spreading outward.

The academic community is glued together more by concepts of reason, fair play and moral rights than by law. Within this framework, each university must develop its own measured responses to the threat and challenge of the radical left.

But the pressures are getting difficult for many administrators who are caught between the shrill noise of the radicals on one side and on the other outraged public officials who are ready to condemn any apparent sign of weakness or capitulation.

Oddly, it's in the quieter outposts of the campus revolt such as Arizona, Colorado, Missouri, and Oregon where the political pressure is strongest for some kind of tough formula for squelching student dissent such as kicking SDS off campus, a ploy that students generally oppose.

The University of Washington's tricky, complex formula worked one day in one situation. No one there believes they've found magic. They believe you fight the campus revolution one day at a time.

SOME COLLEGE POLICIES AID STUDENTS' REVOLT

America's colleges and universities have contributed to the new left's revolution which confronts them.

Administrations and faculties have fostered the youth revolt both by what they have done and what they haven't. In some cases, they have allowed relations with students to deteriorate needlessly. In others, they have failed to lay down guidelines for reasonable conduct and to stick by them.

Equally important, some educators have supplied the ammunition which student rebels fire at the academic establishment.

Dean Arden O. French of Louisiana State University says, "My own personal feeling is that there is not a gap between generations. I think the gap lies in ideologies. There is very clear communication between age groups of similar ideologies, as the Cox Commission report on Columbus shows. There were numerous faculty members and others who helped the student rebels."

The report of the commission, a study, under the chairmanship of the former solicitor general, Archibald Cox, of the 1968 Columbia uprising bears out French's statement. It notes that the Columbia violence was turned into a major blowup by the delay in calling the police, "which the ad hoc faculty committee forced upon the administration."

Some Columbia faculty members tried to aid the new left openly, while the ad hoc group opposed strong action to free captured buildings from radical control. The Protestant chaplain and Jewish rabbi of the school actively aided the revolutionaries. The chaplain spoke at a new left rally this spring, using the second-favorite obscenity of SDS.

Similar problems have developed at other schools. At the University of California at Berkeley during the "free speech" controversy of 1964, faculty members refused to condemn "civil disobedience" tactics and demanded amnesty for disruptive students. Prof. Sidney Hook of New York University describes this "approval of student lawlessness" as "the most shocking aspect of the role of the faculty . . ."

Efforts to end the violent student strike at San Francisco State were frustrated when members of the American Federation of Teachers called a sympathy walkout. Prof. John H. Bunzel, a liberal and proponent of ethnic studies, calls the AFT action "cynical."

Bunzel says the faculty had rejected the union as its bargaining agent and denounced the strike by a two-thirds majority. "What AFT wanted," he says, "is recognition they haven't gotten from the faculty. They decided they could get it from the trustees by using the student strike."

California Gov. Ronald Reagan, who has clashed repeatedly with the left, says, "The weak link is at the administration level of the university . . . During all of this—and it's been going on for five years, really, since the free speech movement—there hasn't been one expulsion from the University of California, from any of the nine campuses."

Reagan adds that, "At one of our state colleges, they suspended all of the sentences—and this was one that had bonfires in the hall and that sort of thing. They had one sentence administered to two of the participants . . . and the chancellor of the campus suspended the two of them—for one day. This is laughable. They'll be back for the next fracas."

Critics of the new left believe previous shows of leniency have emboldened student radicals. Columbia student Abe Lockman, who was mauled this spring by a group of SDS pickets, traces his black eye to the administration. "The university encouraged the new left to further acts of violence by last year's amnesty," Lockman says.

ADMINISTRATION LOCKS DOORS

Steve Frank of Los Angeles City College, who led student action to break a new left strike at his school, has similar words of criticism for administrators. He charges that when the administration building was being "stormed and broken into, all the administration did was lock their doors with themselves inside. They didn't attempt to do anything."

At Berkeley, Columbia and other schools where there have been outbreaks of trouble, observers from different political quarters agree that the administrators had grown out of touch with students. Officials were inaccessible and unresponsive to legitimate concerns. The size of universities is not stressed as often as one might assume, but administrative and teaching problems related to size do pop up.

Mark Oring of Indiana University, a new left leader there, charges that 10 percent of the faculty members at his school do not teach courses but spend their time in other activities. Moderate John Peden of State University of New York complains of oversize classes. A conservative undergraduate at I.U. tells of inadequate courses, stressing, however, that there are a minority, taught over television with the instruction burden being carried by a graduate student.

Jacques Barzun, a professor and assistant to the president at Columbia University, says the schools have tried to become service institutions catering to all elements in society. Barzun thinks the present-day cry for "relevance"—urging the university to plunge into social-political questions—could reduce classes to current-events seminars. He blames the modern yen for informality and the "cult of inattention" for blurring thought processes of students.

REVOLT PHRASES LEARNED IN CLASS

Barzun also notes that the content of the curriculum is involved in the current uprising, since the phrases new leftists fling at the heads of school administrators are often things they have learned in the classroom to begin with. "All the critiques of society have been professors' work for the last half-century," he says.

Academic skepticism toward established values also seems to be involved. A student at the University of Tennessee said that when he came to the school he "equated God and the United States government and things like that," but that his education changed his outlook. "U.T. has given me a sense of weighing values or anything else and coming up with what I think is best." This student was one of the group protesting practices of the school administration.

SOME STAND UP TO NEW LEFT

A new left undergraduate at Columbia illustrates the point in economic matters. A member of the Young People's Socialist League, he says his collectivist opinions stem in part from a conviction that free enterprise was totally discredited by the 1929 depression, an idea he documented from works of Harvard economist J. Kenneth Galbraith. Many leftist students cite such things from their academic experience.

There are cases in which faculty members have stood up strongly against new left tactics—Sidney Hook at New York University, Richard Hofstadter of Columbia, John Bunzel of San Francisco. Yet the over-all verdict is that elements of the faculty, in one capacity or another, have had a key role in spurring disorder.

"I know of no case of a major blowup in a university," says Harvard's faculty dean, Franklin L. Ford, "where a fraction of the faculty has not contributed to the trouble by fudging the issues, whether moral, legal, or simply rational."

RADICALS DECLARE WAR ON LIBERAL PROFESSOR

Prof. John H. Bunzel knows what it's like to disagree with the radical left.

It's like war.

Bunzel unwittingly became a symbol in the violent strife at San Francisco State College just as the school itself became a symbol of victory or defeat for radicals across the country.

Before San Francisco State was convulsed by terrorism, Bunzel was known primarily as the popular and respected chairman of the political science department. He had credentials as a Kennedy liberal and an early campaigner for ethnic studies for black students.

Then last October, a time bomb was found ticking outside Bunzel's office door. Later, part of his department's offices were ransacked; the tires of his car were slashed at his home and his family threatened by telephone. At the start of this semester, he was kept from teaching for a week by radicals who raided his classroom.

Why did the radical left declare war on Bunzel?

To some extent, he said, it was part of a widespread attempt to silence liberal faculty members, who opposed radical tactics of disruption. Their political credentials put them in a unique position to discredit radical methods and inject reason where the new left wanted only confrontation.

But more important in Bunzel's case, he had questioned Dr. Nathan Hare's proposals for creating an autonomous black studies department at San Francisco State. Bunzel did it mildly, in an article published in the scholarly journal, Daedelus.

"I was an early supporter of a sound ethnic program," Bunzel said, "but I was opposed to the revolutionary, nationalistic approach that Hare proposed.

"This place became so polarized that if you didn't support Hare's proposal you were tagged as an opponent and a racist. We couldn't even talk about options or alternate proposals.

"Black studies got completely caught up in revolutionary bombast."

San Francisco State long has been a testing ground for radical tactics. It was the first and most extreme example of the inward shift of the black student revolt. Fortunately, the environment of San Francisco State, and trouble faced by S. I. Hayakawa, its acting president, aren't duplicated at many U.S. campuses, although the same issues are being raised by black students almost everywhere.

The trend at the majority of schools is to go most of the way in granting black student demands quickly, if possible. While the demands usually are couched in nonnegotiable terms, there is considerable negotiating reported from behind the scenes. In general, where blacks see progress, they have adopted a wait-and-see posture.

The blacks' demands pretty much follow the same pattern:

1. More courses emphasizing the black experience in America, preferably taught by black instructors and in a separate department.

2. More black faculty, counselors and administrators throughout the university, but especially in such areas of special concern as admissions and financial aid offices.

3. More recruiting of black students, particularly among the disadvantaged in the ghettos, under special admission policies.

4. Special or separate social and living facilities for blacks.

5. Administration of as many of these programs as possible by black students and advisers.

From Harvard to the University of Washington, schools across the country are making commitments in varying degrees to these goals, whether black students have made formal demands or not.

The reasons behind some of the black demands are obvious, but others are subjective and complicated. The whole issue is cloaked in the intense new feeling of black awareness and search for racial pride and identity that have come to dominate the black movement.

MANY YOUNG BLACKS BITTER

Integration as most liberals have understood it, that is, a colorblind society based on a white-middle-class-value system, is a dead letter as far as many young black Americans are concerned.

That's the view of John U. Monro, dean of Harvard College until two years ago when he went to Miles College, a Negro school in Birmingham, to become director of freshman studies.

Monro sees the black student today as no longer seeking traditional integration with white society, but seeking full equality and respect. Monro likens the black movement to that of labor as it struggles to become organized.

He sees black society moving toward "a great black union" with the intellectual and economic muscle to command respect and equality.

For black students, then, higher education must build union.

There are also more immediate reasons behind black demands listed by university observers:

1. Many black students are committed to return to the ghettos, which means they need skills tailored to black ghetto society.

2. Black studies also may help to bridge an uncomfortable sense of separation many black students feel from their less-fortunate brothers and sisters who don't go on to college.

3. Some college and universities in the past year or two have reached among the truly disadvantaged to increase black enrollments, but haven't prepared to deal with their special handicaps.

As Ed Wynn, a Negro graduate student at Berkeley, put it, "There are people here who simply don't belong here. When they ask for a separate department it's another way of saying they can't make it without special help."

Nearly all universities want to avoid being pushed into setting up completely-autonomous black studies departments such as Hare planned at San Francisco State. With no academic controls, Bunzel said, "The danger is that we'll create Jim Crow colleges within the Northern universities."

UNIVERSITIES ADJUST ADMISSION STANDARDS

With the middle class cream long since skimmed from the top of black society, most universities quietly are "adjusting" their admission standards to bring in more Negro students.

A University of Washington administrator declared, "As long as the exit requirements remain the same, it doesn't make a tinker's dam what the entrance requirements are."

But almost every new black enrollee today requires financial assistance and extra effort and preparation to keep him in school. And that adds up to a heavy financial burden, especially for schools that are already flirting with a taxpayer revolt.

The University of Washington, for example, is in the first full year of its Special Education Programs to recruit disadvantaged minority students.

The University of Washington reports a cost of about $370,000 for the program, which provides "absolutely minimal" financial assistance, according to its program coordinator. That does not include faculty costs related to black studies.

Colorado expects to need $500,000 this year to launch its new recruiting effort, involving 75 students.

Most administrators report that their funds are patched together from various sources, in some cases, faculty and students are major contributors.

$76,000 DONATED AT UNIVERSITY

At the University of Washington, for example, a black student request last year for recruiting funds brought a donation of $76,000 from faculty and graduate students. Washington's undergraduates plan a volunteer work program in May to raise more money.

At the University of Colorado, the student body recently voted by referendum to tack an extra $5 per student on annual activity fees for the sole purpose of recruiting and assisting minority students. The fee boost will provide about $500,000 over four years.

With state legislatures and the Federal government tightening belts, most black program co-ordinators see the large private foundations as their best source of funds. Here, competition looms among very unequal competitors: The state universities and the almost-forgotten Negro colleges in the South.

As more Northern schools make commitments to their black minorities and to the ghettos, the small Negro schools face a squeeze from two directions.

In a competition for private funds with prestigious Northern schools they are outclassed. In addition, they probably face a raid on their most-talented personnel as the big schools scramble to find qualified black faculty, graduate students and administrators.

CAMPUSES SPLIT ON STUDENT RIGHTS, POWER

"Student rights" and "student power" are phrases often used on the college campus.

What these words mean is frequently unclear to people in the outside world. In some cases, it is unclear to the students themselves, since it means different things to different people.

To the partisans of Students for a Democratic Society, student power and student rights mean the right to "radicalize" the campus, to use it as a power-base for new left action. The new left does not extend similar rights to those who disagree with it.

This attitude has been illustrated at San Francisco State College where a student government sympathetic to campus radicals switched funds from traditional campuswide activities to the political interests of the left.

Moderate students are trying to recall the governing group and in February a superior court judge ordered its assets impounded.

The radical view has been made even plainer by the shouting down of opposition spokesmen, taking over buildings and denying access to other students, and in statements of new left theoreticians such as Prof. Herbert Marcuse of the University of California at San Diego.

SDS believes it is entitled to coerce people because it is crusading for destruction of a corrupt society. Mark Rudd, the 1968 Columbia SDS leader, said that "Depriving a few individuals of their 'right' to an education . . . is certainly a lesser evil than allowing Columbia to continue its policies."

Another Columbia new leftist interviewed after the 1968 strike explained that seizure of buildings and similar activities were justified by the writings of Marcuse, who believes "tolerance" should be extended only to leftist groups and denied to others.

Charles Proctor, a general studies student from Indianapolis, is chairman of the anti-SDS Students for Columbia. He charges that the SDS version of student rights is opposed to what the majority of students want, since one of SDS's demands is to ban military recruiting from the campus. In a previous referendum, Columbia students voted overwhelmingly in favor of such recruiting.

David Keene of Wisconsin, a conservative youth leader, makes the same accusation. He says the new left is vocal about demanding that its favorites be allowed to appear on campus, but would deny this right to representatives of the Dow Chemical Co. and others.

To reform liberals on the campus, "student rights" have a different meaning. As most often used in colleges today, the phrase implies that the university is similar to a government and that the students, as the "governed," should have some say on college rules.

Another version says students picking up a percentage of educational costs should have an equal share of decision-making power.

Discussions on this subject were prevalent at every campus surveyed, and at Indiana, the major topic as "open-visitation" privileges in rooms of the opposite sex. At Skidmore, it was a demand that students sit on the board of trustees and help make rules.

Harvard students want representation at faculty meetings to observe deliberations and present their views. At some schools the issues are centered on social prerogatives, women's dorm hours at Tennessee and dress regulations at Louisiana State.

WOULD LIMIT REGULATIONS

Pam Miller, vice-president of the Student Government Association at LSU, says, "Student rights in my opinion would consist of limiting the rules and regulations which the university can make to those which are necessary for the furtherance of their stated objective, academic development."

Questions of curriculum and academic practice also arise, however. At the University of Washington, students score the refusal of tenure to faculty members who have not published sufficient scholarly material. John Mosier, student body vice-president, says the student government may mount a campaign against the academic reward system and the "publish-or-perish" rule.

A demand for "relevance" in course material, meaning emphasis on black studies or other programs connected to current problems, often is advanced. Negro students Alex Crumble of Wisconsin and Bill Allen of Claremont Men's College, whose political opinions are otherwise diverse, support this idea. So does former track star Ralph Boston, now on the staff of the University of Tennessee's Dean Tom Scott. Boston says a program aimed at establishing black identity would be helpful not only for Negroes but for white students as well.

A legalistic turn is supplied by a campaign for "due process" in disciplinary matters, has responded to this by having a former state Supreme Court justice preside at a hearing for SDS members. Student leaders Pat Stimer and Pat McGraw argue that collegiate discipline should be administered by the courts rather than by the school.

Conservative students have still another view of student rights. They do not disagree with anti-paternalism efforts, but see them in a different philosophical light. Thus, Richard Combs, a Young Americans for Freedom leader at Tennessee, says of women's dorm hours: "For a girl under 21, the parents should be the deciding factor, not the university." Sam Coyner, head of the conservative Madison Society, agrees.

These spokesmen oppose liberal efforts to use the issue as a pretext for demonstrations. They point out that the taxpayers also have rights as to what goes on at the university since they pay the bills.

Conservatives urge correction of what they charge is imbalance in course material. At Stanford, Harvey Hukari, Young Americans for Freedom leader, and Bill Boyd, Young Republican chairman, presented a list of proposals for more conservative-liberal balance in the curriculum. At USC, columnist Bill Saracino of the Daily Trojan contends that faculties are slanted to the left, while conservative leader Pat Nolan opposes compulsory fees to finance liberal programs.

A list of recommendations presented to California education officials by Young Americans for Freedom includes:

1. Creation of a free market studies department.

2. Implementation of voluntary student body fees.

3. Free election of campus newspaper editors.

4. Strict enforcement of all laws designed to maintain order on campus.

5. Opposition to consolidation of authority over state junior colleges, colleges and universities.

Conservatives do not claim the right to run the universities. They say their purpose is to get an education, not to give one, and that their foremost "right" is to receive the schooling they contracted for. Twelve students at Columbia have filed suit against the university, charging that the school's failure to prevent the shutting down of classrooms in 1968 denied them the service for which they had paid tuition.

STUDENTS HELP CHOOSE FACULTY

While college radicals shout demands for "student power" many of their moderate classmates are putting it to work without fanfare.

At the University of Oregon, for example, students in the School of Community Service and Public Affairs have just been granted one-third of the vote in the school's policy-making, general-staff committee.

Because of irregular faculty attendance at meetings, the students say it's likely they will be equal partners in setting policy.

The school, in its operation and curriculum, is putting into practice the twin cliches of campus dissent, "student power" and "relevance."

The experiment is different but not revolutionary. Across the country, moderate students are asserting new influence at every level of the college system.

Sometimes their goals aren't very different from those of the radical left. But they fight or change by working within the university system instead of trying to destroy it.

All across the college map, students are working their way into faculty and administrative councils. They are helping to choose university presidents, deans and faculty. More and more, they are taking complete charge of student affairs and budgets that sometimes run higher than $1 million.

The Oregon school, officially 1½ years old, is one of a handful of undergraduate professional schools in the country. It is preparing about 280 major and premajor students for careers in the public sector.

It also serves another 1,300 students in the university with an innovative liberal arts curriculum that many student dissidents across the country would envy for its "relevance."

"As an applied social science school, we're problem-centered rather than course- or discipline-oriented," explains Dean Norman Sundberg. That means the courses, using team teaching and other techniques, cut across traditional academic subjects to focus on social and political issues.

Sample subjects include poverty, violence, black power and urban unrest. The school has inherited much of the developing black studies curriculum at Oregon, also.

"Some of our most-interesting courses were suggested by the students," Sundberg said, adding that the school has sought students' advice on curriculum from the start.

Students are exposed to continuing field work, ending with placement for a full academic term (three months) in a social or government agency of their choice. The field work brings the starry-eyed down to earth, sometimes suddenly, according to Dr. Keith Jensen, who runs the program.

"They learn the frustration of bureaucracy in public agencies" he said. "Sometimes they're overwhelmed, but if we can communicate patience, they can become sharp social critics."

"One of this school's great potentials is to bring in the radicals and teach them how to work with the establishment," said Dave Cleveland, a 22-year-old senior from Salem, Oregon.

He added, "This school breaks down the parent-child relationship between faculty and students so common everywhere."

Another often-heard complaint involves the length of the educational experience. Liz Margoliash, a junior from Marin County, Calif., asserted, "What CSPA is saying in some degree is that what can be accomplished in an extra year of graduate school can also be done in an undergraduate school."

Another Oregon innovation, a type sought by students elsewhere, is its "search" program, a student-centered system for putting into operation experimental courses for full credit. This year's offerings included: Seminars on non-violence, political revolution, underground cinema, black theater and racism in American culture.

HARVARD STUDENT WATCHDOG COMMITTEE

Crossing to the East coast for a different example of student influence, a committee at Harvard acts as student watchdog over the university's academic performance.

The main function of the Harvard-Radcliffe Policy Committee is to "audit" Harvard's academic departments, six each year. It polls and interviews students and faculty, analyzes lectures, examinations, course requirements, the working conditions of graduate assistants, etc. Its reports are taken seriously, students say.

One of the committee's members, 21-year-old Miss Kay Tolbert, is a Washington senior bound for law school. Her political views are ultraliberal, if not new left. Why does she expend her energy and time on the policy committeee's work rather than on radical politics?

OBTAINABLE GOALS SET

"Precisely because I think we can get something done; our goals are usually short range and obtainable.

"I may agree with the radicals, but I'm not convinced that SDS radical methodology is the way to accomplish anything," she says.

Besides, she says, "Education has been my whole life. SDS is not particularly interested in Harvard. I'm interested in national politics, but in Harvard also."

At Harvard, the final appeal on all issues is to the faculty, not the administration, and students know it. Harvard's faculty is probably more accessible to students than the faculty of almost any other major university.

But Miss Tolbert and other student leaders are campaigning for a stronger student voice in faculty councils where decisions are made.

"They listen to us, but we're not there for their discussion or action," she said. "Sometimes they simply misread what we've said."

The students have asked for a permanent voice, not a vote, in meetings of the full faculty. So far, they've been rebuffed, but they scored a breakthrough in January when they were allowed, for the first time, to appear at a faculty meeting and present evidence on the academic standing of ROTC.

STUDENTS USE THEIR POWERS

At the University of Washington, in Seattle, student muscle is flexed effectively by the 2½-year-old Graduate and Professional Student Senate. Its purview is "anything that affects student life," according to Bill Inglis, its first president and now an assistant to the university vice-president.

The elected graduate senate has fought discrimination in off-campus housing, prompted programs and raised funds for minority students and recruited tutors for black undergraduates. In the works are a universitywide senate and a student-faculty bill of rights.

"Protest marches aren't very smart," Inglis says, "You get what you want by doing your homework on the problems and then getting to the guy who makes the decisions. Student input is one of the most valuable resources in a university. At least 50 per cent of it is good, and that's as high a percentage as you get in any enterprise."

CAMPUS REVOLT SPURS NEW STUDENT LEADERS

A new breed of student leaders seems to be surfacing out of the turmoil of the radical revolt on American college campuses.

They signal an end to the popularity contests for student offices long dominated by gridiron heroes, fraternity boys and sorority girls.

The new breed is a product of the campus revolution. Its members oppose the violent and disruptive tactics of the new left, but they're definitely not wedded to the status quo.

They are critics of higher education, pledged to fundamental changes in the universities and to a strong, rational student voice in university affairs. And they're willing to work for it.

Sometimes sympathetic to the views of the left-wing minority, they invariably support the broad goals of the black student movement.

They seldom claim to reflect the views of the silent, disinterested or apathetic majority on all issues. But they are a major element of the student response to the New Left.

They don't see themselves as caretakers of hand-me-down student institutions but as lobbyists for serious student interests.

This new breed can be found taking charge at Harvard, Colorado, San Francisco State and dozens of campuses in between. They are even organizing regionally and nationally.

Here are some samples:

Steve Diaz is a 20-year-old junior at San Francisco State College, a school under continuous police protection or occupation for more than three months.

As we talked in a hallway of the BSS Building at San Francisco State, we were jolted by a sharp blast in a stairwell a few feet away, then the crash of a heavy steel trash can coming down on the floor above.

Diaz, small and wiry, hardly flinched. "Just another bomb," he said, as two other students trotted by carrying fire extinguishers. "That's why we need the police around here. What was I saying?"

Diaz is chairman of the United California Students for an Academic Environment. Born at San Francisco State last November as the Committee for an Academic Environment, it formed a statewide organization in December embracing 30 campuses.

Its short-term goal is to help end violence and disruption at California schools. Diaz said:

"We believe the radical left has been able to do what it has because of a leadership void among students and administrators. They've exploited legitimate and imagined ills for their own ulterior motives.

"The only reason these things have lasted more than two weeks on any campus is that they discovered that students don't like to have police on campus. Nobody's going to point out that you're a violent, pushy little demagogue as long as you look oppressed by heavy authority."

SAN FRANCISCO RECALL DRIVE

"We represent the people who want to go to class," added Mark Wolfe, CAE information officer at San Francisco State. He noted that CAE has mounted a recall campaign against the ultraleft San Francisco State student government.

For the embattled San Francisco State president, S. I. Hayakawa, the CAE has been the most visible evidence he's had for his claims that the vast majority of students support his stand against striking radicals. The student government supported the strikers.

But CAE's goals go beyond restoring order. "Once we eliminate the violence, the issues will still have to be solved," Diaz said. "We intend to provide a continuing student voice on academic and administrative issues in colleges and universities. We've declared war on student apathy."

At San Jose State College, 21-year-old Jack Cade is the CAE chairman. Moderates there claim success in helping to end a student strike marked by violence and imported agitators.

Cade said: "This organization's goals are not only to denounce the violent radical groups but to develop concrete, nonviolent ways to effect change on the campus. We want to dispose of the fuel that feeds violence."

Diaz, in fact, aims at nothing less than reorganization of the California college and university systems. He and other CAE members blame the root problems at Berkeley and San Francisco State on "bureaucratic, buck-passing administrators."

"They don't give a damn about students. They work mostly at remaining undisturbed in their jobs," Diaz charged. They've written their own job descriptions at $25,000 a year. Nowhere at San Francisco State is anyone finally answerable for malfunctions in any area.

"They are totally without imagination except in politicing. After this is all over and Hayakawa is gone, these same administrators will be there doing whatever it is they do."

CASE AGAINST COLLEGE SYSTEM

Diaz and CAE are busy documenting their case against the state college system. Reforms they speak of include: "More autonomy for each campus, less bureaucracy, fewer "civil service mentalities" in administrations and stronger presidents with authority to make changes.

Senstive about being used and ignored at the same time. Diaz declared, "We'll try to speak with reason and in earnest. We're not going to be put off simply because we're not violent. We're devout but not orthodox about the American system."

A kindred soul 1,500 miles to the east is Pat Stimer, new president of the Associated Students of the University of Colorado at Boulder. He fervently wishes that politicians and nervous university officials would quit focusing on the radical Students for a Democratic Society "so that we could get down to some important issues."

"The real issue is that there's a larger society out there and the university has to deal with it," said Stimer.

He plans a campaign to begin restructuring university curriculums. He wants them to be more innovative, to cut across the lines or narrow areas, to put social and political problems in human perspective for students. He wants college to emphasize personal growth at least as much as career preparation.

SEEKING BROADER STUDENTS HORIZONS

In order to broaden student horizons beyond the career and play aspects of college, Stimer plans a week of special orientation next year for incoming freshmen, using "the most exciting people at the University to show them what education can be."

To Stimer and others of his persuasion, the university is and should be a social and political crucible in which to mix and mold human values. Many other students would not agree.

At the University of Washington in Seattle, the aggressive new student government has a whole agenda of projects, including a campaign against the "publish or perish" system by which faculty members are hired and fired.

But the first concern, according to student vice-president John Mosier, is the expected spring uprising of SDS. "If there isn't an effective student government here, the radical left can throw this campus into turmoil," he said.

Effective student government across the nation is the goal of a dozen voluntary college "dropouts" who occupy a sparsely furnished suite of offices in Washington. They are the staff of the new national headquarters of the Associated Student Governments of the U.S.A.

According to Steve Snyder, 22-year-old treasurer and former student body president at the University of Alaska, the group considers its goals important enough that they quit their colleges temporarily for an uncertain future in Washington.

For himself, Snyder says, "I'm beginning to be a firm believer that American education is obsolete. Everything is squared off in little cubicles.

"I feel I can go out and get a job and live comfortably in typical middle class American fashion, but it's not enough. I'm not worried about a job like my parents were. Kids today want to get involved. We think student government can be viable in representing students and in influencing the direction the university takes."

With all of that, the political cast of ASG is mostly Republican and definitely anti-New Left.

SOPHISTICATED RESEARCH SYSTEM

James W. Blair, ASG director of research and University of Cincinnati honor student, is working to get a sophisticated research system funded through a private foundation. Its short-term use will be to keep student governments informed of each other's doings.

Over the long haul, Blair wants to contribute something important in the area of synthesizing knowledge and experience toward an understanding of what student dissent is all about, what its roots are in the American education experience.

The organized moderates are finding that community support stops short of financing. "They think we're kids playing games," says Bruce Angell, CAE treasurer at San Francisco State. Soliciting from business for the CAE cause has been a nickel-and-dime experience, he notes bitterly, while radicals can collect bail money in five figures.

It's debatable how effective the new breed can be. Ed Wynn, a Berkeley graduate student and an outspoken Negro moderate, is doubtful. "The administrations will talk but not change. The worst thing from their point of view is for a strong student coalition to arise and take some of their power."

Which leaves unanswered the fundamental question posed by the radicals: Who is going to lead campus youth?

RADICALS' ACTS SPUR CONSERVATIVE STUDENTS

Radical youth activity has had an unexpected result—new impetus for campus conservatives.

Although less publicized than its opponents, the new right has been making gains in recent months. Leaders of the movement attribute this in part to growing revulsion with the tactics of the left.

Conservative students have been active in "majority coalition" efforts to oppose the left on many campuses, often providing leadership and drive for such groups. The national conservative organization, Young Americans for Freedom, encourages such activity and has a detailed program for countering new left demonstrations.

This effort includes petition campaigns for an "open" or "free" campus, counterdemonstrations against Students for a Democratic Society, speaker programs, publication of newsletters and other literature, distribution of posters and buttons. The conservative theme is antiviolence.

"We do not want power in any way, shape, manner or form," says one conservative statement. "What we want is a free campus, free of any one group's control and free of disruption. . . ."

In California, YAF is distributing 100,000 blue lapel buttons signifying opposition to the new left. "This is a big project now," says YAF leader Pat Nolan of the University of Southern California. "It symbolizes opposition to terrorism. There's been tremendous support for it."

At Columbia, where conservatives John Meyer, Lou Rossetto and Stan Lehr work through the night in a walk-up headquarters cranking out manifestoes against campus violence, the conservative cause is on the upswing. Although conservatives are in a distinct minority, they feel student reaction against SDS is helping them. "We have a

broader base now than I would have thought possible three years ago," says a conservative graduate student.

YAF spokesmen report similar results at Wisconsin, Stanford, Tennessee. Alan Brandstater, executive secretary of the California YAF, says the tempo of conservative activity has increase notably this year. Conservative spokesman Mike Connelly of Louisiana says the same. Karen O'Callaghan and other YAF leaders at Wisconsin say the movement is growing there through energetic chapter programs against a background of new left disruption.

Much conservative youth activity has been channeled into the normal political process, chiefly through the Young Republicans. Rob Polack, Denny Dougherty and Debbie Benoit, Young Republican leaders at LSU, say their group is overwhelmingly conservative.

"The liberal element is sometimes vocal here," says Polack, "but far and away the most effective political work on this campus is done by conservatives, through such organizations as the Young Republicans. During the last campaign, the Young Republicans had 1,500 members."

Mike Cobb, Young Republican chairman of California, symbolizes this fusion of organization politics and conservative activism. In addition to his Y.R. duties, Cobb is a political cartoonist and contributes his work to Arena, a conservative journal published at Stanford. In general, conservative representation is strong in the Young Republicans, both at the collegiate level and among the regular Y.R.s.

Another strand of conservative youth effort is represented by the Intercollegiate Studies Institute, a scholarly organization headquartered in Philadelphia. ISI officials Victor Milione and John Lulves point to a sizable number of young professors and writers who have emerged from their ranks and others who are active in the philosophical battle on campus. The group claims 35,000 members.

OPPOSE NEW LEFT AT IDEA LEVEL

ISI students Bill Allen of Claremont Men's College and Peter Schramm of San Fernando State have served as editor and publisher, respectively, of Phalanx, a journal of conservative thought. They think the struggle with the left will be won at the level of ideas rather than on the picket line.

Allen is a Negro who believes, "The alliance between liberals and black people has been miscalculated" and that the conservative philosophy, particularly as represented by the ideas of economist Milton Friedman, how much potential appeal to Negroes. One difficulty in the conservative approach, he says, is that it has been abstract rather than specific in presenting its views.

Conservatives have a harder time making campus headway than do new leftists because they have less faculty support. Charles Heatherly, a graduate student at Arizona State University, says the new Sidney Hook-S. I. Hayakawa group has had difficulty getting started because of faculty opposition to Hayakawa. Richard Theis of Voices in Vital America believes, however, that faculties and administrators can be appealed to on the antiviolence issue.

STUDENT EDITOR FLAYS LIBERALS

Harvey Hukari of Stanford, editor of Arena, regularly flays the liberal professoriate from his journalistic outpost. So do Indiana graduate student Bob Tyrrell, editor of the Alternative, and the editors of Insight and Outlook, published by students at Marquette and Wisconsin, and On the Right, published by students at Miami University, Oxford, Ohio.

The Columbia students who filed suit against the university for failing to maintain order also came down hard on this issue. Vincent Rigdon of the Columbia Conservative Union said, "The presence of a one-sided faculty . . . has been instrumental in radicalizing the impressionable student body and contributing to the disorders."

LIBERAL BIAS IS CHARGED

Lloyd Taylor of Salisbury State College, editor of the student paper, argues that reading materials made available at the school exhibit a liberal bias. Student Senate member Jim Bopp of Indiana says material in courses with which he is familiar are tilted to the left. So does activist Marty Kopan of Penn State.

Another handicap asserted by conservatives is the historic liberal leaning of many campus publications. At Columbia, sophomore Peter Sordillo says SDS makes it official policy to infiltrate campus media, while Kurt Rodgerson charges liberals on the campus paper don't want conservatives on the staff. The result of these feelings is the launching of conservative publications, or establishment of non-new left journals such as Purdue's Dimension, edited by graduate student Kent Painter and Fareed Nader.

On the whole, conservatives are still a campus minority. But reaction to the current turmoil appears to be aiding their cause.

DO MEDIA REPORT CAMPUS SCENE TRUTHFULLY?

Is the political picture on American campuses being reported accurately?

Go to any college today and you will find spokesmen from nearly every faction, administration, faculty, new left and new right, critical of the media. The major complaint is that publicity is focused on the troublemakers and that good and constructive elements are neglected.

From the press point of view, some of this criticism seems off base. There is a general effort in the media these days to publicize "constructive" youth activities, but the psychological fact remains that "news" to the human mind is generally the unusual or the violent.

Pat Korten, a Wisconsin University senior who doubles as a radio newsman, makes the obvious point: When buildings are barricaded and mass demonstrations occur, it is impossible for reporters to look the other way.

Add the fact that many demonstrators are skilled in public relations. They know, for example, that TV coverage requires movement and action and they have geared their behavior to this knowledge. Students for a Democratic Society and other new left groups have made a science of getting publicity.

Critics of the media makes charges that go beyond these technical factors. New leftists berate the press as a creature of the "establishment." SDS spokesman Mark Rudd says that, "Since journalists lack the tools to report events outside the accepted limits of action and thought, and since many newspapers are committed to an ideological position, as is the liberal New York Times, the truth of the Columbia rebellion had a hard time coming through."

Most criticisms of the media performance, however, are directed the other way. Administrators and students, liberals and conservatives, claim overexposure is given to the new left through the national media, particularly television.

Some administrators say the media act as carriers of the movement. An official of a large Southern school says: "If the media admit they have impact in the sale of products through advertising, they should admit that they have impact on the minds of young people by their constant portrayals of erratic behavior."

Jacques Barzun of Columbia says the media have helped the revolution: "In the first place, they've shown how it's done. In the second place, they've given publicity and prestige to the leaders—the establishment—of the revolution. They've made them interesting, important, and temporarily powerful. In certain cases, one of which came under my own observation, they've stimulated violence—'let's have a little action, boys, for the TV cameras.' This was on one campus where I passed through, not here."

Barzun adds that the media have reported new left doings "as if they were events on a national scale. I don't mean by that that we haven't had these things happening nationally. But a coup d'etat in Pakistan is reported as if it had the same weight as 40 students at Colgate, and I think it can be questioned whether they are the same thing."

One major concern of the administrators is that repeated attention to new left activities can hurt them with alumni or state legislators, where the money comes from. Several college officials interviewed mentioned this. Many stress the theme of Father Theodore Hesburgh, president of the University of Notre Dame, that, "the bizarre and widely publicized antics of relatively few students and relatively even fewer faculty are accepted as the stereotypes of all students and all faculty, much to the disgust of this widely maligned majority . . ."

ARE OTHER ISSUES IGNORED?

Conservative and moderate students in the San Francisco Bay area say press and television neither point out that radicals are a minority nor solicit other opinion. These students also assert that journalists ignore campus issues before trouble erupts.

Liberal undergraduates complain that overemphasis on the new left hurts their cause. Chris Whittle, student government president at the University of Tennessee, says that when the average citizen sees heavy TV coverage of campus violence, "He associates any type of reform movement at this university, regardless of how responsible it is, with what's going on at San Francisco State and then reacts very negatively to our type of approach."

At Arizona State University, student editor Jane Sims says news reports magnified SDS is a dispute over discriminatory practices by a laundry serving the school. She says that while student action on the question had broad campus backing, the media played up SDS to the exclusion of everyone else.

In a sense, the new left movement is social rather than political and some commentators believe the media have helped to sell its so-called "life style," if not its opinions. Nicholas von Hoffman, a reporter for the Washington Post, says media emphasis on psychedelic themes and use of drug-cult language has spread the new left outlook. A co-ed at L.S.U. says, "The same people who were wearing polo shirts and listening to the Beach Boys four years ago are now picking up on the new left. It's a fad."

CONSERVATIVES SAY SOME STORIES UNFAIR

Conservative students charge the media are stacked against them. Phillip Abbott Luce, a former leftist now active in Y.A.F., Young Americans for Freedom, says: "If I weren't cynical, I might be amazed at the recent issues of Esquire, Fortune and a special supplement of the New York Times acting as if the new left is the only political option open to college students. The mass media appears content to portray the campus scene as one dominated by left-wing revolutionaries."

Dave Carpenter, head of the Columbia Conservative Union says TV reporters at one session he witnessed screened out nonradical spokesmen. Another conservative calls attention to two versions of a New York paper's story on this year's SDS strike at Columbia—the first edition lead and headline indicating the strike had been a flop, the second carrying changes eliminating this impression.

CAMPUS LEFTIST SYMPATHIZERS

There is also controversy over the campus press. Newspapers such as the Wisconsin

Cardinal, Columbia Spectator, and Purdue Exponent give heavy emphasis to new left positions. In many cases, it is clear the new left has active sympathizers in editorial chairs. At Purdue, the campus paper gave extensive coverage to the new left and became a sounding-board for radical criticisms of the administration. This prompted conservatives to start their own publication, Dimension.

New left strength in the campus media creates a double feedback: It spreads new left ideas to the student body generally. And it creates the impression among outsiders that the new left is active to the exclusion of almost anything else. Many adult journalists trying to check up on campus doings often get their information from these papers.

COLLEGES LEARN TO MEET DISORDERS

Parents, taxpayers and other Americans who are alarmed and confused by the bad news from the campus have some reason to hope that the worst violence is over.

There will continue to be much unrest at U.S. colleges and the new left revolutionaries still are intent on tearing apart society, beginning with the universities.

But colleges are learning to cope with disruption, and a countermovement is forming among students who are repelled by violence and determined that campus issues be debated in a peaceful atmosphere.

The radical left has established positions of strength at selected schools such as Columbia, Berkeley and Wisconsin and therefore will be capable of wreaking havoc for some time to come. Its ability to disrupt can't be discounted anywhere.

Its organizers are busy in urban high schools creating new waves of hard-core radicals and this influence is yet to be felt on the college campuses.

But the new left's power to mobilize student opinion seems to be waning. That power never has been as great as the radicals' genius for publicity has suggested.

Widespread impressions that the campuses are dominated by radicals seizing buildings and shouting down opponents have been far from the mark.

Students, faculty and administrators are convinced that the universities are suffering from a worse image than they deserve. Their evidence is a nationwide barrage of public criticism, punitive legislation and threats to cut off funds to higher education.

For this, the news media must take part of the blame. They have never quite gotten across the point that the noisy minority has upstaged the vast majority who are concerned mainly about studies and careers.

Now, however, the "silent majority" is finding a voice. Public exasperation with new left's coercion is expressed on the campus, also, and at one college after another groups are being formed to combat the forces of disruption. At most major schools where the new left is acting there is also a "majority coalition" or "committee for an academic environment" advancing the cause of order on the campus.

Much of the reformist sentiment that the new left counts on for support is being directed into other channels by students and administrators concerned with peaceful change but repelled by violence.

Youthful liberals offended by the tactics of Students for a Democratic Society and similar radical groups are taking strong leadership roles in discussions over "student rights" and changes in curriculum and administrative structure.

The black student movement, which has given the new left much of its moral appeal, also has been turning away from SDS to pursue its own goals with campus officials. There is evidence that Negro student leaders feel that the SDS approach is too irrational and even counter-productive to concrete black aims.

A growing conservative movement on some campuses is helping to supply leadership for antiviolence efforts. The conservatives, in Young Americans for Freedom and other groups, battle the left at the level of ideology and occasionally with tactical responses. They frequently unite with reform-minded liberals in opposing new left efforts to shut down classes and close debate.

CALMING OF PASSIONS

These developments suggest there is hope for a claming of passions on the campus and the rise of an articulate group of leaders, ranging across the ideological spectrum, who can give tongue to the antiviolence feelings of the "silent majority."

And there is hope that in this atmosphere liberals, conservatives and all other ideological factions can discuss their differences with reason and civility.

The differences fermenting on today's campuses are real and an end to violence will not mean an end to problems there. Those who oppose violence are not necessarily pleased with the status quo. Liberal students are asking far-reaching changes in the realm of student participation. Conservatives complain of political imbalance in the faculty and urge greater representation for their viewpoint.

The reactions of administrations and faculities have been important in ballooning the new left's rebellion beyond its real proportions.

FAILURE TO ACT ON COMPLAINTS

Failure by administrators to act responsively toward reasonable complaints has given the new left a pretext and a larger pool of support for its actions. Failure to act decisively against violence when it has occurred has encouraged the radicals.

Some faculty members have spurred the new left's disruption, both by the ideas some professors preach and by their participation in radical strikes and uprisings. Others have helped paralyze administrations by refusing to support a firm line on violence, urging compromise with an adversary that declines to barter. Many other faculty members, perhaps a majority, have stood aloof, as if the health of the institutions were not their concern.

Fearing for the future of academic freedom, some faculty members recently have spoken out sharply against the radical left, but to date this group has been small and not very effective.

Beyond the violence and the reactions to it, there are issues that involve the very nature and purposes of the American university. Is there too much emphasis on building careers and too little on building individuals? Should there be more "relevant" work oriented to racial strife and other contemporary problems? Should the universities refocus their efforts to impart disciplined habits of mind?

IS SENSE OF PURPOSE LOST?

There are charges that American higher education has lost its sense of purpose, and by trying to be all things to all of society's special interests it is not performing any single function properly.

There are complaints that schools are too big, that faculties spend too much time on research, publishing, and consulting work, at the expense of teaching.

These feelings are widely shared by students of all persuasions and have given the new left a springboard for its actions. The rise of a non-new left leadership can help defuse the violence, but this leadership still wants these questions debated.

It seems certain that there will be discord over fundamental issues of education in the months and years ahead.

UNIVERSITY OF CALIFORNIA PHYSICS DEPARTMENT OPPOSES ABM

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. COHELAN. Mr. Speaker, since late 1967 I have been outspoken in my opposition to the deployment of an American anti-ballistic-missile system. Accordingly, it is not to reiterate my opposition to the ABM, but rather to inform the Members of this House of the opposition of the knowledgeable and concerned faculty, research physicists, and students of the University of California Physics Department, that I take this time.

The basic arguments against the deployment of an ABM are that it is not necessary, that it is not likely to work effectively, that it will escalate the arms race, and that it will cost billions of dollars that could be better spent elsewhere.

Scientists are not experts on all of these questions. Scientists may, however, make informed judgments on the likely effectiveness of the system. And they can utilize their native intelligence and concern to make valuable judgments on the questions of geopolitics, arms control, and national priorities associated with the ABM issue.

Men on the Berkeley physics faculty have made these judgments and at least 43 distinguished professors, research physicists, and 81 graduate students have concluded that the United States should not deploy the Safeguard ABM.

I commend the statement of these men to the readers of this RECORD, and include the statement and the list of signatories at this point:

UNIVERSITY OF CALIFORNIA PHYSICS DEPARTMENT PETITION

The enclosed petition was circulated among the physics faculty, research physicists, and students at Berkeley. It has so far been signed by the 39 resident and 4 visiting professors of physics listed on the petition, and also by 19 research physicists and 81 graduate students in physics.

We physics professors, research physicists, and students of physics are opposed to the construction of an anti-ballistic missile system. Many eminent scientists have already testified to the grave technical inadequacies of the proposed Safeguard system. Even if the technical problems could be solved, there would still remain serious questions as to the advisability of an ABM system. Any defensive missiles built by one side will be negated by additional offensive weapons on the others. Thus the final result of deployment of an ABM system would be an acceleration of the arms race and a decrease in our total security.

For the United States to waste billions of dollars on an undesirable ABM system, while there are so many legitimate demands to be met for the improvement of the lives of its citizens, would be potentially disastrous and ultimately immoral.

Partial list of signers:

Prof. Kinsey A. Anderson, Prof. Korkut Bardakci, Prof. Harry H. Bingham, Prof. Owen Chamberlain, Prof. Geoffrey F. Chew, Prof. Raymond Chiao, Prof. William Chinowsky, Prof. Marvin L. Cohen, Prof. Eugene Commins, Prof. Frank S. Crawford.

Prof. Leo Falicov, Prof. Gerson Goldhaber,

Prof. Erwin L. Hahn, Prof. Martin B. Halpern, Prof. A. Carl Helmholtz, Prof. J. David Jackson, Prof. Carson D. Jefferies, Prof. Robert Karplus, Prof. Leroy T. Kerth, Prof. Arthur F. Kip, Prof. Wulf B. Kunkel, Prof. Stanley Mandelstam, Prof. Richard Marrus.

Prof. Linn F. Mollenauer, Prof. Burton J. Moyer, Prof. Forrest Mozer, Prof. Sherwood I. Parker, Prof. Alan M. Portis, Prof. Frederick Reif, Prof. John Reynolds, Prof. Gene Rochlin, Prof. Arthur Rosenfeld, Prof. Ronald R. Ross, Prof. Rainer K. Sachs.

Prof. Charles L. Schwartz, Prof. Gilbert Shapiro, Prof. Yuen-Ron Shen, Prof. M. Lynn Stevenson, Prof. George Trilling, Prof. Robert D. Tripp, Visiting Prof. Hans Bichsel, Visiting Prof. Bernd Crasemann, Visiting Prof. George Seidel, Visiting Prof. Noah Sherman.

SONNY'S GOOD WORKS

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. FUQUA. Mr. Speaker, some men get a great deal of publicity for their efforts to aid others while many go quietly about their tasks. It is good to see one of the latter recognized.

A recent editorial in the Gainesville Sun paid tribute to a selfless citizen, Walter R. "Sonny" Lee, and as a tribute to him, I would like to have the editorial reprinted here:

SONNY'S GOOD WORKS

Walter R. "Sonny" Lee of Gainesville does his good works without fanfare.

But, quietly, they accumulate. So now we learn a $150,000 office building in Daytona will bear his name.

The building will house the Florida Council for the Blind. And the Lee Building will be a token of respect for Sonny Lee's extensive work in behalf of the blind.

Lee is chairman of the Florida Council's state board of directors, vice president of the North Florida Eye Bank, and projects chairman for the northeast Florida Lions Foundation for the Blind. And he finds time to serve as president of the Gainesville Chamber of Commerce.

His acts lend luster to his community, and we all benefit from his good works.

To Sonny Lee, our congratulations.

MINIMIZE AIRCRAFT NOISE

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, I would like to have included in the RECORD resolutions to memorialize the Congress of the United States to enact legislation to minimize aircraft noise. The General Court of the Commonwealth of Massachusetts has addressed itself to a very serious national problem.

With improvements in technology and our ability to produce larger and faster jet service, it is incumbent upon us at the same time to provide for the protection of the peace and tranquility of the citizens of the United States. As the resolution clearly points out—

The aircraft noise problem cannot be solved at the local governmental level and properly is a problem for national concern by virtue of federal statutes defining airspace as being within the public domain and subject to the jurisdiction of the federal government.

I have recently had experience in trying to ascertain responsibility for excessive aircraft noise and have met with little success in having the noise at Logan Airport brought to a tolerable level. I have written to the Federal Aviation Administration, the Massachusetts Port Authority, and I am still awaiting an acceptable response.

I am happy to introduce this resolution for the benefit of my colleagues, and I hope that the House will act to solve this pressing and vital issue.

The resolution follows:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION TO MINIMIZE AIRCRAFT NOISE

Whereas, Use of jet aircraft has created a serious national aircraft noise problem which will become more serious with the expansion of jet service and the development of supersonic service; and

Whereas, The aircraft noise problem cannot be solved at the local governmental level and properly is a problem for national concern by virtue of federal statutes defining airspace as being within the public domain and subject to the jurisdiction of the federal government; and

Whereas, Numerous bills dealing with the problem have been introduced in Congress; therefore be it

Resolved, That the General Court of the Commonwealth of Massachusetts respectfully urges the Congress of the United States to enact legislation to establishing criteria for levels of aircraft noise acceptable to persons on the ground, making it necessary for civil transport aircraft to meet such standards as a condition of federal certification of airworthiness, authorizing the establishment of such rules and regulations as may be required to impose such criteria and providing financial assistance to municipalities and other public bodies which operate airports for the necessary expansion thereof to help resolve the noise problem; and be it further

Resolved, That a copy of these resolutions be transmitted forthwith by the State secretary to the President of the United States, to the presiding officer of each branch of the Congress and to the members thereof from the Commonwealth.

TWO FROM MARYLAND KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. LONG of Maryland. Mr. Speaker, Pfc. Gerald L. Call and Sp4c. Richard Walter Goden, two fine young men from Maryland, were killed recently in Vietnam. I would like to commend their courage and honor their memory by including the following articles in the RECORD:

MARYLAND MARINE DIES IN WAR

A Marine Corps private from Aberdeen was killed in Vietnam Friday, the Defense Department announced yesterday.

Marine PFC Gerald L. Call, who was 19, was reportedly killed during a search-and-destroy mission near An Hoa when he was fired upon by the Viet Cong.

The 1968 Aberdeen High School graduate received a Purple Heart earlier this year for an injury received when he stepped in an enemy trap.

Born in Rocks, Md., Private Call moved to Aberdeen with his family when he was 2 years old.

He enlisted in the Marine Corps two months before graduating from high school, and entered the service a few months after graduation.

Completing his basic training at Parris Island, S.C., he was sent to Camp Lejeune, N.C., for advanced infantry training.

During the summers after his sophomore and junior years, Private Call worked at the Aberdeen Proving Ground printing shop, and, during his senior year, attended printing class at Harford Junior College, near Bel Air.

Private Call was "proud of the Marines," according to his family, and never complained about serving in Vietnam.

He is survived by his parents, Mr. and Mrs. John E. Call, of 510 Stepney road, Aberdeen; four sisters, Miss Lynn Call and Mrs. Ruth Walls, both of Aberdeen, Mrs. Joyce Noonkester and Mrs. Jean Morrison, both of Bel Air; two brothers, Ronnie Call, of Delta, Pa., and Richard Call, of Aberdeen; and his grandparents, Mr. and Mrs. John Maloyed, of Aberdeen.

RICHARD W. GODEN KILLED IN PLANE CRASH IN VIETNAM

Army Spec. 4 Richard Walter Goden was killed in a plane crash in Vietnam six days before he was scheduled to return to the United States, the Defense Department announced yesterday.

Specialist Goden, who was 21, was a passenger in a plane which crashed and burned March 22. He was to return from the war zone March 28.

According to his father, Ervin I. Goden, who lives at 5819 Gist avenue, Specialist Goden had been in Vietnam 12 months.

A native of Baltimore, he was graduated from Forest Park High School in 1966, and attended the University of Baltimore.

In July, 1967, he quit school and enlisted in the Army. He wrote to his parents that he planned to complete college upon his discharge.

He completed basic training at Fort Bragg, N.C., and was sent to Fort Huachuca, Ariz., for advanced training in office personnel.

Specialist Goden was an avid sports fan, and rarely missed a Colt or Oriole game before he enlisted.

Mr. Goden said his son never wrote about his duties in Vietnam, except to say, "As for me, all is fine."

Specialist Goden is survived by his parents, Mr. and Mrs. Goden; two sisters, Mrs. Martin M. Blumberg, of Pikesville, and Miss Bonnie Goden, who lives with her parents, and a grandfather, Harry G. Horwitz, of Baltimore.

NATURALIZATION RULE DAY

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. NICHOLS. Mr. Speaker, one of the most important days in the life of a per-

son who chooses the United States as his country is the day he is naturalized. Each year, thousands of persons are naturalized in ceremonies in U.S. district courts throughout the country. Recently, the Honorable H. H. Grooms, judge of the northern district of Alabama, held Naturalization Rule Day in his court. I was most impressed by the remarks he made on that occasion. They were most appropriate for the new American citizens, and I feel they also might be of interest to those of us who are Americans by birth. Judge Grooms reviews the rights and responsibilities that Americans have. Too many times, we tend to expect too much from the rights we have, and tend to forget the responsibilities we have. Judge Grooms' remarks should serve as a reminder to those of us who sometimes take the rights for granted, but overlook our responsibilities as Americans.

Mr. Speaker, I ask that Judge H. H. Grooms' Naturalization Rule Day address be printed in the RECORD at this point:

NATURALIZATION RULE DAY

It is the Court's duty and opportunity to address you on the forms and genesis of our form of government and the privileges and responsibilities of citizenship.

This nation had a small and humble beginning. From a mere handful of Colonists who settled along our Atlantic Seaboard in the early Sixteen Hundreds, we have grown to a nation of over 200,000,000, possessing a land that spans the North American continent and extends into the far reaches of the Pacific and Northward beyond the Arctic Circle.

The larger part of those early settlers came seeking political and religious freedom. To establish these and to make homes for themselves, with determination and purpose they set about the task of conquering the wilderness, of driving back the savages, of building roads, of spanning rivers, and of building for themselves and their posterity schools, churches, and seats of government. It was theirs to make this land to bloom as a garden and to prosper as no other land. There were wars, with their suffering and sorrow. There was sacrifice. More than a million of her sons have fallen in the cause of freedom. This freedom was proclaimed to the world in the Declaration of Independence in 1776, and secured under a written Constitution and Bill of Rights in 1787 and 1791. Under our Constitution and laws:

(1) Sovereignty rests with the citizens. It is symbolized by the flag. Our national government can exercise only such powers as are granted to it by the Constitution, or that are necessarily implied therefrom. All other powers are reserved to the States and to the people.

(2) Ours is a government of laws. No man is above the law. All are subject to the law and all stand equal before the law. All men should obey the law and none should defy it.

(3) Ours is a government of divided and coordinate powers—legislative, executive, and judicial. Neither can legally encroach upon the other. This division of powers prevents the unlawful usurpation of power by those to whom it does not belong, and affords a system of checks and balances that preserves our freedom from within.

(4) We follow majority rule, but the rights of the minority must always be respected and safeguarded. The majority has no right to flaunt the law or to suspend the Constitution.

(5) Our courts are free to our citizens for the vindication and protection of the rights guaranteed to them under the law. You should find occasion to visit our courts—State and Federal—and to observe their important functions in our governmental system.

Among the specific political rights guaranteed to you as citizens of this Republic are these:

1. The right to change your officers by election.
2. Freedom of religion, freedom of speech, and freedom of the press.
3. The right to peaceably assemble, and petition the Government for a redress of grievances.
4. The right to be secure in your persons, houses, papers, and effects, against unreasonable searches and seizures. Your home is inviolate in this respect.
5. In all criminal cases, you are entitled to a speedy, public trial by an impartial jury; to be informed of the nature and cause of the accusation against you. Concentration camps are unknown to the United States. You cannot be compelled to be a witness against yourself. You are entitled to be confronted with the witnesses against you, and to have the assistance of counsel for your defense. The political purge is wholly foreign to our way of life.
6. You cannot be deprived of life, liberty, or property without due process of law. Your home is sacred from intrusion, and you may rest secure in your home without apprehension that secret police will seize you or your loved ones. Your property will not be taken from you for public use without just compensation. You are entitled to the equal protection of the laws, due process of law, and the privileges and immunities of citizens of the United States.

You enjoy many economic rights in this country. Among these are:

1. The right to choose your own work or calling, and to plan your own economic future.
2. The right to an education.
3. The right to use your own earnings as you see fit.
4. The right to work where you want to.
5. The right to live where you please.
6. The right to own property and accumulate property.
7. The right to start your own business.
8. The right to manage your own affairs.
9. The right to succeed or to fail.
10. The right to belong to an organization of your own choice or *not* to belong.

With citizenship, there comes responsibility and duty:

1. You are enjoined to obey the law and to abide by the will of the majority.
2. To serve on juries and to appear as witnesses when called on.
3. To protect and provide for yourself and family.
4. To hold public office.
5. To give of your best to your country, your church, your employer, and to be fair and just with your employees.
6. To serve in the nation's military forces.
7. To register and vote.
8. To support the Government by the payment of taxes.
9. To preserve and strengthen freedom.
10. To help create an intelligent, a just and righteous public opinion.
11. To abstain from interfering with the rights of others.
12. To act with self-restraint.
13. To be a good citizen with all that that implies.

This, your country, will treat you decently. It is to be desired that you will treat her decently in turn.

Each of you is today entering upon an adventure—an adventure in citizenship. I trust that it will be a successful one, and that it will reflect credit upon you and upon the country you have adopted as your own. I congratulate each of you, and wish for you the very best in this great adventure.

NATIONAL NIGHT DRIVING SAFETY WEEK

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. HELSTOSKI. Mr. Speaker, by tomorrow evening many thousands of drivers will get behind the wheels of their motor vehicles to begin the long Memorial Day weekend holiday.

Traditionally Memorial Day signifies the beginning of the summer vacation season which ends on the long Labor Day weekend in September.

In this coming vacation season we shall have three long 3-day weekends—Memorial Day, the Fourth of July, and Labor Day—each being meant to provide for the enjoyment of our American citizens in various ways. Many will take to the beaches, others to the mountains, still others only to see some interesting or historic area in the immediate vicinity.

And, in many instances the travels of these vacationers will be marred by tragedy—either death on the highway or a long and possibly a totally disabling stay in a hospital.

To minimize such tragedies, our modern highways are being clearly marked to provide a vital component to safe driving. Most of these markings utilize reflective materials in order to provide safe driving conditions for motorists, and are especially beneficial to motorists who do much night driving.

The components which are used in these horizontal highway markings are retroreflective glass spheres which are highly luminous when any light is directed at them. Without these roadway guidelines many more lives could be lost because of a driver's weaving and wandering over his portion of the highway for these line markers provide some measure of safety to driver in keeping on his portion of the highway.

There are not many firms manufacturing this type of glass sphere for use in highway markings; and I am proud to have one in the Ninth Congressional District of New Jersey, the district which I have the honor to represent in Congress. This firm is the Potters Brothers, Inc., of Carlstadt, N.J., which is a major supplier of these reflective glass spheres.

Mr. Speaker, I am today introducing a House joint resolution calling upon the President of the United States to proclaim the week of July 20 through July 26 as National Night Driving Safety Week. Through the passage of this resolution a twofold purpose could be accomplished.

First, to make community and State highway departments aware of the necessity of using and maintaining highway lines and reflective markings as a vital component for safe driving.

Second, it would increase the public's awareness of the value of traffic lines and reflective markings and of their proper use while driving.

Mr. Speaker, not only are these reflective glass spheres used in highway line markings, but also in the reflective directional signs placed on every major

highway traversing this country. These spheres, in a lesser extent, are used by city public works departments in the signs they use in their own specific community.

Mr. Speaker, if through the adoption of the joint resolution we can focus the attention of the driving public on the improvement of driving conditions through the use of these reflective markings; we will be going forward toward saving many of the lives which we expect will be lost during the three long weekend holidays which occur in 1969.

It is my hope that the House will be able to take early action on this joint resolution to permit the President to comply with its objectives.

CONTROVERSY OVER THE RECIPROCAL INTERNATIONAL AIR ROUTE BETWEEN THE UNITED STATES AND SOUTH AFRICA

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. FRIEDEL. Mr. Speaker, recent newspaper articles inspired by releases from the American Committee on Africa have given some of my constituents a false impression of my attitudes and my record in the promotion of human rights here at home and throughout the world. I want to set the record straight.

First, let me state that I have no quarrel whatsoever with the American Committee on Africa, which numbers among its members many of my distinguished colleagues in the House of Representatives and the U.S. Senate. I fully support the aims of the committee. However, because of its opposition to the granting of an air carrier permit to South African Airways the committee's Washington director was critical of my recent trip to South Africa and I fear that some of his statements, as reported in the press, left some of my constituents with the impression that I was somehow insincere in my support of civil and human rights.

I share the committee's concern over the denial of human rights to any man, anywhere, at any time. Such denial diminishes each of us, but I believe that we must live in this imperfect world, while we are trying to improve it, and I cannot accept the conclusion that I have been unfaithful to the cause of equal justice, just because I visited a particular part of the world where injustice is more apparent than perhaps it is here at home.

The question of granting a foreign air carrier permit to South Africa was debated over a period of many months and the CAB concluded that the diplomatic, economic, and foreign relations aspects requiring reciprocity in air routes were overriding and recommended that the permit be granted. The President accepted this recommendation and granted the permit in November of 1968.

My subcommittee at no time had jurisdiction over this matter. In fact, contrary to the impression which has been given the granting of the right to South African Airways to use New York's air facilities was not a new right, but merely the implementation of an international agreement, which was negotiated with South Africa in 1947.

If the United States had not honored its commitment under the 1947 agreement, it is probable that South Africa would have reacted by canceling the rights previously granted to Pan American, the American-flag carrier.

Yesterday our distinguished colleague from Michigan, Mr. DIGGS, announced that he planned to introduce a bill which would have the effect of suspending South African Airways' air carrier permit.

I have discussed this matter with Mr. DIGGS, and I have assured him that my subcommittee would schedule hearings on his proposal just as soon as our schedule permits.

At the same time I promised Mr. DIGGS a full hearing on his bill, I frankly advised him that I have some reservations about the wisdom of the course he suggests to the Congress.

I told Mr. DIGGS that counsel has advised me that there appear to be serious constitutional questions involved in his proposal, as they relate to the right of the President to make certain foreign policy decisions and also because this would mean that all air traffic between the two countries would shift to the many air carriers of other nations that serve South Africa. This result would not in any way improve the plight of those South Africans, who suffer from racial discrimination.

I honestly believe that my record of support for civil rights and equal justice is as good as any, and better than most, in the U.S. Congress. In fact, Mr. Gary Gappert, who is Washington director of the American Committee on Africa and who has been critical of my visit there, recently wrote to me stating:

> Your own record in support of civil rights has been outstanding.

The apartheid racial policies of the present South African Government are totally abhorrent to me. Such practices are completely opposed to my personal beliefs, strong, deep-rooted beliefs, which I might add have led me to be actively involved in the long struggle to protect and expand fundamental civil and human rights for all people throughout my entire career in public service.

I am just as concerned and affronted by the fact that my distinguished colleague from Michigan, CHARLES DIGGS, as an American citizen and as a Member of Congress, was denied a visa to visit South Africa, because he is a Negro, as I am concerned and affronted by the fact that I, SAM FRIEDEL, as an American citizen and as a Member of Congress was denied free access to Jordan, because I am a Jew.

I went to South Africa for two reasons—because of my long and continuing interest in the fullest possible development of the safety, frequency, and quality of both domestic and international aviation and quite frankly—principally because of my intense curiosity about South Africa.

I wanted to see for myself if conditions there were as they had been pictured to me.

I found to my sorrow that conditions of racial discrimination exist there which closely parallel and often exceed the worst practices which existed in this country prior to the dramatic advances in civil rights, which began with the Roosevelt administration in 1932.

I also found, however, what I am sure the late Senator Bob Kennedy found when he visited South Africa several years ago—that among the young people particularly there is growing dissatisfaction with the Government's rigid policies. For example, I saw young white college students openly defying and demonstrating against the Government. Carrying signs such as "Is Education Only White?" "The Mind Has No Color," and "Education, Not Indoctrination."

I returned from my visit more convinced than ever that we must intensify our peaceful efforts through such forums as the United Nations to cause change in the repressive practices now in use in South Africa and in many other areas of the world. I am also equally convinced that it is important to keep open our lines of communication and to continue to keep in touch with and to encourage those people in South Africa both white and colored who oppose the apartheid policy.

There are many things we Americans do not like about conditions in many parts of the world, but no purpose whatever is served by a head-in-the-sand approach which limits communication and further inhibits understanding.

HOLIDAY HIGHWAY SAFETY

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. SAYLOR. Mr. Speaker, this coming weekend is one of those delightful and disastrous times—delightful because most people will have an extra day for leisure and disastrous because many will die on our Nation's highways.

I mention the dark side of what we all hope will be a bright weekend because I hope my colleagues will take the time to remind themselves, their staffs, and their constituents that driving can be one of the world's most dangerous occupations and this weekend is just not time for practice.

We are a mobile society but unfortunately we tend to take so much for granted that we forget the responsibilities required of us when we place ourselves behind the wheel of an automobile. One of our leading magazines has predicted that more people will die on the highways this year than there will be casualties in Vietnam.

There is only one value in repeating that dismal prediction and that is to make people more highway safety conscious this weekend. There is no reason for the highway death toll to climb. Each of us has a responsibility to do something about it. We can remind everyone we know that it would be nice to see them next Monday.

RESOLUTION ON THE RIGHT OF FARMWORKERS TO ORGANIZE AND SUPPORT FOR THE NATIONAL GRAPE BOYCOTT

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. DANIELS of New Jersey. Mr. Speaker, the 44-man senate of priests is an elected body drawn from the 1,200 priests of the Catholic archdiocese of Newark, N.J. This archdiocese is made up of four northern New Jersey counties, Hudson, Essex, Bergen, and Union.

On May 5, 1969, the senate of priests of the archdiocese passed three resolutions which I consider worthy of the attention of all Members of the Congress.

Two resolutions were passed unanimously. They include a resolution expressing support for the right of farmworkers to organize and for the national grape boycott. The other resolution was in support of New Jersey State Senate bill No. 206, which authorizes State aid for the purchase and loan of textbooks to public and private school children.

A third resolution was adopted with only one member abstaining. It expressed support for a bill pending in the New Jersey Assembly calling for equal State subsidy for children attending private nonprofit schools.

Mr. Speaker, I include these three resolutions in the RECORD following my remarks.

The resolutions follow:

RESOLUTION ON THE RIGHT OF FARMWORKERS TO ORGANIZE AND SUPPORT FOR THE NATIONAL GRAPE BOYCOTT

Whereas the moral right of workers to organize is being denied the United Farm Workers in California, and

Whereas the living conditions of these and other migrant farmworkers and their families, resulting from the denial of the right to organize, are extreme, intolerable and unjust, and

Whereas the National Boycott of California Table Grapes is seen as the best and perhaps the only weapon to bring about a nonviolent solution to these social and moral evils and an end to the deadlock that is entering its fourth year, and

Whereas the bishops of the United States on two occasions, and the National Federation of Priests' Councils at its recent meeting have spoken out in behalf of the plight of the United Farm Workers.

Be it resolved that:

(a) The Senate of Priests of the Archdiocese of Newark actively support and urge all the priests and people of the Archdiocese to actively support the right of the United Farm Workers to organize and that we do this by supporting the National Boycott of California Table Grapes.

(b) In order to end similar injustices to other migrant farmworkers and to ward off similar disputes in the future in other crops, and mindful of the presence of migrant workers in our own state of New Jersey, we urge the Congress of the United States and our own State Legislature to support the exact legislation that will guarantee the bargaining rights of all farmworkers, insure them of unemployment compensation and the minimum wage.

(c) The Senate of Priests request Archbishop Boland to issue a pastoral letter to be read in all churches of the Archdiocese on this subject as soon as possible.

1. Whereas, both public and non-public schools contribute to the welfare and betterment of their communities and therefore to the State as a whole, and

2. Whereas, all taxpayers share the financial burden of the cost of education, and

3. Whereas, in view of the rapidly increasing cost of education which parents and local school districts are finding increasingly difficult to finance, and

4. Whereas, it is right and fair for all grammar and secondary school children in New Jersey to benefit equally from funds provided by the State for educational aid and that such aid should be increased, and

5. Whereas, there is before the Senate of New Jersey—Senate bill S–206 authorizing State aid for the purchase and loan of text books and offered to pupils attending public and private non-profit schools.

6. Be it resolved, that the Senate of Priests of the Archdiocese of Newark endorse such Bill S–206 and urge upon the New Jersey Senate speedy consideration and approval of said Bill S–206.

Whereas, on February 17, 1969 in the Assembly of the State of New Jersey, Assemblyman Richard J. Vander Plaat, introduced a bill (A–553) the object of which is to distribute to non-public school districts an estimated $30 to $50 million a year subsidy, and

Whereas, the bill would change present State School Law to count every child attending a private non-profit school within or without his own district, and

Whereas, a child attending a private non-profit school would then receive the same amount of State aid as would public school children within the district.

Be it resolved, that the Senate of Priests of the Archdiocese of Newark endorse this bill of Assemblyman Richard J. Vander Plaat (A–553) and urge upon the New Jersey Assembly speedy approval of said bill.

DENVER CITIZENS VOTE NO BUSING

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. COLLINS. Mr. Speaker, as a member of the House Education Committee in Congress, I have been keenly concerned with the school board election in Denver. This progressive city has very carefully weighed the choice of busing or neighborhood schools. The vote was on Tuesday and for the RECORD, here is the background story from the New York Times the day preceding the election, and then a summary writeup by the Rocky Mountain News on the day following the election:

EXCERPTS FROM THE NEW YORK TIMES, MAY 19, 1969

. . . For the most part, everyone was quiet and polite because there seemed to be little left to argue about in Denver's long battle over school integration. All the issues had been laboriously worked over for more than a year.

School board elections, like the one here Tuesday, are usually rated by voters as one of the most-ignored events in American politics. In Denver the turnout is usually about one-third of the registered voters. But Channel 4 in this city was devoting two hours of prime time to the campaign on a Friday night.

The reason for the special treatment was that next fall, schools in Denver will begin one of the nation's most extensive big-city programs in school desegregation if liberals maintain their control of the board. If conservatives win, the plan will almost certainly be canceled.

. . . Though all nine candidates say they support the ideal of integration, only four favor the plan, which was drawn up by School Superintendent Robert D. Gilberts on orders from the board.

One part of the plan would break up heavy concentrations of Negro and Mexican-American students by changing school boundaries and by busing.

As an example Smiley Junior High School in the city's northeast section is now 67 percent Negro. In the fall, it would be 72 percent white.

With Gilberts' program in full effect, 20 percent of the system's 96,500 students would ride buses.

. . . The Denver Post has endorsed both the plan and the candidacies of Mr. Benton and Mr. Pascoe. The Rocky Mountain News stated editorially, "Let's give the Gilberts plan a chance," and endorsed Mr. Perrill and one of the independents who support the plan, Dr. Carl F. Barnhardt, director of teacher education at Loretto Heights College.

In Mr. Benton's living room after the show was done, he and Mr. Pascoe both had a Scotch whisky and went down a long list of groups and people who had pledged their support. However, he was not optimistic.

"We've got everything in the community behind us but a majority of the voters, and you know that can be fatal," he said.

ELECTION STORY FROM THE ROCKY MOUNTAIN NEWS, MAY 21, 1969

James C. Perrill and Frank K. Southworth swept to easy victories Tuesday in the nine-candidate race for two vacant seats on the seven-member Denver school board.

Their election, which changes the balance of power on the board, on the surface is considered by many a blunt mandate for the concept of neighborhood schools and a repudiation of recent mandatory bus integration steps taken by the board.

Both candidates, running as a team, championed the neighborhood school concept and pledged to rescind steps taken by the board over the past year to integrate schools in Northeast Denver through busing programs.

Their closest opponents, incumbent A. Edgar Benton and Monte Pascoe, running as a team on a mandatory busing integration platform, trailed the two winners more than 2 to 1.

The unofficial vote, with all 472 precincts reporting: Benton, 31,098; Pascoe, 28,948; Barnhart, 11,726; Perrill, 73,932; and Southworth, 75,596.

Perrill and Southworth had been the firmest of the major candidates in lining up for the neighborhood school and opposed to busing plans adopted by the board.

The dynamic city of Denver answered with the same sincerity as their neighbors in Chicago, New York and everywhere the issue is fairly presented. The newspapers and civic groups spoke out strongly in support of Busing. But the parents who have the children, who are the most concerned, voted No-busing. Americans from coast to coast prefer neighborhood schools.

MEMORIAL DAY TRIBUTE

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. SCHWENGEL. Mr. Speaker, as we approach May 30, Memorial Day, we turn our thoughts to those valiant men and women who gave their lives that freedom might live. In an article prepared for the

Memorial Day observance, Mr. George T. Nickolas, of Davenport, Iowa, pays appropriate tribute to these men and women:

SHALLOW WORDS OR HALLOWED DEEDS?

(By George T. Nickolas)

As many citizens gather in cemeteries throughout the United States on this Memorial Day, they will come to be a part of the national observance of the holiday on which we honor the dead of America's wars. They will, for a few moments, consider the sacrifices made by those men who lie buried in those cemeteries. Even now, Americans should reflect on how the sacrifices of these dead have affected all Americans, and the heirs, of this era of American History.

Those honored dead were not cowards who dodged drafts or burned draft cards, nor were they all volunteers. Many were drafted from their jobs and families to serve in foreign wars. They were not all heroes in the literal sense, nor did they all die in combat. Many, in fact, died after they had served and had returned to their civilian status. But they all had one thing in common: they chose to serve this great country when called to duty.

All American citizens, no matter how they choose to commemorate Memorial Day, owe these honored dead more than just words of praise, a volley of rifle fire, the sounding of "Taps", or even a tear or two. American citizens owe these American dead a renewed devotion and sworn adherence to the principles of freedom, equality, justice and the American way of life for which they were willing to give their lives.

In this affluent society, it is so easy for citizens to nod their heads in agreement to spoken words of patriotism and Americanism. It's so easy to converse lightly in the confines of their homes of how happy they are to live in this great country and enjoy its freedoms, and then to silently resolve to do nothing more than discuss it and agree that "George can do it."

In these modern times, too many of the people of this country have conceived the notion that the passive way is the only way out of this country's problems. But freedom as the average American envisions and enjoys was not achieved nor can it long endure with passiveness.

My hope is that when America commemorates this Memorial Day, citizens will solemnly and sincerely resolve to express in some constructive manner the pride of being an American and keep that resolve every day of their lives.

In addition to the voiced thanks for the rights and privileges that citizens enjoy as free Americans, people in this country must add something more active to continue these freedoms. If we fail to add something—if we continue to seek the easy way out of our debt to these honored dead—they may yet have died in vain and their services and sacrifices may have been wasted.

GREATER HEALTH AND SAFETY NEEDED IN BUILDING AND CONSTRUCTION

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PATTEN. Mr. Speaker, I believe that the proposed bill that would promote health and safety in the building trades and construction industry in connection with Federal projects, would save hundreds of lives a year and sharply reduce serious accidents.

I noted with concern and dismay that according to National Safety Council and Bureau of Labor Statistics reports, more than 20 percent of annual fatalities and more than 11 percent of job disabilities, take place in the construction field.

During 1968, 2,800 construction workers were killed on the job and 230,000 were disabled last year. Mr. Speaker, this is an appalling record. It is clearly evident that safety conditions in the construction field must be greatly improved.

Construction accidents are not only costly in human lives, but also in economic cost. The frequency rate for construction accidents is almost double the U.S. average. Work accidents are also expected to cost an estimated $3 billion this year. I know that if this important bill is enacted and national health and safety standards in Government construction work are created, the Federal Government would save in construction costs and contractors would also benefit because of lower injury compensation costs.

There are some who are skeptical about how effective this proposed legislation would be. I just want to point out that under the Maritime Safety Act, injuries were reduced by more than 40 percent in 8 years, saving the industry about $43 million. I am confident that even greater results would be achieved in the building and construction areas if this urgently needed legislation is enacted.

Mr. Speaker, I for one deeply appreciate the men who erect the homes and buildings we live and work in. They are, after all, the men who are not only responsible for building a structure that is strong and beautiful, but one that is reliable—an example of their skills and a symbol of their excellence.

In Middlesex County, there are thousands of men in the building trades and construction industry. I want to thank them for the fine work they have done—and will do in the future. Their talents also play an important role in stimulating the economy of our area.

Some say that those who work in the building and construction trades are tough—and they are right—they are tough, because they have to be: the work they do is hard, demanding, and dangerous.

I know these workers well and I am proud to say they are my friends. Their bodies are hard, but their hearts are made of gold. Mr. Speaker, I just want to cite one example of their civic interest and love for people. I know, because I was there:

On Sunday, May 18, 1969, 600 men from the building and construction trades of Middlesex County met and announced that they raised about $16,000 to help fight cerebral palsy. The man who led that inspiring campaign was John J. Wade, president of the Middlesex County Building and Construction Trades Council and business representative of the Iron Workers Local No. 373.

John Wade deserves a commendation for his leadership—not only for leading the campaign to raise $16,000 to be used in the battle against a disease that claims the lives of thousands of persons a year, but also for his able and dynamic leadership in helping to improve working conditions for thousands of union members. And one of the goals is greater safety and health.

A list of union leaders who helped raise the money for this worthy and humane cause is as follows:

THE COMMITTEE

John J. Wade, President Middlesex County Bldg. & Const. Trades Council; Business Representative, Iron Workers Local Union No. 373.

Theodore Walkoczy, Vice-President Middelsex County Bldg. & Const. Trades Council; Business Representative, Roofers Local Union No. 28.

Steven Masley, Sec'y-Treas., Middlesex County Building and Construction Trades Council; Business Representative, Plumbers and Fitters Local Union No. 270.

Sewell A. Peckham, Sec'y., Middlesex County Building and Construction Trades Council; Business Representative, Carpenters Local Union, No. 1006.

Trade, representative, local number

Heavy and general labor, Michael Arnone, 472.
Electricians, John C. Boll, 358.
Laborers, Steve Budney, 584.
Laborers, Salvatore Chirico, 72.
Boilermakers, Charles Crowley, 28.
Laborers, Carmen DeAndrea, 156.
Sheetmetal, Robert DeBartolo, 20.
Heavy and general labor, John Deisler, 472.
Carpenters, Edward J. Grobleski, 65.
Lathers, Albert Hudanish, 173.
Plumbers and fitters, Thomas Hussey, 432.
Bricklayers, William Iverson, 27.
Iron workers, Arthur Jensen, 373.
Machinist, William Keele, 367.
Glaziers, Arthur Kjersgaard, 1183.
Painters, Theodore Manhire, 834.
Electricians, Frank Marchitto, 456.
Asbestos workers, James Mulhern, 32.
Sheetmetal, John O'Brien, 20.
Plumbers and fitters, Albert Rauch, 380.
Engineers, John F. Reardon, 825.
Asbestos workers, Paul Reszler, Jr., 89.
Teamsters, Robert Rossi, 469.
Asbestos workers, Edward Sanborn, 32.
Painters, Albert Totka, 144.
Electricians, Clarence Tyrrell, 358.

Mr. Speaker, these men have not only erected thousands of homes and buildings for families and workers. They have also helped thousands of people who need assistance. These are the kind of men who would be helped by health and safety legislation in the building and construction fields. I commend and salute them.

PATRICK HENRY—NOBLE PATRIOT

HON. W. C. (DAN) DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. DANIEL of Virginia. Mr. Speaker, on May 29, 233 years ago tomorrow, there was born in the Old Dominion a boy child—Patrick Henry—who was to grow to manhood and to see many sobriquets attached to him, but none more fitting than that of "noble patriot."

No doubt he was called many other names by those with whom he clashed in that rough and tumultuous period of our country's history, but decency forbade the recording of these epithets for posterity. I am not so sure but that they

would have been duly spelled out to the last letter in today's permissive society which accepts smut and smear in apathetic resignation.

However, history does record for us some other laudatory labels applied to him—"the people's advocate" and "the forest-born Demosthenes." Although these aptly describe him for certain accomplishments, they nevertheless lack the fervor that "noble patriot" implies.

It was Patrick Henry's eloquence in denouncing the odious Stamp Act that is credited with starting the revolutionary ball to rolling. Generations of Americans have been stirred by the reading of his famous speech that concluded with the ringing phrase: "Give me liberty or give me death."

As the author of "The Virginia Resolves," which set the colonies moving toward the break with the Mother Country, Henry's fame spread and be became the first American national hero. Thomas Jefferson said of him:

> He left us all far behind. He gave the first impulse to the ball of Revolution. He was the idol of the country beyond anyone who ever lived.

To many Patrick Henry was, without a doubt, the greatest American orator of his time and often is ranked with the greatest of all times. Jefferson once commented on this:

> Call it oratory or what you will, but I never heard anything like it. He had more command over the passions than any man I ever knew.

As a young, self-taught lawyer, Patrick Henry earned the affectionate title of "the people's advocate" as he scored what we would term today a moral victory in the legally hopeless Parsons case. As defense attorney he technically lost his case, but his eloquence in portraying the dangerous encroachment of the Crown upon the rights of Virginia freemen so stirred the jury that only a token award was made to the plaintiff.

He was a rebel—but with a cause.

As a member of the Virginia Convention called to ratify the Constitution, he discerned certain shortcomings in that great document and spoke long and passionately—sometimes as many as five times a day—for amendments. James Madison is acknowledged as the chief architect of the 10 amendments that have become known as the Bill of Rights, but many ascribe the dogged opposition led by Patrick Henry at the Virginia Convention as responsible for the ultimate adoption of these amendments by the First Congress.

As his health began to fail, Patrick Henry retired to his beloved home, Red Hill, on the Staunton River in a section of Virginia that is now part of the district which I have the honor to represent. After his death on June 6, 1799, he was buried in the garden near his last residence.

Mr. Speaker, many students of the speeches of this great American—this noble patriot—can see an analogy, in his warnings as he fought for the changes that became the Bill of Rights, with many aspects of today's political scene—many of those things of which he was fearful are still with us, proving, if nothing else, that mankind's inherent weaknesses remain unchanged.

I beg your indulgence as I quote from one of the speeches he made during the deliberations at the Virginia Convention called to ratify the Constitution:

> I had doubts of the power of those who went to the Convention; but now we are possessed of their work, let us examine it. When we trusted the great object of reviving the Confederation to the greatest, the best, and most enlightened of our citizens, we thought their deliberations would have been solely confined to that revision. Instead of this, a new system, totally different in nature, and vesting the most extensive powers in Congress, is presented. Will the ten men you send to Congress be more worthy than those seven were? If power grew too rapidly in their hands, what may it not do in the hands of others?
>
> If those who go from this State will find power accompanied with temptation, our situation must be truly critical. When about forming a government, if we mistake the principles, or commit any other error, the very circumstance promises that power will be abused. The greatest caution and circumspection are therefore necessary—nor does this proposed system in its investigation here, deserve the least charity.
>
> The honorable member says that the national government is without energy. I perfectly agree with him; and when he cried out Union, I agreed with him; but I tell him not to mistake the end for the means. The end is union—the most capital means, I suppose, are an army and navy; on a supposition I will acknowledge this; still the bare act of agreeing to that paper, though it may have an amazing influence, will not pay our millions. There must be things to pay debts. What these things are, or how they are to be produced, must be determined by our political wisdom and economy.

Later, he touched upon a subject that was as sore then as it is today—taxes.

> Let us leave no expedient untried to secure happiness; but whatever be our decision, I am consoled, if American liberty will remain entire only for half a century—and I trust that mankind in general and our posterity in particular, will be compensated for every anxiety we now feel.
>
> Another gentleman tells us that no inconvenience will result from the exercise of the power of taxation by the general government; that two shillings out of ten may be saved by the impost; and that four shillings may be paid to the federal collector, and four to the State collector. A change of government will not pay money. If, from the probable amount of the impost, you take the enormous and extravagant expenses, which will certainly attend the support of this great consolidated government, I believe you will find no reduction of the public burdens by this new system.
>
> The splendid maintenance of the President and of the Members of both Houses; and the salaries and fees of the swarm of officers and dependents on the government will cost this continent immense sums. Double sets of collectors will double the expense. To these are to be added oppressive excise-men and custom-house officers. The experience of the mother country leads me to detest them. They have introduced their baneful influence into the administration and destroyed one of the most beautiful systems that ever the world saw. Our forefathers enjoyed liberty there while that system was in its purity—but it is now contaminated by influences of every kind.
>
> The power of direct taxation was called by the honorable gentleman the soul of the government. We all agree, that it is the most important part of the body politic. If the power of raising money be necessary for the general government, it is no less so for the States. If money be the vitals of Congress, is it not precious for those individuals from whom it is to be taken? Must I give my soul, my lungs, to Congress? Congress must have our souls—the State must have our souls. This is dishonorable and disgraceful!

At another time he warned:

> Congress by the power of taxation—by that of raising an army, and by their control over the militia, have the sword in one hand, and the purse in the other. Shall we be safe without either? Congress have an unlimited power over both: they are entirely given up by us. Let him candidly tell me, where and when did freedom exist, when the sword and purse were given up from the people? Unless a miracle in human affairs interposed, no nation ever retained its liberty after the loss of the sword and purse. Can you prove by any augmentative deduction, that it is possible to be safe without retaining one of these? If you give them up you are gone.
>
> Give us at least a plausible apology why Congress should keep their proceedings in secret. They have the power of keeping them secret as long as they please; for the provision for a periodical publication is too inexplicit and ambiguous to avail anything. The expression "from time to time," as I have more than once observed, admits of any extension. They may carry on the most wicked and pernicious of schemes under the dark veil of secrecy. The liberties of a people never were nor ever will be secure, when the transactions of their rulers may be concealed from them. The most iniquitous plots may be carried on against their liberty and happiness. I am not an advocate for divulging indiscriminately all the operations of government, though the practice of our ancestors in some degree justifies it. Such transactions as relate to military operations, or affairs of great consequence, the immediate promulgation of which might defeat the interests of the community, I would not wish to be published, till the end which required their secrecy should have been effected. But to cover with the veil of secrecy the common routine of business, is an abomination in the eyes of every intelligent man, and every friend to his country.

Patrick Henry—noble patriot—was indeed a rebel, with a cause.

PENNSYLVANIA WIDENS ITS LEAD AS THE NO. 1 HUNTING STATE OF THE NATION

HON. ALBERT W. JOHNSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. JOHNSON of Pennsylvania. Mr. Speaker, once again Pennsylvania is the No. 1 State of the Nation in every category of hunting license sales. The following statement by the Pennsylvania Game Commission tells the story that for the first time in history Pennsylvania has hit the 1 million mark in the number of licensed hunters:

PENNSYLVANIA WIDENS LEAD AS NO. 1 HUNTING STATE

Pennsylvania is increasing its lead as the number one hunting state in the country at an amazing rate, according to the U.S. Fish and Wildlife Service.

For the 1967–68 fiscal year Pennsylvania led the nation in every category of hunting license sales, and rapidly pulled away from all competitors for the number one title.

There were 1,062,121 paid hunting license holders in the Keystone State for the year, an all-time record. It also marked the first

time in history that Pennsylvania has hit the one million mark in number of licensed hunters. Michigan was a distant second in the race with 903,545 paid license holders (a paid license holder is one individual regardless of the number of licenses he may purchase).

The number of paid license holders in the commonwealth represents an increase of 66,931 over the previous year.

When resident hunting licenses, tags, permits and stamps issued by all states were lumped together, Pennsylvania again was well out in front with a total of 1,539,952, ahead of California's figure of 1,459,874.

For the first time in some years Pennsylvania was the undisputed leader in non-resident license sales with 80,481. Colorado was second in non-resident sales with 75,746.

In total license sales, Pennsylvania was way out in front with 1,620,433. California was a distant second with 1,461,836.

The Pennsylvania Game Commission's income from the sale of hunting licenses was $7,455,375.40, an all-time record and nearly one and one-quarter million dollars more than during the previous year. Michigan placed second in this category with a figure of $5,557,463.

Game Commission Executive Director Glenn L. Bowers, in reviewing the federal report, noted that the number of paid hunting license holders in the United States increased by 245,538 last year, so Pennsylvania accounted for more than one-quarter of the national increase.

"I think these figures speak for themselves," Bowers said. It is well known that we offer sportsmen the best diversified hunting recreation in America.

"When one state accounts for over a fourth of the national increase in hunters, the picture as to number one ranking becomes unmistakably clear," he said.

"Especially pleasing to us is the non-resident license sale. For years, we believed we were first, but had no way to prove it, because some states require purchase of separate tags, permits or stamps to hunt different species. When all of these figures were lumped together, totals claimed by other states barely edged our figures," Bowers said.

"Now, there can be no doubt about who leads in sales of non-resident licenses.

"Furthermore, each person who purchases a license in Pennsylvania can hunt any of the many species of game animals and birds we have to offer on that one license; it isn't necessary to have special permits or tags for each species. A Pennsylvania hunting license is a real bargain any way you look at it," Bowers said.

"Hunters agree. They have shown through license purchases where the greatest recreation is to be found," he concluded.

JOHN CARDINAL WRIGHT TAKES POSSESSION OF HIS TITULAR CHURCH

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, under unanimous consent I submit the "Discourse of John Cardinal Wright on Taking Possession of His Titular Church" for inclusion in the CONGRESSIONAL RECORD, as follows:

DISCOURSE OF JOHN CARDINAL WRIGHT ON TAKING POSSESSION OF HIS TITULAR CHURCH, JESUS THE DIVINE TEACHER, ROME, MAY 2, 1969

The happy circumstance that finds us gathered under the patronage of Christ the Divine Teacher suggests reflection for a moment on the *works* of the Christian and the *faith* of the Christian in the contemporary world.

The Scripture tells us that at a given moment Christ began to *do* and to *teach*, not the one alone, not the other alone, but both together.

In the Church Christ continues to do and to teach. In what spirit, then, does He now urge us to *do* the works of justice? What demands does He make on our fidelity to *His teaching?*

In the doing of its works, the Church in our day seems "open" or "forward-looking" in facing social problems. Yet, in her teaching she seems "cautious", or "conservative", especially in matters of faith and morals. Such is the import of the Pastoral Constitution *Gaudium et Spes;* such certainly is the tenor of the *Dogmatic Constitution on the Nature of the Church.*

In like manner, our Holy Father, Pope Paul, like his predecessors from Leo XIII to Pope John, brings to social questions a prevailingly "liberal" outlook, a clear openness to the future, the outlook of Pope John's *Mater et Magistra* and *Pacem in Terris* or his own *Progressio Populorum* and address to the United Nations. But also like his predecessors, the Pope speaks on doctrinal points with the fidelity of that witness to tradition which is echoed in the Year of Faith *Credo,* the encyclicals *Aeterna Dei Sapientia, Mysterium Fidei* and *Humanae Vitae,* and in Pope Paul's repeated affirmations of the received faith of our fathers.

The contrast recalls a parallel in St. Paul, a parallel which may be instructive for the times. No one can fail to note the openness of St. Paul to the wide and varied world of the Gentiles of his time, to their cultures and to the need for changes in the old order to meet the needs of the new. And yet, St. Paul was intransigent in his fidelity to the revelations made to the prophets and, above all, to the truth proclaimed in and through Christ Jesus.

The present-day seeming contradiction which occurs to me can be stated thus: In our moment of history both the history of the Church and the history of mankind, a "liberal" social attitude and a "progressive" spirit are the need of the hour. But such openness requires, as an indispensable condition of its health and effectiveness, a jealous regard for doctrinal soundness, an attachment to the faith that is unqualified save for human frailty. I offer the thesis that in a period of social turbulence, indeed revolution, those who are committed to "openness" and needed change on the level of things human are doomed to be blown about by every wind of doctrine unless they have a commitment not less certain to fixed principles of faith and morality.

I am suggesting that it is not only possible but desirable, even necessary, for the prevailing mood of the Church in our day to be one of open, progressive positions on social questions, above all in what pertains to the freedom due the sons of God, but together with a profound fidelity to the established truth at the heart of religious faith, the faith by which we are, in fact, made free.

With a measure of oversimplification, perhaps, but I trust no injustice to the realities, my thesis is this: *Social openness is the need of the hour: theological caution is not less great the need. Doctrinal integrity is essential to the faith, but it is not less essential to freedom. The faith provides the absolutes against which the relatives of social change are necessarily judged by Christians: absolutes concerning God, the person, the honor of God and the dignity of the person, the value of life and the primacy of the spiritual as Christians must see these always and everywhere.*

Herein lies, one strongly feels, the saving formula for the resolution of the tragic ironies set forth by Bonhoeffer in these words of truth. "The demand for absolute liberty brings men to the depths of slavery. The master of the machine becomes its slave. The creature turns against its creator in a strange reenactment of the Fall . . . The liberation of man as an absolute ideal leads only to man's self-destruction."

At our stage in history the temptations of social conservatism could be perilous to the prospects for human freedom, while those of theological liberalism would be fatal to the substance and the future of divine faith and therefore to the very goals of honest liberalism.

Religious faith, properly accepted and lived, provides the moral climate in which human freedoms have their best chance to survive. The Catholics of Poland proclaimed this to Catherine II of Russia: "We love *liberty* and therefore we love *religion* even more; we are *free* because we love *religion.* We shall not deny our *religion* lest we straightway be deprived of our *liberty.*"

Conversely, political and economic freedom should provide the social climate most favorable to responsible and vigorous religious faith.

Hence it turns out, by a curious but persuasive paradox, that social outlooks usually identified as "conservative", certainly those which are "reactionary", by tending to inhibit social growth and personal liberty, impede the common good, even as that good is preserved and fortified by the conservative instinct with respect to the faith an instinct which keeps one on guard against what Cardinal Newman identified as "liberalism in religion".

And so, social progressivism and theological conservatism, far from being inconsistent, can be mutually supportive. They are logical allies in the face of the present crisis in the Church, the crisis of our culture our political order, our very civilization.

That is why those who love both faith and freedom are always *doubly* concerned when the faith appears to be in jeopardy or the Church, the living presence of the teaching Christ in history, is in whatever peril.

Their preoccupation sometimes expresses itself in language that is anxious; it cannot do otherwise, given the gravity of the issues. But they do not, they cannot, lose heart. They know how much of human history, as well as Christian theology, Cardinal Newman summed up when he said:

"In truth the whole course of Christianity from the first, when we come to examine it, is but one series of troubles and disorders. Every century is like every other and to those who live in it seems worse than all times before it. The Church is ever ailing, and lingers on in weakness, 'always bearing about in the body of the dying of the Lord Jesus, that the life also of Jesus might be made manifest in her body.' Religion seems ever expiring, schisms dominant, the light of Truth dim, its adherents scattered. The cause of Christ is ever in its last agony, as though it were but a question of time whether it fails finally this day or another. . . ." (*Via Media,* Vol. I, pp. 354–355).

The Christian answer to all this is, of course, confident hope and sustaining love, but these because of steadfast faith and yet more faith. *"I believe, Lord, help thou my unbelief"* (Mark 9, 23). If Newman described the recurring condition of turmoil in which the Church always finds itself, he pointed out not less clearly the solution. He said: "Doubt and difficulty seem our lot; the simple question is—What is our duty under it? . . . . Scripture is quite aware of those difficulties . . . . it knows them all; it has provided against them by recognizing them. It says, 'Believe'" (*Essays Critical and Historical,* pp. 244–249).

The problem of *Whom* we shall believe and its solution in Christ, the Divine Teacher, are

both seen in the sixth chapter of St. John's Gospel. Again Cardinal Newman is our guide to their understanding:

"After our Lord had declared what all who heard seemed to feel to be a hard doctrine, some in surprise and offence left Him. Our Lord said to the Twelve most tenderly, 'Will ye also go away?' St. Peter promptly answered. No! But observe on what ground he put it: 'Lord, *to whom* shall we go?' . . . . If Christ were not to be trusted, there was nothing in the world to be trusted; and this was a conclusion repugnant both to his reason and to his heart. He had within him ideas of greatness and goodness, holiness and eternity—he had a love of them—he had an instinctive hope and longing after their possession. Nothing could convince him that this unknown good was a dream. Divine life, eternal life, was the object which his soul, as far as it had learned to realize and express its wishes, supremely longed for. In Christ he found what he wanted. . . . He might have misgivings at times; he might have permanent and in themselves insuperable objections still in spite of such objections, in spite of the assaults of unbelief, on the whole, he saw *that* in Christ which was positive, real and satisfying. He saw it nowhere else. 'Thou,' he says, 'hast the words of eternal life; and we *have believed* and *have* known that Thou are the Christ, the Son of the Living God.' As if he said, 'We will stand by what we believed and knew yesterday—what we believed and knew the day before. A sudden gust of new doctrines, a sudden inroad of new perplexities, shall not unsettle us. We *have* believed, we *have* known: we cannot collect together all the evidence, but this is the abiding deep conviction of our minds. We fell that it is better, safer, truer, more pleasant, more blessed to cling to Thy feet, O merciful Saviour, than to leave Thee. Thou, *canst not* deceive us: it is impossible. We will hope in Thee against hope, and believe in Thee against doubt, and obey Thee in spite of gloom.'

"Now what are the feelings I have described but the love of Christ? Thus love is the parent of faith. . . . Love of God let St. Peter to follow Christ, and love of Christ leads men now to love and follow the Church, as His representative and voice" (*Essays Critical and Historical*, pp. 249–252).

In brief, then, Christ offers mankind that truth which makes us free. But we must be tenacious of the faith through which there comes to us that truth which frees if we are to be, as the voice of the times invites us to be, the heirs to liberty and the builders, in responsible freedom, of a more sane and saving order.

In this, too, Newman, may well have been prophetic when, on the occasion of his coming to Rome ninety years ago to receive his cardinal's hat, he warned against what he called "the spirit of liberalism in religion". He praised what is good and true in liberal theory generally, "for example, not to say more, the precepts of justice, truthfulness, sobriety, self-command, and benevolence". But he saw this spirit, when loosed from firm attachment to the faith, as prompting a great "apostasy", "one and the same everywhere, (though) in detail, and in character, it varies in different countries". He saw that spirit, already shaping up in his times, as ultimately inconsistent with the recognition of any religions whatever as true, all being matters of opinion, never of objective fact. Because of its mischief, "over-spreading, as a snare, the whole earth", Newman made his admittance to the Sacred College the occasion to protest that "never did Holy Church need champions (against this kind of 'liberalism in religion') more sorely than now" (*Biglietto* address).

One wonders what Newman would have said had he lived to see his name and his words invoked in defense of a religious spirit which he found so mischievous and which he repudiated in his own times so pointedly, so passionately, and, on occasion, with such personal suffering!!!

Newman's passion for the Church of the Fathers, for the primacy of the papacy, for the witness of hierarchy and laity alike to the faith committed to the Apostles is preeminently needed if liberalism in the building of peace, the flourishing of the intellectual life, the recognition and service of the person, the progress of civil rights is to have firm roots in truth from which to flourish and fixed, unyielding standards to guarantee its freedoms.

Newman lamented the theological trend of his times because he feared that it would be the ruin of many souls. But he added: "I have no fear at all that it really can do . . . serious harm to the Word of God, to Holy Church, to our Almighty King, the Lion of the tribe of Judah, Faithful and True, or to His Vicar on earth. *Christianity has been too often in what seemed deadly peril, that we should fear for it any new trial now.* [To offset and survive these] . . . commonly the Church has nothing more to do than to go in her own proper duties, in confidence and peace . . ."

What we have thus said about the majestic calm and Christian optimism which the ancient faith inspires, together with the magnanimous, venturesome social action which the new hopes invite, is valid everywhere. Everywhere and always we must *do* with the boldness and generosity of Christ, and *teach* without compromise or confusion the Word of God, still echoed across the ages and throughout the world by the voice of the Church, obedient to Him as is He to the Mind and the Will of His Father in God.

We must repeat these joyful, consoling truths in all seasons and all places. But it is especially appropriate to proclaim them on this occasion and here in Rome, where Christ's own Vicar gives the example of *doing* and *teaching*. It is easy to believe them here where the trophies of the apostles, the memories of the martyrs, all the symbols of the city not lightly called "Eternal," declare the abiding strength of truly human aspirations and the immortal power of divine promises.

Let the words of St. Bernard inspire us here in Rome to deepened identity through the Church with the unchanging Christ Who ultimately changes everything: "Surrounded by a company of single-hearted brethren, what have you to fear? What have you to fear at whose side angels stand and whom Christ leads into battle encouraging his friends with the words, 'Fear not, I have overcome the world'? If Christ is with us, who is against us? You can fight with confidence where you are sure of victory. With Christ and for Christ, victory is certain. Not wounds, nor falls, nor bruises, nor (were it possible) can a thousand deaths rob us of victory, if only we do not forsake the fight. Only by desertion can we be defeated. . . ."—desertion from Christ the Divine Teacher of our faith, Christ the Example of our deeds.

Let us, then, recognize with Newman, that, in the order of Providence, our seeming dangers are often our greatest gains. In the words of the Protestant poet,

"The clouds you so much dread
Are big with mercy, and shall break
In blessings on your head."

CONGRESSMAN MESKILL REPORTS TO YOU

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. MESKILL. Mr. Speaker, the tabulations of my 1969 congressional questionnaire have just been completed. The returns represent the responses of more than 42,000 residents of Connecticut's Sixth Congressional District.

Mr. Speaker, I am pleased to insert the results in the RECORD for the benefit of my colleagues. I think they show some interesting trends:

CONGRESSMAN MESKILL REPORTS TO YOU

DEAR FRIENDS: The results of my 1969 Congressional Questionnaire have now been tabulated. From over 151,000 questionnaires sent to homes in Connecticut's Sixth Congressional District, I have received 24,194 returns. This means that the views of more than 42,000 residents in our district were sampled since the questionnaire was designed to permit both husband and wife to respond individually. I am most gratified by this response.

As I have stated before, the responsibility for my voting record remains my own. However, the opinions expressed are useful in formulating my positions on legislative issues. Your views are helpful to me as I perform my duties as your Representative here in Washington.

Below are the tabulated results of the questionnaire and my response to each question. I answered my own questionnaire on the day the questionnaire was mailed to you. The percentages represent a combined average of the husband's and wife's responses. The answers have also been broken down by age, sex and political affiliation. This information will be made available to anyone requesting it.

Sincerely,

THOMAS J. MESKILL,
Member of Congress.

TABULATION OF RESPONSES TO QUESTIONNAIRE

[Figures are in percent]

	Yes	No	Undecided	My response
1. Should the Federal Government develop laws to help prevent strikes by public employees?	65	26	9	Yes.
2. Do you favor Federal aid to private and parochial schools?	35	60	5	Yes.
3. Should the voting age be lowered to 18 years?	45	51	4	Yes.
4. If a satisfactory peace in Vietnam cannot be secured in the foreseeable future which of the following, if any, would you favor?				
(a) Withdrawal of U.S. forces, even if this means a Communist takeover	A	21		C.
(b) Adhere to holding operations by joint United States-South Vietnam forces.	B	12		
(c) Bring increased military pressure to bear on North Vietnam	C	55		
(d) None of these	D	12		
5. Would you favor a constitutional amendment which would allow Congress to override a Supreme Court decision by a ⅔ vote?	52	37	11	No.
6. Should the electoral college be abolished and the election of the President and Vice President be purely and simply by popular vote?	80	12	9	Yes.
7. Would you favor a policy of promoting trade with Communist-bloc nations?	32	54	14	No.
8. Should the United States adopt a 12-mile offshore territorial limit against other nations which impose more than a 3-mile limit?	86	8	6	Yes.
9. Should the Federal Government try to slow the population migration from rural to urban areas through programs of economic incentives and aids to private industry to help create jobs in rural areas?	61	27	12	Yes.
10. At the conclusion of the Vietnam conflict, would you favor granting amnesty to those who fled the country or were imprisoned because of "conscientious objection" to the war?	20	68	12	No.

THE UNIQUE STATUS OF THE OIL INDUSTRY

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. VANIK. Mr. Speaker, the House of Representatives will soon be considering tax reform legislation which must include meaningful revenue-producing reforms. There can be no sacred cows exempt from this effort. There can be no tax reform bill of any credibility if oil is left out.

The following article from the Monday, May 26, issue of the National Observer outlines the tremendous injustice of the oil tax loopholes which result from a combination of the depletion allowance, foreign tax credit, intangible drilling costs, western hemisphere trade deductions, and an incredible system of oil bookkeeping which allows the 15 major oil refiners to earn almost $5 billion after taxes and pay only 8 percent of their earnings in taxes.

The article is as follows:

THE UNIQUE STATUS OF AN INDUSTRY: HOW TAX BREAKS HAVE NOURISHED THE OIL BUSINESS

In the late Nineteenth Century, the amassing of great wealth from oil was enhanced by the easy ethics of the age. In more recent times, many new oil fortunes have arisen and swelled, and they have swelled in fair measure because the industry enjoys an assortment of tax breaks that no other business can match.

Consider:

Atlantic Richfield Co. reported income before taxes of $377,942,000 in the years 1965 through 1967, but the company paid no Federal income taxes.

Standard Oil of California reported income before taxes in 1967 of $513,067,000 and paid $6,000,000 in Federal corporate income taxes, or 1.2 per cent.

How can this be done? How is it possible to earn so much and pay little or no Federal income taxes? The answer is that the Federal tax structure provides a host of unusual tax sanctuaries for the oil industry.

These tax sanctuaries are related to the controversial Machiasport plan, by which Occidental Petroleum Corp. hopes to erect a huge refinery in the tiny town of Machiasport at the northeastern tip of Maine. The plan represents a sophisticated attempt to hurdle the Federal import quota system for oil. It is the import quota system, which was explained in detail in The National Observer of May 5, as well as restrictions on domestic production, which were examined in The National Observer of May 12, that combine with petroleum's special tax breaks to give the U.S. oil industry a unique status in the economy—and to force the American consumer to pay artificially high prices for many oil products.

It is this unique status that the battle over Machiasport has placed in the spotlight, and the industry is preparing to meet assaults from any direction.

CASH FOR CHANCY PROJECTS

Uncommon tax advantages provide the industry with an uncommonly large cash flow, which the industry argues is required for its gigantic and often chancy operations. What are these tax advantages?

Take a look at the more important ones:

Percentage depletion: Oil and natural gas well operators may deduct 27.5 per cent of the gross revenues of each property before paying taxes, unless this figure totals more than 50 per cent of the net income of the property before deducting the depletion allowance. Thus, if gross revenues on a property total $100,000, the producer may take $27,500, before figuring his taxes, so long as the net income of the property after expenses is $55,000 or more. If, however, the net income was, say, $50,000, the producer would be limited to 50 per cent of that, or $25,000.

Intangible drilling costs: These include such costs of developing a producing well as wages, fuel, repairs, hauling supplies, and other expenses that do not have a salvage value. These "intangibles" may be deducted from gross revenues the first year. Similar expenses incurred by other manufacturers must be capitalized and written off over a number of years.

Foreign tax credits: U.S. companies operating abroad may claim credit for taxes paid to foreign governments on nearly a dollar-for-dollar basis. Thus if a company owed $75,000 to Uncle Sam on its profits earned in, say, Saudi Arabia and had paid $80,000 in taxes to the Saudi Arabia government, the foreign-tax credit would eliminate the taxes on that operation due the U.S. Treasury. Critics, however, say that taxes paid Middle East governments by U.S. oil companies are based on artificial prices, and that some of these taxes should be treated as expenses of doing business and should not be allowed to fully wipe out the companies' U.S. tax debt.

Western Hemisphere trade deduction: This provision allows U.S.-owned companies doing 95 per cent of their business outside the United States but within the Western Hemisphere to a special deduction in figuring their Federal taxes. In effect, it reduces the tax rate by 14 points, currently from 52.8 per cent to 38.8 per cent. This is done before any foreign tax credits or depletion allowances are taken. It is a provision that mostly favors companies in the business of extracting minerals. Like oil.

These sanctuaries are used in combination with still other advantages. An example will indicate what a resourceful accountant might do for his oilman client.

Assume the oilman drills a well that costs $100,000 and produces gross revenues of $100,000 in its first year. Between 75 and 90 percent of his expenses will be intangible drilling costs, which can be written off in the first year. These include rental of a drilling rig and the salaries of crewmen. Assume intangible costs of $80,000 and production costs of $5,000. The gross income of $100,000 minus $85,000 in intangibles and production costs would leave an income of $15,000.

But he would not pay income taxes on $15,000; he would pay them on $7,500.

Here's why: The depletion allowance for oil and gas is 27.5 per cent of the gross income, but this may not exceed 50 per cent of the net income of the property. In this example, the depletion allowance equals $27,500. But the oilman, because of the 50 per cent limit, could claim only $7,500 in depletion. If he chose this method, therefore, the oilman would have a taxable income of $7,500.

The next year, however, assuming again a gross revenue of $100,000 and production costs of $5,000, the oilman could take his full percentage depletion allowance of $27,500 and his taxable income would be $67,500.

But a technique known as "carved-out production payments" would save the operator many tax dollars. In his first year of operation, the oilman's intangible costs limited the amount of depletion he could claim to $7,500. But if he sold his second year's production in advance—that is, during his first year of operation—he would have a first-year gross income of $200,000. And a gross income of $200,000 minus intangibles and production costs of $85,000 would result in a first-year net income of $115,000.

The percentage depletion allowance would equal $55,000 (27.5 per cent of $200,000) and the oilman would not have reached the limit of 50 per cent of net income, or $57,500. Thus, although his gross income for the first year was $200,000, he would have a taxable income of only $60,000.

There is yet another aspect of this device. Since the oilman has already received payment for the oil he produces in his second year of operation, he will have no income at all in his second year. But he will have production costs of $5,000, which he can then report as an operating loss. And so, he will be able to claim a tax refund from the Government on this "loss" by carrying it to earlier years without affecting his depletion allowance, or by applying the "loss" to income from other sources.

The net effect of this maneuver is that the oilman would have taxable income—after selling the production payment—of $60,000 in the first year and minus $5,000 in the second year. Without the sale of the production payment, his taxable income would be $7,500 in the first year and $67,500 in the second year. The sale of the production payment thus reduces his taxable income for the two years by $12,500.

There is another form of production payment called the "ABC deal." It does not lend itself to simple explanation, but perhaps a sample offered in a U.S. Treasury Department report makes the effect sufficiently clear.

"In a recent ABC transaction," reports the Treasury Department, "a major oil company purchased all the coal properties of another corporation, subject to a reserved production payment of $460,000,000 payable out of a large percentage of the net profits to be derived from the operation of the coal properties by the buyer. Under present rules, the buyer excludes from income the $460,000,000 of profits derived from its operation of the coal properties and paid over to the holder of the production payment.

"This feature alone represents a Federal income tax saving to the oil company of approximately $175,000,000 over the payout period, or an annual tax saving of between $10,000,000 and $18,000,000 per year depending on the actual length of the payout period. (It was estimated that it would take 7 to 16 years to discharge the production payment out of profits derived from the operation of coal properties.)

"In addition, all of the costs of mining the coal used to discharge the production payment were deducted by the buyer even though it capitalized those costs on its books as a cost of acquiring the coal properties."

The Treasury says that in 1966, ABC transactions totaled $1.85 billion (for all extractive industries) and resulted in a loss of revenue to the Federal Government of $85,000,000. Carved-out production payments totaled $540,000,000 in 1966—up from $214,000,000 in 1965—and cost the Federal Government $70,000,000 in revenue.

FROM THE JOHNSON YEARS

These figures are taken from reports issued by the Treasury Department during the Johnson Administration; the reports included a long list of tax-reform proposals. They make up four volumes titled *Tax Reform Studies and Proposals U.S. Treasury Department*. The first three volumes are treasury Department studies. The fourth is an examination of tax provisions affecting the oil and gas industry, prepared for the Treasury by the Consad Research Corp. of Pittsburgh.

Neither the Johnson nor Nixon administrations has endorsed the far-ranging reforms sought by Treasury specialists. But the reports were sent to Capitol Hill and released jointly by the House Ways and Means Committee and the Senate Finance Committee.

Included in the Treasury's reports is this comment:

"In effect, the price of crude oil in the United States is being underwritten by import controls, by state controls on production, and by favorable tax provisions. . . ."

The oil industry's tax advantages affect not only its less privileged competitors but the whole national economy as well.

The Consad report states: The oil and gas producing industry accounts for about 1.5 per cent of the Gross National Product. [Reckoned at an annual rate of $93.4 billion in the first quarter of 1969.] By most conventional standards it is not a highly concentrated industry, but with so enormous an output, each of the largest firms is a giant in the economy. The five top domestic producers together account for 20 per cent of the output, the top 20 for 50 per cent.

According to the U.S. Bureau of Mines, the value of crude oil at the wellhead in 1967 was $9.4 billion, and the value of natural gas was $2.9 billion. The value of natural gas liquids, liquid fuels extracted from natural gas, was $1.2 billion. The value of products shipped from U.S. refineries in 1967—the latest year for which figures are available—was $20 billion.

The oil industry concedes that it is very big and very important. Indeed, its size and essentiality are often cited by industry spokesmen to defend its preferential treatment by the tax laws, just as they are cited to defend the import quota system and state-enforced controls on domestic production. What the industry prefers not to emphasize are industry profits.

Consider some statistics contained in the "Monthly Economic Letter" for April of this year, published by the First National City Bank of New York City. A survey of 2,250 manufacturing companies, divided into 41 categories, showed a net income in 1968 of $26 billion. Ninety-nine oil producing and refining companies had a total net income last year of $6.1 billion, or almost 25 per cent of the after-tax earnings of the entire list of 2,250 companies.

Significant, too, is the percentage of return on sales, also calculated in the First National City Bank study. Fifty-five aircraft and space companies had a return of 2.8 per cent. Eleven auto and truck manufacturers had 5.8 per cent. Ninety-two printing and publishing firms recorded a return on sales of 6.2 per cent.

The 99 petroleum companies? They enjoyed a return on sales of 9.0 per cent. Only the drug industry scored higher, with 42 drug makers reporting a return on sales of 9.5 per cent.

The oil industry, however, does not place as much importance on these figures as it does on those that reflect its rate of return on investment. And, indeed, the First National City Bank reports that the average rate of return on net worth for the 2,250 companies surveyed was 13.1 per cent in 1968, up from 12.6 per cent in 1967. The 99 oil companies, however, had a return on net worth in 1968 of 12.9 per cent, compared with 12.8 per cent in 1968. So in terms of return on investment, the oil industry is slightly below the national average.

Some oilmen, moreover, say the difference is greater than it seems because the figures do not reflect what it actually costs to replace extracted oil.

"If oil companies figured in what it is costing them to replace their oil, it could cut their return on investment by one-half," declares Minor Jameson, Jr., executive vice president of the Independent Petroleum Association of America.

It is at this point that the debate over preferential tax treatment for the oil industry approaches the heart of the matter. Most independent economists have a ready answer for Mr. Jameson.

Prof. Walter J. Mead, professor of economics at the University of California, Santa Barbara, told the Senate subcommittee in March of this year:

"The effect of favored tax treatment is to reduce tax costs for oil companies relative to firms in other industries. These measures taken together substantially raise the expected after-tax profit rates on oil industry exploration and development investments in what would otherwise be submarginal uses of scarce capital. Investment in petroleum exploration and development is indeed expanded to the point where the after-tax return is approximately equal to that which may be obtained on alternative uses of capital. . . .

"Oil industry spokesmen have defended their various subsidies with the question, 'If we receive all the subsidies which our critics allege, why is our rate of return on invested capital not substantially higher than other nonsubsidized industries?' The answer to this question is that a subsidy will raise the profit rate at the point in time at which it is conferred.

"Its effects, however, are eroded away with time as producers react to their more profitable situation by expanding into otherwise submarginal areas. This expansion leads to a decline in the rate of return toward a normal yield and to resource misallocation as well."

And here Professor Mead adds an interesting observation in the light of the industry's particularly visible troubles earlier this year.

"The oil spillage case in the Santa Barbara Channel is directly related to the subsidy system. Leases were purchased and drilling occurred in the California offshore area because such operations were made profitable by the subsidy legislation. Under free market conditions, oil prices would be substantially lower, tax costs substantially higher in the oil industry, and the profit inducement to buy leases in the Channel would probably be lacking.

"To develop oil from such sources is to use up more economic value than is produced. In addition to this probable waste of resources, we have the external cost (aptly called 'spillover costs' even before this oil spillage case) of environmental pollution."

Oil industry spokesmen speak frequently about domestic taxes paid as a percentage of gross revenue. The Petroleum Industry Research Foundation, for example, recently published a report showing that the industry paid 5.1 cents on each dollar of gross revenue in 1964 and 1965. This includes Federal, state, and local taxes, but *excludes* state and Federal product taxes. The study showed all business corporations paid an average of 4.5 cents on each dollar of gross revenue.

THE ACCENT ON "GROSS"

So, set forth in these terms, the oil industry pays six-tenths of a cent per gross-revenue dollar more than the average of all industries.

But the comparison is in gross revenue, and does not take into consideration the cost of doing business. Thus if a company doing $10 billion a year volume had business costs of $9 billion, it would probably pay less in taxes than a $10 billion-a-year business with costs of $5 billion. The oil industry's ratio of expenses to gross revenue is lower than that of many other industries.

The oil industry contends that in 1966 it was responsible for $10.5 billion in taxes. Testifying before the House Ways and Means Committee, M. A. Wright, chairman of Humble Oil, a subsidiary of Jersey Standard, declared:

"Aggregate tax payments on oil industry operations in 1966 were $10.5 billion, including $8 billion of excise and sales taxes on oil products. These payments provided 5 per cent of all receipts of the Federal, state, and local governments."

But that $8 billion Mr. Wright refers to was not paid by the oil companies. It was paid by, among other customers, the motorists who buy gasoline at the industry's thousands of filling stations.

Now consider data from the Treasury's tax-reform study, which shows "estimates of the effective tax rates actually paid by corporations, as a group and for several industries." Here are the 1965 figures on "actual (Federal) tax on total net income:"

	Percent
All industries	37.5
Petroleum	21.1
Other mineral industries	24.3
Lumber	29.5
Commercial banks	24.4
Other manufacturing	43.3

Only mutual savings banks (5.3 per cent) and savings and loan associations (14.5 per cent), among the categories considered, had lower effective tax rates than the oil industry.

Oilmen contend the price of gasoline has been remarkably stable in a period of general inflation. But, according to the Oil and Gas Journal of April 14, 1969, the average price of regular gasoline—excluding taxes—has increased 7.4 per cent since April 1968, and 5.9 per cent since the last week in December 1968.

Its many tax privileges give the oil industry tremendous cash flows and thus very great financial leverage. Some critics argue that this gives oil an unfair advantage over competing industries. But the industry insists the nature of its business requires this heavy cash flow.

"It is essential because so much of our investment is such high risk that it isn't bankable," says John J. Scott, general counsel of Mobil Oil. Mr. Scott cited as an example Mobil's operations in Venezuela. Prior to and during World War II, Mobil invested between $45,000,000 and $50,000,000 in that country before getting any return on its investment. "If we did not have the cash flow, we could not have done it," Mr. Scott says.

What would happen to the industry's oil reserves if the depletion allowance and deductions for intangibles were eliminated?

Frank N. Ikard, president of the American Petroleum Institute, offers this reply:

"I can tell you one thing that is spectacular: The size of the investment in exploration and development the industry is going to have to make to meet the needs of the American people over the next 15 years, as a rough estimate, domestic oil exploration and development outlays will have to be increased about 50 per cent. This means going from a little less than $4.5 billion annually up to somewhere around $6 or $7 billion. An industry that has to make such a big boost in its spending has to make profits to do its job."

Some industry sources say oil needs more tax breaks, not less. Harold M. McClure, Jr., president of the Independent Petroleum Association of America, cited figures before the House Ways and Means Committee that showed a 40 per cent reduction in the number of wildcat test wells drilled in 1968 compared with the number drilled in 1956.

"It should be recognized," said Mr. McClure, "that part of these decreases can be attributed to wider well spacing and increased efficiencies in all phases of drilling and producing operations."

It's interesting that Mr. McClure should use the year 1956 as a comparative figure for 1968 drilling operations. Says the Consad report: "The number of wells being drilled reached a peak in 1955-56, but has since declined steadily back to its 1949 level, over 30 per cent below the peak."

Mr. McClure told the senators further: "To re-emphasize the degree of risk, only 2 out of every 100 new field wildcats drilled are likely to find a field large enough to be profitable. . . . To sum up the situation as to incentives for petroleum exploration and development in the United States, there is an obvious need for more—not less—economic stimuli." A wildcat is an experimental or exploratory well.

Mr. McClure uses the term "economic stimuli." In the oil business there are stimuli within stimuli. It is not only the major tax privileges themselves that benefit the industry; it is also the accounting involutions that they make possible. A good example of

such an involution can be found in the uses to which the depletion allowance is put.

Simply stated, oil companies shift expenses, for tax purposes, to the wellhead, where depletion may be claimed, from refinery or transportation costs that do not qualify for this deduction.

In a Senate speech recently, Sen. William Proxmire, Wisconsin Democrat and critic of oil-industry privileges, described the answers he received from the Interior Department to questions he had posed:

"Apparently," said Senator Proxmire, "Interior had made an analysis which demonstrates that integrated companies shift income from refining and marketing to oil production in order to minimize tax liabilities by maximizing percentage depletion. This analysis is correct as was shown by Texaco's recent action in increasing the price it would pay for crude oil by 20 cents a barrel.

"Since Texaco produces most of the crude oil it refines, the increased cost on the 11,000 net barrels a day it buys from outsiders will be more than offset by the larger depletion allowances it will claim on the oil which it sells to itself. Apparently, Texaco felt the 1.9 per cent of its income paid in Federal income taxes in 1967 was too high."

While Senator Proxmire singled out Texaco as an example, that company is hardly alone in taking advantage of the tax laws as they are on the books.

One of the laws on the books permits oil companies to deduct from their U.S. tax obligation the income taxes they pay to foreign governments. To get as much revenue as possible from the oil companies, oil nations in the Middle East and elsewhere base their tax schedule on "posted prices," which are set arbitrarily and are almost always higher than the actual price the companies get for their oil.

The result is that American companies must pay foreign governments more in taxes than they would if the taxes were figured on the true price for which oil can be sold. Thus, a portion of the foreign tax is considered by many critics as not a tax but a royalty. Therefore, so the argument goes, U.S. companies should be permitted to deduct from their U.S. taxes only that part of foreign taxes that are truly taxes. The other part, which would be considered as royalties, would then be figured as just another business expense.

The oil companies, who are being overcharged by foreign governments, don't like the system of posted prices any more than the U.S. Treasury Department does, but they say there's nothing they can do about it.

The House Ways and Means Committee has about two dozen bills of various sorts that deal with reforming the tax structure as it affects oil. One House bill would eliminate entirely the depletion allowance as it relates to foreign wells; Maine's Sen. Edmund Muskie has introduced a similar bill.

Rep. Henry Reuss, Wisconsin Democrat, has introduced a major tax reform package, one section of which would drop oil and gas depletion allowances, presently 27.5 per cent, and allowances for 41 other minerals, presently at 23 per cent, down to 15 per cent.

In introducing his bill on Jan. 29 of this year, Mr. Reuss told the House: "Ideally, percentage depletion should be replaced with cost depletion. But since we are not living in an ideal world, this title provides only that the oil depletion allowance be reduced by less than one-half, from 27.5 per cent to 15 per cent, the percentage now applicable to over 40 other minerals."

Mr. Reuss and his supporters are not overly optimistic about changing oil's depletion allowance, especially now that President Nixon has reiterated his support of the allowance as it stands.

Nevertheless, says Mr. Reuss, "There is a general sentiment among taxpayers that they are getting a little depleted too."

In the American system of making law, it is far easier to establish prerogatives than to abolish or reduce them. To the beneficiary, preferential treatment becomes first a comfort, then a custom, and finally a necessity. And the progression can be carried still one step further. What of the nation's best interests? The late Sam Rayburn wasn't the only friend of oil to know when to turn solemnly and face the American flag.

THE DEPLETION ALLOWANCE

The 27.5 per cent depletion allowance for oil and natural gas is probably the best known of all business tax exemptions. Here's how it came to be:

The Sixteenth Amendment, which became effective on March 1, 1913, made it legal for Congress to assess income taxes. The Revenue Act passed on Oct. 3, 1913, provided that in computing income subject to taxation, producers of ores and all other natural deposits could claim a depletion deduction not to exceed 5 per cent of the gross value of the output at the mine or well.

In 1916 the law was changed, removing the limitation, but specifying that the total depletion allowable over the life of the property could not exceed the capital originally invested, or, if the purchase of the property was made before March 1, 1913, the fair market value as of that date.

A second provision was introduced in 1918 allowing "discovery value depletion." The estimated discovery value was substituted as the value to be amortized for all wells found after March 1, 1913. It wasn't until 1926 that discovery value depletion was replaced by today's system of percentage depletion for oil and natural gas.

Under the 1926 law, any oil or gas producer, or anyone with a financial interest in a well, can deduct 27.5 per cent of his gross income realized from the sale of oil or gas, but this must not exceed 50 per cent of the net income of the property.

Why 27.5 per cent? Because the House of Representatives wanted the figure to be 25 per cent and Senate wanted 30 per cent. The 27.5 per cent figure for oil and gas is the highest depletion allowance; other minerals receive smaller allowances. Metals, for instance, qualify for 15 per cent.

The U.S. Treasury Department reports that, on an average, petroleum producers recover 19 times the cost of their producing wells through percentage depletion.

THE TAXES COMPANIES PAY

Federal corporate income-tax payments for 1967 of the nation's 15 largest oil refiners:

Name	Net income before tax	Federal tax	Percent	Earnings after all taxes
Standard (N.J.)	$2,098,283,000	$166,000,000	7.9	$1,232,283,000
Gulf	955,968,000	74,142,000	7.8	578,287,000
Texaco	892,986,000	17,500,000	1.9	754,386,000
Mobil	594,593,000	26,900,000	4.5	385,393,000
Standard (Calif.)	513,067,000	6,000,000	1.2	421,667,000
Standard (Ind.)	366,847,000	74,021,000	20.2	282,250,000
Shell	342,022,000	44,940,000	13.1	284,849,000
Phillips	227,766,000	52,255,000	22.9	164,015,000
Conoco	241,362,000	30,031,000	12.4	148,962,000
Cities Service	165,289,000	32,347,000	19.6	127,837,000
Union	163,820,000	10,400,000	6.3	144,963,000
Sun	146,946,000	24,700,000	16.8	108,576,000
Atlantic	145,259,000	None	0	130,005,000
Marathon	138,520,000	3,700,000	2.7	73,858,000
Getty	132,762,000	3,687,000	2.8	118,166,000
Total	7,125,490,000	566,623,000	8.0	4,955,497,000

UNIVERSITY OF MASSACHUSETTS FORUM

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, the University of Massachusetts at Boston recently conducted its first public service forum, entitled "the University of Massachusetts/Boston Forum for Argument," which was open to the general public. The first topic for discussion involved the difficult problem of taxation in the Commonwealth of Massachusetts. Four speakers participated in the symposium entitled "Dollars Spent, Services Delivered: Taxation in Massachusetts." They were State Senate President Maurice A. Donahue; Richard M. Millard, chancellor, board of higher education, Commonwealth of Massachusetts; Robert T. Capeless, member, Commonwealth's Master Tax Plan Commission, and former Massachusetts tax commissioner; and Bernard P. Rosenblatt, chairman, department of psychology, University of Massachusetts, Boston.

I applaud the involvement of the University of Massachusetts in public discussion of matters that affect the university, its home, the urban center, and the community of which it is an active and important part. I commend Chancellor Francis L. Broderick, the speakers, and the university for recognizing the important role the university plays in our society, and for realizing its responsibility to the community.

I am very happy at this time to include in the RECORD excerpts from the address by Senate President Maurice A. Donahue and the full text of the address by Chancellor Richard Millard. I recommend their remarks to my colleagues, all of whom are concerned with the problems of their States. I am sure the Members of this body will gain from seeing the great work that is being done by the University of Massachusetts at Boston.

The material follows:

EXCERPTS FROM THE ADDRESS BY MAURICE A. DONAHUE

BOSTON.—Strong criticism was leveled today by State Senate President Maurice A. Donahue at the present state administration for its "inaction and indecision" in tackling the Bay State's current tax problems.

Senator Donahue was a featured speaker at the U. Mass/Boston Forum for Argu-

ment on "Dollars Spent, Services Delivered: Taxation in Massachusetts," held at the University's auditorium at 100 Arlington Street.

Other panelists included Richard M. Millard of Waban, Chancellor, Board of Higher Education, Commonwealth of Massachusetts; Robert T. Capeless of Boston, member, Commonwealth's Master Tax Plan Commission and former Massachusetts Tax Commissioner; and Bernard P. Rosenblatt of Worcester, Chairman, Department of Psychology, U. Mass/Boston.

U. Mass/Boston Chancellor Francis L. Broderick was moderator of the University's first public service project in Boston.

In his remarks, Senator Donahue said, "For some time now I have been speaking out clearly and responsibly about the need for additional revenue to finance the minimal level of state services suggested by Governor Sargent in the budget which he has proposed.

"But Governor Sargent himself by his inaction and indecision has done more than anyone else in Massachusetts to undermine popular support and sabotage legislative approval of any responsible tax program this year.

"He has demonstrated a decided lack of enthusiasm for his own tax plan and has refused to discuss it or defend it publicly, thus inviting attacks upon it even from members of his own party.

"He has created complete confusion about the amounts of new revenue actually needed by endeavoring to claim credit for slashing the costs of Medicaid by fifty million dollars and yet at the same time maintaining that his budget cannot and should not be cut to reflect any such slashes.

"And only last week he raised further doubts about his position on taxes when he specifically refused to repudiate the alternative tax program presented by Republican Senator David Locke and four other House Republicans, and indicated he was reassessing his position and studying this program—a program which includes, among other things, raising the sales tax from three to five percent and raising the tuition at all state institutions of public higher education from $200 to $750!

"It has become increasingly difficult for even the most fair-minded observers to determine exactly what, if anything, the Governor wants by way of new taxes.

"If he and the Republican Party secretly favor a sixty-six and two-thirds percent increase in the sales tax and a two hundred and seventy-five percent increase in the tuition for the more than sixty thousand students in our institutions of higher public education, he ought to have the courage to say so and stop hiding behind somebody else's trial balloons.

"If he and the Republican Party now feel that less revenue is needed than was originally proposed, he ought to tell us so.

"The people have a right to know precisely what his views on additional taxation are.

"I hope that he will soon discover what he truly believes and will at last begin to speak out in clarification of his own position."

Speaking on higher education in Massachusetts, Chancellor Millard said, ". . . The amount expended per capita for public higher education in the Commonwealth is only half that of the national average. This means that the cost of public higher education to the taxpayers in Massachusetts is less than in any other state in the union. . . . This means that our institutions are operating at a dangerously close margin that precludes adequate development of supporting services including libraries and makes the qualitative increase that has taken place truly remarkable. It further means that any holding of the line or cutting back at this point can only result either in reducing the number and level of students accepted or a crippling reduction in quality."

He continued, "We are not now making available as many places for students as are needed by a considerable margin, but if we look ahead to the next decade, to 1975 and 1980, the need becomes compounded, and, if we are even to stay even in terms of the proportion of young people for whom higher educational opportunity will be available, major, even massive efforts are called for."

Dr. Millard also stated, ". . . Projecting operating appropriations at present support levels without necessary provisions for qualitative improvements and at present dollar levels, that is without taking into account inflation, the operating budgets for 1975 would be something on the order of $204 million and for 1980 close to $280 million. But in addition, to achieve such levels of enrollment, will require capital construction over the eleven year period, somewhere in the order of one billion five hundred million. . . ."

Professor Rosenblatt, speaking on the "Cost of Mental Illness" said that "the cost of caring for the mentally ill is far greater than we realize it to be; the cost of not caring for the mentally ill is greater still.

"The major problem in caring for the mentally ill is the shortage of educated and trained manpower. The greatest need in Massachusetts and in other states is for high quality services for children."

The symposium was attended by U. Mass/Boston students and faculty and the general public.

ADDRESS BY RICHARD M. MILLARD

While public support of higher education in Massachusetts extends into the distant past, 1636 to be exact, it has only been in the very recent past that the Commonwealth has come to recognize that the development of an adequate and diversified system of public higher education is essential to the well-being and future development of the state. Through the 19th, and a good part of the twentieth century, while our public institutions of higher education existed, it was assumed that with the exceptions of agriculture, home economics, teacher education, and textile technicians education, the major responsibility for higher education could rest with prestigious private institutions in the state, an assumption that had some basis in fact. Since World War II, however, the situation has changed radically. First the veterans and then in the mid and late fifties the rapid and continuing population increase of 18 to 24 year olds, plus a constantly rising college attendance expectation ratio, have made necessary a major reevaluation of the situation. It became evident that the private institutions in spite of increasing size could not meet the increased need. Further, with spiraling tuition costs young people from less economically affluent families were finding it more and more difficult to go to college at a price they or their families could afford. In addition, as pressure for admissions forced existing institutions to become progressively more selective larger numbers of college capable but average students found themselves shut out of higher educational opportunity. But also, with the growth of the 128 complex and the shift in the economy in Massachusetts to major emphasis upon industries highly dependent upon educated manpower, the state became progressively more aware of its dependence upon higher education for its own economic future.

The people of the Commonwealth, through the legislative and executive branches of government, responded by committing themselves to a system of public higher education which in quality and diversity of institutional functions would move in the direction in cooperation with the private institutions of making available higher educational opportunity to a progressively wider range of young people and citizens of the state. In 1958 the Regional Board of Community Colleges was formed and in 1960 the first community college, Berkshire, opened its doors. The progress from 1960 to the present has been phenomenal by any standard. In 1960 there were only 17,029 students in the sixteen public higher educational institutions in the state (6,371 at the University of Massachusetts, 8,373 in the 11 state colleges, 2,285 in the then 3 technological institutes, and 151 students at Berkshire community college). In the fall of 1968, 60,515 students were enrolled in public institutions of higher education, a 3½ fold increase over 1960. The University of Massachusetts, with its Boston branch, opened in 1965, had grown to 19,367. The state colleges had increased to 21,796; the two technological institutes, SMTI having been formed in 1964 out of the combination of Bradford-Durfee and New Bedford, had grown to 5,728; and most striking, the now twelve community colleges, had increased to 13,624 students with over half the students in occupational two year programs.

Such development has been possible through a series of changes involving legislative and institutional foresight and willingness to take necessary steps to meet changing conditions. In the early sixties the institutions and their governing boards attained the essential fiscal responsibility and flexibility to utilize funds efficiently and effectively to meet emergencies and the demands of rapid expansion including being able to adjust professional salaries in an escalating and highly competitive academic market. In 1965 the educational structure was reorganized creating an agency, the Board of Higher Education, at departmental level to work with, help plan for, and coordinate the public higher educational segements in the state. We have increased students by over 350 percent and appropriations by some 417 percent which does place us third in the nation in terms of rate of increase. And far more important, the university has emerged from a small rural institution to one that can hold its head high in any academic community in the nation; the state colleges are evolving from primarily teachers colleges to four year arts and sciences institutions with masters programs but without diminishing their contribution to supplying the elementary and secondary teachers of the Commonwealth. Our technological institutes have increased in stature and influence, and our community colleges have become models for the nation as comprehensive two year institutions which because they are wholly state funded can in general be placed where they are needed rather than where the community can afford them. It would be hard to find any area where tax dollars have been as well and as fruitfully invested both for the present and the future economic and educational health of the Commonwealth as in higher education.

And yet in the present, when the commonwealth is facing a fiscal crisis, it could be far too easy to congratulate ourselves on progress made, to assume that higher education is an area in which we can, if not cut back, at least hold even, or that further growth and development is a luxury we cannot afford. I would like to suggest that quite to the contrary, while we have made progress, we started from such a low base, that not only are we not currently meeting the need in spite of progress, we have only began to recognize the scope of what is facing us in the next decade. To assume that somehow we can even rest at this point is to court economic and educational disaster.

In relation to the present, while the rate

of increase has been high, the percentage of the Commonwealth's budget going into higher education is strikingly low both in terms of our own budget and in comparison with other states. The percentage of the Commonwealth's budget going into higher education has actually decreased over the last four years from around 8 percent to 6.9 percent in the current year, and if the budget recommendations for next year are followed, to 6.3 percent. The amount expended per capita for public higher education in the Commonwealth is only half that of the national average. This means that the cost of public higher education to the taxpayers in Massachusetts is less than in any other state in the union. The average cost per student in the community colleges runs considerably below that of a number of high schools in the state. And the average cost per student including students at all levels in the public system as a whole (not including capital expenditures) is considerably less than tuition at the major private institutions. This means that our institutions are operating at a dangerously close margin that precludes adequate development of supporting services including libraries and makes the qualitative increase that has taken place truly remarkable. It further means that any holding of the line or cutting back at this point can only result either in reducing the number and level of students accepted or a crippling reduction in quality.

We are not now making available as many places for students as are needed by a considerable margin, but if we look ahead to the next decade, to 1975 and 1980, the need becomes compounded, and, if we are even to stay even in terms of the proportion of young people for whom higher educational opportunity will be available, major, even massive efforts are called for. The Board of Higher Education has just completed a demographic population ratio potential enrollment projection, matched against institutional projections through 1980. The most rapidly growing age group in Massachusetts is the 18 to 24 year old group. It should be pointed out that the college age populations for 1975 and 1980 are not hypothetical persons dependent upon what may be or even is now a fluctuating birth rate, but are very live children currently in elementary schools of the state and nation. What these figures show is that if all the private institutions in the state remain viable and accept all the students they now anticipate taking and the public institutions of higher education increase from the current 60,500 to 143,000 (more than double present enrollments) by 1975 (six years from now) we shall still be short some 60,000 places for potential students. This means that almost as many potential students as are currently in all public institutions of higher education will not be provided for. If we project the figures to 1980 and increase the places available in public higher educational institutions to 188,000 or three times current enrollment and private institutions reach an enrollment figure of 223,000, the potential student places deficit will also have increased to something on the order of 113,000.

These are rather unsettling figures and the costs not of meeting the potential need but of reaching the 143,000 enrollment level in 1975 and 188,000 level by 1980 in public institutions of higher education are considerable. Projecting operating appropriations at present support levels without necessary provisions for qualitative improvements and at present dollar levels, that is without taking into account inflation, the operating budgets for 1975 would be something on the order of $204 million and for 1980 close to $280 million. But in addition, to achieve such levels of enrollment, will require capital construction over the eleven year period, somewhere in the order of one billion five hundred million. To complicate the picture, all these projections do involve the assumption which could be contrary to fact, that all of the private institutions will remain viable and able at least to meet their present projected enrollments. There is rather disturbing evidence that without additional help some of these private institutions may be in serious financial trouble. If any of the major institutions do disappear, the burden on the state will be just that much greater. Because of the potential seriousness of this problem, we are currently initiating a study of the financial problems of private higher education in Massachusetts.

The question can well be raised as to whether the Commonwealth can afford, not to meet the full need, but to do what it minimally ought to do in attempting to meet the need by tripling the size of public higher education by 1980. Here, I think, the answer is clear and has to be phrased in terms of the opposite question: can the Commonwealth possibly afford not to? The results of not doing so are, I would suggest, educational disaster in terms of restricting the potential of the Commonwealth's citizens but are very likely to mean economic disaster for the Commonwealth as well. I need hardly remind you of the difference in earning power of high school and college graduates and the fact that the college graduates become taxpayers increasing the Commonwealth's economic base. Equally important, our changing economy constantly calls for more highly educated and more diversely educated men and women in all phases of business and industry. This is why among other things problems will not be solved simply by making more freshmen places available regardless of type or program of institutions. It is why we must have a balanced and differentiated higher educational system, why community colleges, with their occupational as well as transfer programs, are critical, why our state colleges must continue their evolution as complementary multipurpose institutions, why our technological institutes serve so critical a function, and why the university must expand its professional and graduate programs. While the cost of graduate education is high, there are few programs where the direct dollar return in existing industries and through research and innovation in creation of new industries are as high as in graduate education. Further, without adequate graduate programs, the essential faculty for all other programs will not be produced.

We have a major task ahead that will require the cooperative efforts of all higher educational institutions public and private if we are to come anywhere near to meeting the needs. In the public sector it is critically important that the various institutions continue to develop as a complimentary system. We are past the point where we can afford fragmentation and expediency in the place of careful common planning. We must insure that the system be developed as efficiently, as effectively, and as economically as possible commensurate with quality education. To meet the need will require the combined efforts of the institutions, the legislative and executive branches of government, and the general public. The cost will be high but, it would be difficult to point to any area in which the return on investment of the tax dollar is higher or which is more crucial to the future well being of the Commonwealth. Higher education today and for the future is not a luxury but a necessity for the cultural and economic well being of the state. We may have to rearrange priorities in the Commonwealth, but, to diminish or not to expand our efforts in support of higher education is to court disaster. The most expensive dollar the Commonwealth can spend is the dollar withheld from meeting high educational needs.

FURTHERS WORLD UNDERSTANDING

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. SCHWENGEL. Mr. Speaker, in this day of relatively free and easy world travel, we tend to forget that this travel is limited to a fairly small group of people. There are still large numbers of people who are unable to undertake world travel, and enjoy the rich experience of furthering a better understanding among the peoples of the world. A resident of my district, Mr. George Volger, of Muscatine, Iowa, has made a major contribution in this respect by bringing the world to the people of Iowa, and surrounding States. A couple of recent articles give a pretty good picture of the work being done by Mr. Volger. I salute Mr. Volger for this creative effort to further world understanding.

The articles follow:

[From the American Mail Line Newsletter, July 1965]

SOUND TRAVELS—BY SS "WASHINGTON MAIL"

"I wonder where George is," muses a midwesterner as he turns up the volume on his car radio. At the moment, George Volger may be at his General Manager's desk in the office of KWPC, Muscatine, Iowa. But to tens of thousands of radio listeners tuned to some 50 stations throughout ten Midwestern and Eastern states, the ubiquitous broadcaster may be in mid-Pacific, shouting over the throb of the ship's engines as he questions an engineer on the SS *Washington Mail*—or deep in a Philippine forest, listening to a lumber mill manager plan armed protection for his logging crews from marauding tribesmen—or crouched in a dim corner of a Japanese temple, describing a ritual dance.

George Volger's listeners travel the world with him and his tape recorder—most recently on a ten-week tour of Japan, Korea, Okinawa, the Philippines, Hong Kong, Macau, Taiwan and Quemoy. Much of the mid-winter trip was spent as a passenger aboard the SS *Washington Mail,* and Volger recorded many of his 65 broadcasts aboard the vessel. Not content to join the card players in the lounge, he prowled the ship, recorder slung over his shoulder. In the skipper's cabin, Captain Arnord Beeken proudly describes his vessel. In the engine room, First Assistant Engineer Arthur Hines discussed water supply desalinization. In the galley, Seward Harry Egolf, Jr., talked about food planning. International communications techniques were the subject in the radio shack with Radio Officer Arnold Dreier. On deck, Chief Mate Norrian Johnson chatted about cargo handling. Finally, back in the passenger lounge, Purser William Eastman talked of passports and visas, cargo manifest and quarantines. Fascinating fellow passengers including an Australian circling the globe by freighter, a missionary from Illinois going "home" to her Hong Kong orphanage, and a bridge-haunting Columbia River Bar pilot on a busman's holiday.

Kitchen radios from Kansas to Kentucky have taken housewives to Mexico, the West Indies, Ireland, Scotland, England, Norway, Sweden, Denmark, Germany, Switzerland and Iceland on previous Volger travels. Since 1956, he has recorded over 400 interviews in foreign countries.

"I try to give the listener basic information and human interest material on the country and its people," Volger says, *"And*

I try to give him the incentive to travel by telling about sports, art, folklore, education, business, industry, food, travel, customs, and history—but no politics." However, prominent political figures are not unknown to Volger's microphone. Nationalist Chinese Premier C. K. Yen was a recent interviewee, and Panmunjom negotiations between U.N. representatives and North Korean Communists were captured on Volger's recorder. Nor is the victim of political oppression overlooked. In Macau, nineteen ragged, half-starved refugees told Volger of conditions in Red China just nine hours after their escape by sampan from the mainland.

But there is fun and enjoyment in Volger's journalist journeys too—sampling sake at a Japanese rice winery, rocketing along at 100 miles an hour on Japan's "bullet train," ogling the girls at Osake Takarazuka Revue, or cheering the 300-pound Sumo wrestlers at a Tokyo match. He has shared them all with his listeners.

[From the Farrell Line News, December 1967]

AN AFRICAN TREK ON 12½ MILES OF TAPE

(By George Volger)

Little did I realize when I purchased a pair of "desert" shoes in Chicago in late January, during a Lake Michigan blizzard, that I'd be using them so soon in very literal fashion.

The white material kept coming East, so much so that the *African Dawn's* departure date had to be moved. But on the evening of February 8, with a few feet of snow on deck, we headed out into the Atlantic.

Following a smooth thirteen days, the *African Dawn* came into the busy port of Walvis Bay, South West Africa. It was here I began to comprehend what great advances are being made in some of the remote sections of the "dark continent." Encircled with the Atlantic on one side and the Namib Desert on the other, this port city has sprung from a population of a little over 2,000 in 1950 to an estimated 20,000—spurred chiefly by the thriving pilchard industry. In the midst of new buildings, H. W. Otto Buhr, manager of Cory Mann George (agents for Farrell Lines) and also chairman of the Harbor Board, stated of the expansion, "One of our main problems is we just haven't built big enough—we underestimated our growth."

With only that day in Walvis Bay (I returned a couple of months later, however), and desirous of seeing as much as possible, Mr. Buhr arranged for one of his employees, Von Mallinckrodt, to drive me up to Swakopmund. En route, becoming too entranced with the towering Namib dunes, we got our car stuck in the glistening deceiving sands. Walking to the highway to secure some aid I was, on my first day in Africa, making good use of the desert shoes purchased so recently in the Chicago snow storm.

The Namib Desert episode was a new one for me—none of my previous travels had taken me into comparable country. And at this point, you may well ask, just why and how does a radio station man from Muscatine, Iowa, land in an African desert in the first place?

Over ten years ago, working in conjunction with the British Information Service, my wife, two daughters and I had produced a series of interviews in England and Scotland which were broadcast on over sixty radio stations in the United States. This led to other family projects in Ireland and the West Indies. A few years later, my wife and I complete with tape recorder and cameras, travelled Iceland, Norway, Sweden, Denmark and Switzerland. More recently I have turned out projects in Mexico and the Far East—Japan, Korea, Hong Kong, Macau and Taiwan.

The trip across the Pacific included my first taste of freighter travel. The trek was aided greatly through the cooperation of Worth Fowler, president of the American Mail Line. A meeting with Peter McChesney, manager, Trade Development for the Farrell Lines, at a CASL meeting in Milwaukee, eventually led to the African plans. At this point I am very much a confirmed freighter traveller.

Interviews cover a wide range. The aim has been to give a detailed and comprehensive picture of a country through the voices of the people themselves. Subjects run the gamut from business and industry to sports—from food and farming to art centers—from wild life to schools, historical centers, weather, communications, transportation and government. Sound backgrounds play an important part, adding much to the listener's mental picture.

The interviews are broadcast on radio stations in a wide area. The taped series have been heard on the Iowa Radio Network of twelve stations, plus over fifty outlets in ten other states. The Far East series was broadcast over the world-wide facilities of the Armed Forces Radio Network and officers in charge have requested additional programs.

In addition to radio, the interviews have taken on a broader scope. Auditioning the recorded conversations, Dr. John Haefner, of the Sociology Department of the University of Iowa, saw possibilities for the classroom. This led to testing at various grade levels in Iowa and Illinois schools and in the audio-visual department of Phoenix, Arizona, schools. Instructors reported that the interviews had motivated students in a wide age range, from fourth and fifth grades through high school. Hearing the voices of people in other lands informally discussing their work and telling about their families, had added a valuable new dimension.

On the African trip, the tape recorder "start button" was pushed long before the S.S. African Dawn docked at Walvis Bay. Already, at the New York office of the Farrell Lines, the project was set in motion with interviews with Peter McChesney and Robert Bielskas, Traffic Manager-Passenger, with discussions on African trade development and passenger traffic.

On ship, programs were recorded also with officers who had graduated from the United States Merchant Marine Academy. These will become part of a series being produced in conjunction with the academy at Kings Point, Long Island. Interviews were also made with Captain Erik Tallbe, other officers and unlicensed men, describing various ship responsibilities. These will form an important segment of a vocational series to be used in high schools around the country, telling young men about the Merchant Marine.

Departing the ship at Cape Town, the tape reels began rolling at a faster pace. Now, after some three months of extensive travel in southern and western sectors of the continent, I look back on a multitude of experiences wrapped up in over 180 interviews, in 12½ miles of tape on 70 reels, plus over 3,000 pictures in color and black and white.

The greater part of the time was devoted to the Republic of South Africa, South West Africa, Rhodesia and Zambia. On my return, after hopping the S.S. *African Lightning* at Luanda, Angola, additional material was secured there and in the Congo (Brazzaville), Gabon and Liberia.

In Cape Town, attendance at a rehearsal of the Aeoan group of coloured singers, directed by Dr. Joseph Manca, resulted in recordings of their "La Traviata" performance and interviews with the cast. And on a sheep farm near Tarkastad, enthusiastic Xhosa men and women sang tribal hymns, a wedding song and the Xhosa tribal anthem.

The listener feels much closer to the many racial strains in the southern part of the continent through a conversation with a Malay of Muslim faith in Cape Town; Indian families of Durban tell of their customs, foods and business; in Zululand a Kraal head speaks of his family and tribal customs, and in Rhodesia, Chief Chiota speaks of the changes that have taken place in his tribal area.

Through the voices of farmers, businessmen and industrialists, a detailed description of growth is told, not only in gold, diamond and copper mines, but also rock lobster, ostriches and karakul.

The tapes kept turning at Hout Bay, Cape Province, as Abe Wisenburg of South African Sea Products, told of catching and processing rock lobster, a delicacy relished by American gourmets—and an important cargo for Farrell Lines ships.

Hundreds of ostrich farms around Oudtshoorn provide income for thousands of people. We talk about the fast-running and hard-kicking bird with Will Hooper of the High Gate Ostrich Farm, from egg to biltong (a dried meat which, incidentally, also serves as a tasty hors d'oeuvre).

From mountains of ore to the delicate, suspenseful tap which cleaves a raw diamond, we report this great industry—from the world famous Premier Mine at Cullinan to Goldstein's Diamond Cutting Works in Johannesburg.

The story of gold mining is punctuated with sound, from the singing work crews at the 5,500-foot level of the Buffelsfontein Mine, to the technique of blasting in the stopes, to a class in the highly necessary Fanagulo language (in some mines fifty to sixty dialects and languages are represented among the workers).

The famed copper belt of Zambia has its story told through a visit to the Rhokana Mine of the Anglo American Corporation at Kitwe, Zambia, where 4,000 men are underground at any one time. Involvement in employee housing, schools, medicine and recreational facilities plays a big part of the industrial picture in Africa.

A Bantu businessman in Soweto tells of his grocery store operation and discusses general Bantu economy and buying power.

Continuing the audio picture, subjects include a description of Cape Town Harbor with Captain Joubert, Assistant Port Captain; loading ore at Port Elizabeth; the General Motors complex at "P.E." with 6,000 employees; modern whaling techniques, with H. M. Knudsen of Union Whaling Co., Ltd., Durban (a small radio transmitter on the harpooned whale identifies and locates the valuable catch); a visit to the Tsumeb mine of South West Africa; learning more of the expanding pilchard (sardine) business at Walvis Bay, South West Africa, from Carl Albrecht of SWA Fishing Industry, and the world's largest rubber plantation—Firestone at Harbel, Liberia.

Famed engineering projects provide valuable material, from the great Kariba Dam on the Zambezi River, forming the world's largest man-made body of water, to the awesome Hendrik Verwoerd Dam, a vital initial construction in the 30-year Orgage River Project (plans call for dam additions after the year 2,000 to take care of silt accumulation).

Travelling by car allowed a great variety of contacts. A variety of agricultural practices are described:

A sheep farm near Tarkastad, Republic of South Africa, with Hugh Fuller, who has received recognitions for high quality wool; a visit to a country fair in the attractive town of George, on the Indian Ocean, a stop at a South African vineyard near Paarl with the owner, Francois Malan Basson; karakul farms in South West Africa, and in the Karoi sector

of Rhodesia we learn about tobacco farming in an area where it was impossible to cultivate the ground until the 1940's due to problems with lions and the tsetse fly.

Did you realize that elephants are left- or right-tusked? This is just one of the bits of information about wild life coming out of interviews with knowledgeable game wardens of Kruger National Park of Republic of South Africa, the Wankie and Zimbabwe National Parks of Rhodesia, the Etosha Pan of South West Africa and pioneering farmers (one cattle farmer of South West Africa, Major C. H. Hubble, and his wife have shot forty-one leopards on their semi-arid acreage near Grootfontein).

The peoples of this continent love sports. At Stellenbosch University, Dr. Dannie Craven, a rugby great, compares sports in his country and the United States, and in Bulawayo, Rhodesia, at an African sports center, Coach Stutty Dhlamini tells of that country's most popular games.

At the South African Broadcasting Corporation we speak of radio programming in the two official languages, English and Afrikaans, plus seven of the Bantu languages. Television transmission is growing in Rhodesia, and in Zambia education via radio is under the guidance of an Irishman. Patrick Delahanty.

Expanding horizons demand expanding transportation plans. Some of the recent and planned advancements are discussed with officials of South African Airways and South African Railways.

From these notes you gather a fair idea of why it took some 25,000 miles of travel to secure 12½ miles of tape. Certainly much thanks is due Farrell Lines' men in New York and Africa and their agents, who were of such valuable assistance along the way.

My travels filled me with respect for the many solid accomplishments in the countries visited, along with a feeling of awe in estimating the great potentials still untouched.

In a continent of so many facets, it is certainly a part of the world in which general statements are dangerous. It is a country truly emerging in a positive way on the world scene, and one that demands and requires study and understanding. I hope that these African interviews, over the air and in the classroom, will provide more light on the so-called "dark continent."

SGT. FREDERICK J. MAGSAMEN

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. LONG of Maryland. Mr. Speaker, Sgt. Frederick J. Magsamen, a fine young man from Maryland, was killed recently in Vietnam. I would like to commend his courage and honor his memory by including the following article in the RECORD:

WESTMINSTER SOLDIER DIES

Sgt. Frederick J. Magsamen, 21, a soldier from Westminster, has died in Vietnam, the Defense Department announced yesterday.

Sergeant Magsamen died Friday after a military aircraft in which he was a passenger crashed and burned. The Defense Department said he was being lifted from the site of the crash by an extraction line to an aircraft hovering above when the line snapped and Sergeant Magsamen fell to the ground.

Born in Baltimore, Sergeant Magsamen lived most of his life in Westminster. He was graduated in 1966 from Westminster High School, where he had played on the varsity football team and was a member of the school music organizations.

IN THE GREEN BERETS

He worked briefly for the Random House Publishing Company in Westminster before enlisting in the Army in July, 1967.

Sergeant Magsamen had basic training at Fort Bragg, N.C., jump school training at Fort Benning, Ga., and attended military police school at Fort Gordon, Ga.

He returned to Fort Bragg for special training and became a member of the Green Berets.

Sergeant Magsamen was sent to Vietnam last December. His sister, Mrs. Paul Bowersox, Jr., of Westminster, said that according to letters received at home, Sergeant Magsamen had been awarded two bronze stars and two purple hearts in Vietnam.

Besides his sister, Sergeant Magsamen is survived by his parents, Mr. and Mrs. Frederick J. Magsamen, of Westminster, and his maternal grandparents, Mr. and Mrs. Wilmer T. Butler, of Baltimore.

A NEED TO REMEMBER

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PETTIS. Mr. Speaker, a new memorial to the Nation's honored war dead will be dedicated this Memorial Day in the city of Victorville, Calif. Located in Victor Valley Memorial Park, the memorial contains the names of those brave men from Victorville and other nearby communities in San Bernardino County who gave their lives for their country in World War I, World War II, the Korean conflict, and the war in Vietnam. Interred in the memorial are the remains of Capt. Joseph McConnell, top fighter pilot of the Korean war, who shot down 16 enemy planes and is still the Nation's No. 1 jet ace.

The memorial was built entirely with funds contributed by the citizens of the community. Taking the lead in the project was Joshua Palms Post 2924, Veterans of Foreign Wars, with Dale L. Plumb as the commander.

An editorial in the May 23, 1969, issue of the Victorville Daily Press describes the significance of the memorial. I would like to quote from this editorial for the benefit of my colleagues:

In this day and age of dissent and indecision it is noteworthy to see the response to a project such as construction of a memorial to Victor Valley's war dead.

We have perhaps harped a little on this project for the past year. We have even badgered a few people to get the project underway. And we have urged every citizen to participate by a contribution—no matter the amount—to see the memorial constructed this year.

And now the memorial is a reality. It will be dedicated Friday, May 30 during the morning hours in a ceremony you will find reminiscent of days gone by when communities turned out in force to participate in such Memorial Day ceremonies.

We hope valley citizens will attend the parade and ceremonies Memorial Day. Most of them, by Memorial Day, will have contributed to the fund paying for the construction so we feel they'll want to see what they have created with the dollars given in compassion and honor for those who have died in service of their country during periods of war.

We would like to point out that in these last weeks—even at the time this is written—more and more people are responding with not only dollars, but time and effort to make this a tribute to our war dead.

There will be a band, songs of America, rituals of dedication and military honors. There will be Gold Star Mothers there to observe ceremonies honoring their heroic sons.

There will be a General representing President Nixon and the nation from the Pentagon in Washington, D.C. Dale Evans Rogers will sing "America." There will be many other dignitaries.

There will be veterans organizations placing wreaths and flowers upon the memorial. There will be, we believe, a community area represented that includes all of our 50,000 citizens and families.

But we are sure the community does not want any special accolade. We are sure each valley resident joins with us in doing community services with a minimum of self-approbation.

We will simply dedicate our memorial and conduct, in the most reverent manner, a Memorial Day ceremony which should be repeated in every community throughout the nation to some degree.

We feel it will be a Memorial Day to rededicate ourselves to the principles of this country, to take a close look at our neighbors in the valley and get to know them a little better. It will be a time to read the names of those boys who gave their lives that we can enjoy the freedoms we have.

We feel it is one time in life when there is a need to remember.

RESULTS OF A QUESTIONNAIRE ON MAJOR ISSUES, 25TH CONGRESSIONAL DISTRICT, NEW YORK

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. OTTINGER. Mr. Speaker, this spring I circulated to the approximately 160,000 families in the 25th Congressional District of New York a questionnaire through which I invited them to express their opinions on what I considered to be some of the major national and international issues facing us at this time.

Nearly 20,000 of my constituents took the time to sit down, review the issues, and answer 25 questions dealing with such diverse subjects as defense, foreign policy, crime, the economy, welfare reform, electoral reform, and selective service. In addition, many took the time and trouble to write detailed and thoughtful comments on these issues.

I am presenting for inclusion in the RECORD a tabulation of the results of this questionnaire in the hope that it will be helpful and informative to my colleagues:

A QUESTIONNAIRE FROM YOUR CONGRESSMAN, RICHARD L. OTTINGER, 25TH DISTRICT, NEW YORK

[Answers in percent]

	Yes	No	Undecided
DEFENSE			
1. Do you approve of our present Vietnam policy?	22	69	9
2. If you were to change our present policy, which of the following possible policy changes would you prefer? [1]			
(a) Increased military effort?	50	42	8
(b) Increased negotiation effort?	69	26	5
(c) Unilateral withdrawal?	51	45	4
(d) Limiting U.S. military efforts to protecting population centers in South Vietnam	29	52	18
3. Do you favor resumption of bombing in North Vietnam?	44	46	10
4. Should the United States spend up to $100 billion on an anti-ballistic-missile system as a possible deterrent to Soviet attack?	33	63	4
FOREIGN POLICY			
1. Should the United States recognize the Nassar government in Egypt?	57	24	19
2. Should the United States fulfill its contract to supply 50 Phantom jets to Israel?	64	31	7
3. Should the United States pressure Israel to withdraw from territories occupied during its 6-day war with the Arab countries?	26	65	9
4. Should the United States join with Russia, France, and England in attempting to impose a Middle East settlement?	52	44	4
CRIME			
1. Should Federal wiretapping restrictions be relaxed?	50	41	9
2. Should possession of marihuana be legalized?	25	68	7
3. Should Congress require registration and licensing of all firearms?	65	33	2
4. Do you favor legalizing detention of persons arrested before trial?	48	38	14
ECONOMY			
1. Do you favor:			
(a) Extension of the 10 percent surcharge on personal and business income tax?	21	70	9
(b) Wage and price controls?	51	42	7
(c) An excess profits tax?	57	34	9
2. Should the Federal Government be spending more for highway construction than for mass transit?	24	59	17
3. Should development of the supersonic civilian transport plane be financed by the aviation industry rather than by $2,000,000,000 in Federal funds?	80	13	7
POST OFFICE			
Should the Post Office operations be run by a nonprofit private corporation?	63	27	10
WELFARE REFORM			
1. Should Congress approve as a substitute for welfare:			
(a) Negative income tax?	35	42	23
(b) Day care center program to release mothers for work and provide pre-education preparation for children?	80	12	8
(c) National standards?	63	25	12
(d) Federal assumption of welfare payments?	49	42	9
2. Should the Government become an employer of last resort?	41	52	7

A QUESTIONNAIRE FROM YOUR CONGRESSMAN. RICHARD L. OTTINGER, 25TH DISTRICT, NEW YORK—Continued

[Answers in percent]

	Yes	No	Undecided
ELECTORAL REFORM			
1. Should the electoral college be abolished and the President elected by direct popular vote?	74	19	7
2. Should the electoral college be retained but electors bound and electoral votes apportioned by the statewide popular vote or congressional district results?	24	59	17
3. Should the voting age be lowered to 18?	50	45	5
SELECTIVE SERVICE			
1. Should Congress authorize a national lottery to select Armed Forces inductees?	55	35	10
2. Termination of college exemptions?	41	51	8
3. A National Service Corps which could be chosen as an alternative to military service?	56	27	17
4. Increasing military pay to point at which elimination of the draft and maintenance of a volunteer army are possible?	41	40	9

[1] Figures total more than 100 percent because many persons checked more than one alternative.

A REMARKABLE SERVICE BY OLDER CITIZENS IN VERMONT

HON. ROBERT T. STAFFORD

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. STAFFORD. Mr. Speaker, since May is Senior Citizens Month, I wanted to bring to the attention of my colleagues a remarkable service being performed by a group of older citizens in the State of Vermont.

For the last 3 years, there has been in operation a foster grandparents program at the Brandon Training School, Vermont's State institution for retarded. I have personally seen this program in operation and witnessed the almost unbelievable assistance which retarded patients at the training school receive from their foster grandparents.

The following report, however, is a tribute to the senior citizens themselves and deserves the widest possible circulation:

A RECORD TO THE CREDIT AND PRAISE OF OLDER PERSONS 1966–69: THE FOSTER GRANDPARENT PROGRAM AT BRANDON TRAINING SCHOOL, BRANDON, VT., CAROLYN WHITLOCK, PROJECT DIRECTOR

1. Sixty percent of our Foster Grandparents are over 70 years old.

2. Of 40 Foster Grandparents, only one had to be replaced during the past year and that was because of her getting married and moving away from Vermont.

3. There has been NO tardiness in 3 years and little absenteeism. Even on blizzard days Foster Grandparents attendance records could match and probably surpass any other school or business.

4. As a group, the Grandparents seem to improve as years go by, physically, emotionally, and socially. Twelve of the original 15 Grandparents will have been in the Program for 3 years in October. The local doctor who gives them annual physical examinations has commented that their sustained good health is remarkable. Emotionally, the Grandparents seem to project more self-confidence in their ability to do their jobs and to relate to other employees. Socially, we continue to see warm friendships and kindnesses exchanged between Grandparents of varied backgrounds and ages. The common denominator of the children and the work seems to have brought about the appreciation they have for each other, despite ethnic differences.

5. One third of our group have never had children of their own before becoming Foster Grandparents. They have shown in many areas that oldsters are not so "set in their ways" that they cannot learn new skills or attitudes when the need for such learning really matters to them. One example of this is the way in which six Grandparents are giving meaningful training and care to blind children. Another example, is a Grandmother who had never been off of a farm until her late 50's when she became a childless widow and had to go to the city to find work. She had never known electricity or used a telephone until this age. With less than $600 a year income before this program, she had not had a home of her own for more than 10 years, living with various families that needed her housework assistance. After a year with this program, she now says that she is happier than she has ever been in her 72 years. She takes great pride in the way she is able to care for a child with disturbed behavior. Likewise, her skill in feeding a difficult baby gives her pleasure. When recently briefly hospitalized, she was in tears as to whether the baby was getting as much to eat without her care. In order to keep well and continue coming to her charges, this woman is taking great care with her diabetic diet for the first time in years and has lost 25 pounds with this health maintaining desire. Another example of "being needed" affecting physical health is our 80-year old Grandmother critically ill with a collapsed lung and tumor. During her three month hospital stay, she was positive and determined that she would get back to her "baby". For the past seven months she has been back without missing a day and at 82 is thrilled to now hear her charge begin to talk. One cannot help but wonder if Nursing Homes would be less crowded if more oldsters had opportunities to really feel and be needed.

6. Not one of our Foster Grandparents found the tragedy of retardation too much to take or to approach with hope.

7. The calmly happy optimistic attitudes of Grandparents have had a healthy effect in Brandon. The unsung heroes in an institution are often the underpaid, hard working dormitory personnel. Their many efforts for the children above and beyond what their jobs demand are seen and appreciated by the Grandparents and therefore better understood by the community outside the institution.

8. Our eldest Grandfather (age 89) did not miss one day's work in 18 months, except for a two week cataract operation absence. Our eldest Grandmother, Daisy, was one of our first 15 Grandparents and is credited with giving the program its motto, "Lets Wear Out, Not Rust Out". We almost did not hire her because she refused to put her birth date on our application form (thinking she would never be hired at nearly 85 years). At 86, she returned to work after a month's illness with a lovely white wig and now she is back with us at 87, after a two month absence and wearing a new eye. Daisy surely shows no signs of "rust" and her "wear" is fortunately kept in good repair.

To many persons living responsible, hectic lives the thought of retiring with nothing to do is anticipated as one step from heaven.

The reality of total forced retirement is far from being even pleasant according to most Senior Citizens who are living it. Here at Brandon, we are convinced that doing nothing and being responsible to no one is not a happy state of being for any age, especially not for older persons with skills in human relationships acquired through 60 to 90 years of experience in dealing with other people of all ages and types.

Perhaps, at this time when our social ills and education goals are being scrutinized we should take our older persons "off the shelf" and let them take a vital role in our society. In fields of technology, an experienced person would not be "shelved" but society has no role and little use for the human relations experience, and skills of our older generation. As one-fourth of our national voting population, persons over 65 generally feel they no longer are useful because society has told them they should not be, except in a few isolated situations such as the Foster Grandparent Program. The numbers of such "roleless" persons are rapidly increasing as retirement age becomes earlier and medical advancement keeps us healthy longer. The performance of the 40 Foster Grandparents at Brandon Training School and of 4,000 similarly involved persons in other parts of the United States has clearly demonstrated that older persons do have much to offer society and should never be "shelved".

The younger generation toward which our national attention and funds are focused often sings out that " . . . what the world needs now is Love . . ." Perhaps if the oldsters had not been made "roleless" for so many generations, the youngsters would not be singing out this need with such a fervor today. Teenage volunteers working at Brandon have appreciated the attitudes and work of Foster Grandparents and made many close friendships with them.

Each of the 40 Brandon Grandparents gives individual attention, care, and training to two retarded children for four hours daily. Thus, over 70 children are having needs of self-identity met, as are the Grandparents' needs for feeling important and useful. Every Grandparent works out a program to meet the needs of his particular charges. Among the things that are patiently taught are skills of self-feeding, going up and down stairs, learning to manipulate buttons and shoestrings, getting along and sharing with others in work and play, and behavior in public. For those children who have the ability, there is help with learning to read and count, with crafts and games. There are special events too such as field trips, visits to stores or grandparents' home. The children are taken out-of-door daily and many participate in the Grandparents Rhythm Band and gardening projects. Speech stimulation and physical therapy are also children's benefits from the program.

As the individual Grandparent-Grandchild relationships continue in most cases they seem to improve in effectiveness for both the oldster and the youngster. As the child matures or his abilities improve, the Grandparent's gratification with his work likewise increases.

The Institution's attitude toward the Program has changed considerably since its beginning in 1966 when it was questionable to all concerned whether elderly persons could handle emotionally disturbed or severely handicapped children. Nowadays, if a child is a difficult problem or has multiple handicaps, the prescription is often to give him a Foster Grandparent. The patience, dedication, and perseverance that older people have is often what children need. To hear a 77-year old woman, with a good understanding of what future potential her young charge has, say that she would die happy if she could get him toilet-trained, exemplifies the thoughts of many Foster Grandparents.

APOLLO 10: ANOTHER SPACE SUCCESS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. EVINS of Tennessee. Mr. Speaker, certainly we can all take great pride in the magnificent achievements of the Apollo 10 astronauts and the Nation's entire space team.

I want to especially commend and congratulate the astronauts—Tom Stafford, John Young, and Gene Cernan—whose cool courage and competence overcame mechanical problems as their craft hovered over the moon's surface.

In this connection I also want to commend the work of the Arnold Engineering Development Center in Tullahoma, Tenn., in the Fourth Congressional District which I am honored to represent in the Congress. The testing of the Apollo components at this center was an important part of the preparation for the mission.

The Apollo 10 astronauts and the other astronauts who participated in the Apollo and prior space programs have laid the foundation for man's first trip to the moon scheduled by the National Aeronautics and Space Administration in July.

As we salute the astronauts, I place in the RECORD herewith an editorial from the Nashville Tennessean entited "A Job Well Done, 'Charlie Brown'."

The editorial follows:

[From the Nashville Tennessean, May 24, 1969]

A JOB WELL DONE, "CHARLIE BROWN"

The Apollo 10 mission has again forced those on earth to use up all their best adjectives, as the three astronauts journeyed around the cratered moon and then cut loose in a spidery landing module to dip down to about 50,000 feet of the lunar serface.

There were anxious moments for Col. Thomas P. Stafford and Cmdr. Eugene A. Cernan, flying in the lunar module nicknamed "Snoopy." As its lower stage was jettisioned, "Snoopy" went into wild gyrations. The two men were excited, but never lost their "cool" and Colonel Stafford brought the module back under control and then fired the rocket necessary for "Snoopy" to rejoin the command ship "Charlie Brown" which was orbiting 69 miles above the moon.

Other than the gyrations, which may have resulted because of a switch that wasn't thrown in the correct position, and a couple of other incidents of mild concern, the Apollo 10 mission has gone off in textbook style.

Only the actual moon landing could be a more severe test of the men and machines, and of the long preparatory engineering and training that have figured into the mission.

Apollo 10 has paved the way to the ultimate step, and while there will be additional hazards to the actual touch down and blast off from the pocked lunar surface, the voyage of "Snoopy" proved that it is feasible; that the moon finally is within reach of man's footsteps.

Apollo 10 has accomplished the difficult part, and now can return to earth with the tremendous satisfaction of a job well done and to the applause of fellow Americans who have cause to salute the astronauts for their courage and technical ability.

POSTAL REFORM: SUPPORT FOR A POSTAL CORPORATION

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial pointing up some of the reasons why we should charter a Postal Corporation based on the recommendations of the Kappel Commission.

I was pleased to join my colleague on the Post Office and Civil Service Committee (Mr. UDALL) in cosponsoring introduction today of the Postal Service Act of 1969.

The editorial, by David E. Rosenbaum, appeared in the Sunday New York Times of May 25, as follows:

POST OFFICE—CASE FOR A PUBLIC CORPORATION

(By David E. Rosenbaum)

WASHINGTON.—"Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds."

True enough. But politics, red tape and antiquated machinery and facilities sure take their toll.

The United States Post Office—with more than 700,000 employes, a budget of more than $7-billion a year and an annual mail load of more than 80 billion pieces—is one of the most inefficient big businesses imaginable.

How long do you think a company that performed a service—for instance, repairing widgets—would survive with the following handicaps?

The executive officer knew nothing about widgets when he was appointed. He received the appointment as political patronage or because he was a good friend of the chairman of the board (the President).

The company cannot place its revenues in its own bank account for its own use. (Postal rates are set by Congress.)

The company cannot place its revenues in its own bank account for its own use. (Postal revenues go into the Treasury.)

The company receives virtually no money to prepare for the future when there will be many times as many widgets as there are now.

Employes go over the head of the company's management and bargain directly with another party (Congress) for wages and benefits.

The men running the branch offices cannot be transferred, even if they want to go, to another office in a different part of the country. (Local postmasters must live in the area they are appointed to serve.)

These are the handicaps of the United States Post Office. Is it any wonder it operates at an annual deficit of about $1-billion?

During the election campaign, President Nixon said the Post Office needed "to be run like a first class business," and he pledged to "institute the reforms that will give the American people the kind of postal service they're paying for."

Last week, the shape of Mr. Nixon's postal reforms became known. He plans to submit them to Congress this week. Basically, what Mr. Nixon proposes is to convert the Post Office into a government-owned corporation, not unlike the Tennessee Valley Authority.

The United States Postal Corporation would raise the funds it needed for modernization and capital improvements by issuing bonds for public sale. This would prevent

Congress from slashing funds because of current budget necessities.

The corporation would be run by a board of directors appointed by the President, and postal rates would be set by a separate three-member board. The rate board's recommendations would go into effect unless they were specifically vetoed by Congress. This would take the unpleasant chore of raising rates away from politicians.

Postal workers would be removed from civil service. They would have the right to negotiate directly with the corporation's management, and disputes would be settled through compulsory arbitration. This would diminish the political influence of the postal workers' union.
